Acrimonious accusations and sarcastic suggestions have been made as to certain appointments of the Executive during the passage of this bill. That a man has been either a success or a failure I think is too soon to be judged. Let us leave that to posterity. We see through the glasses of time and sometimes of prejudices. It is often a matter of personal opinion as to whether certain men who are now striving to help win the war are successful or not. Not that I believe that we should not censure any one in this House; but if in any agency inefficiency is apparent the person responsible should be removed and a better-qualified man placed in his stead.

The object of this bill is to attain what the country seems to desire, what the Members here are anxious to see accomplished—simplifying, coordinating, and centralizing the powers of our war machinery—not to create new agencies, new commissions, new departments, to further complicate our present situation. Therefore, the Overman bill is intended to perform what other bills were intended to do and then attain that which is most sorely needed to-day—the doing away with red tape and duplicating agencies.

In reference to the bill I will say that I am an advocate of order, proper procedure, and would and do, at all times except war times, like to see all steps taken according to rules and statutes. What is often called red tape is often limitations imposed for the interests of the people. Too much scope of discretion leads to abuses. I believe under our system of Government that for every act performed by an official there should be authority for the same. If I were sure that every change proposed to be authorized by this bill when presented to Congress would be passed speedily, with less dillydallying, less criticism, with more get-together spirit, then I would be against this bill. But the past does not warrant me to feel and think that way, and, therefore, I think it is fit, reasonable, proper, and right that this delegation of authority should be conferred as it is proposed.

Finally, it does not mean and will not be interpreted by the public that this House is war-fevered or that it has lost its balance if it passes this bill. The country is in a mighty contest; the people realize that we have a big task ahead of us, and every measure will be seconded by the people so long as it tends to bring this war to a triumphant finale. The boys at the front have willingly obeyed the call of the Commander in Chief; they have not questioned his wisdom in leading them to the front line, but they rely upon him to keep the second line intact and dispose of it in such manner that it will completely and adequately back up the firing line. An army is like a sword. The firing line is the sharp and keen edge, but the supply line and the resources of the country and the war machinery form the remaining part of the sword. If the sword is of well-tempered steel the sword will keep its edge and will not be nicked by every obstacle it meets. Therefore an army on the front line is only what we here make it. If we do not back up the front the front will back up, and we have disaster, a crumbling army. The war machinery must be commended for the excellent work it has done in raising the present Army through the draft, and it is only right that we who have the responsibility of furnishing the supplies and materials for that Army should do not our bit but our all. And one of the ways to do so is in passing this bill. Some of the Members of Congress have talked about being slighted in the way this bill has been prepared, presented, and advocated. They have spoken of their rights. During war, material, legal, and other rights are just about as important as one's right to life, the most sacred of rights; there is no such a thing as right. It is a period of trial, sacrifices, self-abnegation, severity, and last, but not the least, patriotism. I do not mean to infer that anyone who does not vote for this bill is unpatriotic, but his patriotism is not all-subservient and is ill-guided.

In order to bring this war to a successful issue Congress pledged all the resources of this country, and the President is now anxious to coordinate these resources and powers. President Lincoln used this authority, and was called a dictator and a czar. He defended his course by suggesting as Commander in Chief of Army and Navy he had this power. President Wilson could adopt this same attitude, but instead he comes to Congress and asks for this authority. I believe it should be given him. I am satisfied that no big man in this country would accept the presidency of a large corporation if powers similar to those asked by the President of the United States were denied him;

and, again, if this Government was run along business lines, millions of dollars could be saved by redistributing functions, making for a unified organization, thus preventing duplications, and so forth. This, in a measure, will be accomplished by conferring this authority.

America, the ideal democracy, is at stake; the whole world looks up to it to see how she will act under such a strain as this is; they look up for instruction and as an example. Her strength has been pitted against the most powerful, autocratic government in the world. The battle is on, and the final outcome will spell either defeat or victory for the democracies of the world—for the Government founded by Washington and Lincoln.

America has the resources, the riches, and the men. Do we desire now to handicap the Commander in Chief with red tape, and if an emergency arise make it imperative for him to come to Congress each and every time he desires to make a change or move in the personnel or conduct of his associates in this tremendous task, this the greatest and most horrible war in the history of the world? It would be criminal to suffer defeat, and we would be only worthy of being slaves of autocracy and militaristic régimes. But America can not, must not, be defeated; unqualified victory must be ours; and to this end this Congress and country are solemnly pledged.

Millions of our young men have been sent, and in all likelihood millions more will be sent, to do battle, to train in our camps, or go to France. At the front these young men for arms, for ammunition, food, clothing, health, and comfort look to this Government, to Congress, to supply them. It is a great responsibility. When we act and do things our soldiers are well taken care of, but when we delay and bicker and permit ourselves to be hampered by members of the Red Tape Club our boys "over there" are the sufferers and feel the wants of life, the rigors of war, and their very lives are endangered.

To obviate these unnecessary delays, to overcome and surmount these obstacles, the President of the United States asks this authority. I am in favor of giving it to him. I shall so vote, and I am satisfied the people of my district and of the country join me when I say, "More power to you in order to win the war, and may the Creator of us all direct you in the use of it."

The War and What is Coming Out of It.

EXTENSION OF REMARKS

OF

HON. JOHN M. BAER,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 18, 1918.

Mr. BAER. Mr. Speaker, recently I attended the "trench dinner" and annual conference of the National Popular Government League, held at the New Ebbitt Hotel, Washington, D. C. The "trench dinner" was a novel affair. The secretary of the organization had made arrangements with the Secretary of War to have the Commissary Department serve the regular meal that is served to our soldiers "over there." Each guest was equipped with the utensils which the soldiers use, and marched along in line to receive his "chow." Official moving pictures were taken of the speakers, and have been shown in several cities throughout the country.

The general topic of the evening was, "What is coming out of this war?" Secretary of the Navy Josephus Daniels spoke on "What is coming out of this war for the people?"; Congresswoman JEANNETTE RANKIN spoke for women; Hon. Samuel Gompers, president of the American Federation of Labor, spoke for labor; Hon. William Kent, chairman of the Tariff Commission, spoke for business; Senator ROBERT L. OWEN spoke on "Organized world democracy"; and I was invited to speak on "What is coming out of the war—for the farmer?" My address follows:

"Mr. President, ladies and gentlemen, and members of the Popular Government League, it is unnecessary for me to assert that the farmers stand for popular government, for was it not the farmers who made a government so popular that it is now wanted by all the people of the world? Since the Minute Men of Concord left their plows standing in the furrows the farmers have always been in the vanguard of every movement looking to the betterment of national conditions. The farmers have never failed our Nation and will not fail it now. The people

of my district in the cities and in the country are striving, and will strive, in every way possible to win this war. They know that our country is involved in the greatest crisis of all time, and our first duty is to wholeheartedly support our Nation in fighting the common foe, the junkers and militarists of Potsdam. We will not only do our bit but we will do our "all" in pledging our lives, our fortunes, and sacred honor to our Nation in order to make safe those principles which are precious to all Americans.

"That we should enjoy the blessings that we have to-day hosts of our ancestors have toiled, suffered, and died. Our heritage of religious, intellectual, and political liberty was made possible only by their self-sacrifice. The greater freedom that we desire to give to all the people of the world and bequeath to future generations can be made possible only by our taking up the burdens of self-sacrifice of former generations.

"There are superior advantages in a democracy, but great responsibilities go with them. All will be lost if the dark forces of autocracy are to prevail. Their idea is that people exist for the government. Our idea is that governments exist for the people. It is for this idea that our soldiers and sailors are fighting. It is to sustain this idea that our people will go to any length of exertion or suffering. Any American who does not respond to this inspiration will be guilty of faithlessness to all who have died for it in bygone years and of treason toward the many who are now suffering and dying so that popular sovereignty may be maintained. The strength of our fighters must be fully backed by the completest strength of every citizen. All are necessary and all should contribute and sacrifice, no matter in what capacity, to putting down the malign forces that would crush liberty. In doing so we will have richly earned the blessings of posterity, as those who struggled for us have merited our undying gratitude.

"While we are passing through the clouds of war, may we not look into the sunshine of the fields beyond? Every man who seeks political honors should be tested by his knowledge of the great advantages that are coming out of this war. If he does not know this truth, then the people should seek a man who does. We must unite to make the end of this war the beginning of an age of freedom and happiness for mankind undreamed by those whose minds comprehend only political and military events.

"While we are preparing to our utmost in a military way to make the world safe for democracy, we have found it necessary to mobilize all the business and industry of this Nation. Military men who are running the war now know that armies and navies are helpless without nation-wide industrial and economic preparedness. Thus, while we are making political democracy safe for the whole world, we are going to gain a greater degree of economic democracy at home. [Applause.]

"Under the strain of this world war our economic system has undergone a severe test. Its flaws have become more pronounced. We are passing legislation every day in Congress to remedy the defects which have become emphasized under this tremendous strain. Just as the selective draft through the physical examinations pointed out some weaknesses in our man power, so has the war magnified the inefficiency of our system of distribution. For some one to say it is not the time to remedy the physical defects of our manhood would be absurd. Likewise for reactionaries to say it is not time to modify and perfect economic legislation is equally absurd. It is contrary to all the efforts made by Congress to alleviate the present situation. We must mobilize all our man power for our armies and our industries. We must better the conditions of transportation and distribution. We must conserve our national resources for the people. We must pass laws to perfect our economic and industrial system so as not to delay the speediest prosecution of this war. We shall strengthen all branches of industry, not only for the betterment of the particular branch, but for the purpose of focusing all these great forces on the one great cause—winning the war.

"I invite you to go with me on a trip with a bushel of wheat. The first thing necessary to produce wheat is seed. This spring the farmer is able to buy seed at \$2.20 a bushel. Last year he paid \$3.50, while in the previous fall he sold his wheat for an average of \$1.20 a bushel. This is because the grain gamblers were able to 'bear down' the price when the farmer had wheat to sell and then in the spring when the speculator sold he forced the price up. The Government price fixing has stabilized wheat. The producer has made no protest, but he objects to a 'halfway' price-fixing program. He would like to see the prices fixed on steel, cotton, beef, clothing, shoes, sugar, and all other products of human consumption. This would help the consumers in the cities, giving them more money to invest in war activities.

"After the wheat is harvested we shall ride into the local elevator on a load. In the olden days the primary market was the first place the farmer came in contact with 'big business.' But to eliminate the injustice of grading, dockage, and weighing there the farmers formed cooperative elevators in many towns. They thought they had eliminated all the iniquities in the transaction. To the contrary, after they dumped their grain into the elevator and ran it out again, they met 'big business' again at the end of the spout in a railway car. But now the Government has found it necessary to take over this monopolistic octopus, which has extended its trunklike tentacles into every community with economic selfishness and political corruption. The farmer welcomes this control of transportation. It will be another great benefit which the producers as well as the wageworkers and city people have gained through the war. [Applause.]

"We are now on the car of grain moving toward the great terminal elevator. On arriving there, before the war, we would meet 'big business' in the form of grain gamblers and speculators. But Mr. Hoover, the Food Administrator, has found it a wise policy to do away with these useless middlemen in war times. The farmers believe that if this be necessary in times of war it is also necessary in peace times. The National Nonpartisan League has advocated the elimination of these unnecessary manipulators for the past three years. This is the rankest injustice in our whole distributive system to producer and consumer alike. We are delighted to enjoy this newly won principle of economic democracy. [Applause.]

"Our bushel of wheat then either passes through the terminal elevator after a thorough mixing, in which the millers gain exorbitant profits, or it is carried on to seaboard. Prior to the war, when we lacked ships, millions of bushels of grain were congested at the seaports. The speculators said there was 'no demand,' and the price always fell at the time the farmer had wheat to sell. But here again our Government steps in in times of war and builds its own ships. We not only own them, but we are going to operate our own merchant marine. This is of wonderful but unseen benefit to the farmers away out on the prairies. So you see all the advantages which are coming out of the war. The farmer benefits at every turn in the road, from the time the seed is put into the ground until it reaches the world's market at Liverpool.

"When one stops to consider that out of our enormous exports, which have been the marvel of all the civilized world, the farmer produces 80 per cent, you can just begin to realize the tremendous benefit this will be to him, and we all know that when the farmer prospers the city people prosper; that when the farmer has a good crop the business men in the cities have a greater amount of trade. In a State like mine, where agriculture is the basis of nearly all the wealth, this fact comes home to us with greater force than it does to those who live in the congested cities of the East and are far remote from this vast source of national wealth.

"We are pleased to see our Government put into active operation the principles for which we have fought and for which we shall organize and continue to fight. [Applause.]

"I never use the word 'organize' but I think of a story of an old stage driver in Yellowstone Park. He became very proficient in the art of snapping his whip. He drove three teams of mules, and he could take his whip and clip a fly off the ear of one of the leaders. He could pick a cone off a pine tree and do other feats. One day we came along the road to a tree from which hung a hornet's nest. Right at the end of the nest a big hornet was dangling. I said to him: 'Say, Bill, you're such an expert with that whip of yours, I would like to see you clip that hornet off the end of that nest.' He replied, saying: 'Not for mine. I know better than that! Them fellows are organized!' [Laughter and applause.]

"And so all the independent and progressive citizens of the city and the country are going to unite, first and chiefly, for the purpose of winning the war, and, secondly, so that they may retain the blessings of these new-found principles of democracy which have come through the war. I have spoken for the farmer, but it is not only the farmers who will be benefited by the application of these principles of democracy to our economic life. In all the cities, and especially in the great industrial centers, the great masses of workers are receiving greater security in the means of living. The smaller business men are as much subjected to the domination of big business and have been discriminated against by the systems of transportation as much as the farmers have. They will appreciate as much as the farmers do the elimination of any useless intermediaries between themselves and the manufacturers.

"It is only by the union of all these forward-looking forces that economic justice may be further established. The old ideas

of partisanship have lost their virtue, have served their purpose, and should be relegated to the rear. Progressive men to-day are ashamed to give themselves in bondage to any party. Great times demand great men, and they are usually forthcoming. Men are not standing for party to-day, but they are standing for America.

"So to restate the blessings which will come to us through the war, and with special reference to the towns and farming districts of the West, I say great things, gentlemen, wonderful things! First and foremost, greater political freedom; second, elimination of grain gambling; third, Government control of transportation; and fourth, Government ownership of shipping. Thus in an emergency we have found it necessary to mobilize all these great economic forces in our program for national preparedness. It is shown that we must have a complete subordination of selfish private interest to a national purpose in every branch of war activity. It is not a party spirit, but it is a better one—the great American spirit. There is no partisanship in patriotism. President Wilson has demonstrated his right to the title 'The Spokesman of Democracy.' Every sign points to the birth of a new day, and under his leadership it is our hope to write a new charter of liberty and economic justice for the world in the same spirit that our forefathers wrote the Declaration of Independence. In union there is strength, and therefore it should be the prime purpose of every forward-looking people, whether they hail from the city, the factory, the mine, the forest, or the farm. United we stand, divided we fall." [Applause.]

War Finance and Other Matters.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 25, 1918.

Mr. HUDDLESTON. In his liberty-loan speech before the Philadelphia Five O'clock Club on April 7, 1918, Hon. William G. McAdoo, Secretary of the Treasury, said:

I think that a fair equipoise between taxation and bond issues is the proper way of financing this war. I do not believe, frankly, that we have that equipoise now. I do not think that we have applied taxation strongly enough. I think that the thinking men of America will realize later that a larger measure of taxation is not only necessary to finance this war, but it is the soundest thing that we can do for ourselves.

We are not going to effect the essential economies, we are not going to prevent the waste, which I think is one of the crowning sins of America's prodigality, unless taxation is applied more heavily. Of course, when taxation is applied heavily, man must economize. People must economize to-day, and it has a wholesome effect upon the body politic in a time like this when prices are mounting and when the great difficulty is to keep things within reasonable bounds.

PAYING FOR THE WAR.

It so happened that on March 30 and April 6 I had made short speeches in the House, in which I took the position that we were relying too much upon bond issues to pay for the war and that there should be increased taxes on incomes and profits. I urged this not only as a matter of justice to coming generations and the country's future, but as an economic necessity to curb inflation, with its attending extravagance and waste. I contended that America should give all its strength to pressing the war against Germany instead of devoting so much of its labor and materials to profit-making business.

I cited figures showing that many great industrial corporations in the United States are piling up millions from war profits and could well afford to pay greater taxes. I cited the case of the United States Steel Corporation, which in 1917, after paying all charges and taxes of every kind whatsoever, had made over 49 per cent on its common stock and showed that had it been located in Great Britain it would have paid \$153,962,387 more than the tax levied upon it by our Government and still have left 18 per cent earnings on its common stock.

I call particular attention to the facts: First, Mr. McAdoo's speech was the same in substance as my own; second, it was made on the next day after my speech of April 6; it was a liberty-loan speech and was made at the very outset of the third liberty-loan campaign. He considered it an opportune time to advocate an increase in taxes. If Mr. McAdoo's speech was proper and timely, mine was also proper and timely.

But the reception which certain politicians in Birmingham gave to my utterances was quite different from that which was

given Mr. McAdoo's speech by his Philadelphia audience. Mr. McAdoo was treated with respect, his views accepted as sound and patriotic, while I was deliberately lied on and charged with opposing the financial policy of the administration. On April 12, after Mr. McAdoo's speech on the 7th, the Age-Herald published a deliberately falsified report of my speech of the 6th. The report was given the false and libelous headline:

HUDDLESTON makes long tirade against bond issues by Government. Birmingham man in Congress delivered speech to audience of eight, in which he attacks entire financial policy of administration. Nothing suits this chronic critic of all war activity.

What I had to say was twisted out of all resemblance to my real speech.

This Age-Herald report was the signal for an attack on me at a "business men's" luncheon, in which a cut-and-dried resolution was adopted which charged that I had "arraigned the financial policy of the Government and had endeavored to put obstacles in the way of placing that loan"; that I had sought "to array labor against capital"; and declared that I was "not truly representing the loyal and patriotic citizens" of my district. The Age-Herald caricatured me as a Bolshevik, and the venomous editor of the News gloated over the resolution and filled a column with editorial abuse and lies. This was five days after Mr. McAdoo spoke in Philadelphia, taking substantially the same stand that I took in the House.

The attack on me was inspired by petty political motives. It was the fruit of a plot against me. There was neither truth nor sincerity in it. I was charged with attacking the financial policy of the administration, when the truth is that I was defending that policy.

I have sent my speech on "Paying for the War" to my constituents. I challenge my critics to point to a word in it which does not breathe the highest patriotism. By reading that speech those who want the truth may see what I said.

I had subscribed liberally to all the liberty loans. In proportion to my means I had already subscribed more to the third liberty loan than any man at the luncheon. Few or none of them had read my speech, yet they were quick to condemn me. Others are permitted to discuss financing the war. Why may not I do so, especially since my views are in support of the financial policy of the administration? The real truth is that my enemies were over-anxious. They were looking for something to find fault with; they wanted to find an excuse for knifing me. They jumped too quick, and simply made fools of themselves.

TAXES OR BONDS.

In a speech in Chicago made by Frank A. Vanderlip, chairman of war savings, on May 5, he said:

Obviously there are just two ways of financing a war: Either work hard and save all we can for war purposes or let business and comforts go on in the usual way and have the Government borrow indiscriminately. I prefer the former method. The latter, for one thing, would mean wild and limitless inflation.

But, to clinch the matter, Mr. McAdoo, in his official capacity as Secretary of the Treasury, on May 8 wrote Senator SIMMONS, chairman of the Senate Committee on Finance, a letter upon the subject of war finances in which he urged an immediate increase of taxes and said:

Nothing is more imperative than new revenue legislation at this session of Congress.

Mr. McAdoo said that, not HUDDLESTON. Now let the News and Age-Herald call him a Socialist and charge him with fighting the administration.

Commenting on Mr. McAdoo's letter, Hon. CLAUDE KITCHIN, Democratic leader and chairman of the House Committee on Ways and Means, said:

If there is a bill, the fellows who are profiteering right and left on the war will feel it. The taxes on excess profits and incomes will be raised so high that there will be little or no profiteering left in the hands of those who are now getting rich off the war.

And now President Wilson himself says that we must have a new revenue law. The President backs up his Secretary of the Treasury, and there can no longer be any honest doubt as to the administration's financial policy. Whether the bill is passed this summer or next fall, Mr. KITCHIN says that it will raise from three to four billions of additional revenue, and that 80 per cent of this increase will be taxes on incomes and profits. The profiteers are to be made to pay a rightful part of their immense gains. I cast into the teeth of my false critics the President's own words: "The profiteering that can not be got at by the restraints of conscience and love of country can be got at by taxation. There is such profiteering now, and the information with regard to it is available and indisputable."

So that it turns out that the ideas expressed in my speech outline the policy of the administration. Considered in this aspect, how diabolically false are the criticisms of the Age-Herald, News, and those for whom they speak!

The most ludicrous feature of the matter is the hypocritical attempt of the News to twist around into the attitude of supporting the administration's financial policy. Having denounced and misrepresented me for similar views, it now tries to pretend that it is standing by the President.

MY SPEECH WAS TIMELY.

But my critics say that my speech was made at the wrong time. Let us see. In the News of May 5 the editor, referring to my claim that profiteering corporations are inadequately taxed, says:

Originators of this drive ignore utterly, when they hold up the earnings of the United States Steel Corporation as an example of idle millions "unconscripted," that after those earnings are taxed corporation income taxes are imposed, and, in addition to that, individual incomes that mount into the millions.

The News believes that other millions should be exacted from the same sources, and several months ago repeatedly urged that Congress set to work to revise the Federal income-tax law so that the huge incomes should be taxed to the hurting point, if need be. The News was not alone in this insistence. Many of the great eastern newspapers joined their voices in the chorus. But Congress was silent. No effort was made at revision. Congress seemed satisfied to let well enough alone.

Passing by this editor's deliberate misrepresentation as to the 1917 earnings of the Steel Trust, which are shown by its financial statement to have been over 49 per cent on its common stock after paying all taxes, we find that the News "repeatedly urged that Congress set to work to revise the Federal income-tax law so that huge incomes should be taxed to the hurting point." Also that other newspapers did the same.

We have been floating liberty loans ever since last August. There has been no time when an argument for an increase in taxes could have been made more opportunely than recently, when the third liberty loan was being authorized. Mr. McAdoo thought so. Indeed, the need for such increase grows with every hour. If it was patriotic for the News and other papers several months ago to urge increased taxes, surely it was proper for a Member of Congress, while raising money to carry on the war was under consideration, to present the same point of view.

ABRATING LABOR AGAINST CAPITAL.

My critics falsely charged me with having tried to set labor against capital. There is not a word of truth in it. I have at all times used my influence with labor for industrial peace. I have not asked labor to make an abject surrender, but have always counseled peace and the patriotic consideration of labor differences. This was true as to the mining troubles last summer. I went to Birmingham to get in touch with the situation. I conferred with the miners and with Secretary of Labor Wilson. The operators ignored me, but the miners felt that I was a friend. I urged a peaceful settlement, and subsequently labored for months until a settlement was finally made under the Garfield agreement. I helped to smooth the situation by assuring the miners during the threatening days of February that Dr. Garfield would see that justice was done.

What do they mean by the charge that I have set labor against capital? Not that I have encouraged labor troubles; not that I have advised strikes, for this can not be said. Do they mean that I have set labor against capital by exposing the profiteering of the great corporations? Am I not permitted to tell the truth as to the immense profits that are being made; to show that both the Government and the people are being robbed? Am I not allowed to point to the millions of profits which the Government might tax to pay for the war? They ask too much who demand that I be silent. Duty requires that the patriot should speak, and if as a result the profiteer is put in a bad light, that is a matter for him to correct. I will continue to point at those who would sacrifice America for the sake of private gain. Let them understand that.

No; the criticism of me was fraudulent and insincere. It is Prussianism in politics, the might of lies that would beat down justice and truth. The representation as to my views was false; the criticism based thereon was false; the spirit behind it all was malicious and contemptible.

"WHY DO THE HEATHEN RAGE AND THE PEOPLE IMAGINE A VAIN THING?"

It is clear to every honest man that the charge that I was fighting the administration's financial policy is false. It is clear that the News, Age-Herald, and the selfish interests behind them misrepresented me and that their efforts to represent me as antagonizing the administration was malicious and deceitful; but this was to have been expected from them. They have pursued that policy from the very beginning.

The selfish interests were dissatisfied with my first election. They had already called me socialist, even as only a few days ago at the Nation's Capitol spokesmen for selfish interests called Secretary Baker and other officers surrounding the President socialists. Such critics would call the President himself a socialist if they dared. "Socialist" with them means real Democrat—

anyone who is interested in the whole people and not merely the upper crust.

Previous to my election to Congress I had served as alderman in Birmingham and had found myself in opposition to the old city hall crowd. I had opposed the Tidewater franchise, had antagonized the street car company, and, generally speaking, had shown myself unwilling "to listen to reason" from the gangster's standpoint. I did my part in forming public opinion which forced the old crowd out of office and put in the commission form of government. I won for myself the ill will of the gangsters and of the Age-Herald, always their organ.

Subsequently I was chairman of the committee having charge of the fight on the 10-year lighting contract, which was turned down by an overwhelming vote. Later on I took active part in the referendum on the water contract, and for two or three years carried on an agitation and litigation against the smoke nuisance from the Sloss coke ovens and to move the slag pile out of Second Avenue, so that the eastern end of our city might be more accessible and fit to live in. In these activities for the public welfare I had no selfish purpose in view, and when they ended dismissed them from my mind. But in their course I had offended selfish interests; I interfered with profits which might have been made; I gained the lasting enmity of a small but powerful faction which is opposing me even to this time.

The News and Age-Herald, mindful always of the will of the selfish forces back of them, ignored me after my election. They were crouching for a spring. With almost my first vote in Congress they launched themselves upon me. I voted against the adoption of the rules of the previous Congress. I wanted amendments. No caucus had been held; it was not a party question. The matter was unimportant. The rules have since been amended. Yet the papers sprang upon me as though I had committed a mortal offense. They rung the changes. I had destroyed myself, they said. No Member took any notice of my vote, but at home it was made the sensation of the hour by the false criticism of these papers. At once they proceeded feverishly to build opposition upon it. Opponents came out with a flourish. The papers gave them free space. They criticized me for party irregularity, and so forth, but later I published a letter from the Democratic leader exposing the thing and the campaign against me collapsed. My enemies had overreached themselves. They were too eager.

But the matter did not end with the primary election, although I was nominated by an unprecedented majority. The News and Age-Herald continued to pursue me. Though charging me with party irregularity, they tried to drum up a Republican opponent against me and gave free space and editorial mention to various Republicans. Their conduct was so scandalous that the county Democratic executive committee took notice of it and only failed by a tie vote to pass a resolution censuring them. Having finally succeeded in getting a Republican candidate out against me, these papers gave me no support. Nevertheless, I received 600 votes more than Mr. Wilson himself. But I did not get the votes of the faction that are now loud in criticizing me. They vote for Democrats only when it suits them to do so. The truth is that we have got an element of industrial and business men in our district who are not Democrats at all. They belong to the selfish interests and to inviolable government. This faction is not for me now, never has been, and never will be for me. To be frank, I do not want them.

"THE KINGS OF THE EARTH SET THEMSELVES."

When I first took my seat in Congress the Age-Herald sent a correspondent to Washington who wildly imagined that he was fit material for Congress. He aspired to succeed me. He sought from the first to disparage and belittle me, to assassinate me with innuendoes and false criticism. He has kept up this scurrilous work to this time. The News has backed up the mendacity of the Age-Herald with misleading criticism. I have ignored these deceitful critics. I have tried to win them by fidelity and conscientious service, but such as they are not to be reached by such means. I have been long-suffering and kind. Now I point the finger of scorn in their faces and hold them up to the execration of honest men as false talebearers. They have sought by every dishonest means to excite the people to hate and distrust me. If they could bring it about by artful lying, they would have me hooted and stoned by my own people, whom I am trying so hard to serve.

The News redoubled its efforts against me in March, 1917. I voted for the armed-neutrality bill, but the News was clamoring for war, and suspected that I was not anxious for it. It circulated a petition to give me instructions; a petition harmless in itself but wickedly designed by the News to club me into submission to its dictation. The News was then trying to make it appear that I was opposing the President. The deceitful pur-

pose of the News at that time was to destroy me politically. It then started the campaign that it carried on all last summer and is now pressing with such malice.

The News even criticizes me as not being happy in voting for the war. I voted for war. I did so because I thought the honor and dignity of my country were at stake. I hated to vote for it for I knew the awful consequences which must come. I pictured the sorrow and the suffering, the millions of desolate homes, and the cries of orphans and the tears of widows and mothers. God knows I would have put the war aside had my conscience not demanded otherwise. I did not go swaggering into the war, too stupid to see the consequences which must follow or too hard of heart not to grieve for them. I had considered the subject long and prayerfully. I hated to send my country into this awful war. I would gladly have given my life to have kept America out of the awful struggle.

And now that we are in the war, I have bent all my efforts to winning it. Every word I have said, every thought of my mind, every beat of my heart has been for the success of American arms.

"STAND BY THE PRESIDENT."

We have heard much during the past two years of "Stand by the President." Too frequently the slogan has been the cloak of hypocrisy. All too often the cry has come not from real friends of the President's policies but from those who are seeking a selfish advantage. It has too frequently come from politicians and selfish interests when they could twist the position of the administration to their own advantage or thought that the administration's attitude would promote their own private interests.

Among those who have made a fraudulent use of the administration's prestige are selfish persons who stand by the President when it suits their own interests, but who do not hesitate to betray him on other occasions. This has been true of much of the controlled press of the country, and particularly true of the News and Age-Herald. The latter during the last national campaign did not hesitate to detract from the President and to discourage his real friends. Its editor filled his paper with anti-Wilson dope and was quick to announce that Hughes had been elected before pivotal States had been heard from. It was true to form, for it has never been a Democratic newspaper in truth. It has spoken for the Steel Trust and other selfish interests, the owners of which never pretended to be Democrats. It has been at its heart Republican, sailing under Democratic colors.

The News, which aspires to be regarded as the President's mouthpiece, is wholly out of harmony with his truly Democratic views. It has not hesitated to sink the knife deep into his policies when it could safely do so. One notable instance is the News's attack on the policy of the Fuel Administration. When the coal-saving order was sent out last winter the News was loud in its protests. The pockets of interests that the News was sponsor for were touched, and it did not hesitate to make a vicious attack. In doing so the News spoke for the same selfish faction that is opposing me. This faction, never sincerely supporting the President, now has the brassy gall to attempt to justify opposing me because I did not support the administration's policy on conscription of soldiers.

I have been disgusted by the loud-mouthed hypocrites who have been hanging to the President's coat tails seeking to benefit themselves by the President's popularity. I have been disgusted by shameless demagogues trying to get public favor by shouting for the President. But I have not antagonized the President's policies. I have supported them in nearly every particular. There have been a few instances where I was compelled by conscience to hold to my own views, but wherever it was not a case of vital principle I have bowed to the wishes of the administration.

Since Congress convened in April, 1917, and declared war against Germany, 105 war measures have been passed. Practically all of these were measures recommended by some officer of the administration. I voted for all of these measures except four—the conscription bill, the explosives bill, the espionage act, and the recent bill to change conscription quotas. Never have I spoken a word of criticism against the President or any Cabinet member. To the contrary, I have defended them whenever the occasion offered.

The impression has been carefully fostered by my political enemies that I have opposed the President's wishes. They have sought to create this impression not by direct statement but by lying insinuations. They have tried to make me out as opposed to the administration. Now, then, I challenge my critics to specific statements. I have voted for every bond issue, for the revenue bill, for every appropriation bill, and to provide every soldier, ship, and dollar which might be required to carry on the war. I voted against the McLemore resolution

and for the armed-neutrality bill. What more would my critics have?

The News and Age-Herald have done their best to create the impression that I have opposed the administration. They have asserted it generally. They have garbled my speeches. They have criticized me and misrepresented me. They have bush-whacked me in an effort to create that false impression. All of it has been done with the definite purpose to oust me from Congress so that they may put one of their tools in my place. They want the ninth district represented either by a capitalist or by some soft tool who can be bent to their will. To this end they have used their efforts and their false criticism from the moment of my first election.

THEY ARE BETRAYING THE PRESIDENT.

I charge that the Birmingham dailies which have the shameless effrontery to criticize me as opposing the administration are not themselves giving the President their loyal support, neither they nor the faction for whom they speak. To the contrary, they are pressing policies which are embarrassing to the President and which make his task more difficult.

They are pressing for compulsory military service, not for war times but as a permanent thing for times of peace. Each of the dailies has repeatedly advocated universal military service and pressed that we should now enact laws establishing such a system as a permanent thing. This same feature of militarism is being pressed by the President's enemies the country over. It is a club with which they are striking Secretary of War Baker, who has refused to approve the measure or to consider it while the war is on. By pressing for universal military service now the Birmingham dailies are aiding the President's enemies; they are abetting the attacks on his Secretary of War. They are weakening Mr. Baker's influence and making the performance of his duties more difficult.

But this is not all. By pressing for permanent compulsory service now this faction is injecting into the present difficult political situation a question which will divide the people and cause sharp controversy. Agitation upon the subject at this time tends to disrupt American solidarity and make us less able to carry on the war.

The Birmingham dailies have been glad to give space to attacks on various departments, on Secretary of War Baker, Secretary of Labor Wilson, and various administrative bureaus. Any blatherskite in or out of public life can find space in their columns for some criticism of the Fuel Administration, Food Administration, the aeroplane production, or any other thing that would tend to discredit the administration. Recently these dailies gave big space to an attack by a disgruntled politician, in which he charged that the President had surrounded himself with a bunch of socialists and other irresponsibles.

The Birmingham dailies are opposing the President's wise and humane labor policies; not openly, of course, but, after their custom, by innuendo and implication. They are pointing the finger of suspicion at men who work with their hands and are full of charges of lack of patriotism in labor circles.

This talk is in the main false and deceitful. There is less labor trouble in the United States to-day than at any time in 25 years; less trouble in proportion to the number of workers than in any country engaged in the war. This is a fact, but you can not get it from the press. You must go to the records of the Department of Labor. Whenever there is labor trouble in our district the dailies give free space to employers who wish to denounce their employees as hoodlums, Bolsheviks, anarchists, or whatnot. The workers get scant publicity for their side.

This, again, is a most unpatriotic attitude on the part of the Birmingham dailies. It tends to provoke, not to suppress, labor troubles. It makes working men resentful to be abused and misrepresented. When differences arise between workers and their employers they are to be settled by mutual concessions. No permanent settlement can be made where an unjust surrender is demanded of the employee. Constant nagging at the workmen, of which our dailies have been guilty, constant suppression of arguments on their side, constant misrepresentation and abuse, all this tends to disrupt the solidarity of our people and to make us less able to carry on the war.

The Birmingham dailies are further embarrassing the President by pressing for extreme measures in regard to the war. They will not leave the President to decide. They cooperate with Roosevelt and the President's enemies, so as to embarrass him. They advocate extreme measures of diplomacy and war policy. They talk "unconditional surrender" and "Germany must be destroyed." They speak of new nations to be carved out of Germany and Austria, changes of boundary lines, and idly press for dozens of things which cause the enemy to stand

together more strongly and to resist us more violently. From the first I have insisted on leaving these matters to the President, where they rightfully belong. As Commander in Chief he should decide on what soldiers and ships we need. I stand ready to give them to him.

Charged with the power of negotiating treaties, it is for the President to say what our terms of peace shall be. I have left all that to him and have not so much as expressed an opinion upon the subject. I have kept my opinions to myself. I have wanted the President to have a free hand and have been willing to support him. The President wants peace and so does every sensible citizen. We want it upon terms consistent with American dignity and honor and with the future security of the Republic. I am willing to trust the President to deal with these things. Those who press for this or that and try to usurp the President's functions need to learn more of patriotism.

ISSUES OF THE CAMPAIGN.

The American Congress has adopted conscription of soldiers as our policy for this war. That is no longer an issue, and discussion of it is useless. I acted on this question when it was presented to me according to my best judgment and conscience and have no apology to make. I have at all times and on every occasion urged that the conscription laws should be obeyed. I have bowed to the will of the majority of Congress.

CONSCRIPTION OF LABOR.

But Congress has not adopted the conscription of labor as a policy. This is a live issue in the present campaign. My critics, through their spokesman, have advocated it. Their conscripted candidate against me must stand upon that platform. I shall not vote for the conscription of labor to earn dividends for the great corporations. If a citizen is to be conscripted, his service must be for the Government, not for any private exploiter of labor. I will not vote to conscript human beings and leave property free to earn profits for its owners. The secretary of the American Federation of Labor recently said:

We oppose the conscription of labor unless wealth is likewise conscripted. The claim that labor should be conscripted on the same theory that the country drafts its citizens for military purposes is not a correct comparison. The Government conscripts its citizens for service; the employer would conscript labor for exploitation. No one can deny the Government's right to draft any citizen for any purpose it sees fit when the Nation's life is in jeopardy. The dollar should at least be forced to surrender its per cent of rights, just as labor would be called upon to surrender its right of freedom.

We notify these employers and their spokesmen in the United States Senate that they can not use the war to establish principles of peonage that they long for when the days of peace return, while they insist on interest and on the establishment of depreciation funds, so that when the war ends it will be found that they have not only maintained well-rounded profits during this period of stress but that the people have paid for the equipment to make these profits.

This sounds like good sense and sound patriotism to me.

CONSCRIPTION AFTER THE WAR.

The faction opposing me also demand compulsory military service for times of peace. They demand that we shall now establish a compulsory military system as a permanent thing. Their conscripted candidate must stand on this platform. I shall not stand with him. We are fighting a war which requires every ounce of our strength. Our future military policy should be left for consideration after the war is over. We are fighting for peace; we are hoping by victory to make peace secure in the world and to render vast armies and navies unnecessary in the future. If we win, and win we must, peace will be made safe and conscription unnecessary. It would be a betrayal of our brave soldiers if when they come back from the war they find that the yoke of forced military service has been riveted on the necks of the people. I will not take part in such riveting. Those who favor it should support my "conscripted" opponent.

TAX THE PROFITEERS.

Another issue in my campaign is whether we are to tax the profiteers or to let them escape with their booty. My critics have denounced me for advocating taking a large share of war profits to pay war expenses. They have quarreled with me for advocating increased taxation. They have taken the position that profiteers are now paying enough and there should be no increase in taxes. Their conscripted candidate must stand on that plank also. I warn them that I stand with President Wilson in holding that no man has the right to grow rich out of this war. I shall favor levying such taxes as will take such ill-gotten riches for war expenses. I am willing within reasonable limits to leave the profiteers incomes comparable to what they received in times of peace, but I will not allow them to pile up their millions out of the misery and suffering of our people.

Upon these live issues I ask the support of patriotic citizens.

Italy Has Done Her Full Duty in the War.

EXTENSION OF REMARKS
OF
HON. ISAAC SIEGEL,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Monday, May 20, 1918.

Mr. SIEGEL. Mr. Speaker, Friday, May 24, will be the third anniversary of Italy's entry into the war.

All over America large mass meetings will be held to commemorate the event. In Washington a notable address is to be delivered by Secretary of State Lansing. In New York at a meeting to be held at the Metropolitan Opera House, Secretary of War Baker is to be the principal speaker. Everywhere from coast to coast the flag of Italy will fly side by side with the flag of the United States in recognition of her brave fight for the world's freedom from autocracy and militarism.

Italy has twice saved the war for the allies. The first time was when she declared her neutrality at the outbreak of the war. In this manner France was enabled to take the troops which had to be maintained along her boundaries adjacent and adjoining Italy.

Events are moving so rapidly from day to day during the past few years that each day's doings are quickly forgotten.

It was in May, 1915, that the battle of Verdun was reaching its greatest intensity, and Russia's forces were going to pieces in hasty retreat. The moment Italy declared war she relieved both fronts by the action.

Many have been the great and heroic deeds of this war, but the world will never forget the extraordinary deeds of valor performed in the defense of Italy's lines along the Piave River.

Italy has raised millions of men, and had we listened to the request made last year by Signor Marconi, the great inventor, when he headed the mission here last year, this war would have been lessened by many months.

The men who came here from Italy have helped in every way to build up America, and have demonstrated their real love and devotion to America by doing their bit in every possible way.

On April 6 last, the anniversary of America's entry into the conflict, monster demonstrations were held throughout Italy. The Monitor describes it in the following account:

WAR ANNIVERSARY MARKED IN ITALY.

ROME, ITALY.

The Coliseum was chosen as the scene of the public celebration of America's entrance into the war. The arcades were hung with the flags of the allied nations, and in the gallery above the second arcade were the children from the communal schools, wounded soldiers, and representatives of various regiments. A stand had been erected covered with a great tricolor banner, on which a number of distinguished persons, including ambassadors, ministers, deputies, and representatives of the allied armies, had their places. The arrival of Prince Arthur of Connaught was the occasion of an outburst of applause.

Speaking in the name of the city of Rome, the mayor, Prince Colonna, rendered a tribute of gratitude and admiration to the great American Nation. He was followed by Signor Berenini, minister for public instruction, who made a short speech in honor of the intervention of America and of the Italian troops fighting on the Piave, as well as of those of France and England. At its conclusion he presented a reproduction of the statue of the Victory of Brescia to the American ambassador.

In the course of his reply Ambassador Nelson Page said that the issue of the present struggle did not concern merely certain countries or peoples or nations, but the whole human race. What had to be decided was whether men should be free or slaves; free to enjoy the fruits of civilization won by many years of struggle and sacrifice or the slaves of those whose name would remain synonymous of broken faith, brutal force, and ruffianly aggression. After a brief review of the policy followed by Metternich, the speaker described Germany's 40 years of preparation for a war of aggression, and declared that to-day there was no possibility of choice; it was a case of either conquering or being conquered, and let the conquered beware! He spoke of recent events and of the need for the utmost resistance on the part of the allies. He told his hearers, if the war seemed long and tedious to them, to think what it must be to their enemies. They were a united people, but Austria consisted of a group of a dozen nationalities, in some cases hating their allies more than they hated the enemy and forced to fight for the perpetuation of their own slavery. Germany and Austria stood together as one in this war, and they were bound to become weaker as the allies became stronger. It was only a question of time, firmness, and resistance.

Speeches followed from Henry P. Davidson, of the American Red Cross, who expressed his admiration for the efforts Italy had made during the war, and declared that all the resources of the United States would be at the service of the struggle for liberty; from two American deputies, LA GUARDIA and Lenz, and from M. Franklin Bouillon. A message to President Wilson in honor of the occasion was then read by Guglielmo Marconi and dispatched from the Coliseum straight to Washington.

In Milan the day was celebrated by a procession through the streets; the flags of the allied nations were displayed and large crowds assembled at the Porta Venezia, the Cathedral Square, and at other places on the route. Speeches were made by the American consul and by

Benito Mussolini. The last named said that the people of Milan had wished to meet in order to show the warmth of their feelings toward American democracy. These were not due merely to the help America could give in the way of war matériel and of men but because she had recognized the justice of their cause and had made it her own.

Signor Mussolini paid a tribute to England, standing firm through the vicissitudes of the struggle, and to the heroism of France. No one, he said, could any longer, in good faith, "put credence in Germany's lies." She alone was responsible for the war. They might still have to pass through sad experiences, but just as the men who accompanied Christopher Columbus in his search for America reached land when they thought they had been deceived, "so we," declared Mussolini, "shall undoubtedly obtain the victory if we resist."

Prolonged applause followed, and shouts of "Viva America!" "Viva Italia!" while the bands played patriotic airs.

Let us, then, show our appreciation of the great sacrifice being made by Italy by cementing the ties of friendship existing between the two nations. Let us, then, send to Italy a few regiments of our troops, to show her we are with her to the end and that the Stars and Stripes now flying over camps at Foggia, Italy, are the symbol of America's guaranty that when peace comes America will never forget Italy's great achievements when the fate of liberty was in the balance.

EXTENSION OF REMARKS

OF
HON. JOSEPH J. RUSSELL,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, May 28, 1918.

Mr. RUSSELL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article written by my colleague, Mr. ALEXANDER, of Missouri, and printed in the Scientific American, upon the Government ship-purchase bill.

The article is as follows:

[From the Scientific American, Feb. 20, 1915.]

THE GOVERNMENT SHIP-PURCHASE BILL—A DEFENSE OF THE ADMINISTRATION'S POLICY.

(By Judge JOSHUA W. ALEXANDER, chairman of the House Committee on the Merchant Marine and Fisheries.)

During the fiscal year 1914 the foreign commerce of the United States amounted to four and a quarter billion dollars. The imports were nearly two billions of dollars and the exports over two and one-third billions of dollars. Not more than 10 per cent of this commerce was carried in vessels flying the American flag. It is estimated that foreign ship-owners collect from the American people two hundred and fifty to three hundred millions of dollars a year for the ocean transportation of passengers and cargoes to and from the United States. This sum materially affects our trade balance. Just prior to the European war we had ships of only 1,876,809 tons gross in the foreign trade. It is estimated that soon after war was declared 5,500,000 tons of foreign shipping was withdrawn from the ocean-carrying trade, and that 550,000 tons of German and Austrian shipping are interned in American ports.

The war in Europe had hardly begun when the American people became keenly sensible of the imperative need for an American merchant marine. England, France, and Germany and our principal carriers were at war, and we needed vessels clothed with the rights of neutrals to carry out overseas commerce. The ship-registry act admitting foreign-built ships to American registry for the foreign trade and suspending temporarily the provisions of our navigation laws requiring the captains and watch officers on vessels of the United States to be American citizens was passed August 18, 1914.

The administration was assured that the passage of this act would bring a large measure of relief.

No sooner was it passed, however, than the same interests called the attention of the administration to the fact that Great Britain, France, and Germany were writing war-risk insurance on vessels and cargoes under their flags, and unless our Government would do likewise the ship-registry act would not be much help. An act was promptly passed by Congress and approved by the President creating a War-Risk Board in the Treasury Department, and the Government has since written millions of dollars of war-risk insurance on vessels under our flag. No serious objection was urged to this legislation upon the ground that the Government should not engage in the insurance business. The emergency had to be met and private companies were impotent. This measure was urged by the people who now object to the Government ship-purchase bill and denounce it as paternalism and State socialism. They were to be the beneficiaries if the Government engaged in the insurance business. All the people will be the beneficiaries if the latter bill becomes a law.

After the ship-registry act and the act creating the War-Risk Board were passed, it was represented to the administration and to the committees in Congress having jurisdiction of the subject matter that, on account of the disturbed financial conditions growing out of the war in Europe, it was impossible for private persons, firms, and corporations to purchase foreign tonnage and bring it under the American flag unless the Government would guarantee their bonds or lend them money or in some other manner give them aid. This was the situation when I introduced the ship-purchase bill.

With our foreign commerce paralyzed and our utter dependence on the shipping of Great Britain for service, and her interests sharply antagonistic to our own, with ocean freight rates mounting higher and higher every day, and facilities under our own flag distressingly inadequate, it was thought by those charged with responsibility in the premises that if the Government must carry all these burdens in the interest of private shipping and give private shipping a free hand to exploit our commerce and charge all the traffic would bear, it would be wise to provide by law for a Government owned and controlled merchant marine operated in the interest of the agricultural, manufacturing,

and commercial interests of the United States and give that service at reasonable rates and at the same time compel other lines to do likewise. And right here is the rub. There is no reason to believe that the Government will enter into competition with the established lines where they are giving the people good service and at reasonable rates. It would be folly to do so.

What are the fundamental proposals in the ship-purchase bill now pending in Congress which the shipping interests are opposing so violently?

The bill provides that the United States, acting through a shipping board, may subscribe to the capital stock of any corporation or corporations now or hereafter organized under the laws of the United States or of any State or of the District of Columbia, the object of such corporation to be the purchase or construction, equipment, maintenance, and operation of merchant vessels in the trade between the Atlantic, Gulf, or Pacific ports of the United States and the ports of Central and South America and elsewhere to meet demands of the foreign commerce of the United States, or to charter vessels for such purposes and to make charters or leases of any vessel or vessels owned by such corporation to any other corporation, firm, or an individual, to be used for such purposes, subject to the approval of the Shipping Board.

The initial stock of the corporation shall not be over \$10,000,000, the shares of the par value of \$100. The capital stock may be increased by the Shipping Board, with the approval of the President. The United States shall subscribe for 51 per cent of the stock and each increase. The remainder may be subscribed for by the public or by the United States if not subscribed for by the public. The United States, through the Shipping Board, with the approval of the President, is authorized to purchase or construct vessels, to transfer them to such corporation, and to pay for same by issue of Panama Canal bonds. Such corporation shall make provision for sinking-fund and for depreciation charges, under the rules and regulations to be prescribed by the Shipping Board. The vessels purchased or constructed under the act shall be entitled to registry under the laws of the United States, but may engage only in trade with foreign countries or with the Philippine Islands, Hawaiian Islands, Porto Rico, and the islands of Guam and Tutuila.

The Secretary of the Treasury, the Secretary of Commerce, and three additional members, two of whom shall have practical experience in the operation of vessels in the foreign trade, subject to the direction of the President, constitute the Shipping Board and are vested with power to vote the stock of the United States in such corporation and to do all other things necessary to protect the United States and to carry out the purpose of the act, and, with the approval of Congress, may sell the stock of the United States in such corporation.

The President is given the power to charter naval auxiliaries and vessels belonging to the War Department suitable for commercial uses and not required for naval or military purposes in times of peace, and vessels owned and operated by the Panama Railroad Co. to the corporation created by the act, the vessels purchased or constructed to be of a type, so far as our foreign trade may permit, suitable for naval auxiliaries. The President is authorized to take them over for use as naval auxiliaries or for other purposes and at a reasonable price of rental.

Powerful private interests are arrayed against this bill. The representatives of special privilege and the powerful organization known as the Shipping Trust, with its affiliations in the domestic and foreign trade, oppose it. They are vociferous in the expression of their fears that the passage of the bill will involve us in grave complications with the belligerents. They may be counted on to promote legislation when it is for their benefit and will increase their profits, but view with grave concern legislation for the general welfare. Another class opposes Government ownership, honestly believing it is not a proper function of the Government. The first class also takes advantage of the reasons urged by the latter to defeat this legislation. None of these classes have proposed a rational plan as a substitute for the administration bill.

It is assumed that Government ownership is something new under the sun. Those who urge this objection assume that the American people are ignorant of the many activities of the Government in which the principle is applied. Private enterprise failed to build the Panama Canal, and the Government took over that great enterprise and has completed the canal in the interest of the world's commerce and for the national defense. The Government owns and operates the Panama Railroad. It was relocated and rebuilt within the last five years at a cost of about ten millions of dollars; also owns and operates the Panama Railroad Steamship Co.'s fleet of passenger and freight steamers from New York to Panama, and has done so for 11 years past. The average rate of freight between New York and the Canal Zone at the time the Government took over the operation of the line was \$8 per ton. This has been gradually reduced to the present rate of \$3.50 per ton on rough goods and \$4.50 per ton for general cargoes. The reductions made by the Government line similarly affected the rates by the other lines, all of which were of foreign registry. The result has been an immense saving to the Government in cost of construction of the canal; at the same time no complaint has been made that the reduced rates have not been remunerative to the foreign as well as the Government line.

The War-Risk Insurance Bureau is a Government activity that has worked well. The rates are one-eighth of 1 per cent. What they would be if the business was being done by private companies must be left to our imagination. The Government has a splendid fleet of vessels in the Revenue-Cutter Service under control of the Treasury Department. The successful and economic management of this fleet requires as high, if not higher, order of skill and efficiency than is required in the management of a fleet of merchant vessels.

The Government, through the Post Office Department, has taken over a large part of the transportation business heretofore done by the express companies and at a reduction of cost to the American people of about 50 per cent, and little heed would be paid to a demand to abolish the parcels post upon the ground that the Government should not engage in the transportation business.

The Government is building a railroad in Alaska, at a cost of forty millions of dollars, to unlock the mineral wealth of that great storehouse of nature for the benefit of all the people rather than have it exploited for the benefit of a few. It is to be hoped, if the Government goes into the steamship business, it will prove a greater success than has the operation of our railroads under private control, notable the New Haven under the Mellen régime.

The Government owns the greatest wireless system in the world, under the control of the Navy Department, which not only renders efficient service for all the departments of the Government but does a large amount of commercial business at reasonable rates, and could do more without additional expense of operation. Yet it is assumed that the Government should not engage in the ownership and operation of shipping of the foreign trade to meet the demands of our

growing and expanding foreign commerce, although private capital has failed for 50 years to provide such service for the American people.

The Washington Post of February 7 in an editorial very pertinently remarks:

"Private capital knows full well that it can not and will not establish an American merchant marine without the aid of public cash contributed in some way, form, or manner by the Government. It is to the interests of foreign shipping combines that no American merchant marine be established. It is to the financial interests of powerful representatives in the country of foreign shipping—commercial and financial interests—that no American merchant marine be established unless they can control it, save their European allies from American competition, and make such rates for freight and passengers as will afford them large profits. They are entirely willing to draw financial aid from our Government if the control of the marine is given them."

Up to the European war our foreign commerce was in the grip of foreign shipping lines. These lines were controlled by shipping rings, and competition for the most part had been eliminated. Rates had increased in the last few years 50 to 200 per cent. These combinations were so powerful in all the trade areas of the world that no independent ship lines dared to enter the field and compete with them.

SUMMARY OF THE MOST STRIKING INCREASES.

Since the outbreak of the war in Europe the following are striking illustrations of ocean freight rates:

Ocean freight rates on grain from New York to Rotterdam have been increased since the outbreak of the war 900 per cent; on flour, 500 per cent; on cotton, 700 per cent. From New York to Liverpool the rates on the same commodities have increased from 300 to 500 per cent. From Baltimore to European ports (excepting German) rates have been increased on grain 900 per cent; on flour, 364 per cent; on cotton, 614 per cent. From Norfolk to Liverpool rates on grain have been increased from 157 to 200 per cent; on cotton, 186 per cent. From Norfolk to Rotterdam the rates on cotton have been increased 471 per cent; to Bremen the rates have increased on cotton 1,100 per cent, namely, from \$1.25 per bale to \$15 per bale. From Savannah to Liverpool the rates have been increased on cotton 250 per cent; to Bremen the rates have been increased on cotton 900 per cent. From Galveston to Liverpool the rates have been increased on grain 174 per cent; on cotton, 361 per cent; to Bremen the rates have been increased on cotton 1,061 to 1,150 per cent.

CONTROL OF RATE SITUATION BY STEAMSHIP INTERESTS.

Ocean freight rates are still rising and are limited only by the greed of the steamship owners on the one hand and by what the traffic can stand on the other. The Government has no power to control or regulate ocean freight rates; it can not under existing law protect our foreign trade against these extortionate and hurtful charges. The steamship owners can increase rates without notice upon the instant and our business men are helpless. The steamship companies are their own masters, and they do as they please with the transportation of our exports. As already shown, they are seriously checking our foreign trade, and in some cases, such as lumber and coal, are stopping it altogether.

It may be that we can not buy any ships. If so, great is the pity. The situation is exasperating and demands an heroic remedy. The shipping combine, who are so deeply concerned lest our Government would involve us in serious complications with the belligerents if we would buy some of the interned ships belonging to the subjects of Germany, should contain themselves in patience. The President of the United States, under whose supervision this law will be administered, may be trusted to have a greater regard for the public welfare than they have shown and to observe in letter and spirit our duties as a neutral. At the same time he will demand that the belligerents shall recognize our rights as such.

One thing is certain, the present situation has demonstrated our absolute need of an American merchant marine, not only to extend and protect our commerce in the over-sea trade but as an arm of the national defense. It is to be hoped that this lesson will not go unheeded and that selfish interests may give way to the general welfare. The plan proposed may not be the best that could be devised, but it is worthy of the consideration of all thoughtful and patriotic American citizens.

As yet no better plan has been proposed.

Agricultural Appropriation Bill.

SPEECH

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 18, 1918.

The House had under consideration the conference report on the bill (H. R. 9054) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1919.

Mr. BURNETT. Mr. Speaker, no one can charge that in the position which I shall take in regard to this bill that I am influenced by any sectional spirit or by any geographical lines. My people are not wheat growers. There is not one acre in a thousand in my part of the country that is planted in wheat. Yet, Mr. Speaker, they realize that the same kind of corns that are in their hands are in the hands of their brother farmers of the West, and therefore when I ask for justice for the wheat growers of the West I reflect the sentiments of the farmers among my own people. [Applause.]

Last fall a year ago in my campaign there was great talk of an embargo on wheat. I went before my people and said, "Gentlemen, I am opposed to it, because if they have an em-

bargo on wheat the next thing somebody will be wanting an embargo on meat, an embargo on cotton, and all other farm products. I am opposed to the price fixing of farm products from alpha to omega, from Dan to Beersheba, and from Cape Cod to Kalamazoo." [Applause.] I believe that it is wrong, but we are in it. I agree with the distinguished gentleman from Texas [Mr. Young] in respect to the prophecy that he made several months ago that whenever we fell into this price-fixing trap other evils were going to follow from it.

Now, we find his prophecy being fulfilled. Yet, Mr. Speaker, Congress did fix the minimum price of wheat, and from that the President fixed the maximum, and if Congress fixed the minimum too low we ought to be willing to correct it. The prices of all things that go to make the crops of the farmer have increased, including the price of labor, and if \$2 was a fair minimum a year ago \$2.50 now would not be an unfair minimum. [Applause.] Gentlemen, let us be just. Let us get above sectionalism. A few days ago we heard much about geographical lines, and I said, my friends, there is no such reason as that kind impelling me. When the southern farmer goes to a store to buy flour, if he has not raised a lot of corn they make him buy as much of substitutes as he buys of the flour, and by the time he does this the price of his flour is enormous. Then you are encouraging the high prices of the substitutes. You are encouraging the high prices of wheat, perhaps, and yet if you will make a fair price for the wheat and a fair price for the substitutes nobody is hurt. Let us have a fair price for cotton and other things as we go along, but not by the price-fixing method.

There is no man that knows better than the western farmer what it costs to make a bushel of wheat; there is no man that knows better than the southern farmer whether it is profitable to raise cotton at 30 cents a pound when all other articles are going higher than a cat's back all the time. Therefore, let us see if we can not do that which is patriotic, that which will help the whole country and not the western farmer alone or the eastern dairyman alone.

There is no denying the fact that if we make the price of wheat too low, so it will not be profitable to raise it, the farmer will be compelled to go to growing other things. So let us have an equilibrium, let all have a fair profit, let the man that follows the plow, whether in the East, the South, or the West, get something from the sweat of his face. Let the dairies of the East make a fair profit, but do not oppress the farmer in one section of the country in order to build up the dairy interests in the East or the great manufacturing interests in any part of the country by furnishing them cheap feed or food.

Patriotism is fairness; patriotism demands that we should not undertake to break down one section of a great nation to favor another. Men from the West are volunteering; the boys from the wheat-growing sections of Oklahoma are over there in the trenches, and while they are there fighting for the cause that they know is right and following the flag that they know is pure let us see to it that in their sections of the country their people are not injured to benefit some other portion of the Union. [Applause.]

If we of the South join the East in oppressing the farmers of the West, how long will it be till they will retaliate on us by joining the East to beat down the price of our cotton?

Suppose Congress should undertake to fix the price of farm implements or shoes or clothing, what a howl would go up from big manufacturing interests against what they would denounce as an outrage; and yet if we fix the price of wheat or of cotton, why should we not also fix the price of that which the farmer buys to make his crop? Every few days we hear some gentleman from the big manufacturing States threatening to fix the price of cotton, and at once cotton begins to go down. Some gentleman within the last day or so introduced a bill to fix the maximum price of cotton at 20 cents per pound and at once it dropped \$10 a bale.

I am opposed to this whole price fixing of farm products. The laborer is worthy of his hire, and instead of fixing the price of his sweat and toil rather let us regulate the profits of those who prey upon him. Supply and demand are the best price fixers that we can have for farm products. Let Congress lay its heavy hand on the Wall Street gamblers who exploit the farmer and the products of the farm rather than on the farmer and the farmer's wife and children, who toil from "early morn till dewy eve" to make an honest living.

I have said that but little wheat is grown in my district, but my people are just and fair, and they would loathe me if I, by word or vote, should try to do an injustice to their brother toilers in the West.

I can not support the McLaughlin motion, because it is cumbersome, confused, and abounds in provisions for tariff regula-

tions; but I am for the Gore amendment, which increases the minimum price of wheat to \$2.50 per bushel. It was \$2 wheat that helped to win the West for President Wilson in the last campaign. Since that time the price of farm labor and of everything the farmer has to buy has increased enormously, and what was a fair price to him then is not a fair price now.

Cotton was then 10 cents a pound less than it is now, but everyone familiar with cotton growing knows that 30 cents is not now too high for that great staple. Gentlemen, let us not be selfish. "With what measure ye mete it shall be measured unto you."

In my views on this question I have the support of the national president of the Farmers' Union, Mr. Barrett, and of the Association of State Farmers' Union Presidents, of which Mr. Ford, president of the Alabama State Farmers' Union, is a member.

The following is an extract from a letter which I recently received from the Association of State Farmers' Union Presidents: [Association State Farmers' Union Presidents. Official headquarters, New Orleans, La. John A. Simpson, president, Weatherford, Okla. O. P. Ford, vice president, Birmingham, Ala. H. Arthur Morgan, secretary-treasurer, Galvez, La.]

TO THE MEMBERS OF THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES:

As president of the Association of State Farmers' Union Presidents, which includes the 10 cotton States, I desire to reiterate the position of our organization on the question of price fixing. We are absolutely opposed to all legislation of that kind for the reason that we believe it is unnatural and impractical. Besides we know by experience, as in wheat pricing, the producer suffers loss while the manufacturer gains, while the consumer receives no corresponding benefit.

While we would much rather see restrictions removed as to wheat than to merely try another price, yet we fear the only practical help is the relief provided in the Gore amendment, and therefore we solicit your support of that measure.

We have positive knowledge that the low price put on 1917 wheat fed millions of bushels to hogs and horses, and that it is still being fed. The farmer has fed his wheat because he could not haul a load of wheat to town and take back as many pounds of corn, oats, or barley. The Government thinks the farmers are hoarding their wheat. It is worse than that; it has been fed. So far as bread for our soldiers is concerned, it might as well have been subordinated, done by a wheat-pricing committee two-thirds of whom never raised a bushel of wheat in all their lives. There are several million acres of fall wheat that can not make more than five bushels per acre. The present price of 1918 wheat will give the farmer about \$1.90 per bushel. The Gore bill provides \$2.50 per bushel to the farmer. That difference will mean plowing up or letting stand every acre that only promises five bushels per acre.

When one product, as wheat, is discriminated against, production of that product will neither be conserved nor even normal production maintained. You have wheatless days and the anomaly of the substitutes costing more than the thing you are trying to save.

If we need more wheat and you feel like the Gore amendment will save for harvest fall wheat that will otherwise be plowed up, and that it will sow more acres of spring wheat and save 1918 crop from going to the feed lot, vote for this amendment.

JOHN A. SIMPSON, President.

On April 10, 1918, C. S. Barrett, president of the Farmers' Union, wrote Hon. SCOTT FERRIS as follows:

DEAR MR. FERRIS: The question has arisen as to the attitude of organized farmers on the Senate amendment to the agricultural appropriation bill providing for a price of \$2.50 per bushel for 1918 wheat to the farmer. Personally I am in favor of the amendment and know that more than 90 per cent of organized farmers are for it, regardless of location or what they raise.

Very respectfully,

C. S. BARRETT, President Farmers' Union.

Army Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. HOMER P. SNYDER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 28, 1918,

On the bill (H. R. 12281) making appropriations for the support of the Army for the fiscal year ending June 30, 1919.

Mr. SNYDER. Mr. Speaker, nothing could be more pleasurable to me than to vote for this measure. In the past I have favored every bill tending to the strengthening and support of the Army and Navy, but in every instance that action was tinged with regret that these bills were insufficient to provide the necessary assistance for our purposes.

This measure, however, exceeds my fondest anticipations and in a way atones for what may be denominated as our tardy action in the past, as far as these appropriations are concerned. I have nothing but words of praise for this proposed legislation and, in case the funds thus provided are found insufficient for the immediate purposes for which they are designed, I am, for one, ready to assist with my vote a measure which will, be-

yond doubt, produce the revenue necessary for the ample equipment of our Army and the means to carry out our plan for defeating the Hun and making the world safe for democracy.

This is not the time to attempt to be frugal or pennywise in these appropriations. This war must be won, and the winning of it is now, I believe, our task and our responsibility. In supporting and passing this bill we are progressing along the lines of preparation and safety and proclaiming to the world that the United States of America is not only ready but willing to sacrifice its last cent and its last man not for the mere supremacy of arms, not for a victory to simply exploit our strength or our resources, but for a result which will insure to the world peace, good will, and the uplifting of every race without regard to color, creed, or previous degree of servitude.

Preparation for and the carrying out of such a policy is now our object, and the sooner that task is performed and that result attained the better it will be, and the quicker we shall prove that righteousness, justice, and mercy are the attributes for which we have striven and which, having attained them, we shall share with all men.

Ordnance Development.

EXTENSION OF REMARKS OF HON. CHAS. POPE CALDWELL, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, Monday, May 27, 1918.

Mr. CALDWELL. Mr. Speaker, we have heard that "food will win the war," that "ships will win the war," that "aircraft will win the war," and a number of similar statements. But in the last analysis it is men with guns and ammunition that will win the war, and all other things are only incidental to them.

We have the men, or can get them. Have we the guns and ammunition, or can we get them?

With a view to answering these questions I have looked into the ordnance situation with a great deal of care, and while I am not altogether satisfied with the progress that has been made and would have been happier were conditions better, I am forced to admit that, considering the smallness of our beginning, the demands of our allies, and the priorities of the Shipping Board, of the Navy, and the air service, the strides made and things accomplished reflect credit upon the men who have recently had the responsibility of producing the guns, ammunition, and equipment for the Army. They more than justify the legislation under which Gen. T. C. Dickson was permitted to reenter the Army.

When we entered the war our allies were holding the enemy and had been for a long time, depending upon America for supplies in huge quantities and of all kinds. Our entrance would have been a burden if we had turned our industry from making their necessary supplies that they were using to creating the initial supply for our Army that could not be used directly against the enemy for a year. Their needs were, therefore, of first consideration and have been given priority over every need of our Army, Navy, and shipping program.

The Navy is our first line of defense. Its task has been to clear the sea so that our Army could cross when ready. Its needs have been second only to the requirements of our allies.

Men and munitions are worthless unless there are ships. The allies, our Navy, and our Army are dependent upon the Nation's success in keeping afloat enough ships to carry men, supplies, and the necessary commerce. If the U-boats can not be destroyed, America must build ships faster than they are sunk. The Shipping Board had, therefore, the next call upon the production capacity of the country. Aircraft production was also properly given priority, as it was essential that the allies should retain control of the air.

To make ordnance for our allies and our Navy and air service and machinery for our Navy and our merchant marine requires the same kind of machinery as is needed to manufacture ordnance and supplies. And what is more important, yet seldom thought of, is that we had little machinery a year ago, less tools to make the machinery, and few men who knew how to make either.

The task, therefore, was to get the toolmakers, to augment their numbers as fast as possible, fashion the tools, make the machinery, build factories, then manufacture the necessities in the order of priorities already outlined.

In a little while our difficulties will be over, for we are training the men and producing the tools and machinery so rapidly that the peak has been passed in the requirements for the Navy and merchant marine, and much has been done toward meeting the ordnance requirements of the Army.

At the beginning of the war the Ordnance Department was conducting a business of \$14,000,000 per year. To do this it employed 97 officers and 700 enlisted men and almost no civilians. To-day it is doing business at the rate of \$4,000,000,000 per year, represented by direct appropriations and contracts authorized—twelve times the total cost of the Panama Canal. To handle this business the Ordnance Department has built up an organization of 5,000 officers and more than 20,000 civilian employees—a large number, seemingly, but actually small when compared with the magnitude of the business conducted. A large part of these are not located in Washington, but are scattered throughout the country, in close touch with the manufacturing concerns. For example, 1,000 officers and enlisted men, the great majority of whom are of necessity officers, are engaged in inspection, besides a large number of men who watch the manufacturing of products in the plants. For conducting the work of the Ordnance Department outside of Washington a dozen district officers are maintained throughout the country, the locations being determined by the proximity of the plants manufacturing the most important matériel.

The ordnance matériel, as it is called, may be considered in three classes: (a) personnel and horse equipment, (b) small arms, (c) artillery.

(a) In number of complete items the personnel and horse equipment far exceeds the others, and the urgency in the beginning exceeded the others because the raw recruits before being taught the manual of arms must be provided with personal equipment and a multiplicity of other things. In the equipment of personnel and horses, for instance, we have hundreds of items let in contracts covering in some instances 75 items each, many of the individual contracts taking nearly the entire production of the manufacturing plants.

Out of the entire list of required equipment there have not been over a dozen items that have caused any concern, and the setback on these few has been due to the lack of raw materials or of intricate machinery which could not be produced in a hurry. Owing to recent events the production of equipment for troops is being very largely increased, and notwithstanding the increase in the Army, all troops that can sail, as well as the troops in training camps, are being properly equipped as necessity requires.

For illustration, take the item of bayonet scabbards used by the Infantry. The total requirements up to January 1, 1919, are 2,455,895, whereas 2,514,695 have been ordered. The requirements to date are 1,200,000, whereas over 2,000,000 have been completed. This is representative of the program as a whole, less excellent production records being the exception.

Contracts for the more important ordnance matériel have been placed with over 800 separate manufacturing companies, each operating from one to a dozen plants, located throughout the country from Boston, Mass., to Benicia, Cal., and from Montreal, Canada, to Waco, Tex.

The question is asked, Why is it that the factories were not ready to produce for us at once in quantity when they had produced such quantities for our allies before we entered the war? The reason is simply that the items manufactured here for our allies were really very few in number and the quantity was almost infinitesimal in comparison with the production required now; and the items required by the allies were in many cases of different size and character than those required by America. In some matériels, such as ammunition for the newly adopted French field gun, the previous factory development has helped—in other cases, as in heavy artillery, it has been a hindrance.

(b) The most important of all things in a soldier's equipment is the rifle. We are equipping all troops now going over with the United States rifle, 1917, modified Enfield. There has never, even in the very beginning of the war, been any serious shortage of rifles or bayonets. In the case of rifles, the plant development for foreign orders had been large, and at plants and arsenals the Government orders were in some cases anticipated. In one plant—Winchester—millions of dollars were spent in preparation before an order was placed, even informally.

At the beginning of the war Springfield rifles, 1903 model, were being produced at the rate of about 10,000 per month. This jumped in September to 20,000. Of the (Enfield rifle) United States 1917 type, which is the accepted type and the type which has proven its worth in actual warfare, the total jumped from 1,550 last August to over 12,000 in September, 50,000 in October, 120,000 in November, and finally reached 200,000 in March. The rifle production is considerably ahead of schedule requirements, and it is expected that the entire requirements for the year will

be completed during the coming summer. In bayonets, similar conditions occur, the production having substantially kept pace with the rifles.

On the other hand, there is still a shortage of pistols. Only two plants were equipped for pistol and revolver output, and it was impractical to change over other plants to increase the capacity earlier in the year, because these plants were needed in the manufacture of the more important rifle. At the present time, however, the Winchester Arms Co. has progressed so far with its rifle orders that it has taken also a contract for 500,000 pistols. The output is in the neighborhood of 40,000 a month at present and is rapidly increasing. Negotiations have been completed with the Remington Co. for 500,000. This will not produce the quantity required and other facilities are being developed.

The output of machine guns is well up to the estimate of production and to the requirements. The Browning machine gun has gone through an exhaustive test, and as a result has been recognized as the best gun in the world. While the actual deliveries of the Browning gun have only just begun, sufficient numbers of other types have been produced to satisfy all of the demands to the present time and up to the date when the heavy Browning will be delivered to the troops. We have 2,500 Colt, 2,500 Lewis, 3,400 Hotchkiss, and 6,600 Vickers, of the heavy type used only in the field. This is in addition to the French Chauchat, large quantities of which have been delivered to us in France.

Of the lighter machine guns used for aircraft work, 16,000 of the Marlin synchronized type have been delivered up to May 1, and 5,000 are expected per month. Of the Lewis flexibles, 4,500 have been delivered; of Vickers, light, 2,000; of the light Browning, called automatic rifles, the deliveries were begun in February, and the output through April was 1,000, for May 1,200, and for June there are expected 4,000; and by December 31 the total output of 75,000 is expected. In other words, the requirements of the increased Army will be met.

Of the heavy Browning, the schedule requirements for the year called for 26,000, while the estimated deliveries are 48,000; the actual deliveries, beginning in May, are estimated at 800, while in August 5,000 deliveries are expected, and in November 13,500. As I have said, the guns already produced and those obtained from the French have been ample in quantity to supply all of the needs of the troops and will be sufficient until these heavy deliveries are made.

When war was declared we were much impressed with the statement that Germany, after 40 years of preparation, had laid up a reserve supply of over a billion rounds of ammunition. After 40 weeks of preparation the United States had in reserve a supply of 1,187,209,000 rounds of .30 cartridges for use interchangeably in rifles and machine guns. This is one item alone.

(c) In the manufacture of artillery ammunition of various types the orders previously produced for England and France have been of some assistance in plant development, although of no great moment, because the size of the foreign orders were relatively small. For the very important pieces of artillery, the 75-millimeter field gun, shrapnel can be manufactured in almost any quantity desired. In January 125,000 complete rounds were completed, a completed round being a single completed piece of ammunition. About the same number were turned out in February, while in April the output was increased to 900,000, and will be maintained at about this rate. None of this matériel is yet being shipped, because the French are furnishing all that is required for the present.

The output of 75-millimeter high-explosive shell is just beginning; 248,000 rounds were produced in April, 1,000,000 are expected in July, and 2,000,000 rounds in September. There are some 20 contracts for this shell and forgings and some 40 contracts on machining. The reason the output has only just begun is that at the beginning of the war there were practically no machine tools adapted to this work and it was necessary to start at the beginning and build tools to make the machines to finish the shells. It may be of interest to those who are not familiar with the details of ordnance matériel to know that a single 75-millimeter shell has 63 parts; that is, 63 pieces have to be manufactured separately out of different kinds of material; in fact, a single shell is as complicated as a watch to produce and assemble, and almost as delicate.

Some idea of the complexity of the problems thrust upon the manufacturers of the country by the Ordnance Department as a result of our entering the war can be gained from an analysis of the single item of ammunition for small-sized cannon. Among the materials used in such ammunition are steel, copper, lead, tin, brass, bronze, felt, cardboard, paper, calico, and tin foil, in addition to the explosives.

It is very encouraging to note the remarkably excellent condition of the vital matériel which has been discussed. The Ordnance Department, on the other hand, recognizes that the immediate situation in artillery is serious and is endeavoring to expedite the production. So far there has been no shortage. The recent developments in France, however, have been showing more and more the necessity for laying stress on this part of the program.

It is necessary to recognize that big guns can not be built in a day. Neither can the machines to make the guns nor the machine tools to make the machines to make the guns be built in a day nor a week nor a month, for that matter. The tools necessary to make the lathes on heavy cannon, 10-inch and upward, have to be produced before the lathes themselves can be turned out; and this inevitably takes time. The making of forgings for guns has created an entirely new industry.

One of the most important of the guns at the present time is the 75-millimeter field gun; of these, 5,589 have been ordered in the United States besides those which are being purchased from the French. This size gun is also used for antiaircraft work. Some 4,000 are expected to be completed during this year. This remarkable capacity has been developed from absolutely nothing a year ago. There is now an ample supply of machines for manufacturing small and medium sizes of artillery, 6-inch and under. There is still shortage in the large machine tools required for turning, boring, pressing, and milling, notwithstanding the utmost pressure which is being brought to bear upon manufacturers. This fact, however, does not by any means indicate that we have been backward in production during this period. As a matter of fact, the tool industry was contracted for nearly to its full capacity by England and France. These contracts could not be broken without damaging the cause much more than would have resulted from transferring work to American contracts. These tool contracts are only recently expiring, so that commitments can be taken for the War Department.

In other cases the Navy has had priority, which has resulted in a delay for the ordnance, although accelerating the naval production.

At present we are making three models of the 75-millimeter field gun, all of which use the same ammunition. But it is intended that the French model of 1917 shall be the standard type used by the American Army in France. It is expected that by January 1, 1919, there will be delivered 1,400 of the model of 1916, 640 of the model of 1917, and 1,225 of the French model of 1917, creating a reserve supply of about 1,000, besides meeting the estimated requirements of that date. After this time we will also be able to produce the standard type of 75's at the rate of 480 per month, so as to fill the replacement requirements.

We have had much difficulty in securing carriages for these guns, but the difficulties are being fast overcome, and it is confidently believed that by the 1st of January, 1919, there will be sufficient deliveries to meet requirements. In the meantime present requirements are being met by over-sea purchases and a few 3-inch and 3.7 guns manufactured and shipped from this country.

The 6-inch seacoast gun we are using for heavier work will soon be supplanted by the 155-millimeter gun with a range from sixteen to seventeen thousand yards. Orders have been placed for 1,449, of which perhaps 400 will be delivered by the 1st day of January, 1919, and thereafter at the rate of about 200 per month. The limiting factor in the production of these guns is the forgings. Forgings are on order in six of the largest steel establishments of America, but because of the general lack of knowledge concerning their manufacture there have been killing delays, resulting in very small deliveries.

The 155-millimeter howitzer is a shorter gun with a correspondingly shorter range; in other words, a mortar of 155-millimeter caliber and movable. It is expected that by January 1, 1919, approximately 1,500 of these guns will be delivered.

To meet requirements pending the delivery of the howitzers, there is also being manufactured an 8-inch and 9.2-inch howitzer of American design.

The third type of the mobile artillery is the 240-millimeter howitzer. The first of these guns will be delivered some time in July, and thereafter the deliveries will increase very rapidly, reaching over 100 per month in November, with their carriages. It is believed that we will have by January 1, 1919, 9,237 of all these sizes of cannon, 1,202 having been already delivered.

In laying out this program the department has established 11 gun-forging plants and has given large financial aid and much technical assistance. It has been necessary to make the tools with which the machinery could be made, and then to make machinery with which the guns were to be made; and then to build factories, assemble workmen, teach them how to

perform their tasks, find the material, and finally to manufacture the guns. In many instances, in addition to these things, houses for the workmen to live in were constructed.

While this program was going on the necessity for heavy ordnance has not been overlooked. We have laid out a program for 8, 10, 12, and 16 inch guns, and 12 and 16 inch howitzers in quantity, many of which have been already supplied from the Coast Defense Service and the Navy, and which are to be replaced under contracts already let. All of these guns will be placed on railway mounts, the construction of which is a task in itself. I have seen a picture of the largest of these mounts. It consists of the rolling stock of two steel flat cars, of 100,000 pounds capacity, joined together by bridge work larger than any girder that I have ever seen on any kind of construction. Upon this mount the gun will be placed in such a way that its muzzle may be elevated or lowered. The mount will be carried along the railroad track under power to specially constructed spurs that will be run from the railway track toward the enemy territory. These spurs will have right and left curves, so that the gun may be pointed in any direction required, the recoil having been worked out to a nicety. They will be ready for delivery in the spring of 1920, when it is hoped that they can be used against the German fortifications on the Rhine.

When we shoot these guns they will speak with the voice of America in an accent the Kaiser can understand.

I have found very gratifying conditions in developments of high explosives, armor-piercing bullets, and new appliances with which we expect to feed the Kaiser and his armies with a concentrated dose of their own medicine. On the whole, therefore, I am safe in saying that while we have not the guns and ammunition we would like to have at this time and have been delayed because of the prior requirements indicated, we have more and, in some cases, many times more than it was predicted we could get, and are well under way to have all the guns and ammunition we will need and when we need them.

"The Third Liberty Loan."

EXTENSION OF REMARKS

OF

HON. WILLIAM W. HASTINGS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 29, 1918.

Mr. HASTINGS. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a short patriotic address delivered by Hon. Houston B. Teehee, Register of the Treasury, to his coworkers down there.

The address is as follows:

MY FELLOW WORKERS: It is somewhat of a tragedy of mind for me to assume the rôle of a speaker when I have for several months been occupied with tasks, frequently until "midnight's holy hour," that required no oratorical effort. Nevertheless, it is indeed a pleasure to say a few words to you concerning the purpose of the work in which we are now engaged.

We need not be reminded that our country is at war. This is self-evident. That fact is known in every American home. War affects everyone, though in varying degree. We perhaps do not fully appreciate the enormity and the enormousness of that fact. If by this meeting we can the more fully realize and appreciate the meaning of this war, we will, indeed, be rendering a great and proper support to our boys in the camps, on the high seas, and on the bloody battle fields of Europe. This will be the burden of what I have to say.

Prior to the engagement of our country in this world struggle our people had directed their efforts in the pursuit of peaceful industries, in the development of our resources, and in the improvement of our social organism, to the end that the happiness and prosperity of mankind might be promoted. Our energies having been so directed we had little or no thought of war. We were wont to believe, and did believe, that mankind had so progressed in the march of civilization that such a monstrous proceeding as war was a thing of the past, with no place in our annals, that we had indeed entered the dawn of the millennium, when a thousand years of peace should reign over the earth. With a great expense of water on either side of us we believed we were safe and secure from the blighting hand of war. The song and hum of our busy marts of trade and traffic had lulled us into a sense and feeling of complete security. Even for two years after the first stroke of the mailed fist in Europe we endeavored by the art of diplomacy to ward off the blow that would set America afire. During this period of our trials it became more evident with each passing day that when the dogs of war were let loose in Europe on August 2, 1914, without a single word of warning, that the clock of time had struck the hour when the sons of America should go through the ordeal of fire to maintain and sustain those principles and ideals of American freedom and liberty the foundations of which were laid amid shot and shell by our forefathers 142 years ago, or else surrender to the war lords of Germany without a single stroke in defense of American ideals, to our everlasting shame, disgrace, and dishonor as a Nation. We rightly and righteously chose to fight, so that to-day thousands of our boys are fighting against the

brutal hordes of the German Empire and her allies, from the devastated lowlands of Belgium, across the blood-soaked plains of France, to the snow-capped peaks of Italy.

We need not recount the brutal atrocities committed by the common enemy of civilized mankind, for that would be too nauseous and horrific. They are brutal enough that the conscience of the civilized world is staggered, dumbfounded, and paralyzed beyond expression. Had Darwin lived in this day and age he would have had no difficulty in determining the source of mankind. He would have saved himself a great deal of theorizing in his treatise on "The Descent of Man." Without investigation he would have said that there are two races of beings, the human race and the inhuman race, the one created in the image of Him who presides over the destinies of nations and who will raise up armies to fight our battles, and the other descended from the brutal and ferocious tribe of gorillas. To-day the human race fights against the inhuman race, the human race of America and her noble allies against the inhuman race of Germany and her ignoble allies.

Twice has the clarion call been sounded to the people of America to come to the aid of their country with their material wealth, and they have nobly responded. Now the third call has been sounded in such clearness that no one need mistake its meaning. We must come forward, and I know we will, in that spirit of sacrifice, if such it be, that our boys on and across the seas, and their brothers in arms, will know that behind them stand 110,000,000 Americans as solid as the rock of Gibraltar. I know we will, without compulsion, restrict our movements, curtail our purchases, forego our pleasures, and place our dollars at the command of our country to the end that our Government at no time will lack in means in the prosecution of this tremendous task to a glorious and victorious conclusion. If we were to contribute all of our wealth, every dollar we hope to earn and possess by way of our daily tasks, we would yet fall far short of the sacrifice made by our boys in arms who have abandoned industrial pursuits, lucrative many of them, in answering the call of their country, thereby reducing their families in many cases to embarrassment, for they have offered their all upon the altar of their country.

In the tasks in which we are daily engaged we see the portraits of the illustrious of our countrymen. We are associated daily with the spirits of immortal patriots of American history. We see Jefferson in Independence Hall presenting that historic Declaration of Independence, upon which is builded the land of freedom and liberty. We see Washington, the father of his country, with his tattered and half-starved followers at Valley Forge, where his force of will turned defeat into victory and firmly established "the land of the free and the home of the brave." We see "Old Hickory" Jackson going to the defense of Mobile and New Orleans, and we are reminded of "Stonewall" at Manassas, whose spirit will be the spirit of our boys on the battle fields of Europe. We see Monroe, when he declared to the nations of the world, in his famous Monroe doctrine, that we should consider any attempt on their part to extend their system to any portion of the Americas as dangerous to our peace and safety. We see Lincoln, the man of sorrow, at the battle field of Gettysburg rededicating the American people to the principles of freedom, "that government of the people, by the people, for the people, shall not perish from the earth." We see Grant at Appomattox receiving the sword of that other eminent soldier, Lee, and reuniting a divided Nation. We see McKinley strike the shackles of bondage from a neighboring people and bring forth an island Republic. We see Cleveland renouncing the famous Monroe doctrine and standing in the way of interference by a foreign power in the affairs of a sister Republic.

They, immortals all, constantly remind us of our duties as Americans in these perilous days to democracy. They, illustrious patriots, championed the cause for which we are fighting to-day. Let us, therefore, contribute our all if need be to the support of our country, and with unfaltering step follow our matchless leader, Woodrow Wilson, to whom the civilized world looks to strike down that hideous monster who seeks to subjugate the world, and we are going to do it, for our cause is "as just as truth itself and as holy as a benediction from the lips of the Almighty," and He is on our side.

Reduction of Railroad Fares for Soldiers, Sailors, and Marines Traveling on Leave or Furlough.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 29, 1918.

Mr. LONERGAN. Mr. Speaker, the present measure should pass without delay. We can not do too much to aid the Military Establishment. In this connection I wish to record the history of the plan to have reduced fares on railroads granted to soldiers, sailors, marines, and Army nurses traveling on furlough or leave from their place of duty to their homes.

The financial hardship to the men in the ranks especially became apparent soon after the first increment of the draft army was called into the National Army cantonments in the summer of 1917. Men who were formerly paid good wages in civil life found themselves at the end of the month in camp paying for insurance, for liberty bonds, later—after the law of October 3, 1917, was enacted—allotting certain amounts to their dependents, and, in short, drawing comparatively small amounts of their regular Army pay. The fact that no manifest complaints were made, while it is a tribute to the patriotism of the men in the service did not negative the hardship.

The men of Connecticut, for instance, serving at Camp Devens, Ayer, Mass., or with the fleet at Boston, Mass., or Newport,

R. I., could not make many trips home without the financial aid of their families. As for the Hartford and other Connecticut members of National Guard units left in the South to form pioneer battalions or sent South to train for duty abroad, the railroad fare in many cases prevented their spending any of their furloughs or leaves on trips home.

Thinking lower rates might be granted under the law by the Interstate Commerce Commission I asked the question in a letter to the commission on December 15, 1917.

The reply was as follows:

INTERSTATE COMMERCE COMMISSION,
OFFICE OF THE SECRETARY,
Washington.

HON. AUGUSTINE LONERGAN,
United States House of Representatives, Washington, D. C.

MY DEAR SIR: Your letter of December 15 inquiring whether any law prevents railroads from offering to soldiers and sailors transportation at reduced rates has been received.

Sections 1 and 22 of the act to regulate commerce enumerate the classes of persons eligible to receive free or reduced rate transportation, and soldiers and sailors are not there enumerated. In its conference ruling 208 the commission, among other things, said:

"Neither do the provisions of the act relative to the issuance of free or reduced fare transportation admit of including therein officers of the Government, the Army, or the Navy, or members of their families, or other persons to whom such consideration may have been extended in the past, unless they are within the classes specifically named in the act. Reduced rate or fare transportation may be granted to such persons as are specified in the law as those to whom free transportation may be given."

The act does permit the granting of free or reduced rate transportation to railroad employees and their families, and provides that "the term 'employee' as used in this paragraph shall include furloughed employees." Construing this provision the commission last July issued conference ruling 511, as follows:

"Passes to furloughed employees entering military or naval service of the United States: Upon inquiry: Held, that employees of common carriers who enter the military or naval service of the United States in the present war and who are carried on the records of the carrier as furloughed employees, to be restored to the carrier's service at the termination of the war, are furloughed employees within the meaning of section 1 of the act to regulate commerce, and the carriers may lawfully grant free passes to dependent members of their families."

Yours, very truly,

G. B. MCGINTY, Secretary.

This letter, of course, came the day after the Congress had adjourned for the Christmas and New Year holidays. During the recess the President, acting under authority vested in him by Congress, took over the railroads of the country for the period of the war and named the Hon. William G. McAdoo, Secretary of the Treasury, as Director General.

On the reconvening of the Congress I again took up the matter and conferred with Secretary of War Baker and Secretary of the Navy Daniels. Both were favorably impressed by the proposition.

At the request of Mr. Baker I submitted to him the following reasons why reduced rates should be granted to soldiers and sailors on leave or furlough:

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., January 7, 1918.

HON. NEWTON D. BAKER,
Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: In compliance with your request I herewith submit some reasons for the proposed reduction in car fare for uniformed enlisted men (Army and Navy) on furlough during the period of the war:

1. The average enlisted man has much less spending money and more unusual occasions to spend than while in civilian life, due largely to his new surroundings and his absence from home, being thereby deprived of some of his customary comforts and many luxuries.

2. The yearning to see the loved ones at home and their desire to see him as frequently as the rules of camp life will permit during the period he is training before he engages in over-sea service, probably never to return.

3. The benefit to the service in promoting peace of mind of the enlisted man and the members of his family at home by assisting in making such visits possible. The proper influence of the home on the enlisted man is a material contributing cause to his well-being and the welfare of the service.

4. The number of men given leave of absence at one time can be limited and the particular trains can be designated upon which they may travel.

5. The comparatively short period of camp life will permit but few trips for each man.

If the proposal is favorably considered, the reduced rate can be determined.

Assuring you of my esteem, I remain,
Yours, respectfully,

AUGUSTINE LONERGAN.

Mr. Baker was agreeable to the proposal, but felt, and properly so, that it was a matter for the Interstate Commerce Commission and the Director General of Railroads. The letter was consequently referred to Mr. McAdoo.

Meanwhile the House Committee on Interstate and Foreign Commerce was preparing the bill to provide for the operation of transportation systems while under Federal control, which naturally occupied the attention of officials interested. Late in March, however, being impressed further by the need for a reduction in fares for our troops at home, since so many more had been called to the colors, and feeling that the machinery of the Rail-

road Administration was now prepared to handle such questions, I directed a letter to Director General McAdoo, again outlining the proposal.

His reply follows:

DIRECTOR GENERAL OF RAILROADS,
INTERSTATE COMMERCE BUILDING,
Washington, March 22, 1918.

HON. AUGUSTINE LONERGAN,
House of Representatives, Washington, D. C.

DEAR MR. LONERGAN: In response to your letter of March 20 I beg to say that the proposal to give men in the service on furlough the benefit of reduced fare has been carefully weighed and the conclusion reached that it would be inadvisable to take such action.

The furloughed men, paying their own fare, are subject to the provisions of the act to regulate commerce, and no reduction could be made for them without making the same rate available for civilians.

Cordially, yours,

W. G. McADOO.

Feeling that if the act to regulate commerce prevented this step being taken, but believing that the new law to provide for the operation of transportation systems while under Federal control, approved March 21, 1918, gave the President power, in section 10, to allow special rates to men in the service while traveling on furlough, I submitted the question to President Wilson March 28 as a "matter worthy of the approval of the administration."

To this the President replied:

THE WHITE HOUSE,
Washington, March 30, 1918.

HON. AUGUSTINE LONERGAN,
House of Representatives.

MY DEAR MR. LONERGAN: I feel the appeal, of course, of the suggestion made in your letter of March 28, but I must frankly say that I do not think the powers conferred upon me justify me in distinguishing between one class of passenger travel and another in fixing rates. It is not agreeable to come to such conclusions, but I can not find in the paragraph to which you refer of the recent legislation sufficient authority.

Cordially and sincerely, yours,

WOODROW WILSON.

Inferring, naturally, from President Wilson's letter that he favored the project but found himself unable to act under the law, I introduced in the House on April 10, 1918, H. R. 11363, an amendment to paragraph 2 of section 10 of the railroad law of March 21, 1918, so as to read as follows:

That during the period of Federal control, whenever in his opinion the public interest requires, the President may initiate rates, fares, charges, classifications, regulations, and practices by filing the same with the Interstate Commerce Commission, which said rates, fares, charges, classifications, regulations, and practices shall not be suspended by the commission pending final determination: *Provided, however*, That during the present emergency the charge exacted for transporting any person in the Army, Navy, or Marine Corps of the United States or in the Nurse Corps thereof while traveling on furlough between his or her home and place of duty shall be one-half the regular charge for such transportation.

Owing to the large number of extra clerks it would be necessary to hire to keep such information, the headquarters of the Army, the Navy, or the Marine Corps does not have on file in Washington data covering the exact number of cases of furloughs granted and the average number of miles traveled by each man, but that the numbers are large is self-evident, but not so large as to work to the disadvantage of the stockholders of the railroads, whose interests the Government has pledged itself to protect. In the Marine Corps, for instance, I am informed about one man in two was granted a furlough during 1917, and it was roughly estimated that the average number of miles traveled by each man on furlough was 750 miles. In the Navy furloughs are not to exceed 30 days in one calendar year, except in cases of emergency.

It soon became apparent that public opinion in the country was rallying behind the simple proposition to make their homes nearer for the troops, and newspapers rapidly reflected this opinion.

There was ample precedent, if not in our own history at least in the recent stories of all our associates in the war.

In Great Britain—

I am informed by Maj. Charles Lyell, assistant military attaché at the embassy here—

In all cases when furlough is given from France to officers or men it carries with it a free return railway ticket to their homes. This is interpreted fairly liberally, and practically means that a free ticket can be obtained to any point in Great Britain or Ireland.

Practically the same rule holds true as regards sailors furloughed from the fleet.

Ordinary furlough from any camp in Great Britain also carries with it, as a rule, a free railway pass, but on some occasions, when furlough is given for special purposes, the officer or man has to pay part of his railway fare. The system is that he is given by his commanding officer a cheap-fare warrant, which, on surrender at the booking office, entitles him to either single ticket at half fare or return ticket at single-rate fare.

France is no less liberal.

Transportation is provided free both ways for men going on furlough from the front—

Col. Collardet, assistant military attaché at the French Embassy, advises me, while—
soldiers and sailors traveling on furlough or leave from garrison towns are enjoying a reduction of three-fourths of the fare on all the French railroads.

The Government of the Dominion of Canada, I am advised by Lieut. Col. E. E. Clarke, director general of supplies and transportation for the department of militia and defense of the Dominion, allows two classes of reduced rates, one for 15 days, one for 90 days, to men on leave. A return journey, in short, to a camp or ship is allowed to soldiers and sailors in uniform upon payment of the ordinary first-class one-way fare.

Italy's plan is one which should be studied, particularly as the railroads there are run by the Government, as ours are now.

Maj. Gen. Emilio Guglielmotti, of the Italian Embassy, has favored me with a very complete résumé of Italy's program along this line:

The war administration in Italy—

He states—

is obliged to pay to the railroad administration the price established for every transportation. During the war there has been established a special system of compensation called "Globale," based as follows: On long studies made in peace time in regard to mobilization of troops, a train called "Treno-Tipo" (standard train) has been established, composed of cars representing the general average of trains studied in peace time. The cost of running such trains for a fixed mileage is ascertained, and the Government then keeps account of the number of trains so run, and multiplies the cost of the standard train by the number used in a day. The military unit merely presents at the station the document ordering the transportation.

Having thus provided for transportation in common, the war administration had to study the transportation of individuals, and the problem was easily solved by adding a few more cars to the standard train and increasing in proportion the price to be paid for every train to the railroad administration. Free transportation is allowed to militiaires who have been granted a furlough for convalescence or for reward, or the periodical ordinary furlough which is granted to the troops at the front, and also to all isolated militiaires traveling for service.

In every other case, and especially when the militiaire travels alone for personal business, he is obliged to pay his transportation at the special reduced tariff existing in Italy, which corresponds to a reduction on the ordinary fare of 70 per cent, therefore paying only 30 per cent of the full price. The militiaire traveling alone on leave of absence or furlough has a document in which is specified the object of the furlough, thereby enabling the railroad employees to know whether or not the bearer is entitled to free transportation.

Not only does Italy thus take care of her men in the active service, but Gen. Guglielmotti adds that—

the personnel of the Red Cross, of the Sovereign Order of Malta, the nuns, the nurses, and, generally speaking, all persons associated with the militiaire because of their duties at the front have the same rights when traveling as the militiaires themselves.

This suggests that even in our own country, when so many men and women are devoting all their time to Red Cross, Knights of Columbus, Young Men's Christian Association, and Young Men's Hebrew Association war work, and to similar organizations, we could well show our appreciation of their efforts at least in granting them reduced railroad fare for journeys necessary in their war work. Such organizations could, of course, be strictly limited by regulations.

Thus supported by public opinion throughout the country, as well as by the action of our strongest associates in the war, Great Britain, France, Canada, and Italy, it was only natural that Chairman SIMS, of the House Committee on Interstate and Foreign Commerce, was prepared to call a special meeting of the committee over which he presides, to report favorably on the subject.

It was with the feeling that endless delays had been discontinued, therefore, that I received the news from the office of the Director General of Railroads that the following had been authorized:

Director General McAdoo, realizing that the payment of the full railroad fare means a serious hardship to our soldiers and sailors who desire to visit their homes before going overseas, has ordered that, as soon as necessary details can be completed, soldiers and sailors of the United States forces, when furloughed and traveling at their own expense, will be granted a rate of approximately 1 cent per mile. This fare will be available on delivery to ticket agents of certificates signed by commanding officers. Such certificates of standard form will be prepared and distributed with the utmost promptness.

This happy result of a long and sometimes discouraging effort to assist our men in camp and aboard ship is indeed gratifying to me.

The President of the United States, the Speaker of the House, others foremost in the administration, have stated repeatedly that our present duty and our paramount duty is to bend every energy to winning the war.

And granting reduced railroad fares to the men with the colors will aid materially in increasing the morale of our troops, in adding to the esprit de corps of our Army and Navy, already attracting the admiration of the world.

In thus honoring these men we honor ourselves.

EXTENSION OF REMARKS

OF

HON. CHAS. POPE CALDWELL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 27, 1918.

Mr. CALDWELL. Mr. Speaker, when war was declared there was only a small number of vessels of 1,500 tons or over, aggregating in total of 3,800,000 dead-weight tons, operating in the trans-Atlantic trade of American registry. Of these, so far as I have been able to learn, only one was under control of the Government, outside of the naval and transport service. On the 1st of May we had steamships of 1,600 tons aggregating 5,985,809 deadweight tons, divided as follows:

Freight and passenger ships.....	4,775,615
Tankers.....	1,210,194

There was under the control of the Government and now being used for war purposes the following tonnage:

	Freight and passenger ships.	Tankers.
Army.....	1,715,494	15,492
Navy.....	278,380	118,554
Food control.....	205,868
Total.....	2,199,742	134,046

Of these, in round numbers, there were 2,200,000 dead-weight tons, other than tankers, engaged in transporting our Army, its supplies, and in kindred work. And, in addition to this, there are in private service, engaged in trans-Atlantic traffic, for war and kindred purposes, ships of American registry as follows:

	Freight and passenger ships.	Tankers.
British service.....	55,645
French service.....	105,679	105,030
Italian service.....	165,081	52,739
Belgian relief service.....	25,530
Russian service.....	16,500
Mediterranean service.....	19,100
Swiss service.....	28,276
English Channel service.....	9,800
Other service.....	127,836	98,087
Total.....	311,492	497,822

Some of this shipping we seized as alien enemy craft, some we obtained from Holland, some from Japan, and some from other sources. But the marvelous production of our own shipyards tells the story.

On May 16, 1918, the New York American printed an editorial—and I have found it to be substantially correct—which tells the story. It is in part as follows:

"With the inconsistency typical of men actuated in their political maneuvers by no higher motives than petty jealousy and personal gain, certain politicians who at one time were the main obstacles in the way of administration measures of preparedness are now seeking in every possible way to belittle our war preparations in the eyes of the people.

"That they will not succeed in the long run in their partisan business of backbiting and political slander is obvious to the student of the situation.

"That they should not succeed now, even temporarily, in fanning the impatience that is characteristically American into a discontent with our Government and a division of loyalty is a matter of supreme importance in the conduct of the war. * * *

"In no part of its tremendous and unprecedented task has it been more hampered by the great profiteering monopolies and their tools and mouthpieces than in the great program of shipbuilding.

"Nearly four years ago the administration, foreseeing in a measure our great need of ships, asked Congress to appropriate \$30,000,000 for providing shipbuilding facilities under Government control.

"Both in the House and Senate there were secure majorities in favor of the bill, but the great monopolies, dreading every extension of public ownership as a step toward a full awakening

of the American people and a summary ending of their opportunities of extortion, did not give up the fight. * * *

"A band of Republicans * * * talked the bill to death in the Senate and prevented it from reaching a vote. * * *

"The bill was defeated, the shipbuilding program was put back two full years, and the Nation instead of having ready an adequate working shipbuilding plant and organization when forced into the war was caught wholly unprepared in this vital regard and was driven to squander millions in frantic haste to meet an emergency which should never have arisen.

"That the mischief done three years ago * * * by the very Republican leaders who are now falsely charging the national administration with failure in war preparations has not proved to be beyond repair is due in no small measure to the energy, zeal, and ability of Chairman Hurley and his associates of the Shipping Board.

"What this Shipping Board has accomplished in spite of tremendous obstacles is little short of miraculous.

"The problem of providing the enormous tonnage required to meet the demands of ocean transportation and make good the losses inflicted by U boats would have been tremendously difficult in normal times.

"This problem has had to be solved at a time when every branch of the military and naval service has been struggling for the same labor, the same material, and the same equipment that were needed by the Shipping Board, and when equal demands upon this labor, material, and equipment have been made by the manufacturing interests turning out unprecedented quantities of military supplies for the allies.

"In solving this problem the Shipping Board has had to build from the ground up.

"We had almost ceased to build ships in America. With the exception of a few widely scattered shipyards, shipbuilding had almost become a lost art. Trained shipbuilders were few, and every man of them and every one of the old shipyards had been pressed into service to build vessels of war and to fill the orders placed by foreign owners and by private concerns in America.

"There was not one shipyard in the Nation that could accept a contract to build a merchant vessel for the Shipping Board.

"Every yard was filled to capacity, and before any ships could be built it was necessary to provide new shipyards and enlarge old yards, to enlist mechanics and train them in shipbuilding—in short, to create in the shortest time possible a practically new industry on a gigantic scale.

"There were in all 37 steel-ship yards in America in April, 1917, with a total of 162 shipbuilding ways, and 24 wooden-ship yards, with 73 ways, making 235 shipbuilding ways in all.

"The board has provided 30 new steel-ship yards, with 203 ways; has built 33 new ways in the old yards; and has provided 57 new wooden-ship yards, with 259 ways, making a total of 730 berths upon which merchant ships can be constructed and giving to America by far the greatest shipbuilding capacity in the world—more than double the capacity of England's shipyards after nearly four years of war.

"While the shipbuilding capacity adequate to the Nation's needs has been under construction, the gathering of the trained army of shipbuilders has gone on apace.

"A few years ago there were less than 45,000 men all told employed in American shipyards. This number has been increased to 236,000, of whom 170,589 are working in actual ship construction and the remainder in completing the yards and ways and in other branches of the industry. In addition, there has been recruited a volunteer force of 250,000 skilled mechanics, who are held in reserve in their present employments until called to the yards as the new ways become ready for the laying of the keels.

"For the direction and supervision of the work a training school has been established at Newport News, from which 115 experts have already been graduated and sent out as instructors.

"Meanwhile the actual building of ships has been pushed ahead as the yards were made ready to receive them. There were contracted for during the year 8,205,708 dead-weight tons of steel construction, of which 655,456 tons were completed and afloat on March 1, and the remainder were advanced on the average over 20 per cent toward completion.

"In view of the obstacles that have been overcome, this achievement is one of which every American may well be proud."

Yet this is not all the story. It is believed that beginning January, 1919, America will be able to produce 500,000 or more dead-weight tons of shipping each month as long as the war lasts of the standard steel and wooden type. The U-boats can not sink them that fast. What the apparently successful concrete construction will increase this amount to can only be conjectured. From all reports of the trial of the *Faith* it appears that the expectations of the designers have been exceeded.

Here again we find American inventive genius presenting the idea and American business supplying the willing capital to make the experiment, not for profits, for profits have always been possible, but because of the country's need.

When we started to move our expeditionary force to France we found that the northern ports of France were heavily congested with the ships of our allies and the southern ports were too shallow to permit the entrance of our large ships fully loaded, nor were there docking facilities available. It was therefore necessary for us to dredge a harbor and to build new docks. This work has been carried out to the extent that we are able to take care of all the boats we now have in service, and in a short while we will have berths in which 40 ships may be docked at one time, practically the whole of which has been accomplished by us. And in addition to this we have taken from the United States the necessary stevedoring machinery to facilitate the unloading of our cargoes and set it up in France.

They tell us of German efficiency. German war efficiency was 40 years in preparation. In 40 weeks we have adopted methods of efficiency and produced results that would make Frederick the Great turn over in his grave. In recognition of this gentleman's discomfort we have removed his statue from in front of our War College.

Speaking of efficiency, listen to this, also from the New York American:

"Acting on orders from the German Government, the officers and crews of the German ships interned in American waters inflicted such damage upon the machinery of the vessels as they deemed absolutely certain to keep the ships out of service for two years. By that time the Germans thought the war would be over.

"But American efficiency and American invention effected the necessary repairs in from six to eight months and at a cost of \$273,000; the Germans had figured the cost of repairs at \$2,600,000 and the necessary time 24 months.

"All of these ships except one, that has been sunk, are now bearing American commerce on the seas or transporting American soldiers to Europe. The Navy Department figures that the use of these ships between the time the ships were actually repaired and the time the Germans estimated they could be repaired will be worth \$240,000,000 to the Government at the present rate of tonnage.

"The *Vaterland*, one of these interned ships, and the largest ship afloat, is now renamed the *Leviathan*. Americans are able to operate this ship at a higher rate of speed than the Germans were able to do, and to do this with 200 tons of coal less a day.

"The *Leviathan* has one American captain in place of five German captains of the *Vaterland*, and one American chief engineer instead of a chief engineer and the five assistants that German efficiency required."

The Germans said the *Vaterland* would never cross the sea during the war. She has made four round trips, carrying forty-odd thousand men, and is now on her fifth voyage as an Army transport.

But ships are not all of the transportation problem. There is a rail shipment of several hundred miles in France and several thousand miles in America that is under the supervision of this Government, besides the motor-driven and horse-drawn vehicular traffic on both sides, and in between, that must be provided and maintained.

In France we are operating over 600 miles of railroad, part of which we have constructed and in connection with which we have built more than 125 miles of side track. All of the engines, tenders, and freight cars will be of American manufacture. These we are now shipping in quantity set up ready for operation as soon as they are lifted out of the ship. And we have taken over and are operating a French repair shop. We have furnished the engineers, firemen, switchmen, telegraphers, conductors, mechanics, and laborers as well as the executives and clerks to manage this huge system that will be required to handle more freight than any other road of its length in the world.

In connection with these operations we are building ware-houses which if placed end on end would be 50 feet wide and reach from Washington to a point more than 50 miles beyond New York City.

Beyond the railroad in France there must be narrow-gauge track leading into the zone of fire, the total of which will approximate 12,000 miles, together with its equipment.

When we speak of transportation for war purposes we naturally think of men, their clothing, and food and guns, with the necessary ammunition, forgetting that soldiers no longer live in tents and that houses must be built for them equipped with heat, light, sewers, and water; that hospitals, salvage and repair factories, with their necessary tools and machinery, and ice plants,

recreation centers, and so forth, have to be built, and the material therefor and operating supplies must be transported ahead of the Army and maintained after the men arrive.

The work upon these necessities is well under way, due to the fact that large numbers of workmen have been employed and vast quantities of material have already been shipped or purchased abroad.

No difficulty seems to be insurmountable. To illustrate: We did not have the necessary lumber nor sufficient ships to carry it if we cut it here. There were no mills to cut it in France. So we took down sawmills in America, shipped them to France, set them up, and sent our men into the French forest reserve as axmen. We now are getting all the lumber we need.

Our work in France has filled that people with amazement and confidence. The only people in the world that are not satisfied with our efforts are the Germans and ourselves—the Germans because we have done so much, we that we have done so little.

Here let us congratulate ourselves. We are not only operating a railroad in a foreign country with success, but we will soon own the largest merchant marine in the world, with storage facilities on both sides of the ocean. We are operating under Government control 226,000 miles of railroad in the United States and doing it better than private companies could. We have replenished its rolling stock to meet our increased requirements and repaired and extended lines in many directions, permitting an increase of the wages of employees in almost every branch of the service.

Our railroads will never again be operated under private control, with the necessary duplication of service and expense.

EXTENSION OF REMARKS

OF

HON. A. C. SHALLENBERGER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 31, 1918.

Mr. SHALLENBERGER. Mr. Speaker, I ask to extend my remarks for the purpose of printing an article published in the Washington Times in compliment and indorsement of the independent and courageous spirit so frequently shown upon public questions by the distinguished member of the Military Committee of the House, the gentleman from Ohio [Mr. Gordon].

The article is as follows:

Mr. GORDON, of Ohio, who has defended the rights of citizenship in America as courageously as he has opposed the compulsory autocracy of Prussia, supported the bill as necessary for immediate passage, in spite of the fact that the House really had no opportunity to inquire into details of its estimates. When, incidentally, he referred to his own votes in the minority on questions affecting the rights of American citizenship, he was applauded by Members who had voted with the majority against him. We have not yet lost in the House of Representatives the sense of the value of the sort of Americanism which is never afraid to be "in the right with two or three."

EXTENSION OF REMARKS

OF

HON. CHARLES O. LOBECK,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 31, 1918.

Mr. LOBECK. Mr. Speaker, in his address to Congress on January 8 President Wilson championed the cause of all the nations as well as our own, when he stated in clear, concise terms our purpose in the war, and declared it to be the principle of justice to all peoples and nationalities and their right to live on equal terms of liberty and safety with one another, whether they be strong or weak. Again, in his New York Red Cross speech, he declared that we propose to stand by Russia as well as by France. And, concluding his speech to Congress in January, he said, "Unless this principle be made its foundation, no part of the structure of international justice can stand. The people of the United States could act upon no other principle, and to the vindication of this principle they are ready to devote their lives, their honor, and everything that they possess. The moral climax of this, the culminating and final war for human liberty, has come, and they are ready to put their own strength, their own highest purpose, their own integrity and devotion to the test."

We are called upon in the pending bill to draw heavily upon the financial strength of the Nation, for this is the largest ap-

propriation measure ever acted upon by the legislative body of any nation in the world. It is to supply and equip our Army, and its passage will fittingly demonstrate our purpose to adequately maintain our armed forces in the battle for democracy.

The solemn words of our brave, courageous young men as they go forth to fight the battles of the Nation call to us, "Give us the equipment, material, and supplies, and we will do the rest." This is the plea from the millions of Americans in arms to us, the Members of the American Congress. Our answer must be the unanimous approval of this bill and of every other supply measure looking to the arming and maintaining of our troops in the field in keeping with the financial standing, power, and dignity of the Republic. If these billions are not sufficient, more will be forthcoming without a murmur. The people will be with Congress and the President, our Commander in Chief, in every call necessary for the successful prosecution of this war to a glorious victory.

I shall heartily support this and every measure for the purpose of winning this war for our defense, our homes, our loved ones, and for democracy in its highest and best sense.

Nebraska is in the front ranks in the galaxy of States in support of the war. She furnished her full quota of National Army soldiers and more than her share of volunteers. Her food conservation administration has received the highest compliments from Mr. Hoover, who declares it to be one of the most efficient administrations in the country, and her production of foodstuffs will be far in excess of previous years. In the first liberty-loan drive her quota was \$18,000,000, to which was subscribed \$19,035,700; in the second her quota was \$29,640,000, and her subscriptions were \$33,317,200; and in the last campaign her quota was \$31,942,800, to which was subscribed \$48,611,150.

In the first Red Cross fund her quota was \$225,000, and her subscriptions \$966,000. In the Young Men's Christian Association campaign, \$250,000 was asked for, to which was subscribed \$525,000. In the Knights of Columbus campaign, \$40,000 was her quota, to which was subscribed \$240,000. Twelve thousand three hundred and fifty dollars was contributed to the smileage-book fund. In the sale of war-savings stamps we lead by far every State in the Union, and, with all due respect to the Empire State of New York, there have been more of these baby bonds sold in the glorious State of Nebraska than in that Commonwealth. The success of the campaign for the sale of war-savings stamps is due to what is known as "the Nebraska plan," which has been adopted by the Treasury Department, and will be used throughout the Nation in a one-day drive on June 28 for the sale of these stamps.

The basic principle of "the Nebraska plan" is a series of meetings in community centers, usually the schoolhouses, on a certain day. The chairman of the meeting announces the community quota and indicates the "fair share" of each individual, who is expected to sign a card pledging purchases of war-savings stamps over a period of one year or less.

After the cards are signed they are placed with the bank or post office or war-savings society specified to make the collection. Once a month the county chairman checks up with the various sales agencies. If a party gets behind in his purchases he is telephoned or called on personally, and in this way the shrinkage is minimized.

In addition to the schoolhouse meetings, "the Nebraska plan" includes an intensive county and State organization. There is a State director and a State secretary of various departments, such as war-savings societies and publicity. Under the State director are county directors. The State secretaries of war-savings societies and of publicity each have a county organization. There is also a field secretary with traveling organizers and traveling speakers. The success of this plan has been demonstrated by the fact that Nebraska's quota of \$25,940,120 has been completely sold, which has put her over the top in this as well as in every other war activity.

The response of the people of Nebraska to the liberty loan, war-savings stamps, Red Cross, and every other activity for the prosecution of the war to a successful ending has been marvelous. This response has come from every class, from the poor as well as those better situated. The laboring men and women, the farmers, the merchants, the manufacturers, the bankers, boy and girl scouts, and the women organizations have all done nobly. Time does not permit for me to enumerate all of these various activities that have done so well. The speakers' bureaus have been organized to do efficient work; these men have spoken in every hamlet, city, and community.

Farming communities have contributed carloads of hogs to be sold in the market for the benefit of the Red Cross, and the salesmen at the Omaha stockyards gave their services freely. I am told that in one community—and that is only one of the many communities that did the same—a committee called on the neighborhood farmers; the call was for a contribution of a hog

or \$30 in money for the Red Cross, and in this particular community 140 hogs were donated, and in only one case did the committee get the \$30; everybody called on donated. This farmer who gave the \$30 said, "I have not got a hog that is big enough for the Red Cross or you could cheerfully have it." I have been told that over \$250,000 in value of hogs have been sold at the stockyards in Omaha, donated by the farmers to the Red Cross. It is difficult to say that one class of people have done better than another in our State, they have all done so nobly.

The second Red Cross war-fund drive has been met by the people of Nebraska most generously. From every community comes the most generous response. The figures are not fully compiled, but it seems as if Nebraska has doubled the quota allotted to them. I quote from press reports of Tuesday morning, May 28, 1918, which gives some idea of what Nebraska has done in this last drive for the Red Cross, and later I have learned that Nebraska has more than doubled its quota for the Red Cross:

ANOTHER DRIVE IS PUT OVER BY NEBRASKANS—OMAHA AND DOUGLAS COUNTY DOUBLE SUBSCRIPTION ALLOTTED TO THEM—REPORTS FROM OVER THE STATE ARE LEAVING SOME FLATTERING IMPRESSIONS.

Displaying once more the unlimited generosity of its citizens, Omaha and Douglas County ended their participation in the second Red Cross war-fund drive with a subscription double the allotted quota of \$200,000. The drive officially closed at midnight Monday.

Reports from all over the State indicate that Nebraska in its entirety may almost equal the enviable record of Omaha and Douglas County.

With the reports of some committees not yet recorded, the office force at Red Cross headquarters in the Keellue Building is completely snowed under with an avalanche of accumulated subscription lists. Several days will be required for a compilation of all donations, upon which rests an official announcement of the result of the drive.

Telegrams from different sections of the State sent to State Director Judson were optimistic in every sense and strengthened the belief that the quota would be greatly oversubscribed.

Seventy-nine of the 93 counties of the State had sent in incomplete returns up to Monday noon, and these, exclusive of Douglas County, totaled \$1,093,469.76, which amount is in itself almost equal to the State's quota.

The Nebraska Council of Defense have done most excellent work through the untiring energy of the men composing the council. They have cooperated with the councils of defense in each county of the State, and their work has produced most excellent results, for they have brought together the people of the State in a united effort to win the war, and their noble work can not be too highly appreciated; they deserve highest praise.

The President's call for soldiers has been responded to by Nebraska's young men second to no State in the Union, population considered. Men under and above the selective-draft age have offered their services freely in the Army and the Navy. Many of our boys are already over there fighting for our liberties, and a number of Nebraska's boys have given their all—their lives—in the defense of our flag and country.

In the debates here in the House it was shown by the records that there have been requests by the young men of our State to be designated in the deferred classes—they all wished to be in class 1 of the selective draft—and when the men have been selected for war service they have never faltered, but have been glad to go to the defense of our country.

When Nebraska soldiers who had served in the National Guard regiment on the Mexican border in 1916 and 1917 were called back to Nebraska, just before the declaration of war with Germany, and the call of the President came again for war service, almost to a man they went back into the service. The most of them were again sent to the Mexican border, training at Camp Cody, Deming, N. Mex., and while Cody is considered one of the most undesirable camps to train in, these brave men have never complained; they have done their duty as soldiers should do; they have learned to obey. British and French officers have reported these Nebraskans as absolutely fit for foreign service; they are trained to the minute, and every one of these soldiers is anxious to go "over there," and they are hoping and praying that with their excellent and efficient record on the Mexican border for the last two years they shall have the opportunity to go immediately "over there," for they know that their energy, their bravery, their efficiency, their training, their patriotism, their soldierly qualities, will show to the world, to our country, and to our President that Nebraska soldiers are of the highest type of men; that following the leadership of Gen. Pershing, who has trained many Nebraska men and who knows their quality as soldiers, they will do their full share to win this war.

And so I could go on and tell about the good people of our State, their patriotism, their activities for the winning of this war. Americanism is the highest and only theme on the prairies, on every hillside, in every valley and community in Nebraska. When the full story is written of Nebraska's part in this war for democracy, it will be written, "Nebraska has done its full share and will shine as one of the brightest stars in the constellation of States." Nebraska became a State 50 years ago;

as a Territory the pioneer men and women gave their best for the preservation of the Union. When the Spanish-American War came, Nebraska's quota for men was filled to overflowing; the State has never lacked in doing its best for the Union. As I said, Nebraska has only been a State for 50 years. I have been intimate with its pioneers, and I have seen it develop into one of the best States of the Union. The majority of the people that came to Nebraska were poor, but by untiring energy they turned the virgin soil to the sun; they planted crops, they sowed, they reaped; they have built towns, cities, churches, and school-houses; and to-day I know you will agree with—those that have seen our glorious State—that it is one of the foremost and best States in the Union.

The Overman Bill.

EXTENSION OF REMARKS

OF

HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 31, 1918.

Mr. SCHALL. Mr. Speaker, there has been much talk about the tremendous and awful power that will be granted to the President by the passage of the Overman bill. There has been considerable fear lest, in the hysteria of our great calamity, we shall adopt desperate remedies, abdicate power, when we had better bear those evils that we have than flee to others that we wot not of. There has even been some doubt lest the Interstate Commerce Commission or the Federal Reserve shall be disturbed.

The machinery of our Government has developed reduplication and confusion. It has evolved four secret services, several bureaus of chemistry, a number of subsidiary print shops, besides the Government Printing Office. It is out of date in many respects and unscientific. One of the great troubles in the airplane production muddle, as the distinguished Senator from Nebraska [Mr. HITCHCOCK] explained to the body at the other end of the Capitol, was "that power has heretofore been vested in one body, and advising authority in another board, and there has been too much delay and too many debates."

How will the passage of the Overman bill make for efficiency? It will put in the hands of the President powers of coordination of all the agencies of the Government for the conduct of the war. He may rearrange or redistribute any records or functions or personnel already in existence. He may not create any agency not already authorized by law, except an agency, much needed, to have jurisdiction over production of airplanes and airplane engines and equipment, and over the expenditure of money appropriated heretofore. He may not create or fill new offices or abolish existent departments; he can only correlate and unite functions already created by Congress. Surely a step toward efficiency and economy.

It would be partisan to deny the President this necessary power of coordination and concentration of power for winning the war. This bill will quickly effect harmony. The powers it conveys will cease automatically six months after the war ends. There is no permanent grant of dangerous authority to the President. Nothing will be done if this bill is passed, as it will be, which can not be undone. There is no abdication of power of the Congress in permitting rearrangement of already authorized power. It is a forward step, designed to correct the mistakes of the past. True, it heaps upon the President's shoulders a mountain of responsibility. It makes the successful conduct of the war more than ever personal to him. But he is not shirking the responsibility.

In the past laws have been suspended by the President on the authorization of Congress when he deemed it necessary in the interest of public policy. Certainly it is a no more radical step to authorize the transfer of functions temporarily than to authorize their suspension. After the transfer has been made the department acted upon or coordinated must follow in the lines already laid down by Congress. Here is no opportunity to disturb or destroy the intent of Congress or render impotent its will. The effect of the bill would be entirely different if it contemplated or permitted discarding or abolishing existing departments or their functions. If such possibility lurks latent within the bill that very condition will vitiate it by making it unconstitutional. For it is elementary that Congress can not delegate its authority.

The Farm Risk Insurance Bill, H. R. 12337.

EXTENSION OF REMARKS
OF
HON. EDWARD J. KING,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
Monday, June 3, 1918.

Mr. KING. Mr. Speaker, I desire to respectfully call your attention and the attention of the House and the country to the principle of agricultural insurance. That the Government should temporarily provide for the insurance of agricultural crops against the action of the elements may seem somewhat startling, but the more thought one gives to the proposition the more he is convinced that the principle is fair, sound, and just, and that war legislation based upon such a bill will materially increase the crop acreage, to the great advantage of our people and our cause.

Last session I prepared and introduced in the House a bill establishing a bureau of farm-risk insurance. I endeavored to engraft the substance of the same by way of an amendment upon the Food Administration bill. It was defeated on a point of order being raised against the amendment that it was not germane to the original bill. I reintroduced this bill at this session. These bills proposed to establish such bureau in the Treasury Department, but upon reflection I have come to the conclusion that such bureau should be founded in the Agricultural Department, in whose archives now rests a great deal of information to which reference can be easily made by such bureau.

It is most patent that the logical place for such a bureau is under the Secretary of Agriculture. I have therefore prepared and introduced a new bill, known as H. R. 12337, giving jurisdiction to the Agricultural Department over farm-risk insurance, which bill has been referred to the Agricultural Committee for consideration.

In this connection may I be permitted to say that the purpose of this legislation at this time is receiving nation-wide notice, and I have received from many parts of the country urgent inquiries as to the relief sought to be granted in this bill.

One of the most effective and intelligent communications comes to hand from Mr. A. A. Wren, of Kansas City, Mo., who is one of the great authorities on interinsurance in America and an earnest advocate of agricultural farm-risk insurance.

This letter, which I urgently recommend to the consideration of every Member of Congress and to the citizens of the country, is as follows, to wit:

KANSAS CITY, MO., June 1, 1918.

HON. EDWARD J. KING,

United States Congress, Washington, D. C.

HONORABLE SIR: Re House bill on agricultural insurance.

In view of the urgent need of increased production now and for some time to come, the legislation proposed by your bill is most important, as both the farm owner and tenant farmer are encouraged by its provisions to cultivate and plant a greater acreage.

The writer having been engaged for over 15 years in the organization and management of cooperative insurance associations among manufacturers and merchants, and appreciating the need of some form of indemnity for crop loss, had begun an investigation with the object of organizing a cooperative agricultural insurance bureau when your bill was called to my attention, and I recognized it as a very essential war measure.

The manufacturer is encouraged to invest in machinery and material because the demand for the article to be manufactured is obvious, and because he has a certain knowledge that the investment in machinery, material, and labor may be protected from the hazards usual to that business with fire and liability insurance and the further knowledge that when labor has been spent on the material a finished article will be ready to market at a profit. On the contrary, the farmer may invest his money in land, equipment, seed, and cost of living, and when he has employed his labor in cultivation and planting he has only a planted crop, which may or may not mature for reasons outside his control; and if it does not mature he has lost his investment in seed, living during the crop period, his labor, and interest on the investment in land and equipment, with no opportunity for indemnity.

If this is discouraging to the farmer who owns his land and has a chance to recoup his loss of some one year in a succession of successful crops, how much more discouraging must it be to the tenant farmer, who rents from year to year, and to whom the soil is being assigned or leased for cultivation more and more every year until at present about 40 per cent of the cultivated soil is tilled by the tenant farmer.

There are in the crowded centers many thousand men, heads of families, who were raised on farms and who would be glad to return with their families to the farm if the security offered by your bill prevailed. The savings of such men may not admit of the purchase of land at its present high price, but they would be able to rent farms, buy the seed, and, with credit strengthened by crop insurance, obtain equipment and live during the crop period, feeling that if the first crop was lost they would not have to sacrifice their equipment under forced sale to pay their creditors and be left stranded on the highway of middle life.

War-risk insurance has provided for indemnity not otherwise provided for in the insurance world, and why should the farmer be obliged to carry, individually, the burden of loss and the hazards

surrounding that which is first in necessities, in peace or war—ample production of foodstuff?

In times of peace this hazard may be properly distributed through cooperative organizations among farmers, which, of course, requires years of organization work to effect; but in such war times, when so many of the tillable acres of our allies have been devastated, the shipping facilities so employed that the crops of other foreign nations can not be imported, and our own stores obviously being diminished, the Government should make provision for crop insurance and encourage the cultivation of some of the many millions of untitled acres in the United States. And in this connection permit me to call your attention to the figures reported in the Weekly News Letter to correspondents by the United States Department of Agriculture, under date of August 13, 1913:

"The Department of Agriculture estimates 829,000,000 acres are not in use. Only 21 per cent of the land is not available for any form of agriculture. Only 27 per cent of tillable land of the United States is actually under cultivation, based upon reports of 35,000 correspondents.

"The total acreage of the United States and possessions is estimated to be 1,900,000,000; 60 per cent, or 1,140,000,000, is estimated to be tillable, capable of being brought under cultivation by means of the plow. This includes land already under cultivation and that which in the future may be brought under cultivation by clearing, draining, irrigation, etc.

"Three hundred and sixty-one million acres, or 19 per cent, are estimated to be untillable, but valuable for pasture and fruits; only 21 per cent, or 399,000,000 acres, was estimated to be of no use for agriculture present or future. In 1909 the land area in crops, where acreage was given, was 311,000,000, or 16 per cent of total land area, about 27 per cent of estimated potential tillable area of the United States and possessions.

"For every 100 acres that are now tilled, about 375 acres may be tilled when the country is developed."

Permit me to call your further attention to that part of the fourteenth annual report of the Reclamation Service, 1914-15, which shows the land situation in the respective States, a copy of which I am inclosing herewith.

I believe the Government has at hand, in the Agricultural Department, all the information necessary to provide agricultural insurance, with the exception, possibly, of the ratio of loss to the cost of cultivation and planting in different parts of the country, and a few months should suffice to acquire this information and be able to establish a schedule of rates that will properly distribute the burden of crop loss, furnish the indemnity that will strengthen the credit of the tenant farmer, and encourage the necessary increase in crop acreage and production next year.

Very respectfully,

A. A. WREN.

Fourteenth annual report of the Reclamation Service, 1914-1915.

REASONS FOR PROMPT ACTION ON THE BILL FOR AGRICULTURAL INSURANCE.

First. The urgent need of increased production.

Second. That the credit of the tenant farmer may be strengthened and enable him to obtain equipment and live during the crop period.

Third. The security offered by the indemnity provided for in this bill will encourage the cultivation of more acres by more farmers, more production of wheat, grain, live stock, and furnish relief to the Nation and our allies next year.

Fourth. It is necessary that a small appropriation be granted at this session for the collection of information covering the ratio of crop loss to cost of cultivation and planting, so that a schedule of rates may be had in time to offer indemnity to the farmer at the beginning of the next crop season.

Fifth. That the foundation may be laid for those of our boys who will return from the front, after valiantly fighting for liberty, who may wish to return to the farm, and that they may be able to do so without assuming the present hazard, individually, of crop loss.

WHY FARM-RISK INSURANCE IS FAVORED BY OTHERS THAN THE FARMER.

By the banker: Because it makes an asset of the labor spent in cultivation, seed, etc., and therefore makes the tenant farmer a better financial risk.

By the merchant: Because he can readily extend credit by open account for provisions, hardware, etc., feeling that a crop failure will not cause the loss of such accounts.

By the real estate man: Because such crop insurance will secure a return on rented farms and cause activity in the sale of farms and renting of farms.

By the Nation: Because it assures increased production.

Prohibition of an Increase in the Production of Foodstuffs on Farms.

EXTENSION OF REMARKS

OF

HON. HENRY T. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, May 23, 1918.

Mr. HENRY T. RAINEY. Mr. Chairman, the item we are considering in this bill is a most important one to the farming interests of the North and also of the South. It provides for an appropriation of \$6,100,000 for the purpose of increasing food production and for the purpose of promoting the conservation of food by educational and demonstrational methods through county, district, and urban agents and others. The amendment proposed by the gentleman from California [Mr. RANDALL] to this section provides that no part of this appropriation shall be available for any purpose whatever unless the President, by a proclamation under the act of August 10, 1917, shall prohibit the production of malt or vinous liquors for beverage purposes.

LIMITATION OR PROHIBITION OF MALT OR VINOUS LIQUORS.

The act of August 10, 1917, referred to in this amendment, permits the President, at his discretion, to limit, regulate, or prohibit the production of malt or vinous liquors, or to reduce the alcoholic content of any malt or vinous liquors, whenever, in his judgment, such prohibition or limitation is essential in order to insure an adequate or continuous food supply. Under this authority the President has already limited the alcoholic content of malt liquors until to-day the malt liquors manufactured in the United States contain less alcohol than that manufactured in any other section of the world. This proposed amendment is not a prohibition measure. It is most unreasonable in its terms. The Chairman of the committee who presides to-day, who is an expert parliamentarian and who votes for all prohibition measures, passing upon the question as to whether or not this amendment was germane, referred to it as "unreasonable in its terms," but he has most correctly held that Congress "can be unreasonable" if it chooses to be unreasonable. I predict that the Chairman will never vote for an amendment as unreasonable as this. You can not coerce the President of the United States.

THE EFFECT OF THIS ALLEGED PROHIBITION AMENDMENT.

The effect of the amendment will simply be to hold up indefinitely the work of county agents in the North and West, the extension of agricultural work in the northern United States, the work of boys' and girls' agricultural clubs throughout the rural sections of the country, and other work of like character provided for in this appropriation.

FARMERS NEED NOW ALL THE SUPPORT THEY CAN GET.

In the production of foodstuffs the farmers of my district and of every agricultural section under the circumstances which surround them now need all the consideration, assistance, and support they can get from the Government of the United States. We are drafting their boys and taking them away from the farms. Farm help is hard to obtain. They need the work of county agents and advisers. The work of the boys' and girls'

agricultural clubs is necessary and is needed in the present crisis. Under ordinary circumstances the farmers of my district ask nothing from the Government of the United States. Under the circumstances which prevail there now they need and are entitled to all of the assistance of the character provided for in this item they can possibly get. I therefore can not vote for this unreasonable amendment. This is not a prohibition amendment. It has been most appropriately termed in an editorial in to-day's New York World "legislative blackmail." I quote from this editorial:

This may be described as a species of legislative blackmail. If not blackmail, it is highwaymanship, for it operates on the stand-and-deliver principle. The money is to be had for imperative uses, provided the President acts, as Congress has not yet acted, and only so he can take his choice. He can move, possibly, against his will, or he can go without needed supplies.

On the same principle, every money bill in Congress might become an instrument of coercion. Why not make appropriations for the Army and Navy conditional upon the acceptance of the silver standard; for the judiciary upon a reversal of the shoe-machinery decision; for the executive department upon a surrender by the President of his power as Commander in Chief.

Trickery such as this is bad enough in time of peace, but a resort to it in war can be explained only on the theory of frivolity or fanaticism, both reckless of public interests.

MY SUPPORT OF ANTISALOON MEASURES.

I voted for all these moral measures when it required courage to vote for them. When I came to Washington there were saloons in this Capitol Building. Whisky was sold in the restaurants. I voted on every occasion and at every opportunity to stop this practice, and it was finally stopped. When I came to Washington there was a saloon in every block in this beautiful city, and some blocks had five or six saloons. I have voted against saloons in Washington on every opportunity. I voted for the measure which reduced their number one-half, and I voted for the measure which banished them from the District of Columbia, and to-day in this Capital City—the best-governed city in the world—it is impossible to purchase intoxicating liquors. I voted on every occasion to banish canteens from Army posts and to banish saloons from Army posts and from the vicinity of Army posts, and I voted for these propositions until they were enacted into law; and to-day there are no canteens in Army posts and there are no saloons near Army posts. I voted for every proposition to limit the number of saloons and to abolish them in the vicinity of soldiers' homes, and this evil has been reduced to a minimum. Under the measures I have supported vast areas in the vicinity of newly established Army posts have gone dry, including some cities with large populations. I have voted always for antisaloon measures, in obedience to the sentiment in my congressional district and to the dictates of my own conscience. I have not been a professional prohibitionist, proclaiming for the purpose of obtaining votes my attitude on these questions.

I voted for the proposition which has put an end to the manufacture of whisky during the war, and not a drop is being manufactured at the present time. I voted to submit the prohibition question to the States, and it is now being considered in the States of this Union. Six years ago I prepared the minority report on the outage bill, and that report was signed also by the distinguished gentleman from North Carolina [Mr. KITCHIN], the leader of this House, who has voted always for prohibition measures. The rest of the Committee on Ways and Means sustained the outage proposition, and this proposition had passed the lower House repeatedly. As a result, however, of the minority report I prepared on that occasion the bill was never even brought up in the House for passage, and there was saved to the Government at least \$20,000,000 in revenue, and with the failure of this "outage" effort the Whisky Trust met with its first real defeat, and then there commenced the real progress of the antisaloon movement in the United States.

I assisted in drafting the clause in the revenue bill of to-day which vastly increased the internal-revenue taxes on beer and whisky. I had charge of this item on the floor of the House, and made the speech defending it. As a result of the incorporation of this item in the laws nearly \$200,000,000 in additional revenue has already been collected; and no matter what becomes of the proposed prohibition amendment which has been submitted to the States, this law will never be repealed. It has already resulted in the elimination of thousands of saloons throughout the United States. On account of the increased cost of intoxicating liquors, 2,000 saloons in the city of Chicago have already closed their doors, and the same situation prevails in the other great cities of the country, and in every wet district of the United States, as a result of this law, saloons are going out of business. I have been as actively instrumental in assisting in putting saloons out of business as any prohibitionist in this House or elsewhere. In fact, in the fight against outrageous allowances and for higher taxes, which have already put out of

business many thousand saloons, we did not have the assistance of professional prohibitionists here or elsewhere.

PROFESSIONAL PROHIBITIONISTS.

It seems particularly easy to a number of gentlemen who on every occasion seek positions in the limelight on the prohibition question to solve this most troublesome matter. The way to do it is simply to stop the manufacture of beer, in their judgment. No matter what else you stop, stop the manufacture of beer, and stop it at once.

THE PROBLEMS CONFRONTING THE PRESIDENT.

At the present time in the United States we are making vast quantities of malt liquor which contains no alcohol whatever. It is rapidly becoming popular, and these so-called "near beers" are taking the place of beer. This amendment, if it could be enacted into law, and if the President could be coerced, would immediately stop the manufacture of malt liquors of this character, but of course this problem does not appeal to professional prohibitionists. At the present time some of the grain we are shipping abroad is being used in the production of malt liquors in England, but of course this delicate international question does not appeal to professional prohibitionists.

At the present time the President of the American Federation of Labor is most violently protesting against the abolition of beers containing a very light percentage of alcohol, and strikes are being threatened in our war industries, but of course a matter of this kind does not appeal to professional prohibitionists. At the present time in the production of liberty bread, and all our war bread—made as they are of mixed cereals with as small a percentage of wheat as possible—it is necessary to use more yeast, and the consumption of yeast has increased in the United States since our declaration of war 33½ per cent. I am at the head of a subcommittee which is dealing with this very problem now. The stoppage of the manufacture of whisky has stopped the manufacture of the large quantity of yeast, which was a by-product connected with the manufacture of whisky. The yeast makers of the country have responded splendidly to the demands on their plants, but half of the yeast supply in the United States—perhaps more than half at the present time—consists of compressed yeast, and compressed yeast can not be made without malt sprouts, and malt sprouts can not be procured unless somebody makes beer—not the "near beers" of commerce, but the light beers of the present period, which contain a minimum of alcohol.

The sudden and unadjusted application of this proposed amendment—if it is possible to coerce the President—would result at once in a bread shortage in the United States most alarming in character. Those great yeast-making establishments which make yeast by the filtration-aeration process would be compelled to close down and to remodel their plants, adopting the expensive and antiquated methods of years ago.

THE YEAST PROBLEM.

The Fleischmann Co., of Cincinnati, with a capacity of 350,000 pounds of yeast a day, producing yeast for 90 per cent of the bakers of the United States and for 20 per cent of the families of the United States, would be compelled instantly to cease operations. This one company produces yeast for 52 per cent of the entire population of the United States. The Corby Co., of this city, with a capacity of 20,000 pounds of yeast a day, could not operate another day under these conditions. The Pennsylvania Yeast Co., of Philadelphia, with a capacity of 2,000 pounds of yeast a day, and the National Co., of Milwaukee, with a capacity of 9,000 pounds of yeast a day, would be compelled to close. It would require months for these companies to rebuild their plants and to adopt the more expensive and the more antiquated methods in vogue years ago in producing yeast.

THE BURDENS THE PRESIDENT IS CARRYING.

I have mentioned some of the problems confronting the President in dealing with this most serious question. We have heaped upon his shoulders burdens greater than any other man in the world was ever compelled to carry, and this amendment proposes to take away from him the wise discretion we have heretofore confided in him in dealing with this important question. In the handling of the great problems committed to him he has used at all times and on all occasions that wise discretion and excellent judgment which all loyal citizens concede that he possesses. By this measure, if it could be enacted into law, you tender to the President of the United States a gratuitous insult, which he is not entitled to receive at the hands of this body. If you could coerce him by a provision of this kind, the result in some of the particulars at least to which I have called attention would be economic disaster, but of course this question does not appeal to professional prohibitionists.

THIS PROPOSITION WOULD ENORMOUSLY INCREASE VALUE OF WINES AND WHISKY.

There are vast stores of wines in California, and of whisky in bonded warehouses throughout the United States. If you could coerce the President you would confer a tremendous advantage upon those men in California who hold in their possession these vast stores of wines and upon the Whisky Trust of the United States, which holds now vast stores of whisky. You would at once compel users of light beers and users of beers which contain no alcohol at all to resort to the wines stored in the State of the gentleman who proposes this amendment, or to the whiskies stored in the vaults of the Whisky Trust, thereby tremendously increasing the value of these stocks, and I submit you would not render at the present time a great service to the cause of temperance, and by holding up the farming industries of the United States, which need support and assistance so vitally at the present time, you would not be contributing to the increased food production we need so much.

SUPPORT THIS AMENDMENT WILL RECEIVE.

This amendment will pass this House because it will receive, first, the votes of the eleventh-hour prohibitionists, who have never exhibited the slightest interest heretofore in the progress of the antisaloon movement in the country, but who, now that the elections are approaching, will be able to call the attention of their constituents to their record on this particular measure, without explaining the effect of their vote. It will receive the support of all of those gentlemen who seek, for political purposes, to embarrass the President of the United States in the discharge of his most difficult duties. It will receive the support of those Members who are anxious to continue in favor with the prohibitionists in their districts who have no opportunity of posting themselves as to the real effect and the real object of this amendment.

SOME PROHIBITIONISTS WHO WILL NOT SUPPORT THIS PROPOSITION.

Propositions of this character will never receive the support of the distinguished Chairman who presides now over our deliberations and who is a prohibitionist, nor the support of the distinguished leader of the House [Mr. KITCHIN], who votes always for real prohibition; nor the support of the gentleman from North Carolina [Mr. WEBB], the leader of the prohibitionists in this body, the author of the Webb bill. The chairman of the Agricultural Committee, the distinguished gentleman from Mississippi [Mr. CANDLER], the author of this bill, himself a prohibitionist always, has indicated that he will vote against this amendment. I might continue this list indefinitely in order to show that this amendment can not receive at any stage of this bill the support of the real prohibition leaders in this body, and I will be surprised if it receives the support of any of the recognized prohibition leaders in the Senate of the United States when it reaches that body.

What Mothers' Day Means.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 31, 1918,

On the bill (H. R. 12281) making appropriations for the support of the Army for the fiscal year ending June 30, 1919.

Mr. LONERGAN. Mr. Speaker, the bill before the House should pass without opposition. The time for argument in regard to war measures is passed. Action, and vigorous action, is now the only thing in order. Our armies have been in the field for more than a year. Daily they are increasing. Even the wonderful story brought back by our able Secretary of War, Newton D. Baker, a few short weeks ago does not now describe the situation. Each day sees its ships sail from our ports loaded with men, munitions, and food; and each day the Army under Pershing is augmented.

Every addition means additional expense. This expense must not only be met but it must be anticipated. We can not fail our men at the front, for on their bayonets and in the strength of their guns they carry the life of our Republic.

Those men, leaving all at the call of duty, have carried with them not a little of the idealism that makes this Nation an honored one among the peoples of the world. Nothing could have typified it more than did the action of Pershing's troops in deciding to observe Mothers' Day, May 12 last, by writing home to their mothers.

The plan was suggested by the editors of Stars and Stripes, among them one of the ablest of Connecticut's younger journalists, Hudson R. Hawley, of Hartford, formerly of the staff of the Times of that city, later of the New York Sun, who offered his services to his country, not in any preferred position, but as a private in the ranks. This plan met with the immediate approval of Gen. Pershing, and on May 8, 1918, he issued the following order of the day to the American expeditionary force:

To all commanding officers:

I wish every officer and soldier in the American expeditionary forces would write a letter home on Mothers' Day. This is a little thing for each one to do, but these letters will carry back our courage and our affection to the patriotic women whose love and prayers inspire us and cheer us on to victory.

(Signed) PERSHING.

When this information was cabled here I suggested to Postmaster General Albert S. Burleson that the mail of the soldiers posted Mothers' Day be expedited in transit. He agreed and wired to the editors of Stars and Stripes, which is the official organ of our troops abroad, that mail posted on Mothers' Day would, as far as possible, have the right of way.

Prompted by the whole-hearted way in which the American soldiers abroad responded, I suggested to the Secretary of War and to the Secretary of the Navy, as well as to the Commandant of the Marine Corps, that the troops at cantonments and in our insular possessions, the men with the fleet abroad and at home, and the marines, wherever stationed, be included.

From the War Department came the following reply:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, May 10, 1918.

HON. AUGUSTINE LONERGAN,
House of Representatives, Washington.

MY DEAR MR. LONERGAN: Referring to your letter of May 3, 1918, in regard to the approval of Gen. Pershing to the plan recommended by the official organ of our troops abroad, that every soldier in France write to his mother on Mothers' Day, May 12 next, the Secretary of War wishes to thank you for this timely suggestion, which he has been glad to adopt.

Your attention is invited to the inclosed copy of telegram sent to all department and division commanders in connection with this matter.

Very truly, yours,

H. P. McCAIN,
The Adjutant General.

The telegram referred to was as of May 10, an order of the day to all department and division commanders, quoting Gen. Pershing's order to the troops abroad as of May 8, and adding:

The Secretary of War most heartily approves the foregoing and desires to urge upon every officer and soldier in the Army that he emulate the example of the soldiers in France by writing a letter home on Mothers' Day, May 12.

The fleet, I was informed, was notified by wireless along the same lines on May 11.

Thus every man wearing the service uniform of the United States on May 12 last, whether his duty was that of holding the front trench in France, of sweeping with his eye the horizon of the North Sea for the telltale periscope of the detestable submarines, of guarding our border under the hot sands of Arizona, of learning at our training camps the art of war, used at least a few minutes of his day in writing to the one friend whose heart is always with him—his mother.

The significance of this action can hardly be overestimated.

It is a tribute at once to the name of "Mother," to the traditions of the service of the Army and Navy of the United States, and is at the same time indicative of the wonderful esteem in which woman is held in our Republic.

History records nothing parallel to it. The Persian armies under Darius and Cyrus looked upon women as man's servant; the sturdy Macedonian phalanxes, under Phillip and later under Alexander, had no greater ideals than desire and lust for conquest and loot; the Greeks, while they saved Europe from Asiatic overlords, held women in little regard; nor were the Romans, warriors and lawmakers that they were, far advanced in their estimation of women from the Greeks. Even in later days and in more civilized countries woman's station in life has not been what it should be.

But in the United States women to-day exert an influence for good that will be one of the most glowing pages of the history of this great war. The call to arms came. Men answered it. Our women held back their tears so long as they could, but the tears came with the parting, and after the tears—work. The winds of the seas and the colds of winter would come, and the men on our ships and in our camps must be warm. Deft fingers worked unceasingly—every community had its organization—and sweaters, helmets, and wristlets took form. Wounds and scars of battles would come, and pale but diligent hands seemed forever to be rolling bandages and packing kits destined to save how many lives we know not on the battle field. Tedious hours might come around the campfire, and books and other good things had to be carefully wrapped and dispatched to the men.

Women, too, have gone out from their homes into the marts of cities and into the factories of industrial communities, accepting positions for which they were fitted, thus releasing men for more important work here or for duty at the front. Every town in the land had its women's committees for the sale of liberty bonds, and their efforts everywhere met with uniform success.

Despite their new and manifold duties, however, the women of the land kept their hearts as ever with the troops, and the recognition of their services by the men on Mothers' Day was a justly deserved one.

It needs no imagination to say that while the soldiers and sailors on that Sunday were writing home letters of comfort and cheer, mothers, too, wherever they were, were in turn penning messages of courage and inspiration to their sons with the colors. We can almost see our transport and mail ships straining every effort to bring from France and England these epistles of love and devotion to the mothers of our land, passing in mid-Atlantic similar ships, couriers, in turn, of hope and love for the fighting men abroad.

It was with no little pleasure, then, that I was informed by Mr. Otto Praeger, Second Assistant Postmaster General, in charge of foreign mails, that on May 31, 1918, there arrived at an Atlantic port, a transport bringing 1,425,000 letters written by our troops and by the men of the fleet on Mothers' Day, in addition to 205,000 letters received earlier the same week. This mail, I was further advised, began to arrive, at the post office of the port where the ship landed, at 4.05 o'clock, and was worked out and dispatched to its destination on every available train during the night, and every letter was out of the office before 11 o'clock of the morning of June 1, and orders had been issued by postmasters everywhere to give expeditious handling to this mail.

The New York Herald of Saturday, June 1, 1918, carried the following story of the arrival of Mothers' Day mail:

The Mothers' Day mail has arrived.

The machinery of the Post Office Department was ready for it. Soldiers' mothers of New York City should receive on the first mail this morning letters from their sons with the American Expeditionary Force. A few of them received their letters last night.

Altogether 475 sacks of letters bringing words of love and good cheer arrived early yesterday at an Atlantic port on board an Army transport. Since they were dispatched on Mothers' Day, May 12, at various points on the western front, they have been moving, not as rapidly as in peace time, but with a determined precision on the slow-moving trains from the battle front, on the faster trains that speed from Paris to the French ports, and then on the big Army transport with its convoy of battleships.

This is what happened as soon as the mail sacks were unloaded from four post-office motor trucks at the central post office here. The trucks were unloaded by a score of mail handlers on the long platform back of the post office behind the Pennsylvania station. The Army mail now is arriving in sacks, sorted as to States and larger cities. The mail destined for points outside of the metropolitan district was hurried to catch mail trains. Railway mail clerks sorted it as the trains sped to all sections of the country.

There were 22 sacks of New York City mail—about 75,000 letters in all. A large portion of these letters were addressed to mothers, with "mother's letter" or "mother's mail" written in the corner by the soldier son.

Here these letters received preference over all other mail. The sacks were opened with haste and the bundles of letters piled onto sorting tables. Then the men who stand in front of the cases of pigeonholes tossed them with their speedy precision into the compartments, each of which represents a substation. When the compartments were filled the small bundles were tied with cord and thrown onto the little moving sidewalk over the heads of the workers. Thence they were dumped onto a small platform, where other corps of clerks were busied in throwing the bundles into the pneumatic tubes, which shoot mail to all parts of the city. At the substations clerks sorted the letters into carrier districts, and then the mail carriers—the only workers of the big machine known to the public—began their everyday task.

Mothers who have not heard from their sons in months—perhaps some in years—will get letters within the next four days in cities and on farms from Portland to Portland.

The New York Times of Sunday, June 2, 1918, had the following account:

Mothers' Day, May 12, was not forgotten by Gen. Pershing's forces in France, and in consequence the New York post office was kept busy until yesterday afternoon handling the largest assignment of mail received from France at one time since our soldiers have been overseas. Close to 1,500,000 letters were received, 75 per cent of which were addressed to women throughout the country. In New York City alone 80,000 Mothers' Day letters have been distributed. In many instances no word had come from these sons in months—some in years.

As soon as the 475 mail sacks were unloaded at the piers they were rushed in motor cars to the central post office here, the letters receiving preference in handling over all others. The mail destined for points outside Manhattan was distributed and rushed to catch the first outbound trains. Letters for city delivery were sorted with all haste and sent through the tubes to the branch post offices, where they were again sorted and put in the sacks of the letter carriers.

The following extracts from letters received by New York mothers give a good idea of the desire of their fighting sons to bring only comfort and reassurance to their mothers' hearts:

"Don't worry, because, as far as I know, we are just as safe as we were at Camp Upton, and you know that living in a tent agrees with me."
"There isn't a thing you can send me from home, so don't worry about what I want. Haven't wanted anything yet that I couldn't buy over here. Things don't cost any more and there doesn't seem to be a shortage of anything."

"The food is excellent, even better than in the camps at home—marmalade or jelly every day."

"You can rest assured that no regiment could be in better spirits or have higher aspirations than ours. We are ready for whatever is in store for us. So don't worry; everything will be O. K."

"It is great to be here. Every one in the United States would be glad to be here if he knew the conditions and could see the brave but pitifully poor French people. Poverty is no name for it."

One young private in the American Ambulance Corps wrote to his mother and said that, though they had no flowers or buttonholes to wear them in, if they did have, they were remembering Mothers' Day with more reverence than they ever had at home. Another young son writes his mother:

"I am sitting in one of the Y. M. C. A. joints with a bunch of other fellows. We can hear the guns in the distance. It sounds like thunder, way off, during a heat-lighting storm up in the Poconos. Everyone is writing to his mother; at least I guess he is, because no one asks how to spell 'young men's fancy' words, and all are using pencils, as I am."

And these simple letters, some of them perhaps scribbled on the most available paper, whatever it might be, others on fine stationery, will surely serve to strengthen the bonds between our homes and the men who have gone out from them to make them the more secure.

Ours is the duty to keep these bonds unbroken. Contentions at home should be avoided. We have sent our troops out to fight. We should see that they are supplied, and most abundantly, with food, with munitions, with clothing, with the smaller things that make life worth while. Above all things we should write them, and write them often, telling them that at home we are keeping the faith; that we, like they, have set our faces resolutely for victory and will sacrifice ourselves to the uttermost until this victory is attained.

And this message to them will buoy up their spirits, even as their messages on Mothers' Day made happy hundreds and thousands, aye millions, of true women in the United States.

EXTENSION OF REMARKS

OF

HON. WALTER M. CHANDLER,
OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 3, 1918.

Mr. CHANDLER of New York. Mr. Speaker, I ask unanimous consent to have inserted in the RECORD a booklet entitled "A Tribute for the Negro Soldier," by John E. Bruce, a distinguished author, and the American representative of the African Times and Oriental Review, London, England.

There was no objection.

The matter referred to is as follows:

A TRIBUTE FOR THE NEGRO SOLDIER.

[By John E. Bruce, American representative of the African Times and Oriental Review, London, England.]

FOREWORD.

Mr. Bruce has rendered a distinct service in paying tribute to the negro soldier by presenting in this admirable form a survey of the whole military field, particularly that portion which relates to and includes the negro soldiers who are now serving with the allied armies in Europe.

With the allied armies in Europe there are already associated negro soldiers from the United States, and an increasingly large number of them will soon be on the firing line under the Stars and Stripes. The history of the American negro soldier is a history of courage and valor. The negro's blood has crimsoned battle fields in every war fought by the United States since the American Revolution.

The patriotism of negro people has never been doubted, and the courage of the negro soldier has been for years a fitting theme of song and story. Every negro soldier going to the front will be heartened not only to "do his bit" but more than his bit when he reads the wonderful story of the dauntless heroism displayed by men of his own race under fire.

I am hoping that this booklet may find a place in the comfort kit of every one of them and in the libraries of those who would be informed as to the real worth and history of the negro soldier.

EMMETT J. SCOTT.

DEDICATION.

The negro soldier fighting under the flag of the United States is blood brother to some of the bravest men who have ever lived. From the jungles and swamps of his mother land, Africa, the incense of brave deeds rises as a tribute to a race that has ever carried a light heart and has not been afraid to die. Through Europe, over to America, on the sea, in the South Sea Islands, even to the very North Pole itself, our brave feet have wandered, and despite handicaps we have acquitted ourselves as men. Believing that a knowledge of the pure fighting strain of our ancestry would nerve us to meet the test now imposed by the participation of the United States in the war to make democracy triumph over autocracy, the publishers of this book send it forth to serve our country's need and to establish our race's honor so far as it rests upon bravery in warfare. It is not a connected narrative; it is not argumentative; it is facts.

Menelik, who said he was a direct descendant of the Queen of Sheba, defending his Kingdom of Abyssinia in north Africa from invasion, is a glory to us in his victory. Our brothers in the Sudan who followed

the Mahdi and died in the British trenches, measuring their spears against the modern rifle, and our brothers in the south of Africa, the Zulus, who died under the machine guns, are no less a glory to us in their defeat.

History, as it is usually written, conceals from us our brotherhood with many men, because they are called by the name of the land where they live, not by their race. To give this knowledge to the negro soldier fighting for the cause of the United States, and to inspire him to greater deeds of military prowess, because he will know that he comes of a stock that has done glorious deeds in warfare, is our aim, and with this hope we dedicate this volume to the modern Numidians—the negro soldiers of the United States of America.

WITH THE ALLIED ARMIES IN EUROPE—"OVER THERE."

BLACK OUTPOST THREE TIMES BURIED.

The 500,000 black and colored men now fighting on the side of the allies in Europe are showing themselves to be as brave and courageous in battle as black and colored men on this side of the Atlantic have shown themselves to be. Many notable instances could be cited of the personal bravery of these black fighters, but we will content ourselves by citing only a few of them. Here is the official record of Fako Doumbia of the Fifty-first Senegalese battalion serving at the observation post of the trench. He was three times buried by projectiles, three times released himself and resumed his post with the greatest calmness, continued on duty until relieved by the commandant of his company.

NEGROES CHARGE AT VERDUN.

Fort Douamont, which had gained renown for its obstinate and prolonged defense by the French during the German rush at Verdun in 1916, was defended by the Huns with equal obstinacy when the French began their counterattack last year, but was recaptured at last. In the course of the attack a battalion of the "Tirailleurs," together with one of the "poules," was held up by an artillery barrage in front and machine-gun fire on the flanks. A veteran lieutenant of the Tirailleurs cautiously raising his head shouted to his men: "How now, Tirailleurs, are we going to stick here? Forward!" The Tirailleurs immediately bounded forward, carrying the "poules" with them in their rush. They passed the barrage and capturing the fort raised the tri-color once more upon its walls.

SINGLY OR BY COMMANDS WE MEET THE TEST.

On March 1, 1916, a battalion was organized at St. Raphael from the veterans of the previous campaign and recruits recently arrived from Africa. After three months' training, to give the necessary cohesion, the battalion was sent to the front on June 1, and went into the trenches on the Oise, and then on the Somme, taking its part in all the battles. At the end of October the battalion went into winter quarters near Arcachon, where it was put under "intense" training, and on March 19, 1917, joined the armies of the North and Northeast on the line of the Aisne, where it was attached to a regiment of Colonial Infantry with which it took part in the spring offensive.

On April 16 and 17 it distinguished itself greatly at the farm of Nolsy, the men dying at their posts rather than abandon the position which they had taken.

In May it served at the Mill of Laffaux, and in June and July was in the trenches in the reconquered part of Alsace.

NO ROMAN LEGION DESERVED HIGHER PRAISE.

During July-August it took part in the defense of the plateaux of Craonne and California and fought on the Chemin des Dames.

These names suffice to show that the battalion was always at the seat of the hottest fighting, and wherever it was called upon to serve, whether in attack or in defense, it attracted attention by its courage, devotion, and self-sacrifice.

The quality of these gallant soldiers will be shown by a few quotations from the "citations a l'ordre" for a single day.

NEGRO COURAGE AND FRENCH NAME.

"Kofi Alla, private: Cool and collected; courageously led his comrades on April 16, 1917, to an assault of the enemy positions. Although wounded, continued to throw his bombs on a hostile machine gun and only left his post when his strength gave out."

"Moderi Comba, private: Very devoted and courageous; on April 16, 1917, dressed, under fire, the wounds of his lieutenant and returned to his post in the line."

"Dembba N'Daigne, private: Very courageous. On April 16, 1917, taking the quick-firing gun of one of his wounded comrades, stopped by his fire an attempted bombing attack by the enemy."

"Mamadon N'Daigne, sergeant: On April 1, 1917, distinguished himself among the bravest of those who advanced against a German counter attack and formed a first line of defense behind the barbed wire."

"Donga Thiam, private: On April 16, 1917, being with a group of bombers and all his comrades having become casualties continued alone to cast his bombs into the enemy's trench."

"Eli Diot, corporal: Showed remarkable courage in the attack on the enemy's lines on April 16, remained at his post although seriously wounded and never ceased to encourage his comrades."

WIN RIGHT TO RESPONSIBLE POSTS.

Where all are brave it is no small matter to stand out sufficiently to attract notice; each "citation a l'ordre" is equal to a decoration, and is inscribed on the regiment's Roll of Honor as a leaf of laurel in its crown, as a memento of deeds which have made it illustrious and an incitement to their successors to emulate the deeds of the heroes.

Owing to the activity of the German intelligence department, with its vast network of spies, and the necessity to avoid affording the enemy any clue to the position and nature of the troops opposed to him at any specific point, the war offices of the allies have ordered the doings of the various units of the army with a veil of secrecy which is seldom lifted. I am, however, permitted to definitely name the following battalions and to quote the following "citations" as specimens of the appreciation by the high command of the deeds of "Les Tirailleurs."

"The Sixty-first Senegalese Battalion specially distinguished itself on July 9 and 10, 1916, by the tenacity and vigor of its attacks. By severe fighting carried five successive lines of enemy trenches and a very strong position which it held in spite of furious counter attacks by the enemy. Took 1,000 prisoners."

"The Thirty-sixth Senegalese Battalion on October 24, 1916, advanced to the attack on the German lines in perfect order, brilliantly carried the first enemy line, then reforming carried the objective assigned to it, after an energetic progress of more than 2 kilometers."

"The Twenty-ninth Battalion of Senegalese Sharpshooters: Under the orders of Commandant Champel bore stoically and without shelter very violent bombardment during one day and two nights; then, on April 17, 1917, in spite of serious losses, sprang forward to the assault of an almost inaccessible enemy position three times, calling forth cries of admiration from the next regiment, entered it, and maintained itself there."

THE STUFF OF WHICH HEROES ARE MADE.

There are numerous instances of record of the heroism of black and colored men in the British Army. Among some of the more notable and conspicuous may be cited the case of Private Gordon, of the First West Indian Regiment, who while fighting against natives in the hinterland of Sierra Leone won the Victoria Cross by conspicuous bravery which saved the life of a European officer.

Sergt. Daniels, of the Gold Coast Regiment, gained special distinction fighting against Ashantis, taking charge of the battalion when its white officers were killed, leading them successfully against the enemy. For this act he was promoted a lieutenant and subsequently transferred to the Southern Nigeria police force as instructor.

A private of the Northern Nigeria Regiment, composed of the fighting Hausa Tribe, while fighting in the Kamerun (Germany East Africa colony), 1913-16, won the West African medal by a daring act of courage, swimming the river with a machine gun on his back in the face of a hot fire from the enemy.

The white British Army in the Zulu War, armed with modern instruments of destruction, were severely defeated by the Zulus at Ulundi and Isandula by Zulus armed only with assegais, under King Cetewayo.

The Italian Army advancing from Italian Somaliland into Abyssinian territory were defeated by Abyssinian troops, with great slaughter. This energetic action on the part of the Abyssinian Army put a check to Italian land-grabbing schemes in that direction, 1899.

The Hereros of German Southwest Africa fought a guerilla campaign against the German colonial army with varying successes until the native tribe were wiped out.

NEGROES ARE EASILY TRAINED.

SIR GARNET WOLSELEY'S TRIBUTE TO NEGRO SOLDIERS.

I do not think Europeans learn drill as quickly as the Bantu or the Zulu. It is astonishing to see the zeal, the undisguised interest, and application these savages bring to bear upon all military lessons given to them. They take the utmost pride in being soldiers and in acquiring any art or drill or exercise connected with the management and handling of arms or the movements of armed bodies. There seems to be something in the disposition and genius of the common stock from which they come, some hereditary bias in their brain, in their very blood, which fits them for the easy acquisition of a soldier's duties. (Gen. Viscount Wolseley, Fortnightly Review, 1899.)

REFRAIN OF ASHANTI WAR SONG.

If I go forward, I die;
If I go backward, I die;
Better go forward and die.

GREAT MILITARY LEADERS.

PURE FIGHTING STRAIN SHOWN IN MANY LANDS.

In every war fought by civilized nations the Negro has played a conspicuous part, either as a private in the ranks or as an intrepid and courageous leader, and he has proved his worth and value as a fighter on every battle field of the world since the dawn of civilization. The Numidians and Moors under Gracchus fought as bravely for their liberty as did the black men and white men under Washington for American independence, and under Grant and Sherman and Sheridan in the War of the Rebellion for the preservation of the Union and the ultimate freedom of the black man. No race has a monopoly of intellect or of courage; the germs of these lie hidden in the hearts and brains of men of every race, and only need opportunity for their full development. The science of war is no novelty to the black man. Hanno, Hamilcar, Imilcon, Hannibal, Scipio Africanus, Pompey, Cimon, and Belisarius were all of them great military leaders and commanded and led black men into battle as well as men of other nationalities. Scipio Africanus (whose full name was Publius Cornelius Scipio; because of his victories in Africa he was called Scipio Africanus, a title of honor), who was a citizen of Rome, prevailed against Hannibal about 146 B. C. This was the last Punic war, and it terminated in the overthrow of Carthage. The interview between Hannibal and Scipio Africanus preceding the Battle of Zama is most affecting. "Since fate," said Hannibal, "has so ordained it that I, who began the war and who have been so often on the point of ending it by a complete conquest, should now come of my own motion to ask a peace, I am glad it is of you, Scipio, I have the fortune to ask it. Nor will this be among the least of your glories, that Hannibal, victorious over so many Roman generals, submitted at last to you." Scipio's reply to this showed that magnanimity united to courage was a characteristic of the African generals of antiquity. The great and illustrious Hannibal could surrender only to his peer in military prowess, and he, like himself, a great military genius.

THE BLACKS UNDER TIBERIUS GRACCHUS, A ROMAN.

The legions which he had with him consisted mostly of volunteer slaves who had chosen rather to merit their liberty in silence by the service of a second year than to request it openly. He had observed, however, as he was leaving his winter quarters, that the troops on their march began to murmur, asking whether they were ever to serve as free citizens. He had, however, writing to the Senate insisting not so much on their wishes as on their merits, declaring that he had found them faithful and brave in the service, and excepting a free condition they wanted no qualification of complete soldiers. Authority was given him to act in that business as he himself should judge conducive to the good of the public. Before he resolved upon coming to an engagement, therefore, he gave public notice that the time was now come when they might obtain the liberty which they had so long wished for; that he intended next day to engage the enemy in regular battle in a clear, open plain without any fear of strategems, the business might be decided by the mere dint of valor. Every man, then, who should bring home the head of an enemy he would instantly by his own authority set free, and every one who should retreat from his post he would punish in the same manner as a slave. Every man's lot now depended on his own exertion, and as security for their obtaining their freedom not he himself stood pledged but the Comitia Marcellus and even the whole senate, who, having been consulted by him on the subject of their freedom, had author-

ized him to determine in the case. He then read the consul's letter and the decree of the senate, on which a universal shout of joy was raised. They eagerly demanded the fight and ardently pressed him to give the signal instantly. Gracchus gave notice that they should be gratified on the following day and then dismissed the assembly. The soldiers, exulting with joy, especially those who were to receive their liberty as the price of their active efforts for one day, spent the rest of their time until night in getting their arms in readiness.

The next day, as soon as the trumpets began to sound to battle, the above-mentioned men, the first of all, assembled around the general's quarters ready and marshaled for the fight. At sunrise Gracchus led out his troops to the field, nor did the enemy hesitate to meet him. Their force consisted of 17,000 foot, mostly Britanni and Lucanians, and 12,000 horse, among whom were very few Italians. Almost all the rest were Numidians and Moors—Bakers Livy's Rome, vol. 3.

(If there is any distinction here on account of color we have the case of Numidians and Moors fighting for their liberty. The distinction between them and Negroes we leave to others whose sight is very refined.)

The Romans gained a complete victory, and Tiberius Gracchus, in an imposing spectacle, gave these blacks their freedom and secured it to them and their posterity forever. The Roman Senate afterwards, by a decree, made it permanent. The Romans held different degrees of slaves, and of various nations. Some of the Germans, many of the Asiatic nations, and many of the African tribes were held as slaves. There was no distinction ever made between them on account of their color. Their condition, not their color, fixed their slavery.

A BEAVER DEED NEVER DONE.

BRAZILIAN MEDAL COMMEMORATES BRAVE DEED.

During the reign of John the Fourth of Brazil, an unadulterated Negro, Henry Diaz, organized a regiment of blacks, of which he was made colonel, to fight against the Dutch. He met with some opposition in his efforts, but finally succeeded in obtaining not only permission to organize this regiment, but the commission as colonel of it. This regiment accomplished in a short time what the white regiments, after eight years of almost constant warfare against the Dutch, failed to do. It took from the Dutch the fortress of Cinco Pontos and placed the Portuguese flag on its tower. When Diaz informed the commander in chief of his plan to take this fortress which had been held so long by the Dutch, he overheard him say to one of his staff as he was leaving: "It is a nigger plan." He took no notice of the slur, but proceeded with his plans. He ordered his men to lay aside their muskets, to retain their side arms, to take a pair of pistols in their belts and to carry upon their shoulders a heap of wood tightly bound together with osier bands. Thus prepared, at 2 o'clock in the morning he gave the command to march toward the fort. The night was dark and the column arrived at their destination in perfect safety. Silently and rapidly they deposited their bundles in the deep trench, beginning at the outer margin and building successive layers toward the wall; as fast as the operation was performed they filed off and formed companies in readiness to scale the wall as soon as this combined bridge and ladder should be completed. They were obliged to wait but a brief period. The Roman warriors could not have buried the parricide woman under their shields with more celerity than the soldiers of Diaz filed up the fosse and formed an ascent to the wall. Diaz was the first to leap upon the ramparts, the first sentinel he met was laid dead at his feet. The garrison was sleeping and before they were completely aroused the blacks had gained the greater part of the fortress. As soon as the Dutch recovered a little from their first surprise and confusion they formed a compact phalanx and offered desperate resistance. Diaz received a sabre wound which shattered the bones of his left arm above the wrist. Finding that it would take the surgeon some time to adjust the bones and arrange the dressing, he bade him cut off the hand, saying, "It is of less consequence to me than a few moments time just now." This being done, he again rushed into the hottest of the fight, and although the Dutch had greatly the advantage in the use of their artillery and muskets, they could not long withstand the determined bravery of their assailants; fighting hand to hand they soon killed or captured the whole garrison and took possession of their immense stores of provisions and ammunition. When the darkness and smoke cleared away, the Portuguese flag was seen waving from the tower to Cinco Pontos. "The nigger plan" had proved successful, and the commander in chief could scarcely believe the evidence of his own senses. At the request of John the Fourth, Diaz visited Portugal, where he was received with great distinction. The king desired him to choose any reward within his power to bestow. Diaz merely requested that his regiment might be perpetuated and none admitted to its ranks but those of his own color. This was granted, and a considerable town and territory were appropriated to secure pensions to these brave blacks. The town is called Estancia and is situated a short distance from Pernambuco. The king conferred knighthood on Diaz and caused a medal to be struck in commemoration of the capture of Cinco Pontos. It was likewise ordained that the regiment should ever bear the name of its first commander. Its uniform is white, faced with red, and embroidered with gold.

OUR RACE HAS SUPERIOR MILITARY SKILL.

AN OCTETTE OF GREAT NEGRO GENERALS.

Hannibal, Toussaint L'Ouverture, Dessalines, Maceo, Henry Diaz, Estonois, Cetewayo, Memelik, and hundreds of other intrepid Negro military leaders who have signalized themselves on the battle fields of the world attest the fighting qualities of the Negro race and have proved that by their deeds its right to be. Dessalines vanquished the French army commanded by Rochambeau, who was sent to Santo Domingo to conquer and subjugate the blacks. He drove him out of the country and he came to America and joined the American Army, where he distinguished himself and won a monument of two. The wily black general was more than a match for the Frenchman.

Maceo, one of the greater generals of Cuba, was representative of the black race, like Dodds in France and Fumas pere, Estinoz, of Cuba, a black man, was a dashing leader, beloved by his race, as was Maceo, and both were victims of treachery because of their growing popularity and the fear that they would some day carve with their swords the way to freedom and independence for black and colored men in the Antilles. The lives of these great men should inspire and hearten the youth of the Negro race, for they have set an example which they may worthily follow.

THE HIGHEST FORM OF COURAGE.

On February 17, 1917, the steamer *Athos*, having on board a battalion of Senegalese, was torpedoed by a submarine when about 2 miles from Malta. The troops were at once drawn up, and, obeying commands calmly as if on parade, they lowered the boats and rafts and transferred the women and children thereto. Some of them jumped into the sea four or five times to rescue passengers who had been seized with panic and jumped overboard; until the last civilian had been placed in safety not a single Senegalese boarded the two torpedo boats which were escorting the ship. There remained on board only the guard on duty, consisting of a section and a half, when the *Athos* suddenly plunged at the hour of 12.40 p. m. As the ship sank the guard was seen to draw up in line and present arms to the flag; impassive and unmoved they stood until the waters swallowed them up. Honor to the heroes. The high command has preserved their memory by a general order to the army. The battalion gave the most splendid example of coolness and discipline. The sentries died at their posts in the discharge of their duties, although they had not yet received their "baptism of fire." They had proved themselves soldiers of the highest order, maintaining their discipline and calmly performing their duty in the face of imminent death.—W. F. Hutchinson, negro war correspondent at the European front.

NEGROES IN THE NAVY.

Following testimony as to the efficiency and courage of negroes as sea fighters is submitted:

PROVIDENCE, October 13, 1862.

MY DEAR SIR: In reply to your inquiries about the employing of blacks in our Navy in the year 1812, and particularly in the Battle of Lake Erie, I refer you to documents in Mackenzie's *Life of Commodore Perry*, Volume I, pages 166-187.

In 1814 our fleet sailed to the upper Lakes to cooperate with Col. Croghan at Mackinac. About 1 in 10 or 12 of the crew were blacks. In 1816 I was surgeon of the *Java*, under Commodore Perry. The white and colored seamen messed together. About 1 in 6 or 8 were colored. In 1819 I was surgeon of the *Guerrero* under Commodore MacDonough, and the proportion of blacks was about the same in her crew. There seemed to be an entire absence of prejudice against the blacks as messmates among the crew. What I have said applies to the crews of other ships that sailed in squadrons.

Yours, respectfully,
To GEORGE LIVERMORE, Esq.

USHER PARSONS.

The documents referred to are two letters, the first written to Commodore Chauncey in the summer of 1813 by Capt., afterwards Commodore, Perry, expressing dissatisfaction with the appearance of the men who had been sent to him for his squadron on Lake Erie before that famous battle:

"Sir: I have this moment received by express the inclosed letter from Gen. Harrison. If I had officers and men—and I have no doubt you will send them—I could fight the enemy and proceed up the lake, but having no one to command the *Niagara*, and only one commissioned lieutenant and two acting lieutenants, whatever my wishes may be, going is out of the question. The men that came by Mr. Champlin are a motley set—blacks, soldiers, and boys. I can not think you saw them after they were selected. I am, however, pleased to see anything in the shape of a man."

This letter called forth from Commodore Chauncey the following sharp reply:

"Sir: I have been duly honored with your letters of the 23d and 26th ultimo, and notice your anxiety for men and officers. I am equally anxious to furnish you, and no time shall be lost in sending officers to you as soon as the public service will allow me to send them from this lake. I regret that you are not pleased with the men sent you by Messrs. Champlin and Forrest, for, to my knowledge, a part of them are not surpassed by any seamen we have in the fleet, and I have yet to learn that the color of the skin or the cut and trimmings of the coat can affect a man's qualifications or usefulness. I have nearly 50 blacks on board of this ship, and many of them are among my best men; and those people you call soldiers have been to sea from 2 to 17 years, and I presume that you will find them as good and useful as any men on board of your vessel; at least, if I can judge by comparison, for those which we have on board of this ship are attentive and obedient, and, as far as I can judge, many of them excellent seamen. At any rate, the men sent to Lake Erie have been selected with a view of sending a fair proportion of petty officers and seamen, and I presume upon examination it will be found they are equal to those upon this lake."—Mackenzie's *Life of Perry*, Volume I, pages 180-187.

BRITISH CAPTAIN CHAGRINED BY HIS CONQUERORS.

Perry found these negroes fully up to his standard as seamen and fighters and he did not hesitate afterwards to bestow a full measure of praise upon them.

The *Analectic Magazine*, volume 3, page 225, says:

"Perry speaks highly of the bravery and good conduct of the negroes who formed a considerable part of his crew. They seemed to be insensible to danger. When Capt. Barclay came on board the *Niagara* and beheld the sickly and part-colored beings around him, an expression of chagrin escaped him at having been conquered by such men. The fresh-water service had much impaired the health of the sailors, and crowded the sick list with patients."

NEVER QAILED IN THE FACE OF DEATH.

Among the negroes who distinguished themselves at the Battle of Lake Erie were John Johnson and John Davis. A 24-pounder struck the former in the hip and took away all the lower part of his body. In this state, he lay on deck and exclaimed to his mates: "Fire away, boys; nor haul a color down." John Davis was similarly injured and several times requested to be thrown overboard, saying he was only in the way of others. Commander Nathaniel Shaler, of the private armed schooner *Governor Tompkins*, reporting these incidents in a letter to his agent in New York, concluded it as follows: "When America has such tars, she has little to fear from the tyrants of the ocean."

HIS RECORD IN AMERICA PROVES NEGRO BRAVERY.

BUNKER HILL MONUMENT IS SHARED WITH US.

Edward Everett, the silver-tongued orator of Massachusetts, in his oration at the dedication of the monument to Gen. Joseph Warren, among other things said:

"It commemorates no individual man or State. It stands, indeed, on the soil of Massachusetts, where the battle was fought, but there it stands equally for Connecticut, New Hampshire, and Rhode Island, and

the younger sisters of the New England family—Vermont and Maine—whose troops shared with ours the dangers and honors of the day. It stands for Prescott and Warren, but not less for Putnam and Stark and Greene. No name adorns the shaft, but ages hence, though our alphabet may become as obscure as those which cover the monuments of Nineveh and Babylon, its uninscribed surface (on which monarchs might be proud to engrave their titles) will perpetuate the memory of the 17th of June. It is the monument of the day of the event of the Battle of Bunker Hill. All of the brave men who shared its perils—alike of Prescott and Putnam and Warren, the chiefs of the day, and the colored man (Peter) Salem, who is reported to have shot the gallant Pitcairn as he mounted the parapet. Cold as the clods on which it rests, still as the silent heavens to which it soars, it is yet vocal eloquent in their undivided praise."

The event which evoked this tribute to the gallant Salem is more particularly described in a letter by Aaron White, Esq., of Thompson, Conn., in answer to an inquiry on this subject. He writes:

"With regard to the black hero of Bunker Hill, I never knew him personally, nor did I ever hear from his lips the story of his achievement, but I have better authority. About the year 1807 I heard a soldier of the Revolution, who was present at the Bunker Hill Battle, relate to my father the story of the death of Maj. Pitcairn. He said: 'The major had passed the storm of our fire without and had mounted the redoubt, when, waving his sword, he commanded in a loud voice the rebels to surrender. His sudden appearance and his commanding air at first startled the men immediately before him. They neither answered nor fired, probably not being exactly certain what was next to be done. At this critical moment a negro soldier stepped forward and aiming his musket directly at the major's bosom blew him through.' My informant declared that he was so near that he distinctly saw the act. The story made quite an impression on my mind. I have frequently heard my father relate the story, and have no doubt of its truth. My father on the day of the battle was a mere child, and witnessed the battle and the burning of Charlestown from Roxbury Hill, sitting on the shoulders of Rev. Mr. Jackson, who said to him as he replaced him on the ground, 'Now, boy, do you remember this.' Consequently after such an injunction he would necessarily pay particular attention to anecdotes concerning the first and only battle he ever witnessed.'—An Historical Research.

FOUGHT SIDE BY SIDE.

A single passage from Bancroft's *History* will give a succinct and clear account of the condition of the Army in respect to negro soldiers at the time of the Battle of Bunker Hill:

"Nor should history forget to record that as in the army at Cambridge, so also in this gallant band the free negroes of the Colony had their representatives, for the right of free negroes to bear arms in the public defense was, at that day, as little disputed in New England as their other rights. They took their place not in a separate corps, but in the ranks with the white man, and their names may be read on the pension rolls of the country side by side with those of other soldiers of the Revolution."—Livermore's *An Historical Research*.

NEGROES AS SOLDIERS IN THE REVOLUTION, 1776.

As early as 1652 the militia law of Massachusetts required negroes, Scotchmen, and Indians, the indentured slaves of Cromwell, who encountered his army at the Battle of Dunbar, to train in the militia. Those negroes who displayed unusual courage in defending their masters' families from the attacks of prowling bands of Indians in their absence from home were not infrequently given their freedom. The early colonists regarded the Indians with more terror than they did the blacks, and their slaves fully realized that if captured by Indians they would share the same, if not a worse, fate than the whites, and so they fought them with the same desperation as did the whites, and they came to be so proficient in the use of arms of precision that one of the first acts of the settlers after the Indians were driven from the forest was to disarm and forbid negroes keeping or handling firearms and weapons of every sort.—*The Black Phalanx*, by Col. James T. Wilson.

NEGROES IN THE BRITISH ARMY.

Fear that the English, with whom the colonists were at war, would arm the slaves and employ them as soldiers against the Americans led ultimately to the enlistment of many slaves and free men of color in the American Army. In March, 1779, the following resolution was reported to Congress:

"Resolved, That it be recommended to the States of South Carolina and Georgia that if they shall think the same expedient, to take measures immediately for raising 3,000 able-bodied negroes."

The States of South Carolina and Georgia did not then seem to think it was expedient, and Gen. Lincoln, who was at that time in command of Charleston, in a letter to Gov. Rutledge, dated March 13, 1780, says:

"Give me leave to add once more that I think the measure of raising a black corps a necessary one; that I have great reason to believe if permission is given for it that many men would soon be obtained. I have repeatedly urged this matter, not only because Congress has recommended it and because it thereby becomes my duty to attempt to have it executed, but because my own mind suggests the utility and importance of the measure, as the safety of the town makes it necessary."

What higher compliment than this could be paid to the negro soldier as a protector of life and property? Subsequently the delegations from those States in Congress informed that body that such a body of troops would be not only formidable to the enemy but would lessen the danger of revolts and desertions among the slaves themselves.

Three regiments of the British Army arrived in Chesapeake Bay in the middle of August, 1814. Gen. Ross commanded the land forces, Admiral Cockburn the fleet. Their first measure was to take possession of Tangier Island, where they erected fortifications, built storehouses, and hoisted the British flag, inviting at the same time the negroes in the adjoining Provinces to join the British force in the island and offering them emancipation in the event of their doing so. Seventeen hundred speedily appeared, were enrolled, and disciplined, and proved of no small service in subsequent operations."—Allison's *History of Europe*, Volume XIII, page 438.

DROVE BACK GERMANS THREE TIMES.

On April 19, 1775, Negroes fought side by side with the white men of New England when Maj. Pitcairn of the British Army fell mortally wounded by the shot of Peter Salem, a Negro soldier of the Continental Army. A distinguished historian of the period, speaking of the heroic deeds of these Negro defenders of the flag, said:

"Indeed it is hardly too much to say that some of the most heroic deeds of the War of Independence were performed by black men."

Col. Christopher Greene, hero of Red Bank, commanded a Negro regiment that had been raised in Rhode Island. Of this regiment Gov. Eustis, of Massachusetts, who had been Secretary of War under Jefferson, said:

"They discharged their duty with zeal and fidelity, the gallant defense of Red Bank, in which this regiment bore a part, is among the proofs of their valor."

Tristram Burgess, in the House of Representatives in 1828, said of them that no braver men met the enemy in battle. Arnold, in his history of Rhode Island, says:

"It was in repelling these furious onsets that the newly raised black regiment under Col. Greene distinguished itself by deeds of desperate valor. Posted behind a thicket in the valley they three times drove back the Hessians who charged repeatedly down the hill to dislodge them."

Connecticut also raised a battalion of black soldiers, which was commanded by Col. David Humphrey, of Washington's staff.

NEGROES IN THE WAR OF 1812.

Every schoolboy is or ought to be familiar with the famous proclamation of Andrew Jackson, dated at Mobile, Ala., September 2, 1814, calling upon the free colored inhabitants of Louisiana, as "sons of freedom," to enlist and arm against the British, and with his flattering address to them after they had served faithfully in the ranks. It is worth reproducing here:

"To the men of color: Soldiers! From the shores of Mobile I collected you to arms; I invited you to share in the perils and to divide the glory of your white countrymen. I expected much from you, for I was not uninformed of those qualities which must render you so formidable to an invading foe. I knew that you could endure hunger and thirst and all the hardships of war. I knew you loved the land of your nativity, and that, like ourselves, you had to defend all that is most dear to man, but you surpass my hopes. I have found in you united to those qualities, that noble enthusiasm which impels to great deeds. Soldiers, the President of the United States shall be informed of your conduct on the present occasion, and the voices of the representatives of the American Nation shall applaud your valor as your general now praises your ardor. The enemy is near, his sails cover the lakes, but the brave are united, and if he finds us contending among ourselves it will be for the prize of valor and fame, its noblest reward."

In the War of 1812 the Negroes who enlisted in the State of Ohio rendered invaluable service to that State by their heroic conduct in repelling the British. They fought side by side with white men and united they drove the invader out.

MILITARY PROWESS DATES BACK TO ANTIQUITY.

A negro soldier named Lambert avenged the death of the commander, Col. Ledyard, at the defense of Fort Griswold on the Heights of Groton by killing the British officer who, upon receiving Col. Ledyard's sword, ran that weapon through his body. Lambert thrust his bayonet through the British officer and then fell himself, pierced with 33 bayonet wounds. These were the kind of negro soldiers which the beginning of the first century of American independence produced. The great-grandchildren of the black men who helped to make this a Nation and the Union perpetual are just as loyal, patriotic, and heroic as were their illustrious grandfathers.

The Negro has covered himself with glory, as the record shows, in all the wars of this Republic; he has proved his worth and value as a "fighting man" on land and sea.

EARLY LAW MAKERS RECOGNIZE OUR WORTH AS SOLDIERS.

The mighty Ethiopian general, Zerah, commanded an army of a thousand thousand and three hundred chariots (II Chronicles, 14:9), so that it is clear that while the Negro race is not a warlike race in the sense that other races with covetous eyes and grasping hands are, it has never avoided war when it was forced upon it and has always convinced those with whom it has engaged in war that they have been in battle with a people worthy of their steel. The Hon. Mr. Martindale, a Congressman from the State of New York, said in a speech in the House, January 22, 1838: "Blacks who had been slaves were enlisted as soldiers in the War of the Revolution, and I myself saw a battalion of them, as fine martial-looking men as I ever saw, attached to the northern Army in the last war on its march from Plattsburg to Sackett's Harbor." And the Hon. Charles Miner, of Pennsylvania, in Congress said, February 7, 1828: "The African race make excellent soldiers; large numbers of them were with Perry and aided him to gain the brilliant victory on Lake Erie. A whole battalion of them was distinguished for its soldierly appearance." And the Hon. Mr. Clark, in the convention which revised the constitution of New York in 1821, said in regard to the right of suffrage of colored men: "In the War of the Revolution these people helped to fight your battles by land and by sea. Some of your States were glad to turn out corps of colored men and to stand shoulder to shoulder with them. In your late war, 1812, they contributed largely toward your most splendid victories on Lake Erie and Lake Champlain, where your fleets triumphed over a foe superior in numbers and engines of death. They were manned in large proportion with men of color. And in this very house. In the fall of 1814, a bill passed, receiving the approbation of all branches of your government, authorizing the governor to accept the services of 2,000 free people of color."

FIRST ORGANIZED NEGRO TROOPS IN CIVIL WAR.

The first fighting done by organized negro troops appears to have been done by Company A, First South Carolina negro regiment, St. Helena Island, November 3-10, 1862, while participating in an expedition along the coast of Georgia and Florida under Lieut. Col. O. T. Board, of the Forty-eighth New York Infantry, who in his report said of them:

"The colored men fought with astonishing coolness and bravery. I found them all I could desire, more than I had hoped. They behaved gloriously and deserve all praise." (From Fleetwood's *The Negro as a Soldier*.)

PURE GRIT AND COLD STEEL WIN.

The Sixth United States Colored Troops was organized at Shelton Hill, Pa., July 26, 1863. The field officers were J. H. Ames, colonel; Clarke E. Raye, lieutenant colonel; Joseph B. Kiddoo, major. This regiment took a conspicuous part in the Battle of Olustee, where it suffered great loss.

At Sugar Loaf Hill, in the same State, Capt. N. J. Hotchkiss was mortally wounded and the regiment sustained heavy losses in February of that year during a sharp engagement with the rebels. Among the wounded were Lieut. D. K. Healey, and Lieut. Fields, commanding Company A, was killed outright. Upon the death of Lieut. Fields the direction of the line devolved upon Sergt. Richard Carter, a black man. After the battle Sergt. Carter was publicly complimented by Col. Ames for the skillful and brave manner in which he handled his men on the skirmish line in the face of a hot and withering fire from the enemy. Sergt. Carter and his men, nerved with sinews of steel and the courage of lions, met and repulsed the rebels at every point.

NEGRO VOLUNTEERS LED BY NEGRO CORPORAL.

Corpl. James Harris, of Thirty-eighth United States Colored Troops, which made the first successful charge at Fort Gilmore September 29, 1864, was one of the first to volunteer to take 100 black soldiers in the face of the enemy under a galling fire from their sharpshooters and strengthen their position. When it became apparent that the works would be assaulted Harris ordered his men to the rear and remained at his post of danger until he drove the last stake. There was not a white officer there to give him instructions or to inspire him with the courage he so coolly displayed. For this act of bravery Gen. B. F. Butler presented him with a badge of honor which he wore up to the day of his death. For leading the charge on Fort Gilmore he was awarded another badge for gallant and meritorious service, though it was won only after a rebel bullet had ploughed through his cheeks.

Another negro distinguished for great bravery was Sergt. John A. Scott, of Company H, Twenty-second United States Colored Troops. Its officers being disabled, he assumed command of the company and led it successfully against the enemy. The command never had an officer in whom it reposed such implicit confidence, nor a braver, better drilled, or more capable officer than he. He was a born soldier and could have handled an army with the same ease, coolness, and courage which he ever displayed while leading the little command which he assumed on that momentous occasion.

NO TRAITOR IN A BLACK SKIN.

The lamented James A. Garfield struck the keynote when he declared in his great speech in New York in 1880 to the boys in blue that "we never saw a traitor in a black skin." The negro went into the Union Army to fight for his liberty as a free man or to die, as thousands of them did, in defense of it. The negro is going into the Army now to fight, not alone for larger freedom for his own race but for the freedom of other races which are now menaced, threatened by a great European power, whose hand, like Cain's, is against every man's hand. And the hand of every man who loves and values liberty of conscience, of utterance and action, is against this overshadowing specter which has thrown itself athwart the horizon of all Europe and threatens the civilized world. The annals of modern warfare do not record any instances of bravery surpassing those performed by these black defenders of the Nation, some of whom were raw troops with only a few months' training.

In the Spanish-American War, as in the present world war, the negro responded to the call of duty with alacrity and performed it with loyalty and fidelity. Thousands of instances could be cited to show the patriotic devotion of the negro to the flag which for nearly a century had only been the emblem of his stripes, yet he has fought and died for it as heroically as any white soldier in battle to whom it even now has a larger meaning than to the negro.

SEVENTEEN WIN MEDALS OF HONOR.

Under act of Congress passed July 12, 1862, the President was authorized to have prepared with suitable emblematic devices medals of honor to be presented in the name of Congress to such soldiers as should most distinguish themselves by their gallantry in action and other soldierly qualities. So chary has the Government been in their issue that the award did not reach 2,000 among the three millions of volunteers and regulars in the Army and Navy, so that these medals are more rare than the Victoria Cross of England, the Iron Cross of Germany, or the Cross of the Legion of Honor of France. But 17 negroes won and received them. The list follows:

C. A. Fleetwood, sergeant major, Fourth United States Colored Troops.
Alfred B. Hilton, color sergeant, Fourth United States Colored Troops.
Charles Veal, corporal, Fourth United States Colored Troops.
Milton M. Holland, sergeant major, Fifth United States Colored Troops.
James Brownson, first sergeant, Fifth United States Colored Troops.
Powhattan Beffy, first sergeant, Fifth United States Colored Troops.
Robert Penn, first sergeant, Fifth United States Colored Troops.
Thomas R. Hawkins, sergeant major, Sixth United States Colored Troops.
Alex Kelly, first sergeant, Sixth United States Colored Troops.
Samuel Gluchrist, sergeant, Thirty-sixth United States Colored Troops.
William Davis, sergeant, Thirty-sixth United States Colored Troops.
Miles James, corporal, Thirty-sixth United States Colored Troops.
James Gardner, private, Thirty-sixth United States Colored Troops.
Edward Ratcliffe, first sergeant, Thirty-eighth United States Colored Troops.
James Harris, sergeant, Thirty-eighth United States Colored Troops.
William Barnes, private, Thirty-eighth United States Colored Troops.
Decatur Dorsey, sergeant, Thirty-ninth United States Colored Troops (Fleetwood's "The Colored Soldier").

THOROUGH TEST OF NEGRO TROOPS.

Of the Battle of Port Hudson in our Civil War, Gen. Nathaniel P. Banks, whom I knew very well, said:

"Whatever doubts may have existed heretofore as to the efficiency of organizations of this character (negro regiments), the history of this day proves conclusively to those who were in a condition to observe the conduct of these regiments (the Fifty-fourth Massachusetts Colored Regiment) that the Government will find in this class of troops effective supporters and defenders."

"The severe tests to which they were subjected and the determined manner in which they encountered the enemy leaves upon my mind no doubt of their ultimate success."

It was at this battle that the brave Capt. Andre Cailloux with his brigade of black men made a charge upon the rebels that challenged the admiration of the negroes' worst enemies. Cailloux was killed in this charge and his body was not permitted to be removed by the enemy for 23 days, even though a flag of truce was sent. Of this incident Dr. A. H. Holt, of Boston, an eminent physician and lecturer, in a letter to the author February 8, 1877, wrote:

"I also well remember that one of the captains, a colored man of this colored regiment, was killed close to the rebel earthworks at the assault on Port Hudson June 14, 1863. I do not remember his name, but he was a well-known colored man of New Orleans. He showed great bravery in this attack. I remember his case well, because the rebel commander would not allow us to bring his body under a flag of truce, as we did our white comrades who fell the same morning—and there it remained for 23 days, or until the surrender of Port Hudson, when it was, if my memory is correct, taken to New Orleans and buried with marked military honors. I am sure his great bravery was talked of in the army. The ungenerous treatment of his remains by the rebels was severely commented upon."

THE HIGHEST FORM OF COURAGE.

After the battle of New Market Heights September 29, 1864, when these brave black troops faced death as gallantly as ever brave men did, Gen. Benjamin F. Butler issued an order, an excerpt from which is here quoted:

"Of the colored soldiers of the third divisions of the Eighteenth and Tenth corps and the officers who led them, the general commanding desires to make special mention. In the charge of the enemy's works by the colored division of the Eighteenth corps at New Market, better men were never better led, better officers never led better men. A few more such gallant charges and to command colored troops will be the post of honor in the American armies. The colored soldier, by his coolness, steadiness, determined courage, and dash, has silenced every cavil of the doubters of their soldierly capacity, and drawn tokens of admiration from their enemies, have brought their late masters even to the consideration of the question whether they will not employ as soldiers the hitherto despised race."

Ten years after this order was issued the writer sat in the gallery of the House of Representatives at Washington and heard the debate on the Civil Rights bill introduced in the Senate by Charles Sumner. Among the speakers was Benjamin F. Butler, then a Representative in that body from Massachusetts. In the course of his speech he said:

"There in a space not wider than the clerk's desk and 300 yards long, lay the dead bodies of 543 of my colored comrades, slain in defense of their country, who had laid down their lives to uphold its flag and its honor as a willing sacrifice. And as I rode along guiding my horse this way and that lest he should profane with his hoofs what seemed to be the sacred dead, and as I looked at their bronzed faces upturned in the shining sun as if in mute appeal against the wrongs of the country for which they had given their lives, and whose flag had been to them a flag of stripes, in which no star of glory had ever shone for them—feeling I had wronged them in the past, and believing what was the future of my country to them, I swore to myself a solemn oath: May my right hand forget its cunning and my tongue cleave to the roof of my mouth if ever I fail to defend the rights of the men who have given their blood for me and my country this day and for their race forever. And God helping me I will keep the oath."

HUMANB INSTINCTS ARE ABOVE RETALIATION.

The last charge at Appomattox was by the black brigades of Gens. Doubleday and William Birney, and the last man killed was Capt. Falconer, of the Forty-first United States Colored Troops. Although Gen. Forrest coldly murdered three-fourths of the garrison at Fort Pillow, making Fort Pillow the war cry of colored troops, there is no record to show that these murders at Petersburg and Fort Pillow were retaliated by Negro soldiers. The brutish instinct in these black men was less defined than that of the enemy against whom they fought.

One chivalric Southern captain gave as a reason for the rebels fleeing before Negro troops that "we could not expect the sons of Southern gentlemen to fight 'niggers'."

MARKED MILITARY HONORS IN CIVIL WAR.

Of the assault on the defenses of Petersburg June 15, 1864, Gen. W. F. Smith made this report on the fighting of Gen. Hicks's division of colored troops:

"This day's work is one of the grandest of the war. It will make the old Army of the Potomac open wide its eyes. The earthworks so successfully carried are regarded as the most formidable the Army has encountered so far during the present campaign. The success has a peculiar value and significance from the thorough test it has given of the efficiency of negro troops. Their losses were heavy. In the thickest of the fight and under the most trying circumstances they never flinched. The old Army of the Potomac, so long prejudiced and so obstinately heretical on this subject, stands amazed as they look at the works captured by negroes, and are loud and unreserved in their praise."—Personal Narratives, Services with Colored Troops. Jas. H. Rickard.

Edward M. Stanton, the great Secretary of War under Lincoln, wrote: "The hardest fighting was done by the black troops; the forts they stormed were the worst of all."

THE AGES SHOW NOTHING BRAVER.

The world's standard of heroism is Thermopylae, but the assault of negro troops at the Crater and the assault and capture of Fort Harrison at New Market Heights without firing a gun, the caps having been taken from the guns, using bayonets only, where Gen. Butler says he counted 543 black heroes dead in a space not 300 yards long, challenges Greek, Roman, or any other heroism. These blacks fighting with bayonets on the ramparts of the fort at Milliken's Bend and successfully bayonetting back Gen. Harry McCullough's rebel division is a record that can not be smirched with sneers or prejudicial injustice.

THE SUPREME TEST OF COURAGE.

The charge of Ferrero's division at the Crater at Petersburg, Va., through a broken and demoralized division of white troops, then forming a line inside the enemy's works and temporary capture of their interior works, with awful losses in killed, wounded, and murdered, is a record to win back the previously prejudiced judgment of the President, Cabinet, generals, and officers of the Army of the Potomac, who up to this time had thought negroes all right for service in a menial capacity, but from henceforth to take responsible places, like the right flank of the Army at Deep Bottom, Va., and the storming of strong works like Forts Alexander and Gregg.—Personal Narrative, Rickard. (Ibid.)

The rebel general, Forrest, unwittingly contributed, perhaps, to the success of colored troops, but hereafter let no man say that black troops led by graduates of Harvard and Yale and the sons of the first families of the North will not fight.

WISDOM IN WARFARE.

The idea of the cotton-bale barricade erected at New Orleans by Andrew Jackson to save the city was not original with him. It was suggested to him by one of his negro soldiers, a native of Africa, who had seen the experiment tried with success at home. Still, Jackson took credit for it. But for a negro familiar with the topography of Vicksburg, Miss., and who showed Ulysses S. Grant how to enter without the knowledge of the enemy, whom he wanted to surprise, the Vicksburg campaign might not have been so successful.

SPANISH-AMERICAN WAR RECORD HIGHLY CREDITABLE.

SAN JUAN.

Of the famous charge of the Ninth and Tenth Cavalry Col. Theodore Roosevelt wrote: "The Ninth and Tenth Cavalry Regiments fought one on either side of mine at Santiago, and I wish no better men beside

me in battle than these colored troops showed themselves to be. Later on, when I come to write of the campaign I shall have much to say about them."—Col. Theodore Roosevelt's letter to John E. Bruce, August 14, 1899.

These colored troops save the day for Col. Roosevelt's regiment at Santiago and helped to give to the Colonel much of the military prominence and prestige and fame which has since come to him. Everyone is familiar with the story of that famous charge, of how these black heroes rushed the Spanish stronghold singing "There'll Be a Hot Time in the Old Town to-night."

ONE OF THE FIRST AT SPANISH BLOCKHOUSE.

In the assault on San Juan Hill, July 1, 1898, Corpl. John Walker, of Troop D, Tenth Cavalry; Pvt. (now Corpl.) Lucius Smith, and Sergt. James Elliott, both of the same troop, distinguished themselves by an act of daring and courage that commanded the admiration of their officers and comrades. Just before the foremost assailants reached the foot of the hill the American Artillery began firing over the assailants at the enemy on the top of the hill. Corpl. Walker was about halfway up the hill, and the only persons near him, except an officer who was disabled, were Lieut. Ord, of the Sixth United States Infantry, and Pvt. (now Corpl.) Smith. The main line was about 50 yards in the rear of this party. Lieut. Ord, observing that the Artillery fire had caused a slowing up in the main line, called out in a loud tone, looking toward the main line and waving his hat: "Come on, men; we've got 'em on the go!" Corpl. Walker reached the intrenchments about 50 yards in advance of the main line, and the only persons near him at that time were Lieut. Ord and a private of the Sixth United States Infantry. About 20 yards to the rear of Corpl. Walker was Corpl. Lucius Smith, and about 25 yards back of him was a scattering of other soldiers, foremost among them being Sergt. James Elliott, Troop D, Tenth Cavalry. Corpl. Walker found two Spaniards alive and a number of dead and wounded in the intrenchments. These two threw up their hands at once and surrendered. He took from one of them a pearl handled pistol and handed it to Lieut. Ord, who said: "Let us go to the blockhouse and capture the men in it." He led the way and had only gone about 4 yards in the direction of the blockhouse and stood behind a tree looking in the direction of the retreating enemy when he was shot with a pistol directly under the chin by a Spaniard on the other side of the tree. As he fell he said: "If we had the rest of the Tenth Cavalry here we could capture this whole command." He died about 5 minutes afterwards, or about 10 minutes after he was shot. The man who shot him ran off. Corpl. Walker fired at him twice and saw him fall. Both shots going through the small of the back.

This is a striking contrast with the action of the Seventy-first New York, which started on the run to the rear after the first volley was fired by the Spaniards and almost precipitated a panic. White troops do not possess a monopoly of courage and negro troops don't run like rabbits at the crack of the rifle or the smell of burnt powder.

NEGRO SCOUT IN THE REVOLUTIONARY WAR.

On June 8, 1814, in the House of Representatives, Hon. MARTIN B. MADDEN, of Illinois, cited instances from American history to show the merit and service of the black citizen. Among other things he said:

"It will surprise many scholars familiar with Revolutionary history to learn that one of the most daring feats of the War of the Revolution was performed by Caleb Barbour, a free negro of New York, and that by his aid Gen. Anthony Wayne was able to recapture from the British Stony Point by surprise July 16, 1779."

"Stony Point, with its almost inaccessible heights, was the recognized key to the British position in New York. It was the route by the old French and Indian road into Canada, whence the British drew most of their supplies. The British took it after a stubborn fight May 1, 1779, and since that time, urged by Washington, Gen. Wayne had planned its recapture, but with little hope of success, when Barbour, famous as a scout in the American service, returned one day with the British countersign, and thus armed he led the American forces, 1,200 strong, at the dead of night up the perilous heights and into the British lines and to victory."

As an evidence of the heroism of the negro soldier in the early period of the country I quote the following from the Annals of Congress, under date of December 5, 1775:

"To the Honorable General Court of the Massachusetts Bay:

"The subscribers beg leave to report to your honorable house—which we do in justice to the character of so brave a man—that under our observation we declare that a negro man named Salem Peer, of Col. Frye's regiment, Capt. Ames' company, in the late Battle of Charleston, behaved like an experienced officer as well as an excellent soldier."

"To set forth particulars of his conduct would be tedious. We would only beg to say in the person of this negro centers a brave and gallant soldier. The reward due to so great and distinguished a character we submit to Congress."

"Jona Breme, colonel; Thomas Nixon, lieutenant colonel; Joseph Baker, lieutenant; Jonas Richardson, captain; Ebenezer Varnam, second lieutenant; William Smith, captain; Richard Welsh, lieutenant; William Prescott, colonel; Ephm. Corey, lieutenant; Eliphalet Bodwell, sergeant; William Hudson Ballard, captain; John Morton, sergeant."

LED A SECOND CHARGE.

This is, indeed, a splendid and a well-attested tribute to the gallantry of a worthy negro soldier of the Revolutionary War, and is only one of the many instances wherein black men offered their lives as willing sacrifices for a country the people of which for years held their race in bondage.

During the War of 1812 a charging column of the American Army was repulsed and thrown into great disorder. A colored soldier, a private in the ranks, at the risk of his life sprang upon a horse near by and with great heroic effort rallied the troops and led them back to a second charge, in this way completely routing the enemy. This colored soldier was afterwards rewarded by Gen. Jackson with the honorary title of major. Under the laws which existed at that time Gen. Jackson could not commission this gallant soldier, and after the close of the war he returned to his home in Nashville, Tenn., where he lived for many years thereafter and was highly respected by the citizens of all races.

Our Civil War had many incidents not recorded by any of the historians which showed the value of colored men as a military force. For instance, perhaps few persons are aware that there were several thousand colored soldiers enlisted in white regiments, as may be seen upon an examination of our pension roll, while quite a number were officers in such regiments.

Napoleon paid them a tribute when he transferred Louisiana to the United States in the year 1803, when he was about to engage in a death struggle with England. He said at that time that—

"If a mere handful of poorly equipped negro soldiers in Santo Domingo could hold at bay for two years and finally defeat over 60,000 of Europe's best soldiers, I could not hold Louisiana against England's great navy."

Napoleon therefore sold Louisiana. He also stated at another time, with extreme admiration for the valor of the black soldiers of Haiti, that—

"With such soldiers, and led by me, I could defy Europe in arms."

IN THE PHILIPPINES.

During the Philippine trouble it is related by Dr. Joseph M. Heller, late major and surgeon, United States Army, that during the campaign of Capt. Bachelor, a North Carolinian by birth and a hero if ever there was one, with 350 colored troopers, a brave and splendidly disciplined band, marched and fought their way over a distance of 310 miles in one month. The route selected was over roads so difficult as to be almost impossible of travel. In fact, the route did not really deserve the name of roads, but were simply trails, through which the men plodded along, sinking at times to their knees in mud.

The expedition at the time was chasing Aguinaldo through the northern and central portions of Luzon and toward the China Sea. Dr. Heller stated that he never saw men show truer courage than these troops with Capt. Bachelor. They were insufficiently clothed for the long march and without guides in a strange region, but through chilling nights and sweltering days they forded 123 streams and crossed precipices and mountains where the daily average of ascent and descent was not less than 8,000 feet. For three weeks these troops lived on unaccustomed and insufficient foodstuffs and drove the enemy twice from strong positions. They captured many of the natives and set free more than 400 prisoners. They finally forced the surrender of the commander of the insurrecto forces and made the people of Luzon enthusiastic advocates of American supremacy. No other single command during the Philippine trouble stood as many hardships or accomplished so much as these negro soldiers under Capt. Bachelor. Such was the report made at the time, and, although Gen. Lawton was killed, Capt. Bachelor carried out his verbal orders and died of cholera in the Philippines, thus going to his grave without any further reward or recognition for one of the bravest expeditions ever attempted by soldiers in modern times.

CIVIL WAR STATISTICS.

They participated in 449 battles, and a few of the colored regiments had the largest number of men killed in any one single engagement. The States furnishing these troops were:

ONLY ONE SUCCESSFUL SLAVE REBELLION.

Wendell Phillips, in his sublime tribute to Toussaint L'Ouverture, the negro liberator of Haiti, said:

"Some doubt the courage of the Negro. Go to Haiti and stand on those 50,000 graves of the best soldiers France ever had and ask them what they think of the Negro's sword. And if that does not satisfy

you, go to France, to the splendid mausoleum of the Counts of Rochambeau, and to the 8,000 graves of Frenchmen who skulked home under the English flag, and ask them.

"There never was a slave rebellion successful but one, and that was in St. Domingo. Every race has been some time or other in chains. But there never was a race that, weakened and degraded by such chattel slavery, unaided tore off its own fetters, forged them into swords, and won its liberty on the battle field but one, and that was the black race of St. Domingo."

THE QUESTION IN ALL OUR HEARTS.

This, then, is the record of the Negro as a warrior from the earliest periods to the present hour. He is the same courageous, intrepid, fearless fighter that his forefathers showed themselves to be on every battle field of the world. The 500,000 black and colored men who are now engaged in the greatest war the world has ever witnessed, like their black and colored brothers in America and the Numidians and Moors under Tiberius Gracchus, are fighting as they fought to help save the world for democracy. The incentive is worth the sacrifice which these heroic blacks have made and which others are now making to bring to full fruition and realization the dream of the dark, said millions the wide world over. Tiberius Gracchus and the Roman Senate made freedom a permanent fact for the blacks who helped Rome to snatch victory from its enemies.

Will moderns be less honorable when the curtain will have fallen upon the bloody drama—the crucifixion of European civilization? Democracy, brotherhood, justice only can revive and rehabilitate the nations who shall survive in this titanic struggle. The Negro, like the Lybians of old, will be at the footsteps of these nations demanding his place in the sun.

SPEECH

OF

HON. WILLIAM J. FIELDS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 9, 1918.

The House had under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the joint resolution (S. J. Res. 123) providing for the calling into military service of certain classes of persons registered and liable for military service under the terms of the act of Congress approved May 18, 1917, entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States."

Mr. FIELDS. Mr. Speaker, the question before the House is the motion of the chairman of the Military Committee to recede from the House amendment to Senate joint resolution 123, known as the new-quota bill, which authorizes the President to call all or any part of any class of registrants to the military service; or, coming to the real purpose of the resolution, it authorizes the President to exhaust class 1 throughout the entire country before invading the other classes in any part of the country. By the enactment of this law, married men or men with dependent families will not be called into the military service so long as there are men without dependents who can be called.

The resolution passed the Senate some time ago, and it passed the House a few days or weeks ago with an amendment which provides that credit shall be given to the several States and Territories and the District of Columbia, and subdivisions thereof, for voluntary enlistments into the military and naval service of the United States, which would also include the Naval Reserve and Shipbuilding Fleet.

I was in charge of the resolution when it passed the House, and spoke and voted against the amendment in question. I am frank to say that I had not studied the proposition then as carefully as I have studied it since, for the War Department had not been able up to that time to supply me with the necessary data to fully understand just how the giving of credits for voluntary enlistments would affect the country and the progress of the Military Establishment in its administration of the draft law. But I had studied it enough from the data at hand to convince myself that the amendment should not be adopted, and if adopted and ultimately carried in the law, that it would not only delay the raising of additional increments of the Army, but would result in great hardship to certain sections of the country, especially the agricultural sections.

Now, I will admit that giving credit for voluntary enlistments looks good at first, but when followed out to its final and last results it looks entirely different and has the opposite effect to what we from the agricultural sections desire.

But the membership of the House apparently had not studied the amendment carefully, neither had the President, and the favorable opinion that the Members had of it, backed by a letter from the President to the chairman of the Military Committee [Mr. DENT] favoring the adoption of the amendment, which the chairman read to the House, resulted in its adoption by an overwhelming majority. Only 64 other Members voted with me against it, and the bill as amended went to conference. But before it was taken up by the conferees the War Department figured out the exact result that would ensue from the amend-

ment and supplied the data to the President and the Secretary of War, and after studying the same the President changed his mind and requested the Secretary of War to urge upon the conferees of both the House and Senate to strike the amendment from the bill. But the House conferees were practically instructed by the House not to yield on the amendment without first bringing it back to the House. We, therefore, could take no other course than to bring it back to the House and let the House decide whether or not it would recede, and that is the purpose of the motion now before the House, and the President has written another letter to the chairman of the committee, acknowledging his mistake in the beginning and expressing the hope that the House will recede from the amendment. The letter of the President, which has already been read by the chairman [Mr. DENT], reads as follows:

THE WHITE HOUSE,
Washington, May 7, 1918.

HON. S. HUBERT DENT,
House of Representatives.

MY DEAR MR. DENT: I take the liberty of writing you to say that I have become convinced that I was mistaken in advising you recently with regard to the matter of credits in the draft legislation. When the matter was presented to me I had not fully analyzed, and I dare say that the gentlemen who presented the matter to me had not fully analyzed, the effects which would ensue by allowing credits for the number who had volunteered. I do not know whether they have changed their opinion in the matter, but I have been convinced by the facts as presented to me by the War Department that I took a mistaken view of the matter, and I now write to say that, in my judgment, the mistake ought to be corrected. I hope that if I was instrumental in any way in leading the committee of the House to the conclusion they came to you will express to them my apologies for not having looked into the facts more thoroughly before I advised.

Cordially and sincerely, yours,

WOODROW WILSON.

Now, Mr. Speaker, in view of the data supplied by the War Department, which I shall go into more fully before I close and which has caused the President to change his opinion on the amendment, I sincerely trust that the House will recede from the amendment and let the bill become a law without further delay.

Mr. LONERGAN. Mr. Speaker, will the gentleman yield for a question?

Mr. FIELDS. Yes.

Mr. LONERGAN. I would like to know if the gentleman can inform the House out of the number of volunteers what percentage were not of draft age.

Mr. FIELDS. About 40 per cent. Part of that number was above draft age and part below the draft age, and those below would soon have been in the draft had they not volunteered, which reduces the future class 1 by the number of volunteers who were below the draft age.

Now, I trust that the membership will permit me to submit without interruption a few observations on the credit proposition, and I hope that I may have your careful attention.

I want to say, first, that this is a question that every man wants to be right on. I impugn the motives of no man who differs with me. I am sure that everyone votes for what he thinks is right, but the mere thought that you are right is not a guaranty that you are right. So let us figure carefully on the data before us, and if you will do so I believe that you will decide that your vote for the amendment was wrong. I want you gentlemen to get your pencils and paper and figure with me, if you will, for a few minutes. Now, to begin with, future drafts will be levied upon class 1 on a percentage basis, or, to make it clear, if we have 2,000,000 men in class 1 and call 200,000 to the service, we will call 10 per cent of the whole class, will we not? Then, the county or local jurisdiction that has 100 men in class 1 will have to furnish 10 per cent of its whole number in class 1, which would be 10 men, and the one that has 500 men in class 1 will furnish 10 per cent of its whole number in class 1, which would be 50 men, and the one having 1,000 men in class 1 will furnish 10 per cent of its whole class 1, which would be 100 men. Now, take a given county in your congressional district, and we will say when the war began that that county had 1,000 men who, had none of them volunteered, would have gone into class 1. We will say that 500 of them volunteered. All right. What did that do to class 1 in that county? Why, you get your credit there indirectly by reason of the fact that it reduced class 1 from 1,000 to 500, so that if called upon to furnish 10 per cent of your class 1 you will furnish only 50 men, whereas you would be required to furnish 100 had none volunteered. Is not that plain mathematics, and is it not correct?

Mr. PHELAN. No; that is not correct, I will say to the gentleman right now.

Mr. FIELDS. Why is it not?

Mr. PHELAN. If you will follow that to a conclusion, you will see that you are wrong.

Mr. FIELDS. If County A of your district had 1,000 men in it at the beginning of the war who belonged under the present classification in class 1—

Mr. PHELAN. Yes.

Mr. FIELDS. And 500 of those class 1 men volunteered, did not that leave only 500 in your county?

Mr. PHELAN. That left 500 in class 1, but the War Department says, "We want 10 per cent of what is left." It gives 10 per cent of that—

Mr. FIELDS. I refuse to let the gentleman take my time until I have yielded.

Mr. PHELAN. I am not going to let you get away with that statement.

Mr. FIELDS. Ah, I see what the gentleman [Mr. PHELAN] has in mind. Coming as he does from Massachusetts, a seacoast State and an industrial center, he has, no doubt, a large number of constituents from class 1 who have enlisted in the Navy or Naval Reserve, the shipbuilding fleet, and the technical units of the Army, none of whom will ever, in all probability, see a European battle field, and for every man who has thus enlisted he wants to receive credit, which will exempt from service, either definitely or indefinitely, an equal number in the remaining class 1; and, using the gentleman's own language, "I am not going to let him get away with that" kind of a deal.

Mr. PHELAN. Mr. Speaker, will the gentleman yield?

Mr. FIELDS. Not until I get through. I purpose to make my own speech. I do not want to be discourteous to the gentleman, but I do not propose to let him make his speech in my time.

Now, let me conclude my analysis that I was making when interrupted. We began with the county that had 1,000 men in class 1, or who would now be in class 1 had none of them volunteered, and showed that if 500 of them have volunteered, that that county now has only 500 men remaining in class 1; and now suppose that the amendment in question is to be adopted. Under its provisions we would have to give that county credit for the 500 enlistments, which would exempt the entire balance of its class 1. In other words, that county would have 500 men in class 1 absolutely protected from the draft by the double credit given. I say double credit advisedly, for it is a double credit. The first credit is given indirectly by a reduction of class 1 equal to the number of enlistments from that class, and the second credit given directly for the number who volunteered, the amount of which must be deducted from the remaining class 1.

As I have previously said, the proposition to give credit for voluntary enlistments looks good to all of us at first blush, and would probably work out equitably in the end if voluntary enlistments, for which credits are proposed, were equally distributed throughout the country. But that is not the case. Aside from the National Guard, which is largely an urban organization, and which, of course, goes to the battle field, the mechanical experts who have enlisted in the technical units of the Army, who do not fight, come from the industrial cities, for the reason that the rural and agricultural sections can not furnish any appreciable number of skilled mechanics, electricians, and so forth. Then, the Navy and Naval Reserves are filled by men largely from coast cities and States, and the shipbuilding fleet is also composed largely of men from those sections, because their constant contact with that character of work familiarizes them with it and causes them to engage in it. Therefore, if we shall give credits, the urban sections of the character to which I have just referred will almost escape further burdens of the draft, and those burdens will be automatically transferred to the rural sections, where men have not enlisted in large numbers into these technical and skilled branches of the Military Establishment, the Navy, Naval Reserve, and Shipbuilding Fleet.

Now, gentlemen, here are the two propositions before us in concrete form, namely, the one not to allow credits for voluntary enlistments and the other to allow credits. To begin with, the War Department contemplates calling 800,000 men within the near future, which is 40 per cent of the whole of class 1 in the entire country. So, if we do not give credits, they will call 40 per cent of class 1 from each county or local division throughout the entire country. The county that has 100 men in class 1 will have to furnish 40 men, and the county that has 200 in class 1 will be required to furnish 80, and so on, and under this system class 1, if it is ever entirely exhausted, will be exhausted at one and the same time throughout the entire country. But if we give credits for voluntary enlistments, as the amendment in question purposes to do, some States will furnish no men at all in a call of 800,000, while others will have to furnish practically all of their class 1. I have the figures

here, furnished me by the War Department, which shows what per cent of class 1 each State will be required to furnish in a call for 800,000 men if credits are given, which reads as follows:

Percentages of class 1 to be levied on the States.	
	Per cent of class.
Louisiana.....	76
South Dakota.....	70
Mississippi.....	68
Arkansas.....	67
Alabama.....	65
Wyoming.....	65
Wisconsin.....	63
Florida.....	61
Georgia.....	61
South Carolina.....	61
North Carolina.....	60
Kentucky.....	57
Missouri.....	56
West Virginia.....	55
Virginia.....	54
Tennessee.....	53
Oklahoma.....	53
Michigan.....	51
Kansas.....	50
Minnesota.....	50
Iowa.....	48
North Dakota.....	47
New Mexico.....	44
Maryland.....	43
Montana.....	40
Nebraska.....	40
New Hampshire.....	39
Ohio.....	37
Texas.....	37
Illinois.....	35
Idaho.....	35
Delaware.....	34
Indiana.....	33
Oregon.....	33
District of Columbia.....	27
New Jersey.....	26
Vermont.....	24
Pennsylvania.....	21
Colorado.....	19
New York.....	16
Arizona.....	12
Massachusetts.....	10
Maine.....	8
Connecticut.....	4
Utah.....	4
Washington.....	3
California.....	0
Nevada.....	0
Rhode Island.....	0

So, then, if credits shall be given, Louisiana will furnish 76 per cent of her class 1, while California, Nevada, and Rhode Island will not furnish a single man. South Dakota will have to furnish 70 per cent of her class 1, while Washington will furnish only 3 per cent of her class 1; Mississippi will furnish 68 per cent, while Connecticut will furnish only 4 per cent; Arkansas will furnish 67 per cent, while Maine will furnish only 8 per cent; Kentucky will furnish 57 per cent, while Massachusetts will furnish only 8 per cent; Missouri will furnish 56 per cent, while New York will furnish 16 per cent.

Referring further to my own State, she, with her 50,192 men in class 1, will furnish in the call, if credits are given, 28,609 men, or 20,076 if credits are not given, and the district which I represent, with her 4,568 men in class 1, with one county not yet reported, will furnish 2,604 if credits are given, or 1,827 if credits are not given.

These figures do not indicate that Kentucky has not furnished volunteers; she has quite a number of volunteers, nearly every man of whom has gone to the firing line, or is on his way, but we have not furnished large numbers of skilled mechanics, naval reserves, and shipbuilders, who will not go to the battle field, and it is not right that my State and other rural sections like her should furnish all the men to replace those who have enlisted in the noncombatant service from other sections. We are not shirking our duty, but we are standing for a square deal in the distribution of the burdens of the service at the front.

Now, in regard to the enlistment of men who are above draft age. The enlistment of these men has no effect upon class 1 in the jurisdiction from which they go, but if we give credit for their enlistments that credit does affect class 1. Let us suppose that a given county has 100 men in class 1, and that 100 or more men above draft age have volunteered from that county into the technical units of the Army, Navy, Naval Reserve, or shipbuilding fleet, none of whom would see service at the front, and we give credit for their enlistment, what would be the result? Why, class 1 in that county would be exempt by reason of that credit. That county would therefore escape the burdens of battle. I do not contend that there are many counties in the entire country in that condition, but I am told that there are some. But there is one fact that we can not escape, which is that if we give credits a registrant will be exempted for

sections have so many more skilled men than do the rural sections, who go into the various technical units, the urban section gets the best of the proposition. So, in view of all these facts, Mr. Speaker, I can not see why any man from a rural section can favor the giving of credits, for to do so will lay the burden of the next draft upon the rural sections, thereby drawing heaviest on farm labor, for the reason that the cities, coast towns, and industrial centers will be far ahead of the farming sections in credits.

The SPEAKER. The time of the gentleman from Kentucky has expired.

Mr. FIELDS. Mr. Speaker, I yield to myself two additional minutes.

So, if the amendment is finally adopted, the men for the next call or calls must come mainly from the field, the harvester, and the plow, which will affect our food production, and the question of food production is not a rural or local question, but is a national, yea, an international question. In fact, the city folk should be more interested in the conservation of farm labor than the farmer himself, for the farmer will manage some way to produce enough food to supply his own needs from one season to another; but he must produce a surplus, or the city folk and our armies and our allies across the seas will suffer. It is therefore highly essential that we exercise the greatest possible care in the conservation of farm labor. [Applause.]

Now, I want to refer briefly before I close to some statements that were made by one gentleman awhile ago who asked why we gave credits in the beginning if it is wrong to give them now? The draft law of June, 1917, was an experiment. Did any man believe that that law would be perfect in its entirety? I did not. I expected deficiencies and inequities to develop from time to time that would make amendments to the law necessary, and in that I was not deceived. In the administration of the law the War Department found that many amendments were necessary, and they have come to the Committee on Military Affairs from time to time and recommended certain amendments because the adoption of those amendments was necessary to the proper operation of the law.

The War Department says that the enactment of this resolution into law is highly essential, and it has also stated and proven that the credits amendment is undesirable, and would, in addition to the objections to which I have referred, disorganize the department's whole plan for the next draft, and impede its progress. Therefore, let us recede from the amendment, and let the resolution unamended immediately become a law, as the War Department has requested.

The SPEAKER. The gentleman's time has again expired.

EXTENSION OF REMARKS OF HON. RICHARD S. WHALEY, OF SOUTH CAROLINA, IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 4, 1918.

Mr. WHALEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of Hon. JAMES F. BYRNES, of South Carolina, delivered at Aiken, S. C., on April 11, 1918.

The address is as follows:

LIBERTY BOND SPEECH OF HON. JAMES F. BYRNES, OF SOUTH CAROLINA,
DELIVERED AT AIKEN, S. C., APRIL 11, 1918.

I am not going to discuss the reasons why we entered the war. If in Aiken County to-day there is a man who does not know why America entered the war, he is so hopelessly enveloped in ignorance that it is a waste of time to talk with him. If in the county to-day there is a man who knows why we went into the war, but who yet has doubt about the righteousness of our cause, I am not going to argue with him. But while I will not argue with him I will give him a piece of advice, and that is that he had better keep his mouth shut or somebody will declare war on him.

Another question that I thought definitely and finally settled is the wisdom of sending our troops abroad. This morning, however, I notice in a newspaper the statement that some man is seeking public office in the neighboring State of Georgia, announcing in his platform that he favors the enactment of a law providing that our soldiers should not be sent abroad. Those of us who voted for the war resolution met and settled that question in Congress. When the war resolution was being considered, Representative BRITTEN, of Illinois, proposed an amendment providing that our troops should not be sent abroad

ingly defeated. At that time I said that it reminded me of the nursery rhyme:

Mother, mother, may I go out to swim?
Yes, my darling daughter;
Hang your clothes on a hickory limb,
But don't go near the water.

I am still of that opinion.

That such a proposition should receive any consideration at all is remarkable in view of the history of this country. In the early days of the Republic, when we went to war with Mexico, our troops did not stop at the Rio Grande, stack their arms, and say, "Thus far shall we go, but no farther." On the contrary, they followed Old Glory to Monterey, Chapultepec, and even to the heart of Mexico, and they stayed there until victory was wrested from the Mexican armies. In the Civil War no such sentiment existed in the hearts of the people of the South. The brave men who wore the gray did not follow the Stars and Bars to the Mason and Dixon line and announce that they would not invade the enemy's country. On the contrary, they followed Lee and Jackson into Yankeeland whenever and wherever they could. Into the country of the enemy they went, even up the hills of Gettysburg, where they willingly died for a cause they believed to be right.

In the Spanish-American War did any man urge this un-American argument? No; under Schley and Sampson our Navy sailed into the shadow of Moro Castle. The boys of our reunited country followed the Stars and Stripes into Cuba and Porto Rico. No man urged that Dewey and his fleet should anchor in the harbors of this country and wait for the enemy to come. That gallant old sailor led the fleet of America across the ocean into the harbor of Manila and there won imperishable glory for himself and for the American Navy.

He was followed by American troops; by Capt. Sawyer from our own little city and many others whose names I could call, who, stopping neither at the shores of America nor at the bay of Manila, went on, even into the jungles of the Philippine Islands. The plea that the armies of America should camp upon the shores of our country and let the enemy select the time and place for an invasion can come only from the thoughtless, the disloyal, or the cowardly. No such argument can be accepted by any man who has red blood in his veins and any common sense in his head. But these questions have been settled. This is no time for argument. It is the time to fight. If any man does not realize by this time that we are in war, and in war to the death, he has another thought coming to him. We are in it up to our necks, and the tide is rising. We can either engage in debate over a settled question and run the risk of being drowned, or we can get together and pull for the shore. I said we were in war up to the neck. The present German drive has done more than anything else to cause our people to realize the truth of this statement. In Picardy to-day the bravest and truest are dying that we may remain free. France is being made the greatest graveyard in all the world, and the boys are sacrificing their lifeblood that you may live.

It is difficult for us to realize the military situation. When Russia succumbed to the armies of Germany and the fanaticism of her own people, so many divisions of German and Austrian troops were released for service on the western front that, notwithstanding press reports, it is believed by those who are in position to know that to-day on the western front the Teutonic forces are superior to the allies, both in number of men and in number of guns. With less men and with less guns we can not assume the offensive. Germany, assuming the offensive, has manifest advantages. On a 50-mile line, with excellent transportation facilities, it is possible for them overnight to transport so many reserves to a given point as to overwhelm the defending army at that point in the morning. Unable to anticipate the exact point at which the attack will be made, the defending army must give ground until sufficient reserves can be brought up to stem the tide. This happened in the first drive of the Germans last spring. The fifth British Army was overwhelmed. When this fifth army failed, the Germans succeeded in driving a wedge into the allied line which for a while endangered the whole line and caused the greatest anxiety to the military authorities of the allied nations. Finally a sufficient number of reserves were brought up to stem the tide of onrushing Germans. If the Germans had succeeded in breaking through the line and in either rolling the British army up toward the sea or the French Army on the other side, causing the surrender of either one of them, it would have been but a short time before the man power of this Nation would be taxed to protect our women and children against the horrors and cruelties of an invasion. It is, then, not strange that from every honest heart in America the call goes out, "Hold that line! Hold that line!"

Frantically the Kaiser, disregarding loss of life, fights for a

enemies. He knows that with each passing day the production of ships is increasing, and their increase means that across the ocean will flow a continuous stream of American soldiers, sons of an unconquered people, who are going there and will not come back until it is over "over there."

It is unwise to discount the military efficiency of the enemy. Their efficiency is exceeded only by their brutality. While we built churches they built battleships; while we built school-houses, they built submarines; while we built public roads, they built standing armies. This is no time to quarrel about who is responsible for our military unpreparedness. The Republican and Democratic Parties are equally responsible. The comforting thought is that to-day the parties are united. Partisanship has disappeared and the sole purpose of the two parties is to unite in the prosecution of this war until Germany is beaten and the Kaiser is sent either to hell or Helena.

Of course, there are some people who spend their time in criticizing the President and the Congress. Some of these people have pro-German hearts, and, regardless of what their protestations may be, their true purpose is to bring the President and the Congress into disrepute. Then there are many others who are absolutely loyal but are so misguided as not to realize the effect of their criticism. The disloyal ones can make certain that they will soon be discovered. The Congress has just passed a new espionage law providing punishment for disloyal and seditious statements. We can recall that in the early days of this country Maj. Andre, a man who owed no allegiance to our Government, attempted to bring about the betrayal of America, and for his crime was shot to death. To-day we have in our country men who are citizens and therefore owe allegiance to our Government; men who have been given opportunity to enjoy the blessings of a free country; men who have participated in our elections and sat in our jury boxes, and are yet disloyal to the country and seek to give aid and comfort to the enemy. The time will come, and will come soon, when such men will be treated as Maj. Andre was treated in the early days of our Republic.

I have been disgusted at times when I have heard of the many lies circulated about the Government and its officials. When I was at home last fall a man who I know to be absolutely honest came to me in quite an excited manner and asked whether it was true that Mr. Tumulty, the secretary to the President, had been arrested as a traitor and sent to Fort Leavenworth. When I assured him that it was not true, and that I knew that the President's secretary was still at work, he was delighted at the information. But, my friends, we can make certain that some disloyal person manufactured and circulated this story for the purpose of bringing disrepute upon the President's official family.

Another story they have industriously circulated is that our troops had no guns, and that we were sending men with wooden guns across the seas to fight the Germans. Of course, there is no justification for this report. It is true that last fall wooden guns were used by recruits at some training camps for drilling purposes, but within a few days sufficient rifles were provided for the men in training, and to-day there are 8 or 10 rifles for every soldier in France, and the factory output of rifles is more than ample for all of our needs.

They charge that our men are allowed to die without care or treatment in the military camps, but we who are in reach of these camps know that the boys have been cared for as well as it was possible for human agency to care for them. Statistics show that the death rate among the enlisted men of this country last year was less than the death rate among the same number of boys for the same period who were not in uniform. I have never heard a soldier complain of the food that has been given him. We have had none of the embalmed-beef scandals of 1898, and there never was an Army composed of better men, physically and morally, than those who are in the camps of this country to-day.

These pro-Germans have told the people that we have no big guns in France to protect our Infantry as they go into battle. But this is untrue. We to-day have numbers of big guns on the western front. They charge that the guns we have were manufactured in France, taxing the resources of those people who are already overburdened. But, my friends, I know that the guns manufactured in France for our use were manufactured there at the request of the French Government, because factories engaged in the manufacture of these guns found that they could manufacture them without overtaxing their capacity.

But the pro-German critic never gets into high gear until he strikes the aircraft situation; then he has some very able assistance from some Members of the United States Senate. These critics have misrepresented the situation, or Gen. Squier, Chief Signal Officer of the Army, is an unmitigated liar. Before my committee I have heard him state within the last 10 days that our air program was delayed but 60 days. He de-

clared that we are turning out 1,000 training planes a month, which is more than we need, and he is arranging to store these surplus training planes. A training plane is, of course, an entirely different thing from a fighting plane. Manifestly it was important to first manufacture training planes, because until a man was trained there was no use for fighting planes. In the manufacture of fighting planes we have encountered delay due to several causes.

It seems that the style of fighting with aeroplanes changes just about as often as the style of women's dresses. When we had started to manufacture the single-seated Spad we received information from our officials in France that the style of fighting had changed so as to necessitate a change to the double-seated Bristol fighting plane. This delayed the production of our fighting planes for some time. Additional delay has been due to inability to secure accessories for fighting planes, which are numerous. But in all Gen. Squier states the delay in our originally announced program will not exceed 60 days.

Notwithstanding statements made in the United States Senate and elsewhere that not one fighting plane has been built in America, Gen. Squier swears before our committee that up to March 31 we have turned out 14 complete fighting planes, and on Monday last four were expressed to Hoboken for foreign shipment. He says we will turn out 100 complete fighting planes in April and the number will increase each month until July, when the maximum monthly production contemplated in the original program will be reached.

In response to a direct question he stated that for every American aviator in France to-day who was ready to fly over the top there was a fighting plane ready for him to use. The explanation of this is contained in the report of the Senate Military Committee published in the press this morning, but it is so cloaked as to be very deceiving. It states, "We have made arrangements to have fighting planes manufactured in France." That creates the impression that we have recently made such an arrangement, whereas Gen. Squier states that shortly after we entered the war our representatives visited the aircraft factories of France, England, and Italy, and after conferring with the experts of those countries they arranged with French factories for the manufacture of 7,500 fighting planes for our use, the French manufacturers asking that we furnish them with the raw material and as many mechanics as we could. France wanted this arrangement, and it was good judgment on the part of our representatives who gave the order, and who thereby guaranteed the presence on the western front of a sufficient number of fighting planes to equip our boys. After listening to these gentlemen testify, I am convinced that much of the criticism of the aircraft situation is due to disgruntled contractors—men who failed to get contracts—and whose criticisms have been used by disloyal persons to lessen the confidence of the people in the officials now administering the affairs of this Government.

To the credit of the business men of America it must be said that the overwhelming majority of them have responded nobly to the call of their country in this emergency. When the Liberty motor was devised manufacturers who guard their trade secrets as jealously as a woman does her virtue entered a room with their competitors, sat around a table, and gave the secrets of their inventions and the best of their brains to the development of one engine that might be placed in an aeroplane and contribute to the success of our cause. To their credit it must be stated that no man who participated in this conference and who suggested any of the mechanical parts that go to make up this engine has ever attempted to secure a patent in order to increase his wealth. Of the success of this engine there can be no doubt. Delay in its production was due to the overenthusiastic promises of manufacturers and also to the fact that they changed from an 8-cylinder to a 12-cylinder engine, because greater power was needed to compete with German engines with greater power. Instead of this 8-cylinder engine being a failure, as was stated in the press, it was a complete success, and was the best 8-cylinder engine ever constructed, and Gen. Squier states that the first Liberty engine manufactured, after traveling about 15,000 miles, is to-day running better than it ever did. The success of the Liberty motor can best be judged from the fact that we are to-day shipping Liberty engines to France and Great Britain to be used by them in airplanes manufactured there, and if the engines were a failure they certainly would not be purchasing them.

This is also true of the Browning gun. I am no ordnance expert, but I know it has been tested in Washington, and when I hear the ordnance experts of this country and the experts of France and Great Britain declare that it is a success I believe they know more about it than these street-corner experts throughout the country.

I know, my friends, that we have made mistakes. We all make mistakes. The Government makes mistakes. But the

makes mistakes. But Woodrow Wilson does more things and makes less mistakes than any man who has ever administered the affairs of this or any other country. Some of the men he has appointed to office may be corrupt and some are sure to be incompetent. Senator JAMES said in the Senate with reference to this that when Christ came upon earth to select his apostles one or two of his selections were disappointing. Your comfort is that whenever a man is found to be corrupt or incompetent he is removed and succeeded by some person who is competent.

Now, I am not going to talk to you much about the financial attractiveness of a liberty bond. You have heard that before. It is the best investment I know of. The only difference between a \$50 bond and a \$50 bill is that the bond pays interest and the bill does not. It is as good as the Government is. In making a liberty-bond speech last fall a man asked me, "But suppose the Government goes broke?" In reply I told him that the Government could not go broke until all the banks went broke, until the railroads went broke, until all the farmers and merchants went broke, and all of the people went out of the country, and if all these things ever happened he would not give a doggone whether he had a liberty bond or not. If you buy a liberty bond and your neighbor does not you can rest assured that the Government will never fail to pay your bond even if it has to take everything your neighbor has to do it. There are three ways by which the Government can raise money—by taxation, liberty bonds, and confiscation. You can take your choice. If you do not buy liberty bonds we will have to increase taxation. We have to have the money. I may as well tell you right now, if any man thinks he is going to make money out of this war he has another thought coming to him. A man will be allowed to make a living, but all over and above his living expense the Government is going to get in some way. It has not figured out a way yet, but you can rest assured that as time goes on new ways will be discovered to prevent some men from getting rich out of this war while other men are giving up their lives. What it takes to win this war we have—men and money. So far as I am personally concerned, I intend to vote every man and every dollar necessary to put the Kaiser out of business. I do not believe it will do a man any good to accumulate money during this war. He will certainly have to explain how he did it and why he did it to a crowd of one-legged and one-armed soldier boys when they return home from France. I never heard a Confederate soldier speak of a man who made money during the Civil War except with utmost contempt. History will repeat itself.

A thoughtless man recently stated he thought \$3,000,000,000 too much money to raise by this bond issue, and asked how much three billions in gold would weigh. The answer came from a mother whose son had died in France. I commend it to you as the weight of a liberty bond.

Oh, mother with the lonely heart, queen of our good, good land,
I'll tell you what three billions weigh—and you will understand!
Far out upon the battle field where fire, poison, hell,
Rained out their awful summons, there my sweet boy hero fell;
And seeking in the murky gloom to kiss away his breath
In mercy came God's messenger, the angel we call Death,
And bending gently over him in sleet and rain and mud,
She took from out his dear dead heart the last, last drop of blood,
And placed that drop upon the scale and watched the balance fall.
For that one drop from my boy's heart, God knows, outweighed it all!
And if my darling gave his blood, my sweetheart dead and cold,
Can you, for whom he lived and died, can you deny your gold?

In the newspapers last Sunday morning I saw a picture of the Kaiser with his six sons, three on each side of him. Looking at this picture I wondered whether in all Germany to-day there was another father whose six sons were safe and sound. I wondered whether in Austria, in Russia, in Great Britain, or in France there was a father whose home had not been visited by the angel of death. As I thought of the suffering the Kaiser of Germany has brought to mankind, I saw another picture of him. I saw him standing behind the lines of his armies; standing with blood-soaked hands; hands dripping with the blood of the sons of Germany, of the sons of France, of the sons of Great Britain; yes, dripping even with the blood of the sons of America. And from that bloody picture my mind traveled behind the lines of the allies, where I saw another man; a man of peace and not of war; a man who, instead of teaching that war is a holy thing, has taught the divine injunction that "thou shalt not kill"; a man who strove to prevent war, and even since we entered the war has held out the olive branch to the foe across the sea; a man who realizes to-day, however, that as long as the German Kaiser is at large there can be no peace, and who on last Saturday at Baltimore accepted the challenge of the German Kaiser and said, "From this day on it will be force, force, unstinted force." In response to that battle cry, from every loyal American heart comes the response, "We salute you, Woodrow Wilson! Our cause is just! America

Army Appropriation Bill.

EXTENSION OF REMARKS

HON. S. HUBERT DENT, JR.,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 3, 1918.

Mr. DENT. Mr. Speaker, under leave to revise and extend my remarks on the Army appropriation bill I desire to place in a somewhat more consecutive order the facts stated at different times during the debate. I also wish to correct, or rather explain, some of the multitudinous figures which were presented at the time.

First, I submit a statement prepared by Col. Arnold, of the Aviation Section. This statement I partially read to the Committee of the Whole. Apparently there is a conflict between his figures in one or two instances and those previously given by me. The first figures were taken from the testimony of Mr. Potter before the committee on May 7. The difference between the figures, as to the amount expended for planes, is explained. The former figures are \$270,000,000, in round numbers, and the latter \$186,000,000. The difference consists in \$49,000,000 reported as obligated overseas and \$35,000,000 of negotiations pending. These figures were included by Mr. Potter but not by Col. Arnold. Hence the difference.

This table also gives the exact number of men and machines, explaining that the total number here and abroad on April 30, the date given in the hearings, was misunderstood to mean the total in the United States. This statement also briefly describes elementary training planes, advanced training planes, and combat planes.

The total amount of appropriations for the air program last year was \$739,067,706. Of this amount substantially \$650,000,000 came from the Committee on Military Affairs.

Financial No. 1.—Obligated.

	Apr. 30, 1918.	May 23, 1918.
Planes, propellers and spare parts, average price per plane, \$5,000.....	\$185,379,492.44	\$186,154,366.79
Engines and spares, average price \$1,950 to \$5,000.....	247,887,288.82	240,803,176.65
Balloons.....	9,591,752.89	9,590,204.54
Machine guns, ammunition, and bombs: \$24,000,000 allotted to ordnance.....	27,786,688.52	28,496,912.33
General equipment, including instruments, etc.....	32,274,689.83	32,768,733.47
Clothing.....	2,450,609.35	2,519,824.79

Total obligations, \$859,839,974.36.

¹ Figures of \$270,000,000 given by Mr. Potter in hearing made up as follows:
Reported as obligated overseas but not verified to date..... \$49,000,000.00
Negotiations pending..... 35,000,000.00
As above..... 185,379,492.44

² Difference due to adjustments or cancellations.

Financial No. 2.—Spent.

	Apr. 1, 1917.	Apr. 30, 1918.
Planes, propellers, and spare parts (average price, \$5,000 per plane).....	\$3,805,465.00	\$53,019,752.59
Engines and spare parts (average price, \$1,950 to \$5,000 per engine).....	1,541,707.00	45,213,541.57
Balloons.....		881,201.19
Machine guns, ammunition, and bombs.....		\$28,534,211.53
General equipment, including instruments.....		11,110,661.49
Clothing.....		1,481,476.18

¹ This item includes engines.

² Total disbursements to May 25, 1918, \$357,894,470.48, which includes a small amount for Signal Corps allotments.

³ Excess over obligations due to fact that lump sum advanced to Ordnance Department is considered spent.

Equipment No. 1.—Ordered.

	Apr. 27, 1918.	May 18, 1918.
Planes:		
Elementary training.....	6,000	15,300
Advanced training.....	1,600	2,100
Combat.....	11,000	11,000
Engines:		
Elementary training.....	10,200	10,200
Advanced training.....	6,661	6,692
Combat.....	27,500	27,500
Propellers.....	31,413	35,913
Balloons.....	1,052	1,077
Machine guns.....	114,200	114,200
Bombs.....	722,000	843,735

¹ Decreased by 700. ² Vickers for whole Army; no allotment to Signal Corps as yet.

Equipment No. 2.—Delivered.

	Apr. 1, 1917.	Apr. 30, 1918.	May 18, 1918.
Planes:			
Elementary training.....	210	4,920	4,365
Advanced training.....		517	620
Combat.....		33	114
Experimental.....		195	195
Engines:			
Elementary training.....		5,278	6,123
Advanced training.....		1,379	1,825
Combat.....		647	1,043
Propellers.....		11,190	13,868
Balloons.....		95	120
Machine guns.....		25,842	31,845
Bombs.....		None.	None.

Schools.

	Apr. 1, 1917.	Apr. 30, 1918.	May 25, 1918.
Flying fields.....	2	22	127
Ground schools—flying officers.....		7	7
Schools for nonflying officers.....		3	2
Aviators:			
United States.....	73	3,011	3,467
Abroad.....		1,858	1,746
Total ¹		4,869	5,213
Nonflying officers:			
United States.....		4,648	4,922
Abroad.....		1,858	1,746
Total ²		6,506	6,668
Enlisted men:			
United States.....	1,800	97,319	99,001
Abroad.....		35,628	38,367
Total.....		132,947	137,368
Awaiting assignment to ground schools—flying.....		5,000	4,236
Number at ground schools—flying.....		2,713	3,391
Number at primary flying fields in United States.....		2,983	3,398
Number at pursuit schools in United States.....		145	152
Number at observers' schools in United States.....		88	432
Number at bombing schools in United States.....		191	542
Total at advanced schools in United States.....		984	1,036
Total at flying fields abroad.....		2,044	
Total observers at balloon schools.....		331	316
On front.			
Squadrons actually at work over enemy line.....		5	7

¹ Includes two fields to be started June 6.

² Total given in hearing Apr. 30, misinterpreted to mean total in United States.

ELEMENTARY AND ADVANCED TRAINING PLANES AND COMBAT PLANES.
ELEMENTARY TRAINING PLANES.

This type of plane may be generally described as small in size and slow in speed, having a low-powered engine. It has very little climbing ability but considerable stability. They are provided with two seats and a dual control, one for the instructor and one for the student.

ADVANCED TRAINING PLANES.

This type of plane is constructed for higher speed, having a more powerful engine, and is adapted for acrobatic flying. It may have one or two seats, depending upon the kind of instruction for which it is to be employed, as, for instance, pursuit flying, in which case there may be but one seat, or instruction in bombing or observation work, in which case there may be two seats.

COMBAT PLANES.

These planes embody the very latest improvements which have been developed, giving them great speed or great weight-carrying capacity, or other feature, depending upon the class of work for which intended. Generally speaking, there are four kinds of combat planes—fast single-seated pursuit planes, adapted to climb very rapidly; day bombing machines, which are adapted to carrying a load of bombs while at the same time having a high speed, and having a high ceiling; night bombing machines, adapted to carrying a heavy load of bombs, but not required to be so fast; and observation machines, carrying two or more aviators, equipped for observation and reconnaissance, and usually provided with a strong defensive armament.

For convenient reference, I submit an itemized statement of the amounts estimated for and appropriated, together with the total:

Condensed memoranda relative to appropriations for support of the Army, fiscal year 1918-19.

Page of hearings.	Items in committee print.	Original estimate.	New estimate.	Amount of appropriation.	Amount of authorization.
1350	Contingencies of the Army.....	\$300,000.00	\$300,000.00	\$250,000.00

Bureau Insular Affairs.....	2								2	
Chaplains.....	142						389		531	
Professors.....	7								7	
Cavalry.....	1,579	25,762			49	1,790		1,533		23,088
Field Artillery.....	997	40,389			3,603	86,330		53,185		179,904
Coast Artillery Corps.....	1,434	49,689	30,860		819	19,000	23,620		75,458	68,689
Infantry.....	3,813	140,176			8,684	252,455		155,522		549,153
Depot Brigade.....								70,437		70,437
Miscellaneous.....		44,332			153	927		23,043	153	68,392
Total.....	10,296	504,677	79,038	78,590	16,906	411,952	33,894	510,963	140,133	1,506,152

In addition to the above there are the following officers not on active duty: Adjutant General's Department, 4; Judge Advocate General's Department, 2; Quartermaster Corps, 78; Medical Department, 6,645; Engineer Corps, 40; Ordnance Department, 85; Signal Corps, 27; line officers, 1,314 (Reserve Corps).

This table does not include the men accepted on the recent call to the draft, which was for 150,000 men, who were to report between April 26 and April 30, nor the last call for 233,742 men, who will report between May 25 and May 30.

In the National Army line officers are not commissioned in the several branches of the line, but simply in the National Army.

Classification of the Reserve Corps line officers has not yet been completed.

ADJUTANT GENERAL'S OFFICE, May 16, 1918.

This statement discloses the fact that we had an Army, including the April and May drafts, on May 16, of 1,889,894 enlisted men and 140,133 officers, or a total of 2,030,027. The number of line officers is 75,608 and the number of staff officers, 64,525.

It is a very interesting fact to note that, beginning with a small Regular Military Establishment of about 127,000 officers and men when war was declared, the establishment has grown within a year and a little more to over 2,000,000, most of whom have been equipped and trained.

While some delays have occurred and some mistakes have been made, the War Department and the country are to be congratulated upon this wonderful achievement.

There have also been organized special and technical troops such as ambulance and sanitary troops, salvage troops, and many other kinds necessary to put a modern army upon a business basis.

The appropriations for the Quartermaster Corps, Engineer Corps, and Medical Department were liberal so as to be sure to provide the proper supplies and equipment for an Army during the coming year of at least 3,000,000 men.

It may not be amiss to call attention also to the fact that this bill, carrying more than \$12,000,000,000, was reported by the Committee on Military Affairs by a unanimous vote, and that it has since passed the House without a roll call or a dissenting vote, and passed practically as reported. No better evidence of the united spirit of the American people could be given to the world of our determination to carry the conflict to a successful conclusion.

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 4, 1918.

Mr. TINKHAM. Mr. Speaker, under leave to extend remarks in the Record I desire to print copies of letters which were sent out to Americans of German ancestry in New England during the recent third liberty-loan campaign. Many of these people, connected with the committee of Americans of German ancestry of the liberty-loan committee of New England, live within the confines of the district I have the honor to represent here in Congress:

LIBERTY LOAN COMMITTEE OF NEW ENGLAND,
Boston, June 3, 1918.

HON. GEORGE HOLDEN TINKHAM,
Washington, D. C.

DEAR SIR: In accordance with a vote of the committee of Americans of German ancestry, I hereby transmit to you the inclosed letters which were sent out to Americans of German ancestry in New England and to the newspapers of the country during the recent third liberty-loan campaign.

Respectfully, yours,

M. E. PIERCE.

BOSTON, April 9, 1918.

DEAR SIR: We, American citizens of German ancestry whose names appear on this letterhead, have been appointed by the liberty-loan committee of New England as a subcommittee to aid in the work of raising the quota required of Massachusetts by presenting the subject to all American citizens of this same ancestry, as is being done with other nationalities represented in our citizenship, in order that we may thus again give fresh proof of the allegiance and loyalty which we owe to our country.

We urge every loyal American citizen to make as large an investment in this third liberty loan as his or her resources will permit. Our country requires all and much greater help even than in the trying days when Schurz, Hecker, Heintzelman, Sigel, Rosecrans, and over 175,000 German-born men volunteered their lives for our common country, the United States of America.

The Americans of German ancestry have never failed our country in the past, and we are sure they will not now.

Liberty bonds can be subscribed for at your regular bank or at almost any national, savings, or cooperative bank or trust company. Kindly ask to have your subscription reported with the total from Americans of German ancestry. Please call the attention of all your friends of German ancestry to the contents of this circular.

For any further information or help write us at our headquarters.

For the executive committee.

FRANK VOGEL,
Chairman.
JACOB MILCH,
Secretary.

If you are not of German ancestry, disregard this letter, but buy the bonds.

[This letter to be read at the next meeting of your society.]

TO AMERICANS OF GERMAN ANCESTRY: It has been suggested that a word from me might be useful in bringing to your minds a clearer understanding and inspiration of our duty to our country at this time than perhaps some of the people of German ancestry seem to have. I am glad to do this, especially as in doing it I am conserving one of the important traditions and streams of American history and development. It is not strange that in a time like this there should be much confusion of thought. Nor is it strange that there should be bad and ignorant words spoken by persons who are themselves ignorant of our country's history.

No American has a greater reason for absolute and unflinching loyalty to America and American institutions than he of German blood, for that blood has been represented in every stage of our national development, and it would be disloyalty to our blood and our fathers who helped to make America what it is if we did not as resolutely as they take our stand for the country in the time of its necessity. You need not think of any other country in this connection than our own. You are not fighting England's battle or Italy's, or even France's, but America's, and that is what you are to fix your mind upon.

Men of your blood were with Washington and formed his bodyguard; men of your blood were in the war of 1812; men of your blood by the hundred thousand were in the Civil War; they stood around the Government then and unless they have forgotten their heritage in American history their descendants must be as loyal now as they were then. We firmly believe that they are and that, in spite of much misrepresentation and ignorant slander, our sons, the sons and grandsons of the veterans of the Civil War, by the thousand are in our Army to-day. Not a list comes to us from the front but bears names that show distinctly the German blood, maintaining the tradition which was handed down to them by their forebears on American soil. No American of German blood can think one minute of this record without feeling that his first loyalty and that of his children must be to America.

That you must be suffering when you think of what this war has brought is understood by most thoughtful men. One of the wisest of these, Mr. Henry P. Davidson, of the Red Cross, said in his memorable speech in Tremont Temple, Boston: "I know no German-Americans; but I can say to you that if they are loyal to America in this hour they have suffered what you and I will never suffer." That was a wise and understanding statement of the situation, and I need not dwell upon it. We have all of us suffered, not so much by the revelations of the brutalities of German militarism as by the vicious onslaughts by men here at home upon us, who have been true and loyal Americans in every breath we ever drew. But let us not take the assaults of agitators and mouth patriots too seriously. They have their reward. The sober and outstanding fact remains, that in spite of them we must do our share and do it bravely and unflinchingly, toward seeing that our sons and grandsons, who are standing for America and American institutions, do not sacrifice in vain.

Germany in arms was never the Germany of our love and reverence, least of all its crass and brutal militarism. Our Germany was and is the Germany of her philosophers, her poets, her musicians, and her arts, not one of which owes anything whatever to the brute power of her militarism. It will be a glorious day for Germany when freed from this great burden of shame she takes her place among the nations of the world again.

I ask you, therefore, to let no opportunity pass to announce, and to announce boldly, and without fear, your loyalty and love for this our land by birth, as in my own case, or by adoption, as in the case of many of you. Help when you can, and let your fireside utter for its own uplifting the historic deeds of sacrifice which German blood has wrought in the structure of American institutions. The millions who sought in this land a home and an opportunity came because they saw here a hope and a promise for a wider and freer life than could be found in Europe. Since our institutions and those of Germany stand front to front on the battle field, for Americans there is but one choice, and that is not a choice, since every fiber in us and every instinct of duty in us points the way to us, for in it Schurz, Sigel, Hecker, Heintzelman, and countless others have shown us the path with unmistakable clearness. Do it, then, my brethren, not half-heartedly, nor with apologies to anybody, and least of all because of the foul words of ignorant men, but simply because we are Americans, and this America is to us, no less than to others, the home land of our children and children's children forever. War destroys nothing that has a permanent interest to mankind when the heart and the conscience are clear, and we may confidently hope that when the smoke of battle has cleared away, the great things human, without respect to nationality, creed, or condition, will revive and the dreams of perpetual peace which lived in the souls of the greatest Germans will be realized. Talk these things through in your homes; let your children know now that the greatest thing they have is their American birthright, and urge them to stand by it and for it with all their souls and might and strength. I know that for most of you this exhortation is needless, but let us in the face of the situation make it doubly clear, that the stupidest slanderer of our Americanism will be shamed into silence.

Sincerely yours,

ADOLPH A. BEERLE.

BROOKLINE, MASS., April 19, 1918.

Your society should invest its funds in liberty bonds. Your members should be canvassed by a special committee. Let Mr. Milch know the total of bonds bought by your citizens of German ancestry from time to time and for the whole campaign.

H. J. Res. 70, Authorizing Erection of a Statue of James Buchanan, a Former President of the United States.

EXTENSION OF REMARKS OF HON. RUFUS HARDY, OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 6, 1918.

Mr. HARDY. Mr. Speaker, the debate on the joint resolution for the erection of a monument to President James Buchanan having been abruptly terminated, I took leave to extend my remarks upon it in the RECORD. I avail myself of that privilege. I would not have done so but for the discussion that arose between the gentleman from Pennsylvania [Mr. DEWALT] and the gentleman from Wisconsin [Mr. COOPER]. The former, in a forcible speech, quoted from a personal history of James Buchanan, by William Uhler Hensel, an attorney general of Pennsylvania, these words:

I state it from the record and after examination thereof, and my opinion is concurred in by Judge Brown, of the Supreme Court, that if Abraham Lincoln had lived as President under the same circumstances and in the same trying times he would have done before the war what James Buchanan did, and that if James Buchanan had lived and been President when Lincoln was he would have followed the path of the illustrious Abraham Lincoln.

Instantly that opinion was vigorously denounced by a number of those opposing the pending resolution, particularly by the gentleman from Wisconsin. Mr. DEWALT quoted also from Mr. Lincoln, as follows:

I must save the Union. If I must free all the slaves, I will save it by freeing them all. If I must free some of the slaves, I must save the Union by freeing some. If I can save the Union by freeing none of the slaves, I would still save the Union.

He contended that under the unhappy conditions existing at the time, Lincoln and Buchanan both tried their best to avert

war, that neither of them wanted to plunge this country into war; a statement which I believe to be sober truth—a statement which ought to have allayed opposition to the pending resolution but seemed only to inflame it. The gentleman from Wisconsin [Mr. COOPER], with great vocal and physical force, read from Mr. Buchanan's message to Congress in December, 1860, as follows:

Without descending to particulars, it may be safely asserted that the power to make war against a State is at variance with the whole spirit and intent of the Constitution. Suppose such a war should result in the conquest of a State, how are we to govern it afterwards? Shall we hold it as a province and govern it by despotic power? In the nature of things, we could not by physical force control the will of the people and compel them to elect Senators and Representatives to Congress and to perform all the other duties depending upon their own volition and required from the free citizens of a free State as a constituent member of the confederacy.

And then Mr. COOPER commented:

"He declared this Nation to be a confederacy, although the Constitution adopted in 1787 superseded the articles of federation which had made the Colonies a confederacy."

He read further from President Buchanan:

But if we possessed this power, would it be wise to exercise it under existing circumstances? The object would doubtless be to preserve the Union. War would not only present the most effectual means of destroying it, but would banish all hope of its peaceful reconstruction. Besides, in the fraternal conflict a vast amount of blood and treasure would be expended, rendering future reconciliation between the States impossible.

Those passages seemed specially to rouse his ire, and for purposes of contrast he read these words from Mr. Lincoln's inaugural in 1861:

If it were admitted that you who are dissatisfied hold the right side in the dispute, there is still no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land are still competent to adjust in the best way all our present difficulties. In your hands, my dissatisfied fellow countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourselves the aggressors. You have no oath registered in heaven to destroy the Government, while I have the most solemn one to preserve, protect, and defend it.

I think he read this passage chiefly because of the last sentence in it. To call the Union a confederacy was an offense, and to deny the right of the Federal Government to coerce a State was a crime to him.

In what I write I only attempt to hold the mirror up to truth and to see whether the bloody-shirt professed apostles of Abraham Lincoln or Mr. DEWALT and the gentlemen he quotes from speak with soberness and reason. When Mr. Lincoln, on March 4, 1861, used the language quoted, it is very clear that he had not then made up his mind to attack merely seceding States, even though it may not be clear that he had made up his mind to let them go in peace. I have read his whole inaugural carefully. He plead for time, for deliberation, and for the Constitution unimpaired. He declared that those dissatisfied, referring to the slave-holding States, could have no conflict unless they were the aggressors; that the Government would not assail them. He admitted what he called the revolutionary right to dismember the Union, and he closed his address not by a warning or a threat of force to prevent secession, but by an appeal to hold the Union by bonds of affection. This notwithstanding many Southern States had already seceded, and Mr. Davis had been inaugurated as President of the Southern Confederacy, and South Carolina had prevented the reinforcement of Fort Sumter by firing on a United States vessel, the *Star of the West*, attempting to introduce soldiers into the fort on January 9, 1861. If the policy of coercion had already been determined upon by Mr. Lincoln he concealed that determination. On March 15, Mr. Justice Nelson, in the interest of peace, called on Secretary Seward, and even Seward then professed to hope for a peaceful adjustment, and practically agreed to evacuate Fort Sumter, while refraining from recognizing the southern commissioners who were then here in Washington, apparently because of public feeling and excitement at the North. Mr. Lincoln's declaration that he had registered an oath in heaven to preserve, protect, and defend the Government was not true. The oath he took, the only oath prescribed by the Constitution, was to faithfully execute the office of President of the United States, and to the best of his ability preserve, protect, and defend the Constitution of the United States. I do not know whether he was conscious of his misquotation, but to those who held the Constitution supreme in testing the questions of right between the States and General Government there was a vast difference between an oath to preserve, protect, and defend the Constitution and one to preserve, protect, and defend the Government of the United States. But things were moving with fatal speed between the time of Mr. Buchanan's message and Mr. Lincoln's. Passion was roused and being whipped every day into greater fury.

After the election in 1860, and after Mr. Buchanan's words, earnest efforts were made in Congress during December and on up to the adjournment of Congress, March 4, 1861, to adjust peaceably the differences between the States. December 20, 1860, a committee of 13 Senators was appointed to consider the distracted state of the country and the grievances between the States and report back. This committee was composed of 5 southern men—classing Kentucky as southern—3 northern Democrats, and 5 northern Republicans. It failed to agree. Mr. Douglas, one of the committee, in open Senate, stated that the five Republicans had rejected every proposition which promised peace, and asked them to state what they were willing to do. Mr. Seward, also a member of the committee, and one who was to be Secretary of State in the new administration, sat in his seat and was silent—an ominous silence to the Southern States. A similar committee appointed in the House likewise bore no fruit.

It ought to be known to all students of history that up to December, 1860, it was generally admitted that any State had a right to secede, and that the Union was in fact a confederacy of States. In condemning Mr. Buchanan gentlemen condemn nine-tenths of the elder statesmen and the vast majority of the statesmen who lived before 1861, including, as I believe, Mr. Lincoln himself, who spoke earnestly of preserving the Union, but not by force. In his inaugural address he not only denied any intention to interfere with slavery in any State where it existed but reiterated the statement of his party platform in these words:

The maintenance inviolate of the rights of the State . . . is essential to that balance of power on which the perfection and endurance of our political fabric depend, and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter under what pretext, as among the gravest crimes.

He promised to enforce the fugitive-slave law. He said everything that words could say to remove the fears of the slave-holding States. It is true that he argued for the perpetuity of the Union. He argued that its perpetuity was implied in contemplation of universal law and of the terms of the Constitution. By this, I take it, he meant the Union was perpetual because the Constitution did not limit it. He claimed that the Union was older than the Constitution; that it was formed in 1774, matured by the Declaration of Independence in 1776, and made perpetual by the Articles of Confederation in 1778, and then rendered more perfect by the Constitution of 1787. He seems to argue that every compact, if its duration is not expressly limited, must be perpetual unless dissolved by the consent of all of the parties. It seems to me that the very citations he makes confound his argument. The very Confederacy of 1778, cited by him, which in terms declared itself perpetual, was in fact dissolved, and that not by the consent of all the States party to it, but by a part only of them, in 1787, when they formed a new Union under our present Constitution, composed at first of only 9 States out of the original 13, and leaving some of the original States out of the Union.

Mr. Lincoln trod the pathway of constitutional controversy with care. He argued that "if a minority in such case will secede rather than acquiesce, they make a precedent which in turn will divide and ruin them." That the argument in favor of secession from the then existing Union would be equally good in case of any later union of any of the seceding States is true, I grant, and that is the very Gibraltar of the argument in favor of secession. I believe that any voluntary union of sovereign States from motives of sympathy, mutual interest, welfare, and affection ought not to be held together by force when the affection, the sympathy, and the interest that brought them together cease to exist—certainly not if when they united it was well understood they were not parting with their sovereignty and that they were not to be held together by force. And I am persuaded that but for the passions engendered by heated discussions of slavery Mr. Lincoln would never have sent troops of the United States into the South. If he had not done so, in my opinion, the slaveholding States, after setting up a government for themselves, would have themselves freed the slaves and would have voluntarily sought readmission into the Union after a few years' separate existence as a friendly neighbor of their northern sister Republic.

It was not force that brought the States together, but voluntary choice induced by fraternal feeling and mutual interest, and that feeling and interest was the bond relied on by the fathers to hold them together. It may be claimed and has been claimed that such a bond was a rope of sand. I deny it. The tie that binds husband and wife together is such a bond, and when it is perfect is stronger than life or death, but when jangling discord or unjust treatment comes is it not better to break the tie? Surely great States, whole nations, should be

as free to withdraw from a union voluntarily entered, else what becomes of the natural right of self-determination of peoples so eloquently proclaimed by us to-day?

Northern States had passed laws in avowed violation of the Constitution. Virginia's soil had been invaded by those hostile to her institutions, and that party in sympathy with her invaders, many of whose great leaders had denounced the Constitution as a covenant with hell, had come into power. When the South was being denounced all over the North and the North being denounced at the South, what other course was left a self-respecting people but to withdraw from a Union hateful to both sections?

In direct conflict with Mr. Lincoln's claim of perpetuity of the Union, because it is not limited by the terms of the Constitution, a great law writer of Massachusetts—Parsons—says:

If the articles between partners do not contain an agreement that the partnership shall continue for a specified time, it may be dissolved at the pleasure of either party, but no partner can exercise this power wantonly to the injury of the other partner without making himself responsible for the damage he thus causes. If there be a provision that the partnership shall continue a certain time, this is binding.

No good lawyer will disagree with Parsons.

Mr. Buchanan was in the last year of his administration without ambition or expectation of further honors. He was personally opposed to slavery. He was a northern man, but he was reared in the school of strict construction of the Constitution. He was peace loving and conciliatory, and his name was without stain or reproach. Let those who judge him now go back into history.

When the use of force against a delinquent State was proposed in the convention that framed the Constitution, Mr. Madison declared that—

the use of force against a State would look more like a declaration of war than an infliction of punishment, and would probably be considered by the party attacked as a dissolution of all previous compacts which it might have been bound by.

And the convention expressly rejected the proposition. Mr. Ellsworth, in the Connecticut ratifying convention, said:

This Constitution does not attempt to coerce sovereign States in their political capacity.

Mr. Hamilton, in the New York convention, said:

To coerce the States is one of the maddest projects that was ever devised. . . . Can we believe that one State would ever suffer itself to be used as an instrument of coercion? The thing is a dream; it is impossible.

Mr. Randolph in the Virginia convention spoke in similar strain. The idea of military coercion of one State by the other States was advocated by no man of repute in any State after its rejection by the convention that framed the Constitution until 40 years after that date. The center of all the reservations, restrictions, and limitations in the Constitution and early amendments was the unimpaired ultimate sovereignty of the States. The doctrine of the right of local self-government, as embraced in the rights and powers of the States, was the sheet anchor of the hope of permanent freedom to those who formed the Union.

The right of secession was not first asserted in 1860 or 1861. The purchase of Louisiana in 1803 created dissatisfaction in the New England States because it was feared the influence of New England might be lessened, and secession was talked of freely without any question being raised as to the right. Col. Pickens, an officer of the War of the Revolution, and afterwards Secretary of War and Secretary of State in President Washington's Cabinet and United States Senator from Massachusetts, denounced "the influence and oppression of the aristocratic Democrats of the South," and freely predicted and favored a northern confederacy. He declared that Massachusetts must begin the separation; that Connecticut and other States he named would follow, and that New York must be made the center of the confederacy, and that the Southern States would be left "to manage their own affairs in their own way."

In 1811 Hon. Josiah Quincy, of Massachusetts, declared in the House that if Louisiana was admitted to the Union it would free the States from any moral obligation to remain in the Union, and it would become the duty of some States to prepare for separation. He was called to order. The Speaker sustained the point of order, but on an appeal to the House the Speaker was reversed, and Mr. Quincy proceeded. The Hartford convention of 1814 is history. There were delegates there chosen by the Legislatures of Massachusetts, Rhode Island, and Connecticut, and an irregular delegation from New Hampshire and Vermont. They debated the expediency of secession. They decided finally against its expediency at that time, but practically declared their right to secede whenever their interests might make it desirable.

This convention has been in great disrepute because it was regarded as an effort to weaken the Government while we were

at war with a powerful foe—a war engaged in by us to protect the seamen and shipping interests chiefly belonging to these very States.

In 1844 the Legislature of Massachusetts declared that—
the project of the annexation of Texas . . . may tend to drive these States (referring to the New England States) into a dissolution of the Union.

In Jackson's administration Calhoun proclaimed the doctrine of nullification of a Federal law by a State within its borders. Jackson threatened to use force to enforce the law. Nullification by a State remaining in the Union and secession of a State from the Union are very different questions. The one asserts the right to enjoy all the benefits of the Union and still defy its laws whenever the particular State may judge them to violate the compact between the States. The other only asserts the right of a partner to withdraw from a compact. I shall only discuss the first—that is, nullification—to say that its maintenance must have ultimately resulted in a dissolution of the Union over the very question of slavery that finally brought about the secession of Southern States, and to note the fact that notwithstanding President Jackson's threat of force he never used it. The nullification proclamation of South Carolina was issued in December, 1832, to take effect February 1, 1833. Congress was in session. A bill was introduced in January, 1833, which was called the force bill, to give Jackson power to use the Army and Navy against South Carolina. Great excitement prevailed and a great debate took place in Congress. Webster, Calhoun, and Clay participated. The day after the bill was introduced Calhoun presented his famous State-rights resolution. South Carolina had declared her purpose to resist if coercion was attempted. A clash was greatly feared. The struggle was over the enforcement of a tariff law, the constitutionality of which was denied by South Carolina and protested against by many other States. While the debate progressed and efforts at satisfactory adjustment were being made, South Carolina, on Virginia's urgent appeal, postponed the operation of her nullification law until March 4, the closing day of the sitting Congress. At that time neither Jackson's force bill nor Calhoun's resolutions were brought to a vote. Mr. Clay brought forward his compromise on February 12. He offered to give up the principle of protection if its abandonment might be gradual, so as not suddenly to strike down industries built upon it, and within 10 years to reduce all tariffs to a revenue basis. He appealed for harmony and expressed very similar horror of war between the States to that expressed by Mr. Buchanan in 1860. He justly had presidential aspirations. He was denounced in public meetings in manufacturing States and was said at that time to have uttered the immortal words, "I would rather be right than be President."

When Clay closed, Calhoun arose at once, and as one who loved the Union indorsed Mr. Clay's resolutions, which were passed and became a law on March 4, 1833. South Carolina soon after repealed her law and that was the end of nullification. It was not put down by Gen. Jackson, as is frequently declared. It was not abandoned by Calhoun. It was as a question simply removed by the genius and great heart of Henry Clay. Even Mr. Lincoln in his inaugural admitted the right of revolution on the part of a minority in case of a clear violation of right under the Constitution by the majority. Under our Constitution what milder, more just, or more appropriate form could revolution take than secession? The strongest argument Mr. Lincoln makes against secession is not one based on the question of right, but one based on practical considerations and on the contention that unlimited right of secession leads to anarchy. Most doctrines carried to extremes lead to absurdity. The whole teaching that all just governments derive their authority from the consent of the governed carried to its extreme would mean that a minority in all republics might secede or resist the government, yet practical statesmen continue to maintain that doctrine, and the right of self-determination for the nations and peoples of Europe is stressed by the President and every party in the United States to-day. Its violation is the cause of the present world war. The truth always lies midway between extremes. A whole nation, a sovereign State, has the right of self-determination, and all just government of such a nation or State must rest on the consent of at least a majority of its people. So that the question of secession in its last analysis goes back to the question of the original separate and full sovereignty of the States, and the question whether they parted with or retained that sovereignty when they entered the Union, whether the Constitution was a compact between sovereign States or an instrument of government of a single consolidated people, one State? This question was old to Mr. Buchanan and Mr. Lincoln. They knew all its history; but for the benefit of critics of Mr. Buchanan and lest we ourselves forget, I wish to give some more of it here.

First. Each of the States party to the Constitution and the present Union when it was formed in 1787 had been a separate colony of Great Britain. They had united as colonies to declare their independence of the mother country, but their declaration proclaimed that they "are and of right ought to be free and independent States," and when they made peace Great Britain recognized and acknowledged each of them as separate, independent, sovereign States or nations, and this notwithstanding their Articles of Confederation made in 1778, while the war was in progress.

Second. These sovereign States first formed a voluntary compact and Union in 1778, which by its terms declared itself perpetual.

Third. A part only of these States in 1787 seceded from or dissolved that union and formed a new compact and union, to wit, the present Constitution and United States.

Fourth. In this new compact they omitted the declaration that it was to be perpetual, doubtless owing to the brief duration of the compact of 1778 and the knowledge of the fathers that on sound principles, as I have shown, all partnerships, whether of persons or nations, for an indefinite period are dissoluble at the will of any partner. The framers of the new Constitution did not declare the Union defeasible at will because I fancy they did not wish to invite or suggest its dissolution, but they tried by every stipulation conceivable to them to preserve the sovereignty of the States and limit and define the powers they intended to grant the Federal Government, and while its ratification was pending they virtually promised to still further safeguard the sovereignty of the States by amending the Constitution for that purpose.

Fifth. Several of the States, fearful of usurpation by the Federal Government, fearful that they might create a Frankenstein for their own destruction, remained out of the new Union for several years, thus reverting to their separate as well as sovereign Statehood until their fears were allayed.

Sixth. Several of the States in ratifying the new compact incorporated certain conditions and provisions, which, of course, inured to the benefit of all the equal partners. The Virginia convention declared that the powers granted under the Constitution being derived from the people of the United States might be resumed by them. New York's convention declared the powers of government may be resumed by the people whenever it shall become necessary to their happiness. And little Rhode Island, when she finally came into the Union, did so with the declaration that the rights of the States not clearly delegated to the United States remained to the people of the several States. It has been claimed that the words "by the people" and "by the people of the United States" meant by the people of the United States as a whole and not by the people of the several States; but it was not so held by any of the statesmen of that generation, and to so hold as to these words when used by the ratifying conventions of the several States would be absurd, since no one would for a moment question the right of all the people of all the States to alter, amend, or destroy the Constitution or dissolve the Union or diminish or increase its powers, nor would anyone if the Union was a simple single consolidated Government deny the power of its people to change its form in any way. The only common sense construction or meaning of these phrases used by so many of the State conventions is that the people who were ratifying the Constitution and granting powers were trying to reserve to themselves alone the right to resume those powers. That was the construction of every statesman of that day, from Madison to Hamilton. The right of any single nation, as distinguished from a confederacy, to do as it pleases with its government being unquestioned, why then did these States make these reservations of the right to take back and resume the powers they were in the act of granting? If they were reserving these rights to the whole people of a consolidated Republic, against whom were they reserving them?

Seventh. The Constitution neither expressly nor impliedly diminished or impaired the sovereignty of the States but only granted certain definite powers to be exercised by their agent, but fearful of the usurpation of powers not granted the Constitution was amended almost immediately, while all its framers still lived, and every early amendment was made to prohibit something or the exercise of some power which the fathers feared might be attempted contrary to the purpose of the compact.

Perhaps the most important of these amendments were the ninth and tenth. The ninth declares "the enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people," meaning surely the people of the separate States, since no reservation was needed to reserve to the people of any consolidated State all their rights. The tenth declared "the powers not delegated to the United States by the Constitution nor prohibited by it to the States

are reserved to the States respectively or to the people." Surely this amendment can admit of no question as to what people was meant by the reservation.

Eighth. A little thing, but a potent one, is the fact that the military school of the United States at West Point, where Jefferson Davis and R. E. Lee were trained, taught in its textbook that the allegiance of the soldier was due first to his State, and the fact that Gen. Lee, trained at West Point, when he resigned from the United States Army said that he sheathed his sword hoping never again to draw it save in defense of Virginia, surely, as he conceived it, his sovereign.

Ninth. The framers of the Constitution in the convention were not silent as to the right of the United States to coerce a single State. Madison, the father of the Constitution, denied it vigorously; and, on his motion, when the proposal was made to authorize the use of force against a State, it was postponed indefinitely without a dissenting vote.

The great abolitionist, Horace Greeley, in 1860, when agitators were preaching "force," declared in the Tribune that "if the cotton States wished to withdraw from the Union they should be allowed to do so," and that "any attempt to compel them to remain would be contrary to the Declaration of Independence." Bear in mind the declaration had declared the States to be free and independent States.

If more can be asked, let us cite the famous Kentucky and Virginia resolutions, the former adopted in November and the latter in December, 1798. These resolutions were the basis upon which Mr. Jefferson was elected President in 1800, and no man who did not believe in them was elected President for the next 60 years. Mr. Buchanan, in 1856, was elected on a platform which declared—

that the Democratic Party will faithfully abide by and uphold the principles laid down in the Kentucky and Virginia resolutions of 1798 and in the report of Mr. Madison to the Virginia Legislature in 1799; that it adopts those principles as constituting one of the main foundations of its political creed and is resolved to carry them out in their obvious meaning and import.

What were these Kentucky and Virginia resolutions? In condensed form, as far as pertinent here, they are as follows:

Kentucky declared that the Union was the result of a compact between the States to which each acceded as a State; that it possessed only delegated powers, of which it was not the final judge; that, as in all other compacts among powers having no common judge, each State had the equal right to judge for itself of infractions; that the powers not delegated to the United States were reserved to the States respectively; that the States had the right to nullify illegal and unauthorized acts of the Federal Government.

Virginia first declared her purpose to defend the Constitution of the United States against every aggression, foreign or domestic, and to support its Government in all measures warranted by the Constitution. Then that the Federal Government resulted from a compact to which the States are parties and is limited in its powers to the grants in the Constitution, and that the States have the right and duty to resist when powers not granted are attempted to be exercised by the Federal Government. Then she expresses regret that a spirit has been manifested by the Federal Government to enlarge its powers by forced construction "so as to consolidate the States by degrees into one sovereignty," and appeals to all the other States to join her, by each of them taking necessary measures to maintain "the authorities, rights, and liberties reserved to the States, respectively, or to the people."

By reading these resolutions and Mr. Madison's wonderful report referred to in the platform of 1856 we find that Mr. Buchanan was elected distinctly on the very views for which he has been called to task by the gentleman from Wisconsin. Moreover, in the very election at which Mr. Lincoln was elected those views were reflected by a vast majority of the votes cast. It must be remembered that Mr. Lincoln was a minority President, only elected because of a split in the Democratic Party.

Perhaps I ought to say something of Mr. Webster's claim in his great speech on the Union—that the use of the words "we, the people of the United States," in the preamble to the Constitution, showed that our Government was a consolidated government of the whole people, of all the States as one State, and not a compact between the States.

In the Virginia convention of ratification Patrick Henry strangely expressed the fear that such a construction might be given to those words or such an inference drawn from them. Mr. Madison answered him:

Who are the parties to it (the Constitution)? The people, but not the people as composing one great body, but the people as composing 13 sovereignties.

He satisfied Mr. Henry's objections and scruples on that point, and it was never raised again until Mr. Webster's day.

In that great speech Mr. Webster distinctly admitted that the States had a right to secede if the Constitution is a compact between the States as States. Was it such a compact?

The historical truth is that the preamble to the Constitution was originally written, "We, the people of the States of New Hampshire, Massachusetts," and so forth, naming all the original 13 States, thus showing plainly the meaning to be "the people of each State separately." In that form it was adopted unanimously. It was changed to its present form simply and solely because it was not known what States would ratify it, and it was desired and provided that the Constitution should become operative between any nine States as soon as that many had ratified it. That is the history revealed by the publication of the journal of the Philadelphia convention, which possibly Mr. Webster had not read. The journal was intrusted to Gen. Washington and many years afterwards deposited by him with the State Department and was first published, I think, in 1836. No State ratifying the Constitution did so with any other understanding than that the people referred to in the preamble were the people of each State taken separately. Every ratifying State convention had the presence and counsel of its deputies who had framed the Constitution and knew how and why the names of the several States were eliminated from the preamble.

Had those who made the Constitution dreamed that so great a perversion of their whole work would ever hang on a simple phrase they would have been more careful, but knowing that in submitting the Constitution the deputies had signed for each State separately; that each State was then an independent sovereign; and that each State as such was called on to ratify it; and that however great a majority there might be in favor of it in all the States taken as a whole it could not be ratified or made binding on any State except by the action of the people of that State, they were unfortunately blind to the mischievous possibilities of its construction and of ingenious sophistry; and the politicians of 1860 seized on this sophistry to help them deny the whole basic principle of the Constitution and the Union. These sophists never note that the Constitution itself never speaks of the United States as a single unit. It speaks of "laws of the United States and treaties made under their authority." It declares "treason against the United States shall consist in levying war against them or adhering to their enemies." Always the Constitution speaks of the Union as a "Union of States, as 'United States.'" It speaks of "the several States," "each State," "that State," "any State," "the States, respectively," "the several States which may be included within this Union," "different States," "every State." It named separately each of the 13 States, and always the framers and sponsors of the Constitution spoke of it as a compact between the States.

The eleventh amendment declared the—

Judicial power of the United States shall not be construed to extend to any suit . . . against one of the United States by a citizen of another State, or by citizens or subjects of any foreign State.

Thus expressing as clearly as words can that the Union is a union of many States. They dreamed of a fraternal union, of States held together by love and interest. Perhaps the States have been fused into one by the white heat of war or by the passing of time and the increasing activities and functions of government acquiesced in since the war.

I do not know whether that be true; but if it is true the most important amendment to the Constitution since its adoption is not any one of those written into it in the manner prescribed by it, but the fusion which I have just suggested.

In denying that the Constitution is a compact between States, as was done by Mr. Webster, it is also necessary to ignore the final, the closing article and paragraph of the instrument itself.

Article 7 reads:

The ratification of the conventions of nine States shall be sufficient for the establishment of this Constitution between the States so ratifying the same—

And the solemn asseveration follows:

Done in convention by the unanimous consent of the States present—

With the separate signatures of each of the States, by their deputies. The proponents of the solid-nation theory hang to a preamble and ignore every other part of the Constitution, and the whole proceedings of the convention that framed it, and the multiplied expressions of their purpose and meaning by those who wrote it, signed it, and ratified it. In the Federalist, urging the ratification of it, even Mr. Hamilton refuted every one of the contentions of the latter-day solid-nation advocates. He adopted Montesquieu's description of a confederated republic as appropriate to ours. He denied the right to sue a State before a Federal court on the ground that the States were sovereign, and replying to the objection that the Constitution contained no bill of rights said it was unnecessary, because the

people of the several States had surrendered nothing of their inherent sovereignty.

For why declare—

Says he—

that things shall not be done which there is no power to do—

Thus affirming that the Federal Government had only delegated powers such as are expressly or by necessary implication granted in the Constitution. And, finally, he says:

Every constitution for the United States must consist of a great variety of particulars in which 13 independent States are to be accommodated * * * hence the necessity of molding and arranging all the particulars in such manner as to satisfy the parties to the compact.

I have quoted at length from Hamilton and Madison because on their writings in the Federalist the Constitution was really adopted, but George Washington also had his say as to the nature of the Constitution and Union. In letters he repeatedly refers to the Union as "a confederacy of States," a "confederated Government," and speaks of States acceding to it by ratifying the Constitution. He calls the Constitution "a compact or treaty." To Count Rochambeau he wrote:

The Constitution is to be submitted to conventions chosen by the people in the several States and by them approved or rejected.

That certainly is how "We, the people of the United States," did ordain and establish the Constitution. Even Webster, before his death, in a speech at Capon Springs, Va., in 1851, declared that—

if Northern States refused, willfully and deliberately, to carry into effect that part of the Constitution which respects the restoration of fugitive slaves * * * the South would no longer be bound by the compact.

Apparently he had forgotten that in his great speech in the Senate he denied that the Constitution was a compact. Or was it that he had changed his opinion?

Legislative enactments deliberately passed by certain States to defeat the fugitive-slave clause of the Constitution were denounced by the convention that nominated Douglas in 1860, and must have been in the mind of the convention that nominated Mr. Lincoln when that convention denounced the lawless invasion of any State. That legislation was surely a breaking of the compact by those States and, moreover, the denial of the Republican convention of 1860, that nominated Mr. Lincoln, of the right of citizens of the slaveholding States to take their slave property into the territory was believed to be a denial of the right guaranteed them by the Constitution. So that when the Southern States seceded they believed their right to have been violated, and the compact under which they entered the Union to have been broken by some of the States, and that the party just installed in power were committed to a breach of the compact. No man can question this, and so believing, no candid, unbiased student of the Constitution, its creation and its history, will deny their right to the remedy of secession. All I have said has been better said before, but I say it again, and say it here, "lest we forget."

It may be partly repetition, but I wish to dwell a little more on the convincing story of Calhoun, Clay, and Webster in relation to this subject.

In January, 1833, John C. Calhoun introduced a series of resolutions declaring the Constitution to be a compact between the several sovereign States, a Union between the States ratifying the same; that they delegated certain definite powers to the Union, reserving to each State the residuary mass of powers; that the exercise of powers not delegated is unauthorized; that the General Government was not the judge of the powers delegated to it, but that each State had the right to judge for itself both of the infraction and the mode and nature of redress; and that the claims that the United States formed one Nation or people and that the allegiance of the people of the States had been transferred to the General Government were contrary to the most certain, plain historical facts.

These resolutions were opposed by Mr. Webster in what has been called his great speech, to which I have referred, in which he claimed the Constitution was not a compact between the States in their sovereign capacities, and therefore that no State had the right or power, except by revolution, to dissolve the Union, or to relieve itself in any way against usurpation by the Federal Government. The speech was full of error in fact and sophistry in logic. But even Mr. Webster in that speech admitted that if the Constitution was a compact between sovereign States, each State had the right to dissolve the Union or secede from it.

Mr. Calhoun replied, and the two speeches constituted the strongest arguments that can be made for the two sides. The reply of Mr. Calhoun to Mr. Webster seems to be conclusive. Mr. Webster never made a rejoinder. No vote was then taken on the resolutions. You will remember it was the wise resolution of Clay that bridged over that troubled time.

In 1837 Mr. Calhoun introduced another set of resolutions on the same subject and of the same tenor, adding to them additional resolutions upon the question of slavery. His resolutions, covering the same ground as those of 1833, were brought to a vote on January 3, 1838, in the Senate and adopted by more than two-thirds majority. This was the verdict of the statesmen of that day upon the issue joined in the great speeches of Mr. Webster and Mr. Calhoun five years before, which had been much discussed in the intervening time.

Mr. Webster was still in the Senate in 1838, but while he voted against the resolutions he did not take up the gauntlet thrown down by Mr. Calhoun in debate or attempt again to refute the principles asserted by the resolutions. Votes were taken on the resolutions separately. The States voting for the first resolution were: Alabama, Arkansas, Connecticut, Georgia, Illinois, Kentucky, Louisiana, Mississippi, Missouri, Michigan, Minnesota, North Carolina, New Hampshire, New York, South Carolina, Pennsylvania, Tennessee, and Virginia. Those voting against it were: Delaware, Indiana, Massachusetts, New Jersey, Rhode Island, and Vermont. Ohio was divided, and Maryland failed to vote.

All of the other resolutions in the series were adopted by an even greater majority than the first. Mr. Clay, who was present, voted with Mr. Calhoun, and when Mr. Webster, at Capon Springs, Va., in 1851, declared, "I am as ready to fight and fall for the constitutional rights of Virginia as I am for those of Massachusetts," it seems to me that had Massachusetts been invaded by the armed forces of the Union, Webster would have been as much of a rebel as Jefferson Davis was in 1861, and furthermore that he would have indorsed the very expressions of James Buchanan which were read and condemned by the gentleman from Wisconsin on the floor of this House.

Mr. Lincoln held the Union above the question of slavery and above the Constitution; Mr. Buchanan held the Constitution above the question of slavery and above the Union. Since both of them took the same oath of office, and since the Constitution itself prescribed that oath, requiring them to "preserve, protect, and defend the Constitution of the United States," who shall accuse Mr. Buchanan if he placed that obligation above all others? Up to 1861, Mr. Webster and Mr. Cooper to the contrary notwithstanding, in the light of the facts, were the States sovereign? Yes. Was the Union a confederacy? Yes. Was the Constitution a compact? Yes.

The fierce storms of those days have died down to the gentle murmurs of far-away music; the leaves of many autumns and the snows of many winters have fallen gently upon the graves of Buchanan and Lincoln; time and mother nature have soothed and healed our heartaches and scars and wounds; the memories of the war between those who fought for and against the faith of our fathers have grown dim and mellowed by the charity that never faileth.

After the war the Supreme Court of the United States in dismissing the indictment against Jefferson Davis decided that he was not guilty of treason or any crime, and those of us who yet believe that Calhoun and Buchanan and Lee and Davis were right feel that they were vindicated by the great court, and we know that before that greatest court of all, that court where the hearts of men are searched and all secrets laid bare, Buchanan will meet no charge for the efforts he made to prevent fraternal strife, and Davis, Lee, and Jackson will be justified. We trust "the depth of the riches both of the wisdom and knowledge of God." He guided and governed the event. We are content. All bitterness is gone from us. It seems to be time for even politicians to cease trying to stir the passions of 60 years ago and give just judgment of the lives and characters of all the actors in the great drama of that day. If possibly we might have remained divided, had the South been allowed to secede peaceably in 1861, who can say but that our right to secede was taken away that we might be held in union and strength for this great day? "How unsearchable are His judgments, and His ways past finding out!"

In the baptism of blood that is come and is coming we are united. Our country is one country. There is no cotton State, no manufacturing State, no North, no South, no East, no West; we are just one great, united people, whether we be State or States. We love the flag with its 48 stars and 13 stripes. We love the Union it stands for and typifies, with its stars of glory and stripes of afflictions—the Union cemented as it was in the day of its creation by the common dangers, the common interests, and the unstinted love of all the people of all the States.

So let the Union, bound by the glories it has won and shall win, by the trials and dangers it has passed and must pass, by the love of liberty and devotion to justice and righteousness, stand forever!

Memorial Address of Hon. David A. Hollingsworth at
Columbus, Ohio, May 30, 1918.

EXTENSION OF REMARKS
OF
HON. JOHN W. LANGLEY,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, June 5, 1918.

Mr. LANGLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered at Columbus, Ohio, on Memorial Day, by Hon. DAVID A. HOLLINGSWORTH, a Civil War veteran.

The address is as follows:

ADDRESS OF HON. DAVID A. HOLLINGSWORTH, REPRESENTATIVE FROM OHIO, ON MEMORIAL DAY, 1918, AT COLUMBUS, OHIO.

Comrades of the Grand Army, soldiers of later wars, and friends, I am very glad to be with you on this memorial occasion at the capital city of the great State of Ohio, central Commonwealth of the great American Republic, modern Mother of Presidents and of many illustrious statesmen whose names and fame have added luster and dignity to the Buckeye State. Here boyish memories crowd in upon me of a day long ago when, as a 16-year-old lad in uniform, after less than a month's training at Camp Chase, I marched with the Twenty-fifth Ohio Regiment down High Street early in July, 1861, to the old Pan Handle Station to entrain in cattle cars for the front in a war destined soon to shake the very foundations of civil liberty. The hard board seating of those cattle cars was not as inviting as the luxurious upholstery of the modern Pullman, but I trust it is not offensive in this presence to suggest that their blue-clad volunteer occupants were as courageous, patriotic, and determined as the khaki-clad lads of 1918 moving to the front in Pullmans and ocean liners with the same high resolve and purpose of defending home and country, liberty, and the sacred rights of freemen against autocratic power.

Both deserve the highest honors the American people can bestow upon brave men, and to-day, in this most crucial hour of our country's history, this fact is manifested by a patriotic, God-fearing citizenship laying aside business cares and in a spirit of gratitude assembling all over our broad land for the double purpose of honoring the soldier living and paying deserved tribute to the soldier dead of the Republic. Veterans of the Civil War do not claim exclusive honors. Recognizing the spirit of comradeship in patriotic endeavor wherever found they are proud to share honors equally with those of all other wars, from the red-coated attack on our colonial life in 1776 down to the present world-wide conflagration and upheaval, the end of which no human mind can fathom, and only the Infinite, in the clear sunlight of inspired wisdom, can read the horoscope of the future.

Tragedy follows tragedy in such sudden and heartbreaking desolation that in our blindness doubts arise unbidden as to wherein man, considering his bloodthirsty instincts, is superior to the brute creation. As in a maelstrom, modern civilization and humanity seem to be in a swirling current of darkness, with nothing but the merciful goodness of a just God to give light and hope to mankind. It is truly an hour for sober thought by a sober citizenship. The elements of horror and hatred are found everywhere. A supreme crisis is approaching; the powers of good and evil seem arrayed against each other in the modern world. It is backward to the jungle for mankind or onward and upward, sword in hand, along American lines, until the highest ideals of civilization shall be realized. Autocracy and self-government are in a death grapple. There is no middle ground. Absolute loyalty to American institutions and American ideals is the only test of American worthiness in the individual citizen. It is vital to victory and peace such as must be secured before the sword of the Republic can again be sheathed in honor or safety.

Doubly significant, therefore, are the patriotic exercises of this holy day, teaching, as they do, to young and old alike, that in America duty and sacrifice are essential elements of good citizenship. They emphasize in this crucial hour, perhaps the most portentous in the world's history since the stars sang together at the dawn of creation, the fixed determination of the American people to defend at all hazards and to the death, if necessary, the blessings of civil and religious liberty won by our forefathers on the battle fields of the Revolution and which they and their children have enjoyed for more than a century under

the protecting aegis of Old Glory, flag emblem of a free people, never lowered in defeat, and destined, if the patriotic outpouring of to-day be any augury of the future, never to be lowered in dishonor while brave men stand ready to defend it.

We are in a world war, at the "peak and crisis" of it, as the President has recently told us. The very ends of the earth are convulsed with war preparations, and the glad greeting of peace on earth, good will to men, except at the point of the sword, seems to have been forgotten by both priest and layman. German aggression has forced world-wide problems vital to civilization itself upon a peace-loving people, long accustomed to regard as sacred the warning of Washington to avoid foreign entanglements. Americans of good intentions may not have all agreed as to the original inception of the war, its causes, or its subsequent management; mishaps and misunderstandings, even blunders, may have occurred, but, nevertheless, the awful hour of destiny has struck for the Republic, and there must be no faltering or hesitancy among freemen. The basic principles of liberty, its very existence and the existence of freedom and righteousness in the world, are challenged, assailed, by ruthless warfare and treachery, so that united patriotic action has become a necessity for the safety and welfare of all self-governing peoples. There is no room now for laggards in the world.

Further dalliance with kaiserism is weakness, or worse. It is treachery to American ideals. Differences of opinion, if any exist, must be reconciled or subordinated to victory if we would defend our homes against would-be despoilers of the race. Human liberty, sacred honor, and all things that make for peace and happiness in the world, all things dear to American hearts and homes, are at stake in the horrible holocaust of the present.

The call to duty, like the shot at Lexington, has been heard around the world. It will be answered as in 1776 as surely as God reigns in the hearts and consciences of freemen.

Congress has acted officially, partisan feeling has been stilled, and the last man and the last dollar, if necessary, pledged to the realization and rededication of republican aims and purposes. That pledge will be kept unless red blood has ceased to run in American veins, which God forbid.

As at Balaklava, it is not for loyal men to reason why, not to make reply, when called upon for service or sacrifice in defense of home and country. Forward must be the battle cry of a liberty-loving world if victory and safety are to be secured.

But, my comrades of the Grand Army, vanishing heroes, old men, as we are called by the thoughtless, while joining heart and soul in the intense loyalty and broad world views of the present day, a little retrospection and special pride on our part may be pardoned on this one day of the year long ago set apart and dedicated in the hearts of a grateful people, before the recent proclamation of the President giving double significance to the day, as peculiarly sacred to the memory of those who in the dark days of the sixties offered their young lives a willing sacrifice for God and country. Their heroism and devotion to liberty and republican ideals have never been and never will be excelled; they were the limit of unselfish devotion to duty. The struggle was of gigantic proportions. Anglo-Saxon faced Anglo-Saxon in battle with a fierceness never surpassed until the present brutal, poisonous, God-defying, ruthless warfare was conceived by our enemies to shock and horrify the civilized world.

The estrangements, bitter as they were, thus caused by the Civil War between the North and the South are happily of the past, vanished utterly as the followers of Grant and Lee, and their sons and grandsons, have met together on later battle fields under one flag, the dear old Stars and Stripes, and mutually learned to respect American manhood, although still radically differing in some matters of principle supposed to have been settled by the arbitrament of the sword. We of the Northland are not expected, nor will we, even after the lapse of a half century, forget the boys in blue and their heroic sacrifices, or such leaders as Lincoln, Stanton, Grant, Sherman, Sheridan, Logan, Hancock, Hayes, Garfield, Custer, and others long ago called to their reward; nor do we object to southern loyalty to the memory of Confederate leaders or to southern eulogies being pronounced at the graves of Confederate dead, either in the Southland or the Northland, wherever they may be sleeping. Time, seemingly, has silenced passion and ill will between the sections, although strange exceptions occasionally arise and tend to cast doubts upon the good faith of some of the supposed settlements of the war.

They ought not to be reopened or referred to, especially on memorial occasion; but, as exceptions, I trust the mention of some of them may not be improper as reminders of never-to-be-forgotten historic facts.

As an illustration showing the tenacity of southern sentiment to southern ideals, the present House of Congress recently

authorized the erection of a monument on one of the most conspicuous squares of the National Capital to the memory of James Buchanan, who, as President at the opening of the Civil War, sat complacently in the White House, without effective protest or effort, and saw the Government he had sworn to protect and defend drift rudderless and pilotless into the vortex of rebellion only to be rescued by loyal sons of the Northland after four years of bloody warfare. Some objection, although futile, was naturally made to the passage of such a resolution and sharp discussion ensued. It could not well be otherwise in a Congress sitting in plain view of an unfinished monument, wholly neglected, to the memory of Gen. Grant, successful leader of the Union Armies and twice elected President, and who had at Appomattox received from Gen. Lee his sword in token of the surrender of the Southern Army, and with true knightly gallantry had at once returned it to him on the field of honor and at the same time granted terms of surrender to the vanquished legions of the Southland more generous than ever before given by victor to vanquished in any war in history.

Other incidents of like character which might be mentioned, such as fulsome prearranged eulogies of Jefferson Davis on the floor of the House and a denial by the same committee that reported the Buchanan resolution of a modest monument to Gen. Custer, who led the last grand charge at Appomattox and received for his chief the white flag of Lee's army, and whose heroic death at the Custer massacre in 1876 shocked the entire civilized world.

But, comrades and friends, as the recital of such incidents may not seem in entire harmony with the patriotic purposes of the day, especially the prayerful suggestions of the President, let us banish them utterly from our minds and hearts. We are here to cherish only the memory of good deeds and, if possible, to forget the evil designs of the enemies of our country in the long ago. The mantle of charity must cover the faults, if any there be, of both the Blue and the Gray, and the Americanism of both must now give inspiration to their descendants as they battle together on foreign soil for God and humanity. The eternal verities of history are secure, and we of the Northland need not fear that any attempted perversion of history will make white appear black or black appear white in the essential elements of the peace entered into at the close of the Civil War.

It ended in a victory for humanity on the Western Continent just as the present war must and will end in a like victory over the whole wide world.

The battles of life are not ended for the surviving soldiers of the Civil War, who are especially honored to-day and pointed to as silent object lessons of patriotism for the emulation of millions of young men mustering for service in the present war. In reality they face more dangerous conditions from age and natural causes than in the most critical hours of their army life when youth and health and hope were with them. Death as suddenly as from a torpedo shell is not uncommon. The remnants of both armies are in fact in the trenches and on the firing line every day, all the time, unarmed and helpless against the grim reaper. The average fatality among them, based upon numbers, is simply appalling. It rivals the deadliest moments of Pickett's charge at Gettysburg or the recent death struggles in the trenches and on the western war sectors of Europe. It admonishes all who took part in the heroic scenes of the sixties that the final inevitable end of life's campaign draws near. Taps are constantly sounding in our ears. Soldierly courage and manly character are as essential to true Americanism to-day as they were when hydraheaded treason sought the life of the Nation.

Old men, it is true, with the silvery gray mark upon us all, and yet we know we have duties yet to perform here upon earth or we would not be here, spared monuments as we are, seemingly awaiting the final bugle call to service on the other shore. He who takes note of the sparrow's fall is not unmindful of His own children. The gracious lengthening of our days must be for some wise purpose. He knows, but His purposes are not revealed, and we can only stand at attention like true soldiers ready for duty when and where ordered, if it be only as living object lessons of loyalty and encouragement to American heroes in this frightful hour of destiny.

Hats off to the veterans both of the Blue and the Gray, noble sires of khaki-clad sons, on whom the real hopes of a bleeding world must rest to-day.

But comrades, and by comrades I mean the soldiers of all our wars and their descendants, in the natural enthusiasm and self-interest of occasions like this we must not forget that there are civic heroes as well as military heroes in the life of every nation.

The sainted mother who gives her only boy to her country, as thousands of them are doing to-day and as thousands have done

in former wars, is as much a heroine in that act as he is a hero in the hour of battle. She does not have, as he has, the excitement and comradeship of glorious war to sustain her when gloomy thoughts gather and distracting heartaches come to her in the uncertain hours of battle. The anxious waiting for news, the suspense, and the final reality are nerve racking beyond compare. Silently and alone her tears are shed, silently but no less heroically, like the prophet of old, she places her young idol on the altar of God and country and only her prayers can follow him.

Sainted mother! God Himself asks no greater sacrifice. Hats off, therefore, to the mothers of the land!

Nor must we forget in the enthusiasm of Memorial Day that the Republic of our fathers has successfully weathered the storms of more than a century under their guidance. Its rich fruitage marks epochal periods in American history, and notwithstanding the present war excitement and tension it is well to stop and look backward for a moment in contemplation of the gradual progress of the country from a few struggling Colonies in 1776 to its present imperial domain, reaching as it does, in influence and in fact, around the whole habitable globe. Nations, like individuals, learn wisdom from observation as well as experience. Hermit nations are no longer possible.

It is well, therefore, for all nations at stated periods to take note or inventory of their own progress and development. In our own land we begin with the American Revolution. The great men of that day, plain Americans as they were, civilians and soldiers alike, deserve the gratitude of mankind for having left indelibly stamped upon the pages of history such matured thoughts and lofty ideals as to form beacon lights of progress for the world.

It is said, and present-day conditions confirm it, that out of our Revolutionary War England, proud foe of the Colonies and of liberty as she was at that time, received more of actual good and future advancement than did the struggling Colonies themselves. The scales fell from imperial eyes at Yorktown, and although the struggle was half-heartedly renewed in 1812 the idea of autocratic control over free peoples seems to have become a barren idealism with England after the Battle of New Orleans. All her struggles since Pakenham's defeat down to the crossing of swords with the Kaiser have pointed in the direction of liberalism and away from autocracy. Freely admitting mistakes, she has seemingly crossed the rubicon of modern progress, and to-day, standing as an ally of the French Republic, locked arms in sentiment and instinct with her American Colonies of 1776, liberalizing gradually but certainly toward Ireland and all the other dissatisfied elements of her vast empire commonwealth on which the sun never sets, she is uninfluenced and unshackled to-day by past autocratic notions, honored among modern nations, and joined with America is leading the English-speaking world upward, upward, until, as recently seen in Jerusalem, the cross is to replace the crescent and civilization triumph over barbarism in every form.

Hats off to England and her allies!

As Americans we point with pride and satisfaction to our own national life, and although feeling keenly the horrors of the present foreign war we look to the future hopefully and without fear. It is as inspiring to American freemen as was Thermopylae to the Spartans.

Aside, therefore, from the hallowed sentiments of Memorial Day and the special recognition of our obligations as a Nation to all the soldiers of the Republic, we must be careful in our enthusiasm not to detract from the just need of praise due to the great civilians who in colonial times formed and fashioned the Government itself—those who, in the dark days of British oppression, before the dawn of liberalism in Europe, conceived the idea of American independence, and who, after solemn deliberation, issued to the world that immortal document wherein they declared the colonies free and independent States and pledged "their lives, their fortunes, and their sacred honor" to establish and maintain the American idea that "all men are created equal; that they are endowed by the Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." These men deserve to be remembered by posterity, not only for the brave, bold stand they originally took against oppression, but for the statesmanlike manner in which they managed the civil affairs of the Government during the war which followed, until England, then the proudest monarchy in existence, still clinging to the autocratic notions of old King George, was compelled to acknowledge American independence. No less credit is due to those of our ancestors on whom devolved the task of utilizing the great victory won by the colonists, of organizing out of the chaotic elements existing

at the close of the Revolutionary War a Government strong and compact, capable of resisting the shock of future wars, and yet one which should preserve and maintain the almost absolute freedom of its citizens.

There were few republican governments in those days as models to guide them. Since the efforts of Greece and Rome no nation of any considerable magnitude had ventured to try the experiment of government by the people for the people. True, Switzerland, the neutral gem of Europe, and perhaps some other small States, maintained a republican form of government, but they were almost useless as models because of their limited territorial extent and minor political importance.

A government suited to the wants of a few thousand people, living within a few square miles, was wholly inadequate for a nation of millions of people scattered over millions of square miles. Our ancestors were, therefore, left almost entirely without valuable precedent or guide in the formation of government, but by their own wisdom and far-seeing intelligence they founded it safely and firmly on the rock of the Constitution, a rock which has weathered the storms and tempests of many decades, growing stronger and stronger as each new test has been applied.

Equal honor is also due to those wise statesmen who, directing the civil affairs of the Government, have successfully piloted our grand old ship of state safely through the perils of a century and more, guarding it from destruction by both foreign and domestic enemies, and shielding it in their wisdom from those dangers which have ever beset the pathway of republics until to-day Columbia's name in peace and war leads the world.

We must not, I say, in our enthusiasm for the soldiery of the Republic, detract unjustly from the fame and honor of those who in civil life have added or are now adding luster and dignity to the American name. Yet we can not forget, and the 30th of May is the day set apart to remember and acknowledge, our obligations as a Nation and a patriotic people to all the soldiers of the Republic who have been or are engaged in either our foreign or domestic conflicts, especially to those who by death have been called to join the triumphant army on the great unknown camping ground, where bugle calls summon them to battle no more.

To these men, one and all, we owe an incalculable debt of gratitude we can never, never pay.

To Washington and the Continental Army, under Providence, we are indebted for our independence and for our existence as a distinct nationality. True, they were largely aided by Dr. Franklin and his civil compeers, but it was their valor, their courage, their endurance, and their success that caused the proud legions of England to surrender and the British King to acknowledge a treaty that gave us peace and a place among the nations of the earth.

Hats off, therefore, to the soldiers of the Revolution, who have long since passed beyond the portals of time, and may their memory be as dear to our hearts this day as if they had fallen in later wars or in the recent trench fighting of Europe!

We are also as a Nation and people largely indebted to those who on many a hard-fought battle field since the Revolution have defended and upheld the integrity of the Republic against the armed assaults of foreign powers—those who in 1812 again taught the proud mistress of the seas that the American flag, whether on land or sea, is potent to protect all who seek shelter beneath its folds; those who in 1803 accompanied Commodore Preble and in 1815 Commodore Decatur to the Mediterranean, where they humbled the insolent pirates of Africa, who had for years preyed upon the commerce of the world; those who more recently, in 1846 on the plains of Mexico and in 1898 in the Spanish-American War, vindicated the right of the United States Government to extend its dominion, if necessary, in defense of its own integrity and the rights of its citizens, whenever and however such territorial extension may become necessary.

But honorable as were the achievements of these men, and great and heroic and self-sacrificing as are and must be the services of those engaged in the present war, they are not as yet, in actual results, to be compared in magnitude or beneficent results with those of the Union Armies during the Civil War.

It was believed to be the final crucial test of republican government. Our political institutions, and with them republican institutions everywhere, seemed to be at stake. The world generally, in form of government, was autocratic. Foreign antagonisms and interference with American rights were threatened, and helpful alliances could not be formed such as now mark the strength of our allied armies. The contest was terrific; its sacrifices appalling. One hour at Chickamauga or in

the Wilderness was more destructive than the entire Spanish-American War.

But all talk of distinctions among Americans in their patriotism or Army service is invidious and should be avoided. There never was a truer sentiment uttered than one by President McKinley during the Spanish-American War, more recently attributed with slight variations to our present Chief Executive, when, in answer to the complaint of a Spanish War soldier that he had not been permitted to see an armed Spaniard, that it was not alone the fighting service of a soldier under orders of his superior officers, as that was his sworn duty, but it was the simple brave act of enlistment that marked the American soldier a hero. Hats off, therefore, to-day, my comrades, and fraternal greetings to every soldier living or dead whose name appears honorably on the muster rolls of the Republic!

But, my countrymen, what of the present? What of the future? Shall this dreadful crisis pass without injury to republican ideals or shall they be destroyed and German autocracy rule the world? No greater problem, one fraught with more momentous consequences to mankind, has ever been presented for solution to a liberty-loving people. Shall the forces of reaction prevail or shall they be driven backward, by the sword of allied freemen and an aroused public conscience, further and further in the direction of modern thought and liberalism?

Concentration of power in great emergencies is as essential to liberty in a republic as in any other form of government. Its absence is inexcusable and seemingly disastrous at times, as it was after the recent enforced abdication of Czar Nicholas which brought ruin and chaos to the Russian people and just as it would now be in our own country had not Congress placed in the President's hands startling and almost unlimited powers looking to the winning of the war.

It is early to make predictions. The war may end as suddenly as it began, or it may be long drawn out. There is a divinity that shapes the course of nations as of individuals, but it seems impossible that the frightfully destructive forces of the war can last much longer. Appearances are kept up by our enemies; spasmodic, forceful, and demoniacal drives are made on all sectors of the battle line; but the barometer of fast-moving events after each assault shows everywhere the tightening coils of distress.

The collapse may come at any time, and with it after-war problems greater than those of the war itself, greater than any which have disturbed the world since the crucifixion.

American statesmanship and genius will be needed in the hour of victory as much as now in the war councils of the allies. Out of the wreck and carnage of the war, as out of the tragedies and exhaustion of our Civil War, there must come a higher and holier condition, world-wide and universal, heralding possibly the millennial period on earth.

A solid basis of adjustment must be found which shall forever make war impossible.

Shall the nations disarm? Shall the construction of big battleships and navies cease? Shall big standing armies be denied to civilized powers? Shall universal military training be made compulsory among freemen? These and other international problems touching every phase of humanity reach far beyond the present generation. Any mere temporary truce will fail; peace permanent as the ages is the only hope of mankind, the only hope of Christian civilization. A new birth of freedom such as inspired Lincoln in his great speech at Gettysburg may be necessary before celestial bugles can sound the truce of God to an awakened world.

God has certainly had the American Continent in his keeping for some wise purpose. The same star that pointed the way to Bethlehem seems to have guided our Pilgrim Fathers to Plymouth Rock, blazed in the heavens as the patriots marched to Lexington and Concord, was seen by Washington at Yorktown, by Jackson at New Orleans, by Scott and Taylor in Mexico, by Grant at Appomattox, and finally seemed almost to rest for a moment over the head of President McKinley as the protocol with Spain was signed ending a war begun as no other war in history, solely in the interest of suffering humanity, and ending as all other wars of the United States, including the present one with the Kaiser, who talks of himself in lordly terms as the equal of the Savior of mankind, have or will end in the righteous triumph and advancement of American civilization.

Well may America's great poet exclaim of the future of our beloved country:

Behind the dim unknown
Standeth God within the shadow
Keeping watch above His own.

War Finance Corporation.

SPEECH

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 20, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 10608) to provide further for the national security and defense, and, for the purpose of assisting in the prosecution of the war, to provide credits for industries and enterprises in the United States necessary or contributory to the prosecution of the war, and for other purposes.

Mr. JOHNSON of Washington. Mr. Chairman, put forward now as a war necessity, the War Finance Corporation is likely to be with us for 50 years or longer. I am convinced that it will become the permanent holding company for the railroads. What is gained by denying it?

The bill is to render "first aid" to injured industries, concerns that can not borrow in a market that is largely monopolized by the Government. In special cases the corporation is authorized to make direct loans for periods of five years or less to any private or corporation borrower conducting an established and going business in the United States.

It is that section which needs amendment for the reasons just set forth by the gentleman from Pennsylvania [Mr. McFADDEN] and the gentleman from California [Mr. HAYES], both members of the Committee on Banking and Currency. I feel satisfied that this section, if left in the bill, will bring up a tremendous lot of appeals, that most of them will have to be turned down, and that will cause a great criticism of the law and of the makers of it.

Mr. HICKS. Is the point whether or not criticism will come of consequence? Is it not more important to get munitions, whatever the criticism may be?

Mr. JOHNSON of Washington. I grant that; but all going concerns can be financed by more tried methods. The trouble is that when you begin to lend first aid to corporations you are not likely to hear the end of it, and none of them will take "no" for an answer. The concern manufacturing munitions when it gets the O. K. at its home bank can get the money from this corporation. A concern should not have to come up after the banks are through with it to find money.

The House has made many changes. Let us strike out this section. How far the House will be able to stand out in conference with the Senate for these changes remains to be seen. But we have a chance now to further perfect the measure, and then, when it becomes a law, let us hope that a board of unquestionably sound men will be selected to carry out its multitudinous provisions; not men of the "rainbow-tinted school," who are so rapidly coming to the front, but men of prominence in banking. [Applause.]

Rivers and Harbors.

SPEECH

OF

HON. OSCAR L. GRAY,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 10, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 10069) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. GRAY of Alabama. Mr. Chairman, at this moment I am reminded of a part of Abraham Lincoln's memorable speech at the dedication of the battle field at Gettysburg: "That government of the people, by the people, for the people, shall not perish from the earth." In this twentieth century that idea is more than ever before impelling the motives, aims, and actions of those who are battling against despotism, in order to further this righteous principle, whether it be in the shouldering of guns by our soldiers in the trenches on the battle fields of Europe or in the making of laws here by the Members of Congress.

It has been intimated that this river and harbor bill is not, strictly speaking, a war measure. On the surface it may to some seem so, but by a careful analysis it will be found to be

of vital importance in the present crisis—for we do agree that for efficient service our avenues of transportation for commerce, domestic and foreign, shall be kept open and unobstructed.

We could not properly transport and export our grain, fuel, bread, and so forth, were there no means of transportation—no channels, no rivers and harbors. The ripened grain would lie shriveling in the fields; our cotton of the South would be scattered and wasted by the winds; our beds of coal would lie and remain buried in the mines.

If peace is soon declared, we will need those channels open for the present and future development and prosperity of our country, but if the war continues indefinitely we will need the channels open even more, in order to facilitate transportation, and thus render the more efficient service to the Government.

This war will be brought to a close in proportion to the ability of the Government to meet the demands for supplies for our allies and soldiers, and this will be done only in so far as the people here are able to produce and place upon the market, through transportation facilities, the necessary products. The people of the United States as well as the soldiers at the front must be equipped for ready service; we must all work together. So, as before stated, every obstruction to transportation and commerce must be removed, and the sooner this fact is realized and the more promptly we act for its immediate accomplishment the more speedily our men will be on the firing line and their needs and those of our allies met, both as to foodstuffs and other supplies.

I need not say here how the congestion in coal and other products could have been avoided during the past winter, how the delay in the shipment of troops and supplies might never have arisen, had legislation pertaining to rivers and harbors in the past been viewed in its true light and received its just support. I am not even criticizing the failure of any to have seen the importance of it. I refer to this fact only because I want to present this measure to you somewhat in a new light. I also desire to call your attention to some things in regard to rivers and harbors in general, and in particular to that portion of the bill referring to my own State, which I have the honor in part to represent.

EUROPEAN WATERWAYS.

Some one has stated that the rivers of no other civilized country are so poorly developed, so little used, and play so small a part in the life of the Nation as those of the United States.

According to a report of the Inland Waterways Commission, some time ago the National Waterways Commission made an inspection of European waterways, visiting especially England, France, Belgium, Austria, Germany, and Hungary. They report that in practically all of these countries waterways had attained a high standard of development. Within an area of less than 800,000 square miles, comprising the countries mentioned, there had been expended in the last half century in improvements and construction of internal waterways an amount which, if it be added the probable cost of improvements now on hand, will aggregate probably over a billion dollars.

Nearly all this vast sum has been taken from Government revenue. Only a negligible part has been provided by private enterprise.

The general policy of almost all European countries has been to develop and improve their waterways.

The history of waterways shows that the development in Europe naturally falls into two periods. The first began nearly a century and a half ago and continued down to the time when railroad building absorbed energy and capital and brought waterway expansion to an end. The second period began about a generation ago. The revival of interest in waterways, taking place at about the same period in different countries, seems to have been due to some dissatisfaction with railroad conditions and to a developing idea that the best results would be secured by the use of both transportation systems, rail and water. In no other country has it been possible to secure satisfactory development of both systems until one was protected by the other. As a rule, it has been necessary to invoke the power of the Government to save the traffic of waterways from destructive railway competition.

It is believed, however, that fair consideration will convince any candid student that this by no means demonstrates the improbability of the economic utility of waterways. Those countries which have taken most pains to improve and systematize waterways and which have most carefully protected them in a share of traffic are fully committed to the policy of developing both rail and water transportation side by side, as complements one of the other.

Experience has convinced these countries that the best and most economic transportation is to be secured only by maintaining both systems at high efficiency.

It is universal experience that development of waterways, resulting in a great increase of their tonnage, does not injure the traffic of railways.

Development of water transportation has greatly reduced freight charges, induced industrial and commercial development, and contributed vastly to prosperity and wealth. So firmly is the conviction now established that waterways contribute to national prosperity that those countries in which the Government owns the railroads are foremost in developing waterways, and this policy has paid both in increased railroad profits and in added national prosperity.

It seems that Great Britain and the United States are the only industrial countries of the first class in which water transportation has been neglected; and it is a suggestive fact that in both these countries a powerful opinion has lately developed in following the lead of continental nations, emancipating the waterways from railroad domination and vigorously developing them as an independent factor in transportation. It has been said by some that in both England and the United States the railroads have probably been unduly blamed for suppressing the competition and development of waterways. I shall not take the time to go into the reasons for this belief in England. As to the United States, many different sets of reasons probably should be assigned. The vast area and comparatively sparse population of the United States seemed for a long time to justify the belief that it would be little less than waste of money to develop two transportation systems side by side.

The problem until recent years was not only to secure transportation facilities enough to move the freight, but also to secure freight enough to make the transportation facilities profitable. As railroads go into all sections, while inland waterways were necessarily limited in this regard, it was natural that the railways should have the preference. Moreover, as to the great American rivers—vastly greater and more potentially useful in transportation than the rivers of Europe—their tonnage and commercial utility constantly increased because the railroads were willing to take the freight, and until recent years afforded ample facilities for moving it. To-day, however, the United States faces an entirely different situation. Many of the railroads have been unable to meet the demands upon them, and influential managers of railroads have lately insisted that it was absolutely necessary that waterways be developed to complement the railroad scheme of transportation. Commerce demands all the accommodations that both rail and water can provide.

It is contended that in those countries which have government ownership of railroads, and where governmental policy has protected the developing waterway systems from ruinous competition with the railways, the waterways have been developed to the greatest extent and efficiency.

Belgium, for instance, had under normal conditions as nearly a perfect system of inland waterway communication as could be found in any continental country. Although its area is less than 12,000 square miles, it has been in proportion one of the most important industrial centers in the world. Its railroad system is owned by the State, and its canals have been developed under its supervision.

My object in presenting Belgium as an example is to illustrate the fact most strongly that, while the water and railroad transportation systems are in a secure competition, as are great trunk-line railroads like the Southern and Louisville & Nashville Railroads, I am not prepared to say that the time has come when the Government should own the railroads in this country. But I am convinced that we have reached that time, and especially is this true in the present crisis, when this Government should control with equal justification the water lines of transportation as well as the railroads.

Military considerations in Europe, especially as to Germany, have been much more regarded, both in the construction and management of transportation lines, than in the United States. Railroads are laid down there to connect the center with the frontier, with a view to the mobilization of trucks and to the carrying of supplies to the places where they may be needed and with a less regard for serving manufacturing centers. Waterways are located mainly for development of trade at all times and to relieve the railroads in time of war. Great care has been taken in most European countries to protect the inland water-borne traffic against railway competition. In France a differential of 20 per cent is enforced in favor of the waterways against railways, the purpose being of maintaining both methods of transportation. And it may be asserted that water transportation has reached its highest development and efficiency in those countries where the railroads belong to the State. This is especially true in Germany, Austria, Hungary, Holland, and Belgium.

Again, it should not be considered that the value of river and harbor appropriations can always be measured by the amount

of water-borne traffic or tonnage. Frequently when lower competitive rates have been secured traffic is directed to the railroads, but in such cases the object desired, to wit, the reduction of the cost of transportation, has been secured.

Notwithstanding there may be a decline of the river commerce, the Mississippi and its tributaries are now, as in the past, important factors in diminishing competitive railroad rates, and this influence is not confined to traffic which moves between the trade centers on the river.

M. C. Markham, assistant traffic manager of the Pennsylvania Central Railroad, stated before the Industrial Commission that the complexities and necessities which surround the railroad in rate making are such as to make this river almost coterminous with the Rocky Mountains on one side and the Atlantic on the other. He further stated that the Great Lakes, the St. Lawrence, and the Erie Canal virtually dominate the rail carriers' rates on the traffic interchanged between Eastern and Western States, in a somewhat similar manner as the Mississippi does north and south.

The National Rivers and Harbors Congress, in its declaration, refers to the fact that rail rates have been reduced between water competitive points. There is a wider and more extended influence. Primarily river and harbor improvement has been commensurate with the amount of water-borne commerce, but the regulation of traffic rates on all transportation lines, especially the railroad rates, should also be considered.

AMERICAN WATERWAYS.

According to the Commissioner of Corporations on transportation by water in the United States, pages 28 and 29, the navigable length of streams in the United States is approximately 27,000 miles.

There are 2,189 miles of canals in operation; hence the total length of all navigable rivers and canals is about 28,600 miles.

In 1906 the length of railways of the United States was 221,571 miles, over seven times the length of all its navigable canals and rivers. The total tonnage of railroads was about 1,631,374,219 tons; over 12 times the traffic upon all the rivers and canals, which amounted to 132,000,000 tons.

When we consider the fact that the river systems of the United States are better adapted to the needs of the people than any other country in the world, and that we have failed to improve and use them, no reasonable man can scarcely imagine that such a condition ought to continue.

As to the different groups in our country, there may be stated to be four great systems or divisions—the rivers which flow into the Atlantic, the Pacific, the Great Lakes, and the Gulf.

Of the Atlantic tributaries, the Hudson River is of course of the greatest commercial importance. Over \$12,000,000 has been spent in its improvement for commercial needs.

The rivers of the Pacific tributaries are not so numerous as those comprising the other groups. Of these the most important is the Colorado. Like the Atlantic, the Pacific tributaries do not connect with one another as well as the Gulf tributaries, but they are valuable and should not be neglected.

The rivers of the Lake region are of commercial importance only as connecting links for Lake traffic.

Shall we open the gateways of the North, the Great Lakes, the waterways of the East and Middle West, and leave undone or neglect the channels of the South, thus crippling our transportation facilities and impairing our usefulness?

While I do not wish to minimize or in any way deprecate the value and importance of the great river systems in the other divisions, it is but fair to state that the Gulf affluents developed in the plains and valleys of the interior connect with one another better than the Atlantic tributaries, and form a system of navigation of much greater importance.

The more important river system is, of course, that formed by the Mississippi and Ohio and their more than 40 tributaries. These form a network of inland waterways of about 16,000 miles.

The main Alabama system of rivers reaches the Gulf through Mobile Bay, and is composed of the Mobile, Alabama, Coosa, Tallapoosa, Tombigbee, and Warrior Rivers. These streams form a navigable system of more than 1,200 miles, and if developed, second only in importance to the Mississippi.

MOBILE HARBOR.

Mr. Chairman and gentlemen of the committee, I have approached this question of increased appropriation for Mobile Harbor with some little hesitancy, especially in view of the fact that the Board of Engineers finally recommended an additional appropriation of \$100,000 for Mobile. If I did not feel that I was right upon this proposition I would not ask for the adoption of the amendment I now propose, but let me call your attention to the fact that the project for a 27-foot depth in the channel and 30 feet across the bar was completed practically

three years ago, and not one dollar has been appropriated by this Congress since that time. You will recall there was nothing put in the last river and harbor bill for Mobile. Congress merely adopted the project and appropriated money for maintenance. The War Department decided that it was an emergency, but they did not recommend an additional appropriation in the last bill. Not one cent was used for the improvement of the 30-foot project. It was recommended that any balance might be used for further improvement of this project, but all of it was consumed on the channel which had been completed to a depth of 27 feet.

Mr. MADDEN. Will the gentleman yield?

Mr. GRAY of Alabama. I will.

Mr. MADDEN. Does the gentleman care to say to the House that the total amount of money appropriated by this amendment could be used in the next fiscal year?

Mr. GRAY of Alabama. I will say that it is very probable that it can.

Mr. MADDEN. It ought to be stated with more definiteness than that, if the gentleman expects to get favorable consideration of his amendment. What does the gentleman say to the recommendation made by the Chief of Engineers, that he wants \$360,000, against the \$850,000 the gentleman from Alabama proposes?

Mr. GRAY of Alabama. I will state that the \$850,000 I am asking for is the amount that was originally recommended by the district engineer and the Chief of Engineers, and all others that had anything to do with it, as per House Document No. 1763.

Mr. MADDEN. That is to complete the project.

Mr. GRAY of Alabama. No; that is the initial appropriation.

Mr. MADDEN. Not for one year?

Mr. GRAY of Alabama. Yes.

Mr. MADDEN. It is evident from the statement of the Chief of Engineers that he can not expend that amount in one year.

Mr. GRAY of Alabama. I will say to the gentleman that in this time of stress, during the war period, some difficulty has been experienced in obtaining a sufficient number of dredges at a reasonable cost. That is why the engineers are taking the position at this time that they can not profitably spend \$850,000 for improvement of the 30-foot project.

Mr. MADDEN. What does the gentleman say about the War Department getting the dredges to expend this money called for by his amendment?

Mr. GRAY of Alabama. I will say candidly that no one can answer that absolutely. I am asking for the amount needed if they can provide the dredges. They may be able to do it; they may finish other projects and bring dredges from other ports to aid in the harbor work at Mobile. I am asking the Congress to give us the \$850,000, the original sum recommended, so that, if we can get the dredges, the channel may be promptly and efficiently improved. If the money can not be used, it will still be in the United States Treasury.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURNETT. Mr. Chairman, I ask unanimous consent that the time of my colleague be extended five minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama [Mr. BURNETT]?

There was no objection.

Mr. GRAY of Alabama. I thank the gentleman. I will say to the committee that there is no reason why the improvement of this project should not be put well on the way without further delay, because it is unquestionably one of the most important harbors in this country. It is capable of almost limitless extension, and, according to a report of the United States engineers, the cost of dredging has been proven to be the cheapest in the United States.

Mobile is, as you know, centrally located, on the Gulf, and is the nearest American port to the Panama Canal. It is at the mouth of one of the greatest river systems in this country; at the mouth of a river upon which the Government has spent \$8,000,000 to penetrate the coal fields of Alabama, some of the richest and best on earth.

Alabama, according to recent statistical reports, is one of the most important coal-producing States in the United States, and ranks fifth in the production of coal. The available coal supply in Alabama in 1908, according to an estimate of the United States Geological Survey, was 68,656,000,000 short tons, which would last four years at the present rate of mining.

The coal production, as per the "Statistical Abstract of the United States for 1914," for the years 1909 to 1913, inclusive, was:

1909, over-----	12,000,000
1910, over-----	14,000,000
1911, over-----	13,000,000
1912, over-----	14,000,000
1913, almost-----	16,000,000

Since a completion of the locks on the Warrior and Tombigbee Rivers, at a cost of \$10,000,000, and the opening of the river to navigation, barges ply regularly from the mines to Mobile. As traffic increases and transportation facilities improve it will tend to reduce still further the cost of coal, which is now the best and cheapest in the world. Alabama coal has been approved by the Navy Department for use of the United States Navy. In addition to its rich mineral resources, the regions penetrated by the rivers of Alabama are producing and will continue to produce large quantities of varied agricultural and lumber products, as well as live stock, vegetables, and other products, which are so essential now and at all times. Also great quantities of fish are caught in Mobile Bay.

In the event of a successful invasion of the New England States, New York, and Pennsylvania, the iron and steel factories of Alabama would be the last resources of the Government. Colon, as a base, would need fuel, supplies, and so forth, and in case of interruption of traffic on the Atlantic and Pacific Oceans the only source of supply of fuel would be the coal fields of Alabama and the oil fields of Louisiana and Mexico. The loss of munition plants, ship building and repair yards, and the coal and iron supply on the Atlantic would leave the Nation helpless unless the vast resources of the South were utilized. The Pacific coast would be too far away to render much assistance to the Atlantic and Gulf coast, if she did not need all her resources to protect her own coast line.

A successful attack in the Gulf would give the enemy everything necessary to manufacture its own munitions and extend its operations, and would also mean control of the manganese ores in Cuba.

Can the United States afford to run the risk of not safeguarding and utilizing the vast resources of Alabama and make them available for immediate use—refuse to lend its aid to keep open the avenues of commerce everywhere, in order that the products of the land may move quickly, especially those products that must be had in the present war crisis?

It would be little short of a crime to leave the natural resources of Alabama—coal, iron, and so forth—unprotected in this plan of national preparedness.

It is highly necessary that we should be able to bring such products down the canalized river and have them go out promptly through the port of Mobile.

But what happens now? Large vessels that carry coal can not get into and out of the port of Mobile completely loaded. Vessels of the great lines like the Leland and the Mallory that desire to send ships into Mobile can only send those with limited draft, because vessels drawing 30 feet can not enter the harbor, and thus can not be profitably used in the Mobile trade.

Gentlemen know that iron and steel are of high density; and why should Mobile, in transporting these products, be compelled to use vessels of light draft, which at times come in and go out partly loaded?

In addition to this, we should be prepared for any emergency which might arise in the present war situation. We occupy a whole continent, so it would not be unnatural for us to find ourselves attacked on any or all sides by the enemy. Our harbors and coasts on the Gulf should be kept open so that in case of an attack on the Atlantic or Pacific coast our ships could find anchorage at any point in the Gulf. This can not be done in Mobile Harbor until the channel is deepened so that large ships can pass through.

Rear Admiral Edwards, in the December Engineering Magazine, wrote:

There are 2,000 miles of sea coast on the south Atlantic and Gulf coasts, between Cape Hatteras and the Rio Grande, and there is not a dry dock on the south Atlantic or Gulf coast which will dock any of our superdreadnaughts.

Mobile would be the only logical base for the United States fleet in case we were compelled to defend Yucatan Channel and Florida Strait, thus closing the Gulf of Mexico to an attack of the enemy.

Hon. Franklin D. Roosevelt, Assistant Secretary of the Navy, stated before the Naval Commission on March 29, 1916: "We believe that the enemy would come for many reasons to the South, and that he would strike along the chain of the West Indies. We are vulnerable down there to a quick, rapid naval attack, far more so than we are along the Atlantic seaboard."

If our fleet should meet an enemy's fleet and be disabled, she would be forced to retire into the Gulf of Mexico or into the Caribbean Sea, and thence into the Gulf of Mexico. Then Mobile would be the natural base for the Gulf. The guarding of our port by submarines, and so forth, would be a safe anchorage for our Navy and give the United States access to manganese ores of Cuba, and would be a safe route for shipment in case the Atlantic route was closed.

Admiral C. H. Davies, retired, said: "If any port on the Gulf possesses the advantages that I have enumerated as essential (for a naval station) and that I know Mobile to possess, I do not know where that port is."

Mobile is the only available port in Alabama, and could, if no other necessity arises, be used as a coaling station and base for docking, repairing, and for the shipment of coal, oil, munitions, and foodstuffs.

Mr. ROBBINS. Will the gentleman yield?

Mr. GRAY of Alabama. Yes.

Mr. ROBBINS. What is the depth of water there now?

Mr. GRAY of Alabama. Twenty-seven feet.

Mr. ROBBINS. What is proposed to get by this amendment?

Mr. GRAY of Alabama. Thirty feet.

Mr. ROBBINS. How far is the dredging to extend?

Mr. GRAY of Alabama. About 33 miles.

Mr. ROBBINS. That would be an additional difference of 3 feet for 33 miles.

Mr. GRAY of Alabama. Yes.

Mr. ROBBINS. And it is to cost \$850,000?

Mr. GRAY of Alabama. No; that is the initial appropriation.

Mr. ROBBINS. How much will the whole thing cost?

Mr. GRAY of Alabama. A million and a hundred and fifty thousand, or thereabouts; I do not remember the exact amount.

Mr. ROBBINS. How long will it take to complete the work?

Mr. GRAY of Alabama. I think to 29 feet in a year, with the appropriation I am asking for, if they go at it and prosecute the work as it should be done.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. GRAY of Alabama. Yes.

Mr. MOORE of Pennsylvania. I think it is highly important that the House should understand how much will be expended there in a year, because I know of other instances where that question has arisen, where the question of dredges to which the gentleman has referred to is all important, or the ability to get the dredges to do the work. I understand that the appropriation here for Mobile Harbor as reported is \$260,000, and that the committee has consented to raise that \$100,000, so that it shall be \$360,000. Is it possible to expend more money than that during this year?

Mr. GRAY of Alabama. Yes; it is. I understand the gentleman. Of course, it is hard to say just how much can be expended, but all we are asking for is that a sufficient amount be appropriated in order that the work should progress, and not be halted for lack of funds.

Mr. MOORE of Pennsylvania. I want the gentleman to know that in the case of another important river the same question has arisen. More money has been asked for—more money was asked for—but the ability of the Government to get the dredges and the men to do the work arose, and therefore a smaller appropriation was taken, with a view of carrying the work through the year. The gentleman and I and all of us can come back here next year if we do not get enough this year. The question now is, Will \$360,000 carry you through this year?

Mr. GRAY of Alabama. The Board of Engineers decided that their original recommendation was not sufficient, and recommended an increased appropriation of \$100,000. I will read letters between Gen. Abbot and myself in regard to this matter:

WAR DEPARTMENT,
Washington, March 22, 1918.

HON. OSCAR L. GRAY,
House of Representatives.

MY DEAR MR. GRAY: Knowing the very great interest that you have taken in the new project for deepening the channel of Mobile Harbor, Ala., I wish to notify you that information has just been received from the district engineer showing the need of an increase in the estimate for that work for the next year in order to make adequate provision for the operation of the Government dredges. I am accordingly writing a letter to Mr. SMALL (see inclosed copy) recommending an amendment to the pending river and harbor bill.

Very truly, yours,

FREDERIC V. ABBOT,
Brigadier General, Engineers,
Acting Chief of Engineers.

GEN. FREDERIC V. ABBOT,
Acting Chief of Engineers, U. S. Army,
Washington, D. C.

MY DEAR GEN. ABBOT: Your esteemed letter of recent date came duly to hand, and I wish to express to you, in behalf of the people of Alabama as well as myself, my appreciation for this consideration.

I have a personal interest in Mobile Harbor, because it is Alabama's only seaport, and for the further reason that I represent, in part, more intimately that great section; at the same time, the important position that Mobile occupies and its advantages as a Gulf port would still command my honest, unswerving support and efforts to achieve for it speedy and increased development, although I might reside in a different section of the country.

I have hesitated to carry my efforts for full appropriation before Congress without the indorsement of the United States Army engineers, but I am thoroughly convinced that I am correct in my assumption that the port needs immediate development for the following reasons:

1. The commerce of the port is "large and valuable," and the benefits that would follow will warrant the expenditure involved.

2. In the war crisis this port occupies a peculiarly important position. It is now a shipbuilding center, and a port for exporting valuable products so essential for the war emergencies, such as cotton, timber, iron, and coal.

As you well know, the existing channel facilities do not fully meet the economic requirements of the port, as vessels of greater draft than can now safely enter the harbor are available in the Gulf trade, and could be used to much advantage for general commerce, and for war needs if the increased draft were given.

3. War vessels should be able to enter this harbor for safe refuge, both from storm and attack, but the present condition of the channel makes it impossible. Furthermore, they should be able to fill to their dead-weight capacity their bunkers with the cheapest and best coal on earth and go out full and not partially loaded, as they are compelled to do at present.

When the Mobile item came up before the Rivers and Harbors Committee for consideration, I made a motion for an appropriation of \$850,000 as per report of the United States Army engineers, House Document No. 1763. This motion was defeated by a tie vote.

I believed then that my position was right, and that the right would prevail. Your letter has convinced me that the truth is asserting itself, and I believe that I have your cooperation, and that upon further careful consideration of the needs of Mobile Harbor you will agree with me that it would be a great mistake to leave the work unfinished at this time for lack of appropriation, and that I will have your earnest assistance and cooperation for the speedy completion of the work.

Again thanking you for your kindness, and assuring you that your recommendation for the full appropriation will be highly appreciated, I am,

Very respectfully, yours,

OSCAR L. GRAY.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, March 22, 1918.

HON. JOHN H. SMALL,
Chairman Committee on Rivers and Harbors,
House of Representatives.

MY DEAR MR. SMALL: 1. I am just in receipt of a report from the district engineer at Mobile, Ala., indicating that the amount carried in the pending river and harbor bill for that port should be increased if practicable. The present amount—\$260,000—was based upon the estimates made by the district engineer last July to cover simply the operation of the Government dredging plant for the next fiscal year, it being considered impracticable either to build an additional dredge at this time on account of the state of the shipbuilding market, or to have work done by contract on account of the limitation imposed by law forbidding contracts at a cost in excess of 25 per cent over the cost of doing the work with Government plant.

2. The district engineer now reports that there has been a large increase within the last few months in the cost of operating the Government plant. The cost of fuel, for instance, has gone up about 100 per cent, and the cost of other supplies and of repairs and wages has also increased to a marked extent. He, therefore, recommends that the estimate for Mobile Harbor be increased by \$100,000 in order to make adequate provision for the operation of the Government dredges and the prosecution of the improvement as rapidly as this plant will permit, until another appropriation can be made available by Congress at its next session.

3. In view of these circumstances it is recommended that this item in the bill be amended so as to increase the amount of the appropriation from \$260,000 to \$360,000.

Very truly, yours,

FREDERIC V. ABBOT,
Brigadier General, Engineers,
Acting Chief of Engineers.

The engineers or no one else can tell accurately how much money will be needed, and we are asking the original appropriation as recommended. If, as I have stated before, they can not use that amount, it will be in the United States Treasury as an unexpended balance.

Mr. MOORE of Pennsylvania. Is the amount the gentleman is asking for in the amendment the amount that the engineers recommended for an annual period?

Mr. GRAY of Alabama. Yes; for an annual period. When we were considering this proposition in the committee it was suggested to find out what the Shipping Board would say in the matter. I took it up with the Shipping Board, and what did I get?

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. ALMON. Mr. Chairman, I ask unanimous consent that the gentleman's time be extended five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. I have in mind a case where the district engineer recommended an annual amount, but the Board of Engineers did not agree to that recommendation, and they cut the amount. Is that the situation?

Mr. GRAY of Alabama. Yes; the Board of Engineers cut the amount from the original recommendation.

Mr. MOORE of Pennsylvania. Then the amount the gentleman asks for is the amount estimated by the district engineer, but not recommended by the Board of Engineers?

Mr. GRAY of Alabama. Yes. I am asking for practically the same amount recommended by the district engineer, as will be shown in the following letters between the Board of Engineers and the chairman of the Rivers and Harbors Committee.

APRIL 1, 1918.

FEBRUARY 26, 1918.

Gen. W. M. BLACK,
Chief of Engineers, United States Army,
War Department, Washington, D. C.

MY DEAR SIR: Referring to Mobile Harbor. Col. Newcomer, as your representative, appeared before the committee at various times during the consideration of the pending river and harbor bill and is familiar with the hearing and the discussion before the committee relating to the appropriation for the maintenance and improvement of Mobile Harbor to be included in the pending bill. You estimated \$160,000 for maintenance and \$100,000 for further improvement for the next fiscal year. Local interests in the city of Mobile sent a delegation to appear before the committee, who with Representative GRAY from the Mobile district, have insisted that the amount recommended was insufficient in that more could be profitably used. As the matter now stands, you have up to this time adhered to your estimate and Mr. GRAY and the local interests are still insisting that a larger appropriation for further improvement is essential.

In this connection Mr. GRAY recently made a statement before the committee that it had been intimated to him from unofficial sources that the district engineer probably had recommended a larger appropriation for further improvement and that he desired to place before the committee for its reconsideration such report of the district engineer. It was tentatively stated by members of the committee at the time, and without dissent, that there appeared to be no reason why he should not have any available official information on the subject. Mr. GRAY stated to the chairman that he had a conference with Col. Newcomer this morning, at which time the suggestion was made that it would be more appropriate to have the chairman of the committee ask for any additional information embraced in the report of the district engineer, and I therefore have the honor to request that you furnish Mr. GRAY and the committee any further information upon the subject, including copies of the report of the district engineer. Mr. GRAY also desires that you will reconsider your former estimate based upon all the available information, with which request the committee are in sympathy. The committee have adopted and so far adhered to the policy of limiting appropriations for maintenance and improvement within the estimate submitted by the Chief of Engineers, and they are reluctant to depart from this policy. At the same time we wish to accord to Mr. GRAY and the local interests, which he represents, every opportunity to secure information and have you to consider same.

Very sincerely,

(Signed.) JNO. H. SMALL,
Chairman.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, February 28, 1918.

HON. JOHN H. SMALL:
Chairman Committee on Rivers and Harbors,
House of Representatives.

MY DEAR MR. SMALL:

1. In response to your request of February 26 for information concerning the estimate submitted by the district engineer for additional funds to be appropriated for Mobile Harbor for the fiscal year 1919, I have the honor to state that his estimate was as follows:

Operation of 1 sea-going dredge 3 months in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies.....	\$10,000
Operation of 1 sea-going dredge 9 months in the partial formation of a channel 450 feet wide and 33 feet deep, including upkeep and care of plant, office expenses, surveys, and contingencies.....	30,000
Operation of 2 hydraulic, pipe-line dredges 1 year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies.....	250,000
Construction of 1 steel pipe line to replace the inefficient one now in use.....	75,000
Construction of 1 hydraulic, pipe-line dredge, including steel pipe line, suitable tugboat, and barges.....	425,000
Operation of 1 snag boat 6 months, including care and upkeep of plant and office expenses.....	7,500
Total.....	797,500

2. In considering the matter in this office the estimate for the new dredge was eliminated, as it was deemed impracticable to secure such plant at a reasonable price under the present conditions of the ship-building market. The estimate for the new steel pontoon line was also omitted; as authority had already been granted the district engineer for the construction of a new line with funds already available. The estimate approved by this office is given on page 836 of the Annual Report for 1917.

3. The depth of 30 feet on the bar was considered adequate for existing depths in the harbor, or those that could be provided during the year, so that provision was made only for maintenance of the depth on the bar.

4. It has been suggested that work on the project might be expedited at a reasonable cost by making provision for doing the work by contract, as well as with the available Government dredges, since such contract work, if done, would have to comply with the provision of the law that its cost must not be more than 25 per cent in excess of the cost of doing the work with Government plant. This office, of course, has no objection to such procedure, provided the committee considers and additional appropriation advisable for this purpose.

Very truly, yours,

FREDERIC V. ABBOT,
Brigadier General, Engineers,
Acting Chief of Staff.

I have here the original report from the district engineer, and the Board of Engineers saw fit to cut down the amount recommended by him. I hold this report in my hand, and shall embody it in the RECORD. The engineer states that Mobile should have practically the amount I am asking for.

Mr. MOORE of Pennsylvania. But the Board of Engineers cut that down.

Mr. GRAY of Alabama. Yes; that is true, as you will see by the following report, showing changes made by the Board of Engineers:

Operation of one sea-going dredge three months on the bar in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies.....	\$16,000
Operation of two hydraulic pipe-line dredges one year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies.....	242,000
Operation of one snag boat six months, including care and upkeep of plant and office expenses.....	8,000
Total.....	260,000

When this matter came up before the Committee on Rivers and Harbors, at their suggestion I went to the Shipping Board, and I hold in my hand a communication from Mr. Franklin, to whom this matter was referred by said board, and what does he say?

Mr. MADDEN. Will the gentleman state who Mr. Franklin is?

Mr. GRAY of Alabama. He is a member of the Shipping Board.

Mr. MADDEN. What does he know about this?

Mr. GRAY of Alabama. He knows a great deal about the shipping interests in this country and what is needed to facilitate the movement of commerce through the ports.

Mr. MADDEN. Does he know anything about Mobile Harbor?

Mr. GRAY of Alabama. We went to the Shipping Board to find out whether or not this project was deemed a war emergency and therefore needed. Mr. Hurley, chairman of the board, referred the matter to Mr. Franklin, a member of said board. On February 6, 1918, Mr. Franklin addressed the following letter to Mr. Hurley:

WASHINGTON, D. C., February 6, 1918.

EDWARD N. HURLEY, Esq.,
Chairman United States Shipping Board,
Washington.

DEAR MR. HURLEY: With reference to the call made here this afternoon by Commander Bakenhus, United States Navy, and Congressman O. L. GRAY, of the Rivers and Harbors Committee, I wish to inform you that I am heartily in sympathy with the project for deepening without delay the depth of water at the port of Mobile to, say, 30 feet mean low water, to enable us to take advantage of the complete loading of ships at that port with the commodities that would naturally flow through it, namely, iron, steel, and cotton. This will enable the large majority of ships to be loaded down to their marks and full.

Yours, very truly,

P. A. S. FRANKLIN.

I will also insert in the RECORD a letter from Chairman Hurley to Mr. SMALL, as follows:

UNITED STATES SHIPPING BOARD,
Washington, February 8, 1918.

HON. JOHN H. SMALL,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Responding to your communications in regard to the wisdom of increasing depth of the channel at Mobile: Mobile has 27 feet. Thirty feet would be better, as it would permit of practically all vessels now trading in the Gulf or those that will be assigned there to enter the harbor without difficulty, whereas vessels over 27-foot draft must now seek deeper ports or discharge part of their cargo elsewhere and then complete discharging at Mobile; and the same condition would prevail in loading out cargo; a vessel can not complete her loading at Mobile if she draws over 27 feet.

Undoubtedly the traffic through Mobile will increase, and a harbor that would take vessels plying in that trade would increase the usefulness of Mobile as a port, and it is quite possible that more of the South American business could be handled through that port.

However, if the work could be done at this time quickly and efficiently, and not at a prohibitive cost, I would recommend deepening the channel.

Respectfully,

EDWARD N. HURLEY, Chairman.

Mr. MADDEN. Will the gentleman yield?

Mr. GRAY of Alabama. I will.

Mr. MADDEN. I desire to ask the gentleman who is Mr. Franklin and where does he come from and what does he know about Mobile Harbor, and does the gentleman know we would not be able to do this work in a year in any case?

Mr. GRAY of Alabama. I will state to the gentleman that Mr. Franklin, I am informed, lives in New York. He has been connected with the shipping interests in New York and is intimately associated with them. Because of his experience as a shipper I presume he was put on the Shipping Board.

Mr. MADDEN. It does not follow because he is on the board he knows anything about shipping, although this man may; I do not know.

Mr. GRAY of Alabama. I will say to the gentleman I do not know just what Mr. Franklin knows about shipping, but he seems to know a great deal and talks very intelligently about it. You have heard the statement of the Shipping Board, and it says this channel ought to be increased to 30 feet. The engineers also say that, but that they can not economically use the money at this time unless they are able to secure a dredge, which they think now is impossible. Suppose we can not secure a dredge and can not use \$850,000, as originally recommended. What is going to become of the balance, if any? It is not going to fly out of the Treasury. The money will not be expended if not needed.

While we are in the consideration of this bill, I wish to say, gentlemen, I have not too much sympathy with the idea that we must hold the appropriation down to so-called war needs or emergencies. I am one of those who believe that the development of our waterways and our harbors should not be abated simply because we have been drawn into the European war, and I doubt if we are doing even as much in this direction as England, France, and even Germany at this time. The United States will survive the war, and we should not neglect those things that sustain the very life of the Nation.

The irregular, timid, or vacillating policy which is marking our legislation is ruinous. A concerted plan of agitation and organization formed by the interested sections has been confined in its influence upon Congress in a legislative system on a large scale sufficiently strong to embrace the local interest and influences in a majority of the Congressional districts of the Union. Consequently it becomes necessary to form a kind of legislative omnibus in which all sorts of works are crowded together, good and bad, wise and foolish, national and local, all crammed into one bill and forced through Congress by an organized majority. Sometimes it may well be questioned whether as a general rule the money has been wisely and economically applied. Whether in many cases the expenditure has been productive of any useful result, beyond the mere distribution of so much money to the contractors, etc., of the favored community.

Far be it from my purpose to call in question the integrity and skill of those whose professional duty it is to devise a plan and superintend the construction of the works, but I suggest from the nature of their profession and their habits of life they could not expect always to possess the local knowledge in each locality in this widely extended country, which is so evidently essential in determining upon the proper plan for the improvement of navigation. Without depreciating the value of science, or disregarding its precepts, I do not hesitate to say that the opinion of an intelligent captain or pilot who for a long series of years had sailed out of and into a given port, in fair and foul weather, and who had daily and carefully watched the changes produced in the channel by the currents and storms, should also inspire confidence as to his knowledge of the local and practical questions involved.

The operations of the Government have not been sufficiently rapid to keep pace with the spirit of the age. One reason for this and perhaps the principal cause is the fact that the appropriation is too small for efficient service. It may be sufficient to commence the work, but, before completion, it is frequently swept away.

The ruinous consequences of these small appropriations are seriously deprecated and well understood, but they constitute some of the evils inseparable from the policy. It seems that items upon their own merit can not pass. Some of the Members think the work of their own districts of sternest necessity and are willing to defeat the bill if their project is not included. It is erroneously contended that there is not enough money in the Treasury for all, consequently the amount for each item is reduced to so small an amount as to make the appropriation of much less service. We need a system which will not depend for its success on the dubious and fluctuating issues of political campaigns and Congressional combinations, but one which will be certain, uniform, and unvarying in its results, wherein the rivers and harbors legislation is not dependent alone upon estimates furnished by engineers or boards that in some cases have not had the "organization or time to thoroughly investigate the conditions" of harbors, but also upon the wisdom of the Members of the committee and Congress; for in this matter of river and harbor appropriations, gentlemen, you are allowing, inch by inch and step by step, an encroachment on the power of the Rivers and Harbors Committee and Congress.

The Board of Engineers have their duty to perform and we have ours. We say to them, "We are the legislative, you are the administrative, branch of the Government." We say to them, "You go and survey a certain contemplated project. Let us know whether or not a channel of certain dimensions can be dug and maintained, and also inform us as to the amount of money it will take to construct and maintain said project." It is for the Congress to say how much of the money shall be appropriated and whether or not the commercial needs require the work to be hastened to completion.

As to the value of the commerce to be accommodated by said projects, Congress has an equal opportunity to obtain correct information and independently base its conclusions and its actions on said information. It occurs to me, gentlemen, that we have allowed the pendulum to swing too far, and we are gradually surrendering our branch of the Government, the absolute power to control rivers and harbors legislation. In

other words, if we continue to follow the present policy the Congress might as well enact a law appropriating a lump sum to the Army Board of Engineers, and say to them, "Here is the money. Take it and use it where, in your judgment, it is needed." We might as well, gentlemen, look at this matter squarely in the face and decide what shall be the future conduct of Congress pertaining to rivers and harbors legislation.

In regard to the Mobile item, I think it is but fair to say to you, gentlemen, that the Rivers and Harbors Committee, even in the face of the last report of the engineers, when it had under consideration the items of the present bill, only by a tie vote refused to recommend an additional appropriation of \$850,000 for improvement of Mobile Harbor under the present 30-foot project. Consequently I do not come to you with reluctance but with the hope and desire that a majority of the committee and Members of this Congress will see the importance of incorporating in this bill an appropriation of \$850,000, the amount already recommended by the district and Army Board of Engineers, as per their report in House Document No. 1763.

I have no patience with the camouflage that is suggested by this bill or any other bill, for that matter, where appropriations are secured on the ground that it is solely for "war emergency."

If it is a war measure, why should we refuse to hasten the work of this project? If it is not a war measure, then it should not be included in the present bill at all. So, gentlemen, let us assert our power, prerogatives, and individuality and maintain our self-respect by showing a small degree, at least, of independence and common sense in the consideration of this measure.

All I ask this committee to do is to stand by the original reports of the engineers. Take them and read them, and you will find that they say it is a necessity, and that this channel ought to be speedily improved to the necessary depth.

There is no reason, gentlemen of the committee, why these great products like coal and iron should not flow through that channel and flow freely.

Go to the port of Mobile. Probably at no other port have there been so many recent developments.

Let me give briefly a few of the recent important developments in Mobile.

The Mobile Shipbuilding Co.'s plant, employing 1,500 men in the construction of \$10,000,000 worth of steel and wood vessels for the United States Shipping Board Emergency Fleet Corporation.

The Tennessee Coal, Iron & Railroad Co.'s—a subsidiary of the United States Steel Corporation—mammoth building plant and industrial development, investing \$800,000 for building ships, which is said will include thousands of employees and be in itself a city on the order of Gary, Ind.

The Alabama Dry Dock & Shipbuilding Co., with its 1,400 employees, handling \$7,000,000 worth of work at this time; additional enlargements already decided upon.

The Henderson Shipbuilding Co., Murnan Shipbuilding Corporation, and other similar companies are expanding and increasing the population.

The following 11 events emphasize some of Mobile's industries:

Contract on building of \$100,000 marine railway in Mobile for Emergency Fleet Corporation announced let to Henderson Shipbuilding Co.

Capital stock of Dock & Shipbuilding Co. increased by stockholders from \$500,000 to \$600,000.

Petition of Merchants Bank of Mobile to increase capital stock from \$150,000 to \$200,000 granted by State superintendent of banks.

Shell Banks Shipbuilding Co. organized with a capital stock of \$300,000.

Inspection of harbor by B. L. Winchell, representing Director General of Railroads W. G. McAdoo, with a view to making recommendations for furthering movement of coastwise and export traffic through Mobile.

Increase of 50 per cent in February port clearings for Mobile over same month last year, shown by report of collector of customs.

Taking of steps by the Chickasaw Shipbuilding Co. to dredge and straighten Chickasabogue for accommodation of ocean-going vessels. Contract to cover probably two years awarded to Atlantic, Gulf, and Pacific Dredging Co.

Arrival of machinery, equipment, and materials for construction in Arlington dock improvement, the city's \$600,000 project to give Mobile increased port facilities.

Continued progress by the United States Steel Corporation in the establishment of its \$10,000,000 shipbuilding enterprise at Chickasaw.

Conference of Federal, State, county, and city engineers on plans for constructing permanent, paved boulevard between Mobile and Chickasaw.

I hope, gentlemen of the Congress, that I have presented this measure and the present needs of the country in regard to transportation facilities, the needs of Mobile Harbor, and the recent important developments at that port in such a manner as will justify the speedy completion of the work undertaken there by the Government. I trust you may see that it is worthy and demands the support of all those who are loyal to the cause of democracy and especially those upon the floor of this House who are cooperating in the enactment of those measures which will secure prosperity for the Nation.

There can be no doubt, gentlemen, that this war and the issues before Congress at this time are not matters to be dealt with in a spirit of partisanship or prejudice, either for private or corporate gain. I hope that every Member of this body is working in unison and harmony for the one great aim—the establishment of peace, a peace won on a basis that will insure the overthrow and the annihilation of despotism and tyranny. We should labor for those things that will bring to our Nation and to the world the supremacy and dominion of freedom, justice, and right, that mankind may enjoy their inalienable rights of self-government, liberty, and peace. We should unite with one purpose of mind as a body to enact here such measures as the one we now have under consideration, which will procure and secure this devoutly wished-for consummation. Therefore, gentlemen of the committee, I hope you will see the importance and necessity of adopting this amendment.

I thank you. [Applause.]

[Copy of the original report showing estimate and recommendation of the district engineer at Mobile before it was changed and cut down by the Board of Engineers.]

MOBILE HARBOR AND BAR, AND CHANNEL CONNECTING MOBILE BAY AND MISSISSIPPI SOUND, ALA. (GROUP A).

1. MOBILE HARBOR, ALA. (A1).

Location and description: This improvement is in the southwestern part of the State of Alabama, its entrance through Mobile Bar being located in the Gulf of Mexico, about 40 miles from the mouth of Mobile River, 46 miles west of Pensacola Bar and 104 miles east of the mouth of the Mississippi River, and its upper end being about 91 miles from Pensacola, Fla., on the east and about 61 miles from Pascagoula, Miss., on the west. (See U. S. Coast and Geodetic Survey inside route, Key West to New Orleans, No. 5, 1914.)

Mobile Harbor has been formed by dredging a channel 30 feet deep at mean low water and 300 feet wide and about three-fourths of a mile long across Mobile Bar, connecting the 30-foot contours on each side of this bar, and a channel 27 feet deep at mean low water and 33½ miles long extending from deep water in lower Mobile Bay to the mouth of Mobile River and thence up said river, in front of the city of Mobile, a distance of about 5 miles, to Chickasaw Creek. This channel has a bottom width of 200 feet in the bay and 300 feet in the river. The bar channel is very much exposed, being in the Gulf of Mexico seaward of Sand Island, while the channel through Mobile Bay is better protected but exposed to the storms that visit this locality. The river channel is protected.

Original condition: Previous to any dredging there was a minimum usable depth of 23 feet at mean low water over a width of about one-half a mile across Mobile Bar, and the channel through Mobile Bay had a minimum usable depth of 5½ feet through Choctaw Pass and 8 feet through Dog River Bar at mean low water, the available draft for purposes of commerce by way of Spanish River being limited to the latter depth. The width of channel over a depth of 5½ feet was about one-half a mile. The average range of the tide on Mobile Bar is about 1.1 feet, while near the upper end of the improved channel it is about 1.4 feet.

Previous projects: The original project for the bar channel was adopted by the river and harbor act of June 13, 1902. The original project for the bay and river channel was adopted May 20, 1826. The second project was adopted July 11, 1870, the third March 3, 1879, the fourth August 11, 1888, the fifth March 3, 1899, and the sixth June 25, 1910. On original and modified projects there was expended to June 30, 1917, the sum of \$7,783,345.17, of which \$6,398,785.81 was spent for new work and \$1,384,559.36 was spent for maintenance. For scope of previous projects see page 1840 of Annual Report for 1915, and also pages 802 and 807 of Annual Report for 1916, under paragraphs entitled "Existing project."

Existing project: The existing project provides for a channel across Mobile Bar 33 feet deep at mean low water and 450 feet wide and about 1 mile long, connecting the 33-foot contours south and north of the bar; for a channel 30 feet deep at mean low water and 300 feet wide from deep water in lower Mobile Bay to Chickasaw Creek, about 5 miles above the mouth of Mobile River, a distance of 33½ miles, and for the removal of sunken obstructions. Under ordinary conditions the mean tidal range at the lower end of the improvement is 1.1 feet and at the upper end 1.4 feet, and the extreme tidal range is 3.4 feet at the lower end and 3.6 feet at the upper end. The original, which is also the latest approved, estimate of cost of the project for new work on the bar channel is \$62,200 and for maintenance \$15,000 per annum, and for new work in the bay and river channel it is \$1,030,000, and for maintenance \$150,000 per annum, or a total for new work, exclusive of amount expended on previous projects, of \$1,092,200 and for maintenance \$165,000 per annum. This project was adopted by the river and harbor act approved August 8, 1917, in accordance with the report published in House Document No. 1763, Sixty-fourth Congress, second session, except as to pilotage and terminal facilities. The act of June 13, 1902, made the removal of sunken obstructions part of the maintenance of Mobile Harbor. The above document contains the latest published map of this locality.

Operations and results during the fiscal year: All work was carried on by day labor with United States plant, and was for maintenance of the previous projects. The channel across the bar was maintained by dredging between the 30-foot contours at the outer and inner end of the bar. In the accomplishment of this work 144,099 cubic yards of material were removed at an expenditure of \$19,852.47, including upkeep of plant previously used on the work, surveys, inspections, and office expenses. From July 1 to 3, 1916, the work of removing the wreck and cargo of the *Indian Chief* from Mobile Bar was in progress. This vessel was sunk about 45 years ago and lies near the inner end of the bar, between it and Sand Island Light. On July 5, 1916, due to extensive damage by hurricane to the plant engaged on this work, operations here were discontinued. The hurricane shifted the channel to the westward of the wreck, making its removal unnecessary. During the year about 20 tons of railroad iron were removed, at an expenditure of \$111.01. The total expenditures on the above work during the year amounted to \$19,963.48, all of which was for maintenance.

The bay channel was dredged to the previous project dimensions from 4,500 feet south of Beacon 8A to 1,600 feet north of Beacon 8B, near the middle of Mobile Bay, a distance of 12,095 feet, and from 1,000 feet south of Beacon 12, near the middle of the bay to day mark

2 in the cut-off channel in the upper part of Mobile Bay, a distance of 36,868 feet, making a total of 48,903 feet of channel which was dredged. In accomplishing this work a total of 2,714,129.1 cubic yards of material were removed from within the theoretical section. The expenditures on this work, including upkeep of plant, surveys, inspections, and office expenses amounted to \$76,242.26. The snag boat *Demopolis* worked in the river channel from near the foot of Texas Street, in the lower part of the river, to Chickasaw Creek, the upper limit of the improvement, a total distance of 21,850 feet. This work resulted in the removal of 1,971 logs, snags, and square timbers, at a total cost of \$7,034.47, including office expenses. Other expenditures, amounting to \$14,289.11, were made as follows: Cost of operation of snag boat *Demopolis* in handling heavy parts of machinery, inspections and miscellaneous work in the harbor; part cost of repairs to plant, due to damage caused by storm of July 5, 1916. The total expenditures on the bay and river channel during the year were \$98,465.18.

Condition at the end of fiscal year: The channel across Mobile Bar, formed by dredging, is 300 feet wide and abut three-fourths of a mile long, and connects the 30-foot curves of depth on each side of the bar. The 30-foot project was completed by dredging during the fiscal year ending June 30, 1914. Expenditures since its completion have been applied to its maintenance. An increase in depth of 7 feet over that originally existing has resulted. On June 30, 1917, the controlling depth in the dredged channel across this bar was 30 feet at mean low water. The total expenditures under the 30-foot project to June 30, 1917, are as follows: For new work, \$100,000; for maintenance, \$168,750.40; a total of \$268,750.40. The bay and river channel has been formed by dredging a channel 27 feet deep at mean low water and 33½ miles long, extending from deep water in lower Mobile Bay to the mouth of Mobile River, and thence up said river, in front of the city of Mobile, a distance of about 5 miles, to Chickasaw Creek. This channel has a bottom width of 200 feet in the bay and 300 feet in the river. All work on this improvement has consisted of dredging and removing obstructions. The 27-foot project was completed during the fiscal year ending June 30, 1915. The cost of its completion, including \$144,363.45 for maintenance dredging during its progress, was \$179,057.85 less than the approved estimate of \$1,802,548. Expenditures since its completion have been applied to its maintenance. An increase in depth of 2½ feet over that originally existing has resulted. On June 30, 1917, the controlling depth in the dredged channel was about 24 feet at mean low water. As the material is soft, vessels drawing 27 feet can pass through the channel. The total expenditures under the 27-foot project to June 30, 1917, are as follows: For new work, \$1,479,126.70, and for maintenance, \$491,559.56 (including \$33,520.23 for removing sunken obstructions), a total of \$1,970,686.26. No work has been done and no expenditure has been made under the existing project.

Local cooperation: The only condition imposed by law is that no work shall be done under the existing project until local interests have established port regulations satisfactory to the Secretary of War. This has not been complied with. The city of Mobile has expended the following amounts in the construction of a public wharf, a bulkhead, a steel shed, and in dredging necessary to produce 27 feet of water between its wharf and the United States dredged channel: Cost of wharf and bulkhead and repairs to same, \$29,526; cost of shed and repairs to same, \$61,641; and cost of dredging in front of wharf, \$60,094.

Effect of improvement: The effect of the improvement has been to give Mobile a reduction in rail freight rates between this port and Atlantic seaports and, by admitting a larger class of steamers, to reduce insurance and water freight rates upon shipments between Mobile and other ports.

Proposed operations: There is an available draft of 30 feet in the bar channel, and a draft of only 24 feet in the bay and river channel. The latter channel shoals at the rate of about 4,500,000 cubic yards per annum. Snags, logs, and sunken obstructions accumulate in the river channel. It is therefore believed that the needs of commerce will be best served by applying all the \$110,000 appropriated by the river and harbor act of August 8, 1917, to work in the bay and river channel, and it is accordingly proposed to use these funds and those available on July 1, 1917, amounting to \$23,586.12 for Mobile Harbor and \$3,849.60 for Mobile Bar, as follows:

Operation of one sea-going dredge about one month in maintaining a depth of 30 feet over a width of 300 feet in the bar channel, including upkeep and care of plant, office expenses, and contingencies	\$3,849.60
Operation of one hydraulic pipe-line dredge one year and one part of a year in maintaining the dimensions of the previous project, and increasing these dimensions in places if possible to do so with the funds, provided port regulations are made satisfactory to the Secretary of War, including care and upkeep of plant, surveys, office expenses, and contingencies	112,584.33
Construction of about 640 feet of floating pipe line (estimated time, four months)	12,000.00
Removing obstructions from Mobile Harbor by day labor with United States plant, including care and upkeep of plant, office expenses, and contingencies	9,001.74
Total	137,435.72

It is estimated that the above funds will be spent uniformly from August 8, 1917, and that they will be exhausted by June 30, 1918.

The bar channel shoals at the rate of about 70,000 cubic yards per annum. The bay and river channel shoals at the rate of about 4,500,000 cubic yards per annum. Snags, logs, and sunken obstructions accumulate in the river channel. The maintenance of the previous project dimensions across Mobile Bar requires the services of the United States dredge *Charleston* from two to three months per annum, and the maintenance of the previous project dimensions in the channel through Mobile Bay and River requires the services of a hydraulic pipe-line dredge all the time, and the attention of a snag boat about six months per annum. Provided the condition as to port regulations is complied with, it is proposed to do the following work with funds estimated for the fiscal year ending June 30, 1919:

Operation of 1 sea-going dredge 3 months in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies	\$10,000
Operation of 1 sea-going dredge 9 months in the partial formation of a channel 450 feet wide and 33 feet deep, including upkeep and care of plant, office expenses, surveys, and contingencies	30,000
Operation of 2 hydraulic, pipe-line dredges 1 year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies	250,000

Construction of 1 steel pipe line to replace the inefficient one now in use.....	\$75,000
Construction of 1 hydraulic, pipe-line dredge, including steel pipe line, suitable tugboat, and barges.....	425,000
Operation of 1 snag boat 6 months, including care and upkeep of plant and office expenses.....	7,500
Total.....	797,500

Recommended modifications of project: None.

References to public acts: None.

Commercial statistics: The total commerce for Mobile Harbor during the past five years, including bunker coal and river shipments, is given below:

Comparative statement.

Calendar year.	Short tons.	Value.
1912.....	2,210,496	\$63,493,612
1913.....	2,212,805	61,368,688
1914.....	2,392,442	58,085,903
1915.....	1,579,804	46,440,771
1916.....	1,673,020	55,712,360

The commerce during 1916 consisted principally of coal, cotton and cotton products, food and grain, fruit, general merchandise, logs, lumber and timber, molasses, naval stores, and staves. The proportion in tonnage of each of these articles to the total tonnage moved during 1916 is as follows: Coal, 14.18 per cent; cotton and cotton products, 2.91 per cent; feed and grain, 7.57 per cent; fruit, 3.73 per cent; general merchandise, 3.10 per cent; logs, 8.72 per cent; lumber and timber, 23.12 per cent; molasses, 4.41 per cent; naval stores, 3.75 per cent; staves, 4.60 per cent.

The usual limits of loaded draft of the boats carrying these principal classes of commerce were from 4 to 28 feet. Practically the entire amount of commerce of Mobile Harbor was carried over the improved sections, although there was before improvement a sufficient depth to have handled a portion of this. There has been no recent change in the nature of commerce due to the improvement.

One line of transportation, the New York & Porto Rico Steamship Co., has been temporarily abandoned.

The commerce during 1916 would have been considerably more but for the interference with trade caused by the European war and the consequent depression in business.

The following shows the changes made by the Board of Engineers in the foregoing report, cutting down the appropriation:

Operation of one sea-going dredge three months on the bar in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies.....	\$10,000
Operation of two hydraulic pipe-line dredges one year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies.....	242,000
Operation of one snag boat six months, including care and upkeep of plant and office expenses.....	8,000
Total.....	260,000

Development of Production of Firearms in the United States During the War.

EXTENSION OF REMARKS

OF

HON. SCHUYLER MERRITT,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 7, 1918.

Mr. MERRITT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech delivered by Hon. JOHN Q. TILSON, Member of Congress, before the Hardware Manufacturers' Organization for War Service at Atlantic City, N. J., on May 27, 1918.

The speech is as follows:

SPEECH DELIVERED BY HON. JOHN Q. TILSON, MEMBER OF CONGRESS, BEFORE THE HARDWARE MANUFACTURERS' ORGANIZATION FOR WAR SERVICE AT ATLANTIC CITY, N. J., ON MAY 27, 1918.

Mr. Chairman, ladies, and gentlemen, I assure you that it is an honor to be invited to address an audience of this character, and I wish at the outset to assure you of my appreciation of the privilege. So strenuous is the life that those of us who are trying to do things down at Washington are now leading that it was with a considerable degree of hesitation that I consented to take on even one more duty. It was the fact that I was certain of meeting and talking with men who, by their force of character and ability, have become leaders of their fellow men in their respective lines of endeavor that I finally gave my assent to come to you to-day.

I wish I were an orator, or, at least, an entertainer, so that I might make to you an address worthy of an occasion of this sort, or, at least, regale you with wit or entertainment to better fit you for the performance of the duties which you must perform during the continuance of your meetings.

There is only one subject to talk about, because there is only one supreme, overwhelming event now happening in the world, and that is the war. I sometimes think that it would be a great relief to some of us who are having to give so much of our time and vital energy to that subject if we could withdraw ourselves from all thoughts of the war for a while; but we can not, and we should be cowards and slackers if we undertook to do it. The war is the great existing fact in the world to-day, the one which involves our country in a way that no other ever has, and therefore we must meet bravely the fact and face the problems which that fact raises.

Between drives for liberty bonds and Red Cross, Young Men's Christian Association, and Knights of Columbus funds, and other worthy causes, when permitted to follow your usual vocations, you gentlemen are engaged in making a number of more or less useful articles out of metal. I say "more or less useful" because in these war times it depends somewhat upon the point of view as to just how useful those articles are. It may be said of some of the things that some of you are manufacturing, such as hand grenades, bombs, and the like, as is so often said by the minister when the deacons pass the plate on Sunday, that "It is more blessed to give than to receive."

The present war is preeminently a war of metals, and that side which has the most metal, has it in the best shape, ready to deliver at the right time, and delivers it most wisely is going to win the war. This indicates the important position which the hardware manufacturers of this country, including all those who are engaged in the making of war materials and other incidental tools of the war, occupy and what that position may mean to the war. Provost Marshal Gen. Crowder, who has made an enviable record thus far in the conduct of his office, was credited the other day with a very wise saying, that this is no longer a war of military maneuver alone, important as that may be, but it is a deadly contest of industries and mechanics. Never in all time has there been a war in which so much use has been made of machines and machinery, and certainly never a war in which there has been such general use made of metal in all its various forms.

Think of the list of weapons used, not only the guns, of which I have a small collection here before you, but the various other forms which metal takes. In the list of guns, including pistols, rifles, trench mortars, howitzers, long guns, big guns, and little guns, there are literally hundreds of types. Then take the shells, beginning with the .30 caliber service cartridge, and there are some half dozen and more types of that. I have them all here to-day, including the service bullet, tracer bullet, incendiary bullet, armor-piercing bullet, and so on. Then there are the larger shells, beginning with the 1 pounder, or 37 millimeter, and going all the way up through the sizes, and various kinds of shells, in almost every size—shrapnel, high explosive, gas, incendiary, and the rest—all incased in metal.

Then there are the bombs of all sizes, from the small lemon hand grenade, that is thrown by the individual grenadier, up to the largest bomb that has yet been dropped from the clouds. We do not know just how large that has been. We are making them up to 500 pounds, to be dropped out of airplanes. In my opinion they will be used very much larger than that.

Then those great monsters used in the service, that invention of the British, the tank, which is really a great armored land cruiser, with its armament of guns of all sizes, able to travel not only on the roads but over all kinds of ground, including shell holes and trenches.

The shoulder rifle itself is an intricate and complicated machine. It is not always realized, but the shoulder rifle has more parts than the machine gun itself. I shall touch a little later upon the situation which confronted us at the beginning of the war in regard to the shoulder rifle.

DEVELOPMENT OF SMALL ARMS.

It is my privilege to talk to you about the development of the production of firearms in this country since the beginning of the war, with special reference to the small-arms situation. The committee of the House of which I am a member does not handle the large guns. We consider the appropriations for the small arms and ammunition, bombs, airplanes, and accessories, but not the large guns, which are handled by the Fortifications subcommittee of the Appropriation Committee. Therefore, the subject with which I am most familiar is that connected with small arms.

Long before this war came on, or at least before we came into it, I had become a student of small arms. I felt that perhaps it was the highest duty that I could perform. I come from what they call down at Washington the "munitions belt." We are accustomed to make firearms in large numbers and varieties in the State of Connecticut. I was a member of the great war committee in the House of Representatives. I felt that it was

three years ago, and not one dollar has been appropriated by this Congress since that time. You will recall there was nothing put in the last river and harbor bill for Mobile. Congress merely adopted the project and appropriated money for maintenance. The War Department decided that it was an emergency, but they did not recommend an additional appropriation in the last bill. Not one cent was used for the improvement of the 30-foot project. It was recommended that any balance might be used for further improvement of this project, but all of it was consumed on the channel which had been completed to a depth of 27 feet.

Mr. MADDEN. Will the gentleman yield?

Mr. GRAY of Alabama. I will.

Mr. MADDEN. Does the gentleman care to say to the House that the total amount of money appropriated by this amendment could be used in the next fiscal year?

Mr. GRAY of Alabama. I will say that it is very probable that it can.

Mr. MADDEN. It ought to be stated with more definiteness than that, if the gentleman expects to get favorable consideration of his amendment. What does the gentleman say to the recommendation made by the Chief of Engineers, that he wants \$360,000, against the \$850,000 the gentleman from Alabama proposes?

Mr. GRAY of Alabama. I will state that the \$850,000 I am asking for is the amount that was originally recommended by the district engineer and the Chief of Engineers, and all others that had anything to do with it, as per House Document No. 1763.

Mr. MADDEN. That is to complete the project.

Mr. GRAY of Alabama. No; that is the initial appropriation.

Mr. MADDEN. Not for one year?

Mr. GRAY of Alabama. Yes.

Mr. MADDEN. It is evident from the statement of the Chief of Engineers that he can not expend that amount in one year.

Mr. GRAY of Alabama. I will say to the gentleman that in this time of stress, during the war period, some difficulty has been experienced in obtaining a sufficient number of dredges at a reasonable cost. That is why the engineers are taking the position at this time that they can not profitably spend \$850,000 for improvement of the 30-foot project.

Mr. MADDEN. What does the gentleman say about the War Department getting the dredges to expend this money called for by his amendment?

Mr. GRAY of Alabama. I will say candidly that no one can answer that absolutely. I am asking for the amount needed if they can provide the dredges. They may be able to do it; they may finish other projects and bring dredges from other ports to aid in the harbor work at Mobile. I am asking the Congress to give us the \$850,000, the original sum recommended, so that, if we can get the dredges, the channel may be promptly and efficiently improved. If the money can not be used, it will still be in the United States Treasury.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURNETT. Mr. Chairman, I ask unanimous consent that the time of my colleague be extended five minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama [Mr. BURNETT]?

There was no objection.

Mr. GRAY of Alabama. I thank the gentleman. I will say to the committee that there is no reason why the improvement of this project should not be put well on the way without further delay, because it is unquestionably one of the most important harbors in this country. It is capable of almost limitless extension, and, according to a report of the United States engineers, the cost of dredging has been proven to be the cheapest in the United States.

Mobile is, as you know, centrally located, on the Gulf, and is the nearest American port to the Panama Canal. It is at the mouth of one of the greatest river systems in this country; at the mouth of a river upon which the Government has spent \$8,000,000 to penetrate the coal fields of Alabama, some of the richest and best on earth.

Alabama, according to recent statistical reports, is one of the most important coal-producing States in the United States, and ranks fifth in the production of coal. The available coal supply in Alabama in 1908, according to an estimate of the United States Geological Survey, was 68,656,000,000 short tons, which would last four years at the present rate of mining.

The coal production, as per the "Statistical Abstract of the United States for 1914," for the years 1909 to 1913, inclusive, was:

1909, over-----	12,000,000
1910, over-----	14,000,000
1911, over-----	13,000,000
1912, over-----	14,000,000
1913, almost-----	16,000,000

Since a completion of the locks on the Warrior and Tombigbee Rivers, at a cost of \$10,000,000, and the opening of the river to navigation, barges ply regularly from the mines to Mobile. As traffic increases and transportation facilities improve it will tend to reduce still further the cost of coal, which is now the best and cheapest in the world. Alabama coal has been approved by the Navy Department for use of the United States Navy. In addition to its rich mineral resources, the regions penetrated by the rivers of Alabama are producing and will continue to produce large quantities of varied agricultural and lumber products, as well as live stock, vegetables, and other products, which are so essential now and at all times. Also great quantities of fish are caught in Mobile Bay.

In the event of a successful invasion of the New England States, New York, and Pennsylvania, the iron and steel factories of Alabama would be the last resources of the Government. Colon, as a base, would need fuel, supplies, and so forth, and in case of interruption of traffic on the Atlantic and Pacific Oceans the only source of supply of fuel would be the coal fields of Alabama and the oil fields of Louisiana and Mexico. The loss of munition plants, ship building and repair yards, and the coal and iron supply on the Atlantic would leave the Nation helpless unless the vast resources of the South were utilized. The Pacific coast would be too far away to render much assistance to the Atlantic and Gulf coast, if she did not need all her resources to protect her own coast line.

A successful attack in the Gulf would give the enemy everything necessary to manufacture its own munitions and extend its operations, and would also mean control of the manganese ores in Cuba.

Can the United States afford to run the risk of not safeguarding and utilizing the vast resources of Alabama and make them available for immediate use—refuse to lend its aid to keep open the avenues of commerce everywhere, in order that the products of the land may move quickly, especially those products that must be had in the present war crisis?

It would be little short of a crime to leave the natural resources of Alabama—coal, iron, and so forth—unprotected in this plan of national preparedness.

It is highly necessary that we should be able to bring such products down the canalized river and have them go out promptly through the port of Mobile.

But what happens now? Large vessels that carry coal can not get into and out of the port of Mobile completely loaded. Vessels of the great lines like the Leland and the Mallory that desire to send ships into Mobile can only send those with limited draft, because vessels drawing 30 feet can not enter the harbor, and thus can not be profitably used in the Mobile trade.

Gentlemen know that iron and steel are of high density; and why should Mobile, in transporting these products, be compelled to use vessels of light draft, which at times come in and go out partly loaded?

In addition to this, we should be prepared for any emergency which might arise in the present war situation. We occupy a whole continent, so it would not be unnatural for us to find ourselves attacked on any or all sides by the enemy. Our harbors and coasts on the Gulf should be kept open so that in case of an attack on the Atlantic or Pacific coast our ships could find anchorage at any point in the Gulf. This can not be done in Mobile Harbor until the channel is deepened so that large ships can pass through.

Rear Admiral Edwards, in the December Engineering Magazine, wrote:

There are 2,000 miles of sea coast on the south Atlantic and Gulf coasts, between Cape Hatteras and the Rio Grande, and there is not a dry dock on the south Atlantic or Gulf coast which will dock any of our superdreadnaughts.

Mobile would be the only logical base for the United States fleet in case we were compelled to defend Yucatan Channel and Florida Strait, thus closing the Gulf of Mexico to an attack of the enemy.

Hon. Franklin D. Roosevelt, Assistant Secretary of the Navy, stated before the Naval Commission on March 29, 1916: "We believe that the enemy would come for many reasons to the South, and that he would strike along the chain of the West Indies. We are vulnerable down there to a quick, rapid naval attack, far more so than we are along the Atlantic seaboard."

If our fleet should meet an enemy's fleet and be disabled, she would be forced to retire into the Gulf of Mexico or into the Caribbean Sea, and thence into the Gulf of Mexico. Then Mobile would be the natural base for the Gulf. The guarding of our port by submarines, and so forth, would be a safe anchorage for our Navy and give the United States access to manganese ores of Cuba, and would be a safe route for shipment in case the Atlantic route was closed.

Admiral C. H. Davies, retired, said: "If any port on the Gulf possesses the advantages that I have enumerated as essential (for a naval station) and that I know Mobile to possess, I do not know where that port is."

Mobile is the only available port in Alabama, and could, if no other necessity arises, be used as a coaling station and base for docking, repairing, and for the shipment of coal, oil, munitions, and foodstuffs.

Mr. ROBBINS. Will the gentleman yield?

Mr. GRAY of Alabama. Yes.

Mr. ROBBINS. What is the depth of water there now?

Mr. GRAY of Alabama. Twenty-seven feet.

Mr. ROBBINS. What is proposed to get by this amendment?

Mr. GRAY of Alabama. Thirty feet.

Mr. ROBBINS. How far is the dredging to extend?

Mr. GRAY of Alabama. About 33 miles.

Mr. ROBBINS. That would be an additional difference of 3 feet for 33 miles.

Mr. GRAY of Alabama. Yes.

Mr. ROBBINS. And it is to cost \$850,000?

Mr. GRAY of Alabama. No; that is the initial appropriation.

Mr. ROBBINS. How much will the whole thing cost?

Mr. GRAY of Alabama. A million and a hundred and fifty thousand, or thereabouts; I do not remember the exact amount.

Mr. ROBBINS. How long will it take to complete the work?

Mr. GRAY of Alabama. I think to 29 feet in a year, with the appropriation I am asking for, if they go at it and prosecute the work as it should be done.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. GRAY of Alabama. Yes.

Mr. MOORE of Pennsylvania. I think it is highly important that the House should understand how much will be expended there in a year, because I know of other instances where that question has arisen, where the question of dredges to which the gentleman has referred to is all important, or the ability to get the dredges to do the work. I understand that the appropriation here for Mobile Harbor as reported is \$260,000, and that the committee has consented to raise that \$100,000, so that it shall be \$360,000. Is it possible to expend more money than that during this year?

Mr. GRAY of Alabama. Yes; it is. I understand the gentleman. Of course, it is hard to say just how much can be expended, but all we are asking for is that a sufficient amount be appropriated in order that the work should progress, and not be halted for lack of funds.

Mr. MOORE of Pennsylvania. I want the gentleman to know that in the case of another important river the same question has arisen. More money has been asked for—more money was asked for—but the ability of the Government to get the dredges and the men to do the work arose, and therefore a smaller appropriation was taken, with a view of carrying the work through the year. The gentleman and I and all of us can come back here next year if we do not get enough this year. The question now is, Will \$360,000 carry you through this year?

Mr. GRAY of Alabama. The Board of Engineers decided that their original recommendation was not sufficient, and recommended an increased appropriation of \$100,000. I will read letters between Gen. Abbot and myself in regard to this matter:

WAR DEPARTMENT,
Washington, March 22, 1918.

Hon. OSCAR L. GRAY,
House of Representatives.

MY DEAR MR. GRAY: Knowing the very great interest that you have taken in the new project for deepening the channel of Mobile Harbor, Ala., I wish to notify you that information has just been received from the district engineer showing the need of an increase in the estimate for that work for the next year in order to make adequate provision for the operation of the Government dredges. I am accordingly writing a letter to Mr. SMALL (see inclosed copy) recommending an amendment to the pending river and harbor bill.

Very truly, yours,

FREDERIC V. ABBOT,
Brigadier General, Engineers,
Acting Chief of Engineers.

APRIL 1, 1918.

Gen. FREDERIC V. ABBOT,
Acting Chief of Engineers, U. S. Army,
Washington, D. C.

MY DEAR GEN. ABBOT: Your esteemed letter of recent date came duly to hand, and I wish to express to you, in behalf of the people of Alabama as well as myself, my appreciation for this consideration.

I have a personal interest in Mobile Harbor, because it is Alabama's only seaport, and for the further reason that I represent, in part, more intimately that great section; at the same time, the important position that Mobile occupies and its advantages as a Gulf port would still command my honest, unswerving support and efforts to achieve for it speedy and increased development, although I might reside in a different section of the country.

I have hesitated to carry my efforts for full appropriation before Congress without the indorsement of the United States Army engineers, but I am thoroughly convinced that I am correct in my assumption that the port needs immediate development for the following reasons:

1. The commerce of the port is "large and valuable," and the benefits that would follow will warrant the expenditure involved.

2. In the war crisis this port occupies a peculiarly important position. It is now a shipbuilding center, and a port for exporting valuable products so essential for the war emergencies, such as cotton, timber, iron, and coal.

As you well know, the existing channel facilities do not fully meet the economic requirements of the port, as vessels of greater draft than can now safely enter the harbor are available in the Gulf trade, and could be used to much advantage for general commerce, and for war needs if the increased draft were given.

3. War vessels should be able to enter this harbor for safe refuge, both from storm and attack, but the present condition of the channel makes it impossible. Furthermore, they should be able to fill to their dead-weight capacity their bunkers with the cheapest and best coal on earth and go out full and not partially loaded, as they are compelled to do at present.

When the Mobile item came up before the Rivers and Harbors Committee for consideration, I made a motion for an appropriation of \$850,000 as per report of the United States Army engineers, House Document No. 1763. This motion was defeated by a tie vote.

I believed then that my position was right, and that the right would prevail. Your letter has convinced me that the truth is asserting itself, and I believe that I have your cooperation, and that upon further careful consideration of the needs of Mobile Harbor you will agree with me that it would be a great mistake to leave the work unfinished at this time for lack of appropriation, and that I will have your earnest assistance and cooperation for the speedy completion of the work.

Again thanking you for your kindness, and assuring you that your recommendation for the full appropriation will be highly appreciated, I am,

Very respectfully, yours,

OSCAR L. GRAY.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, March 22, 1918.

Hon. JOHN H. SMALL,
Chairman Committee on Rivers and Harbors,
House of Representatives.

MY DEAR MR. SMALL: I am just in receipt of a report from the district engineer at Mobile, Ala., indicating that the amount carried in the pending river and harbor bill for that port should be increased if practicable. The present amount—\$260,000—was based upon the estimates made by the district engineer last July to cover simply the operation of the Government dredging plant for the next fiscal year, it being considered impracticable either to build an additional dredge at this time on account of the state of the shipbuilding market, or to have work done by contract on account of the limitation imposed by law forbidding contracts at a cost in excess of 25 per cent over the cost of doing the work with Government plant.

2. The district engineer now reports that there has been a large increase within the last few months in the cost of operating the Government plant. The cost of fuel, for instance, has gone up about 100 per cent, and the cost of other supplies and of repairs and wages has also increased to a marked extent. He, therefore, recommends that the estimate for Mobile Harbor be increased by \$100,000 in order to make adequate provision for the operation of the Government dredges and the prosecution of the improvement as rapidly as this plant will permit, until another appropriation can be made available by Congress at its next session.

3. In view of these circumstances it is recommended that this item in the bill be amended so as to increase the amount of the appropriation from \$260,000 to \$360,000.

Very truly, yours,

FREDERIC V. ABBOT,
Brigadier General, Engineers,
Acting Chief of Engineers.

The engineers or no one else can tell accurately how much money will be needed, and we are asking the original appropriation as recommended. If, as I have stated before, they can not use that amount, it will be in the United States Treasury as an unexpended balance.

Mr. MOORE of Pennsylvania. Is the amount the gentleman is asking for in the amendment the amount that the engineers recommended for an annual period?

Mr. GRAY of Alabama. Yes; for an annual period. When we were considering this proposition in the committee it was suggested to find out what the Shipping Board would say in the matter. I took it up with the Shipping Board, and what did I get?

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. ALMON. Mr. Chairman, I ask unanimous consent that the gentleman's time be extended five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. I have in mind a case where the district engineer recommended an annual amount, but the Board of Engineers did not agree to that recommendation, and they cut the amount. Is that the situation?

Mr. GRAY of Alabama. Yes; the Board of Engineers cut the amount from the original recommendation.

Mr. MOORE of Pennsylvania. Then the amount the gentleman asks for is the amount estimated by the district engineer, but not recommended by the Board of Engineers?

Mr. GRAY of Alabama. Yes. I am asking for practically the same amount recommended by the district engineer, as will be shown in the following letters between the Board of Engineers and the chairman of the Rivers and Harbors Committee.

FEBRUARY 26, 1918.

Gen. W. M. BLACK,
Chief of Engineers, United States Army,
War Department, Washington, D. C.

MY DEAR SIR: Referring to Mobile Harbor. Col. Newcomer, as your representative, appeared before the committee at various times during the consideration of the pending river and harbor bill and is familiar with the hearing and the discussion before the committee relating to the appropriation for the maintenance and improvement of Mobile Harbor to be included in the pending bill. You estimated \$180,000 for maintenance and \$100,000 for further improvement for the next fiscal year. Local interests in the city of Mobile sent a delegation to appear before the committee, who with Representative GRAY from the Mobile district, have insisted that the amount recommended was insufficient in that more could be profitably used. As the matter now stands, you have up to this time adhered to your estimate and Mr. GRAY and the local interests are still insisting that a larger appropriation for further improvement is essential.

In this connection Mr. GRAY recently made a statement before the committee that it had been intimated to him from unofficial sources that the district engineer probably had recommended a larger appropriation for further improvement and that he desired to place before the committee for its reconsideration such report of the district engineer. It was tentatively stated by members of the committee at the time, and without dissent, that there appeared to be no reason why he should not have any available official information on the subject. Mr. GRAY stated to the chairman that he had a conference with Col. Newcomer this morning, at which time the suggestion was made that it would be more appropriate to have the chairman of the committee ask for any additional information embraced in the report of the district engineer, and I therefore have the honor to request that you furnish Mr. GRAY and the committee any further information upon the subject, including copies of the report of the district engineer. Mr. GRAY also desires that you will reconsider your former estimate based upon all the available information, with which request the committee are in sympathy. The committee have adopted and so far adhered to the policy of limiting appropriations for maintenance and improvement within the estimate submitted by the Chief of Engineers, and they are reluctant to depart from this policy. At the same time we wish to accord to Mr. GRAY and the local interests, which he represents, every opportunity to secure information and have you to consider same.

Very sincerely,

(Signed.) JNO. H. SMALL,
Chairman.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, February 28, 1918.

HON. JOHN H. SMALL:
Chairman Committee on Rivers and Harbors,
House of Representatives.

MY DEAR MR. SMALL:

1. In response to your request of February 26 for information concerning the estimate submitted by the district engineer for additional funds to be appropriated for Mobile Harbor for the fiscal year 1919, I have the honor to state that his estimate was as follows:

Operation of 1 sea-going dredge 3 months in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies	\$10,000
Operation of 1 sea-going dredge 9 months in the partial formation of a channel 450 feet wide and 33 feet deep, including upkeep and care of plant, office expenses, surveys, and contingencies	30,000
Operation of 2 hydraulic, pipe-line dredges 1 year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies	250,000
Construction of 1 steel pipe line to replace the inefficient one now in use	75,000
Construction of 1 hydraulic, pipe-line dredge, including steel pipe line, suitable tugboat, and barges	425,000
Operation of 1 snag boat 6 months, including care and upkeep of plant and office expenses	7,500
Total	797,500

2. In considering the matter in this office the estimate for the new dredge was eliminated, as it was deemed impracticable to secure such plant at a reasonable price under the present conditions of the ship-building market. The estimate for the new steel pontoon line was also omitted; as authority had already been granted the district engineer for the construction of a new line with funds already available. The estimate approved by this office is given on page 836 of the Annual Report for 1917.

3. The depth of 30 feet on the bar was considered adequate for existing depths in the harbor, or those that could be provided during the year, so that provision was made only for maintenance of the depth on the bar.

4. It has been suggested that work on the project might be expedited at a reasonable cost by making provision for doing the work by contract, as well as with the available Government dredges, since such contract work, if done, would have to comply with the provision of the law that its cost must not be more than 25 per cent in excess of the cost of doing the work with Government plant. This office, of course, has no objection to such procedure, provided the committee considers and additional appropriation advisable for this purpose.

Very truly, yours,

FREDERIC V. ARNOT,
Brigadier General, Engineers,
Acting Chief of Staff.

I have here the original report from the district engineer, and the Board of Engineers saw fit to cut down the amount recommended by him. I hold this report in my hand, and shall embody it in the RECORD. The engineer states that Mobile should have practically the amount I am asking for.

Mr. MOORE of Pennsylvania. But the Board of Engineers cut that down.

Mr. GRAY of Alabama. Yes; that is true, as you will see by the following report, showing changes made by the Board of Engineers:

Operation of one sea-going dredge three months on the bar in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies	\$10,000
Operation of two hydraulic pipe-line dredges one year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies	242,000
Operation of one snag boat six months, including care and upkeep of plant and office expenses	8,000
Total	260,000

When this matter came up before the Committee on Rivers and Harbors, at their suggestion I went to the Shipping Board, and I hold in my hand a communication from Mr. Franklin, to whom this matter was referred by said board, and what does he say?

Mr. MADDEN. Will the gentleman state who Mr. Franklin is?

Mr. GRAY of Alabama. He is a member of the Shipping Board.

Mr. MADDEN. What does he know about this?

Mr. GRAY of Alabama. He knows a great deal about the shipping interests in this country and what is needed to facilitate the movement of commerce through the ports.

Mr. MADDEN. Does he know anything about Mobile Harbor?

Mr. GRAY of Alabama. We went to the Shipping Board to find out whether or not this project was deemed a war emergency and therefore needed. Mr. Hurley, chairman of the board, referred the matter to Mr. Franklin, a member of said board. On February 6, 1918, Mr. Franklin addressed the following letter to Mr. Hurley:

WASHINGTON, D. C., February 6, 1918.

EDWARD N. HURLEY, Esq.,
Chairman United States Shipping Board,
Washington.

DEAR MR. HURLEY: With reference to the call made here this afternoon by Commander Bakenhus, United States Navy, and Congressman O. L. GRAY, of the Rivers and Harbors Committee, I wish to inform you that I am heartily in sympathy with the project for deepening without delay the depth of water at the port of Mobile to, say, 30 feet mean low water, to enable us to take advantage of the complete loading of ships at that port with the commodities that would naturally flow through it, namely, iron, steel, and cotton. This will enable the large majority of ships to be loaded down to their marks and full.

Yours, very truly,

P. A. S. FRANKLIN.

I will also insert in the RECORD a letter from Chairman Hurley to Mr. SMALL, as follows:

UNITED STATES SHIPPING BOARD,
Washington, February 8, 1918.

HON. JOHN H. SMALL,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Responding to your communications in regard to the wisdom of increasing depth of the channel at Mobile:

Mobile has 27 feet. Thirty feet would be better, as it would permit of practically all vessels now trading in the Gulf or those that will be assigned there to enter the harbor without difficulty, whereas vessels over 27-foot draft must now seek deeper ports or discharge part of their cargo elsewhere and then complete discharging at Mobile; and the same condition would prevail in loading out cargo; a vessel can not complete her loading at Mobile if she draws over 27 feet.

Undoubtedly the traffic through Mobile will increase, and a harbor that would take vessels plying in that trade would increase the usefulness of Mobile as a port, and it is quite possible that more of the South American business could be handled through that port.

However, if the work could be done at this time quickly and efficiently, and not at a prohibitive cost, I would recommend deepening the channel.

Respectfully,

EDWARD N. HURLEY, Chairman.

Mr. MADDEN. Will the gentleman yield?

Mr. GRAY of Alabama. I will.

Mr. MADDEN. I desire to ask the gentleman who is Mr. Franklin and where does he come from and what does he know about Mobile Harbor, and does the gentleman know we would not be able to do this work in a year in any case?

Mr. GRAY of Alabama. I will state to the gentleman that Mr. Franklin, I am informed, lives in New York. He has been connected with the shipping interests in New York and is intimately associated with them. Because of his experience as a shipper I presume he was put on the Shipping Board.

Mr. MADDEN. It does not follow because he is on the board he knows anything about shipping, although this man may; I do not know.

Mr. GRAY of Alabama. I will say to the gentleman I do not know just what Mr. Franklin knows about shipping, but he seems to know a great deal and talks very intelligently about it. You have heard the statement of the Shipping Board, and it says this channel ought to be increased to 30 feet. The engineers also say that, but that they can not economically use the money at this time unless they are able to secure a dredge, which they think now is impossible. Suppose we can not secure a dredge and can not use \$850,000, as originally recommended. What is going to become of the balance, if any? It is not going to fly out of the Treasury. The money will not be expended if not needed.

While we are in the consideration of this bill, I wish to say, gentlemen, I have not too much sympathy with the idea that we must hold the appropriation down to so-called war needs or emergencies. I am one of those who believe that the development of our waterways and our harbors should not be abated simply because we have been drawn into the European war, and I doubt if we are doing even as much in this direction as England, France, and even Germany at this time. The United States will survive the war, and we should not neglect those things that sustain the very life of the Nation.

The irregular, timid, or vacillating policy which is marking our legislation is ruinous. A concerted plan of agitation and organization formed by the interested sections has been confined in its influence upon Congress in a legislative system on a large scale sufficiently strong to embrace the local interest and influences in a majority of the Congressional districts of the Union. Consequently it becomes necessary to form a kind of legislative omnibus in which all sorts of works are crowded together, good and bad, wise and foolish, national and local, all crammed into one bill and forced through Congress by an organized majority. Sometimes it may well be questioned whether as a general rule the money has been wisely and economically applied. Whether in many cases the expenditure has been productive of any useful result, beyond the mere distribution of so much money to the contractors, etc., of the favored community.

Far be it from my purpose to call in question the integrity and skill of those whose professional duty it is to devise a plan and superintend the construction of the works, but I suggest from the nature of their profession and their habits of life they could not expect always to possess the local knowledge in each locality in this widely extended country, which is so evidently essential in determining upon the proper plan for the improvement of navigation. Without depreciating the value of science, or disregarding its precepts, I do not hesitate to say that the opinion of an intelligent captain or pilot who for a long series of years had sailed out of and into a given port, in fair and foul weather, and who had daily and carefully watched the changes produced in the channel by the currents and storms, should also inspire confidence as to his knowledge of the local and practical questions involved.

The operations of the Government have not been sufficiently rapid to keep pace with the spirit of the age. One reason for this and perhaps the principal cause is the fact that the appropriation is too small for efficient service. It may be sufficient to commence the work, but, before completion, it is frequently swept away.

The ruinous consequences of these small appropriations are seriously deprecated and well understood, but they constitute some of the evils inseparable from the policy. It seems that items upon their own merit can not pass. Some of the Members think the work of their own districts of sternest necessity and are willing to defeat the bill if their project is not included. It is erroneously contended that there is not enough money in the Treasury for all, consequently the amount for each item is reduced to so small an amount as to make the appropriation of much less service. We need a system which will not depend for its success on the dubious and fluctuating issues of political campaigns and Congressional combinations, but one which will be certain, uniform, and unvarying in its results, wherein the rivers and harbors legislation is not dependent alone upon estimates furnished by engineers or boards that in some cases have not had the "organization or time to thoroughly investigate the conditions" of harbors, but also upon the wisdom of the Members of the committee and Congress; for in this matter of river and harbor appropriations, gentlemen, you are allowing, inch by inch and step by step, an encroachment on the power of the Rivers and Harbors Committee and Congress.

The Board of Engineers have their duty to perform and we have ours. We say to them, "We are the legislative, you are the administrative, branch of the Government." We say to them, "You go and survey a certain contemplated project. Let us know whether or not a channel of certain dimensions can be dug and maintained, and also inform us as to the amount of money it will take to construct and maintain said project." It is for the Congress to say how much of the money shall be appropriated and whether or not the commercial needs require the work to be hastened to completion.

As to the value of the commerce to be accommodated by said projects, Congress has an equal opportunity to obtain correct information and independently base its conclusions and its actions on said information. It occurs to me, gentlemen, that we have allowed the pendulum to swing too far, and we are gradually surrendering our branch of the Government, the absolute power to control rivers and harbors legislation. In

other words, if we continue to follow the present policy the Congress might as well enact a law appropriating a lump sum to the Army Board of Engineers, and say to them, "Here is the money. Take it and use it where, in your judgment, it is needed." We might as well, gentlemen, look at this matter squarely in the face and decide what shall be the future conduct of Congress pertaining to rivers and harbors legislation.

In regard to the Mobile item, I think it is but fair to say to you, gentlemen, that the Rivers and Harbors Committee, even in the face of the last report of the engineers, when it had under consideration the items of the present bill, only by a tie vote refused to recommend an additional appropriation of \$850,000 for improvement of Mobile Harbor under the present 30-foot project. Consequently I do not come to you with reluctance but with the hope and desire that a majority of the committee and Members of this Congress will see the importance of incorporating in this bill an appropriation of \$850,000, the amount already recommended by the district and Army Board of Engineers, as per their report in House Document No. 1763.

I have no patience with the camouflage that is suggested by this bill or any other bill, for that matter, where appropriations are secured on the ground that it is solely for "war emergency."

If it is a war measure, why should we refuse to hasten the work of this project? If it is not a war measure, then it should not be included in the present bill at all. So, gentlemen, let us assert our power, prerogatives, and individuality and maintain our self-respect by showing a small degree, at least, of independence and common sense in the consideration of this measure.

All I ask this committee to do is to stand by the original reports of the engineers. Take them and read them, and you will find that they say it is a necessity, and that this channel ought to be speedily improved to the necessary depth.

There is no reason, gentlemen of the committee, why these great products like coal and iron should not flow through that channel and flow freely.

Go to the port of Mobile. Probably at no other port have there been so many recent developments.

Let me give briefly a few of the recent important developments in Mobile.

The Mobile Shipbuilding Co.'s plant, employing 1,500 men in the construction of \$10,000,000 worth of steel and wood vessels for the United States Shipping Board Emergency Fleet Corporation.

The Tennessee Coal, Iron & Railroad Co.'s—a subsidiary of the United States Steel Corporation—mammoth building plant and industrial development, investing \$800,000 for building ships, which is said will include thousands of employees and be in itself a city on the order of Gary, Ind.

The Alabama Dry Dock & Shipbuilding Co., with its 1,400 employees, handling \$7,000,000 worth of work at this time; additional enlargements already decided upon.

The Henderson Shipbuilding Co., Murnan Shipbuilding Corporation, and other similar companies are expanding and increasing the population.

The following 11 events emphasize some of Mobile's industries:

Contract on building of \$100,000 marine railway in Mobile for Emergency Fleet Corporation announced let to Henderson Shipbuilding Co.

Capital stock of Dock & Shipbuilding Co. increased by stockholders from \$500,000 to \$600,000.

Petition of Merchants Bank of Mobile to increase capital stock from \$150,000 to \$200,000 granted by State superintendent of banks.

Shell Banks Shipbuilding Co. organized with a capital stock of \$300,000.

Inspection of harbor by B. L. Winchell, representing Director General of Railroads W. G. McAdoo, with a view to making recommendations for furthering movement of coastwise and export traffic through Mobile.

Increase of 50 per cent in February port clearings for Mobile over same month last year, shown by report of collector of customs.

Taking of steps by the Chickasaw Shipbuilding Co. to dredge and straighten Chickasabogue for accommodation of ocean-going vessels.

Contract to cover probably two years awarded to Atlantic, Gulf, and Pacific Dredging Co.

Arrival of machinery, equipment, and materials for construction in Arlington dock improvement, the city's \$600,000 project to give Mobile increased port facilities.

Continued progress by the United States Steel Corporation in the establishment of its \$10,000,000 shipbuilding enterprise at Chickasaw.

Conference of Federal, State, county, and city engineers on plans for constructing permanent, paved boulevard between Mobile and Chickasaw.

I hope, gentlemen of the Congress, that I have presented this measure and the present needs of the country in regard to transportation facilities, the needs of Mobile Harbor, and the recent important developments at that port in such a manner as will justify the speedy completion of the work undertaken there by the Government. I trust you may see that it is worthy and demands the support of all those who are loyal to the cause of democracy and especially those upon the floor of this House who are cooperating in the enactment of those measures which will secure prosperity for the Nation.

There can be no doubt, gentlemen, that this war and the issues before Congress at this time are not matters to be dealt with in a spirit of partisanship or prejudice, either for private or corporate gain. I hope that every Member of this body is working in unison and harmony for the one great aim—the establishment of peace, a peace won on a basis that will insure the overthrow and the annihilation of despotism and tyranny. We should labor for those things that will bring to our Nation and to the world the supremacy and dominion of freedom, justice, and right, that mankind may enjoy their inalienable rights of self-government, liberty, and peace. We should unite with one purpose of mind as a body to enact here such measures as the one we now have under consideration, which will procure and secure this devoutly wished-for consummation. Therefore, gentlemen of the committee, I hope you will see the importance and necessity of adopting this amendment.

I thank you. [Applause.]

[Copy of the original report showing estimate and recommendation of the district engineer at Mobile before it was changed and cut down by the Board of Engineers.]

MOBILE HARBOR AND BAR, AND CHANNEL CONNECTING MOBILE BAY AND MISSISSIPPI SOUND, ALA. (GROUP A).

1. MOBILE HARBOR, ALA. (A1).

Location and description: This improvement is in the southwestern part of the State of Alabama, its entrance through Mobile Bar being located in the Gulf of Mexico, about 40 miles from the mouth of Mobile River, 46 miles west of Pensacola Bar and 104 miles east of the mouth of the Mississippi River, and its upper end being about 91 miles from Pensacola, Fla., on the east and about 61 miles from Pascagoula, Miss., on the west. (See U. S. Coast and Geodetic Survey inland route, Key West to New Orleans, No. 5, 1914.)

Mobile Harbor has been formed by dredging a channel 30 feet deep at mean low water and 300 feet wide and about three-fourths of a mile long across Mobile Bar, connecting the 30-foot contours on each side of this bar, and a channel 27 feet deep at mean low water and 33½ miles long extending from deep water in lower Mobile Bay to the mouth of Mobile River and thence up said river, in front of the city of Mobile, a distance of about 5 miles, to Chickasaw Creek. This channel has a bottom width of 200 feet in the bay and 300 feet in the river. The bar channel is very much exposed, being in the Gulf of Mexico seaward of Sand Island, while the channel through Mobile Bay is better protected but exposed to the storms that visit this locality. The river channel is protected.

Original condition: Previous to any dredging there was a minimum usable depth of 23 feet at mean low water over a width of about one-half a mile across Mobile Bar, and the channel through Mobile Bay had a minimum usable depth of 5½ feet through Choctaw Pass and 8 feet through Dog River Bar at mean low water, the available draft for purposes of commerce by way of Spanish River being limited to the latter depth. The width of channel over a depth of 5½ feet was about one-half a mile. The average range of the tide on Mobile Bar is about 1½ feet, while near the upper end of the improved channel it is about 1.4 feet.

Previous projects: The original project for the bar channel was adopted by the river and harbor act of June 13, 1902. The original project for the bay and river channel was adopted May 20, 1826. The second project was adopted July 11, 1870, the third March 3, 1879, the fourth August 11, 1888, the fifth March 3, 1899, and the sixth June 25, 1910. On original and modified projects there was expended to June 30, 1917, the sum of \$7,783,345.17, of which \$6,398,785.81 was spent for new work and \$1,384,559.36 was spent for maintenance. For scope of previous projects see page 1840 of Annual Report for 1915, and also pages 802 and 807 of Annual Report for 1916, under paragraphs entitled "Existing project."

Existing project: The existing project provides for a channel across Mobile Bar 33 feet deep at mean low water and 450 feet wide and about 1 mile long, connecting the 33-foot contours south and north of the bar; for a channel 30 feet deep at mean low water and 300 feet wide from deep water in lower Mobile Bay to Chickasaw Creek, about 5 miles above the mouth of Mobile River, a distance of 33½ miles, and for the removal of sunken obstructions. Under ordinary conditions the mean tidal range at the lower end of the improvement is 1.1 feet and at the upper end 1.4 feet, and the extreme tidal range is 3.4 feet at the lower end and 3.6 feet at the upper end. The original, which is also the latest approved, estimate of cost of the project for new work on the bar channel is \$62,260 and for maintenance \$15,000 per annum, and for new work in the bay and river channel it is \$1,030,000, and for maintenance \$150,000 per annum, or a total for new work, exclusive of amount expended on previous projects, of \$1,092,260 and for maintenance \$165,000 per annum. This project was adopted by the river and harbor act approved August 8, 1917, in accordance with the report published in House Document No. 1763, Sixty-fourth Congress, second session, except as to pilotage and terminal facilities. The act of June 13, 1902, made the removal of sunken obstructions part of the maintenance of Mobile Harbor. The above document contains the latest published map of this locality.

Operations and results during the fiscal year: All work was carried on by day labor with United States plant, and was for maintenance of the previous projects. The channel across the bar was maintained by dredging between the 30-foot contours at the outer and inner end of the bar. In the accomplishment of this work 144,099 cubic yards of material were removed at an expenditure of \$19,852.47, including upkeep of plant previously used on the work, surveys, inspections, and office expenses. From July 1 to 3, 1916, the work of removing the wreck and cargo of the *Indian Chief* from Mobile Bar was in progress. This vessel was sunk about 45 years ago and lies near the inner end of the bar, between it and Sand Island Light. On July 5, 1916, due to extensive damage by hurricane to the plant engaged on this work, operations here were discontinued. The hurricane shifted the channel to the westward of the wreck, making its removal unnecessary. During the year about 20 tons of railroad iron were removed, at an expenditure of \$111.01. The total expenditures on the above work during the year amounted to \$19,963.48, all of which was for maintenance.

The bay channel was redredged to the previous project dimensions from 4,500 feet south of Beacon 8A to 1,600 feet north of Beacon 8B, near the middle of Mobile Bay, a distance of 12,095 feet, and from 1,000 feet south of Beacon 12, near the middle of the bay to day mark

2 in the cut-off channel in the upper part of Mobile Bay, a distance of 38,868 feet, making a total of 48,963 feet of channel which was redredged. In accomplishing this work a total of 2,714,129.1 cubic yards of material were removed from within the theoretical section. The expenditures on this work, including upkeep of plant, surveys, inspections, and office expenses amounted to \$76,242.26. The snag boat *Demopolis* worked in the river channel from near the foot of Texas Street, in the lower part of the river, to Chickasaw Creek, the upper limit of the improvement, a total distance of 21,850 feet. This work resulted in the removal of 1,971 logs, snags, and square timbers, at a total cost of \$7,034.47, including office expenses. Other expenditures, amounting to \$14,289.11, were made as follows: Cost of operation of snag boat *Demopolis* in handling heavy parts of machinery, inspections and miscellaneous work in the harbor; part cost of repairs to plant, due to damage caused by storm of July 5, 1916. The total expenditures on the bay and river channel during the year were \$98,465.18.

Condition at the end of fiscal year: The channel across Mobile Bar, formed by dredging, is 300 feet wide and abut three-fourths of a mile long, and connects the 30-foot curves of depth on each side of the bar. The 30-foot project was completed by dredging during the fiscal year ending June 30, 1914. Expenditures since its completion have been applied to its maintenance. An increase in depth of 7 feet over that originally existing has resulted. On June 30, 1917, the controlling depth in the dredged channel across this bar was 30 feet at mean low water. The total expenditures under the 30-foot project to June 30, 1917, are as follows: For new work, \$100,000; for maintenance, \$168,750.40; a total of \$268,750.40. The bay and river channel has been formed by dredging a channel 27 feet deep at mean low water and 33½ miles long, extending from deep water in lower Mobile Bay to the mouth of Mobile River, and thence up said river, in front of the city of Mobile, a distance of about 5 miles, to Chickasaw Creek. This channel has a bottom width of 200 feet in the bay and 300 feet in the river. All work on this improvement has consisted of dredging and removing obstructions. The 27-foot project was completed during the fiscal year ending June 30, 1915. The cost of its completion, including \$144,363.45 for maintenance dredging during its progress, was \$179,057.85 less than the approved estimate of \$1,802,548. Expenditures since its completion have been applied to its maintenance. An increase in depth of 2½ feet over that originally existing has resulted. On June 30, 1917, the controlling depth in the dredged channel was about 24 feet at mean low water. As the material is soft, vessels drawing 27 feet can pass through the channel. The total expenditures under the 27-foot project to June 30, 1917, are as follows: For new work, \$1,479,126.70, and for maintenance, \$491,559.56 (including \$33,520.23 for removing sunken obstructions), a total of \$1,970,686.26. No work has been done and no expenditure has been made under the existing project.

Local cooperation: The only condition imposed by law in that no work shall be done under the existing project until local interests have established port regulations satisfactory to the Secretary of War. This has not been complied with. The city of Mobile has expended the following amounts in the construction of a public wharf, a bulkhead, a steel shed, and in dredging necessary to produce 27 feet of water between its wharf and the United States dredged channel: Cost of wharf and bulkhead and repairs to same, \$29,526; cost of shed and repairs to same, \$61,641; and cost of dredging in front of wharf, \$80,094.

Effect of improvement: The effect of the improvement has been to give Mobile a reduction in rail freight rates between this port and Atlantic seaports and, by admitting a larger class of steamers, to reduce insurance and water freight rates upon shipments between Mobile and other ports.

Proposed operations: There is an available draft of 30 feet in the bar channel, and at draft of only 24 feet in the bay and river channel. The latter channel shoals at the rate of about 4,500,000 cubic yards per annum. Snags, logs, and sunken obstructions accumulate in the river channel. It is therefore believed that the needs of commerce will be best served by applying all the \$119,000 appropriated by the river and harbor act of August 8, 1917, to work in the bay and river channel, and it is accordingly proposed to use these funds and those available on July 1, 1917, amounting to \$23,586.12 for Mobile Harbor and \$3,849.60 for Mobile Bar, as follows:

Operation of one sea-going dredge about one month in maintaining a depth of 30 feet over a width of 300 feet in the bar channel, including upkeep and care of plant, office expenses, and contingencies	\$3,849.60
Operation of one hydraulic pipe-line dredge one year and one part of a year in maintaining the dimensions of the previous project, and increasing these dimensions in places if possible to do so with the funds, provided port regulations are made satisfactory to the Secretary of War, including care and upkeep of plant, surveys, office expenses, and contingencies	112,584.33
Construction of about 640 feet of floating pipe line (estimated time, four months)	12,000.00
Removing obstructions from Mobile Harbor by day labor with United States plant, including care and upkeep of plant, office expenses, and contingencies	9,001.74
Total	137,435.72

It is estimated that the above funds will be spent uniformly from August 8, 1917, and that they will be exhausted by June 30, 1918.

The bar channel shoals at the rate of about 70,000 cubic yards per annum. The bay and river channel shoals at the rate of about 4,500,000 cubic yards per annum. Snags, logs, and sunken obstructions accumulate in the river channel. The maintenance of the previous project dimensions across Mobile Bar requires the services of the United States dredge *Charleston* from two to three months per annum, and the maintenance of the previous project dimensions in the channel through Mobile Bay and River requires the services of a hydraulic pipe-line dredge all the time, and the attention of a snag boat about six months per annum. Provided the condition as to port regulations is complied with, it is proposed to do the following work with funds estimated for the fiscal year ending June 30, 1919:

Operation of 1 sea-going dredge 3 months in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies	\$10,000
Operation of 1 sea-going dredge 9 months in the partial formation of a channel 450 feet wide and 33 feet deep, including upkeep and care of plant, office expenses, surveys, and contingencies	30,000
Operation of 2 hydraulic pipe-line dredges 1 year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies	250,000

Construction of 1 steel pipe line to replace the inefficient one now in use.....	\$75,000
Construction of 1 hydraulic, pipe-line dredge, including steel pipe line, suitable tugboat, and barges.....	425,000
Operation of 1 snag boat 6 months, including care and upkeep of plant and office expenses.....	7,500
Total.....	797,500

Recommended modifications of project: None.

References to public acts: None.

Commercial statistics: The total commerce for Mobile Harbor during the past five years, including bunker coal and river shipments, is given below:

Comparative statement.

Calendar year.	Short tons.	Value.
1912.....	2,210,490	\$63,493,612
1913.....	2,212,805	61,369,688
1914.....	2,392,442	58,085,903
1915.....	1,579,804	46,440,771
1916.....	1,673,020	55,712,360

The commerce during 1916 consisted principally of coal, cotton and cotton products, food and grain, fruit, general merchandise, logs, lumber and timber, molasses, naval stores, and staves. The proportion in tonnage of each of these articles to the total tonnage moved during 1916 is as follows: Coal, 14.18 per cent; cotton and cotton products, 2.91 per cent; feed and grain, 7.57 per cent; fruit, 3.73 per cent; general merchandise, 3.10 per cent; logs, 8.72 per cent; lumber and timber, 23.12 per cent; molasses, 4.41 per cent; naval stores, 3.75 per cent; staves, 4.60 per cent.

The usual limits of loaded draft of the boats carrying these principal classes of commerce were from 4 to 28 feet. Practically the entire amount of commerce of Mobile Harbor was carried over the improved sections, although there was before improvement a sufficient depth to have handled a portion of this. There has been no recent change in the nature of commerce due to the improvement.

One line of transportation, the New York & Porto Rico Steamship Co., has been temporarily abandoned.

The commerce during 1916 would have been considerably more but for the interference with trade caused by the European war and the consequent depression in business.

The following shows the changes made by the Board of Engineers in the foregoing report, cutting down the appropriation:

Operation of one sea-going dredge three months on the bar in maintaining the dimensions of the 30-foot project, including upkeep and care of plant, office expenses, surveys, and contingencies.....	\$10,000
Operation of two hydraulic pipe-line dredges one year in maintenance and improvement work, including care and upkeep of plant, surveys, office expenses, and contingencies.....	242,000
Operation of one snag boat six months, including care and upkeep of plant and office expenses.....	8,000
Total.....	260,000

Development of Production of Firearms in the United States During the War.

EXTENSION OF REMARKS

OF

HON. SCHUYLER MERRITT,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 7, 1918.

Mr. MERRITT. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a speech delivered by Hon. JOHN Q. TILSON, Member of Congress, before the Hardware Manufacturers' Organization for War Service at Atlantic City, N. J., on May 27, 1918.

The speech is as follows:

SPEECH DELIVERED BY HON. JOHN Q. TILSON, MEMBER OF CONGRESS, BEFORE THE HARDWARE MANUFACTURERS' ORGANIZATION FOR WAR SERVICE AT ATLANTIC CITY, N. J., ON MAY 27, 1918.

Mr. Chairman, ladies, and gentlemen, I assure you that it is an honor to be invited to address an audience of this character, and I wish at the outset to assure you of my appreciation of the privilege. So strenuous is the life that those of us who are trying to do things down at Washington are now leading that it was with a considerable degree of hesitation that I consented to take on even one more duty. It was the fact that I was certain of meeting and talking with men who, by their force of character and ability, have become leaders of their fellow men in their respective lines of endeavor that I finally gave my assent to come to you to-day.

I wish I were an orator, or, at least, an entertainer, so that I might make to you an address worthy of an occasion of this sort, or, at least, regale you with wit or entertainment to better fit you for the performance of the duties which you must perform during the continuance of your meetings.

There is only one subject to talk about, because there is only one supreme, overwhelming event now happening in the world, and that is the war. I sometimes think that it would be a great relief to some of us who are having to give so much of our time and vital energy to that subject if we could withdraw ourselves from all thoughts of the war for a while; but we can not, and we should be cowards and slackers if we undertook to do it. The war is the great existing fact in the world to-day, the one which involves our country in a way that no other ever has, and therefore we must meet bravely the fact and face the problems which that fact raises.

Between drives for liberty bonds and Red Cross, Young Men's Christian Association, and Knights of Columbus funds, and other worthy causes, when permitted to follow your usual vocations, you gentlemen are engaged in making a number of more or less useful articles out of metal. I say "more or less useful" because in these war times it depends somewhat upon the point of view as to just how useful those articles are. It may be said of some of the things that some of you are manufacturing, such as hand grenades, bombs, and the like, as is so often said by the minister when the deacons pass the plate on Sunday, that "it is more blessed to give than to receive."

The present war is preeminently a war of metals, and that side which has the most metal, has it in the best shape, ready to deliver at the right time, and delivers it most wisely is going to win the war. This indicates the important position which the hardware manufacturers of this country, including all those who are engaged in the making of war materials and other incidental tools of the war, occupy and what that position may mean to the war. Provost Marshal Gen. Crowder, who has made an enviable record thus far in the conduct of his office, was credited the other day with a very wise saying, that this is no longer a war of military maneuver alone, important as that may be, but it is a deadly contest of industries and mechanics. Never in all time has there been a war in which so much use has been made of machines and machinery, and certainly never a war in which there has been such general use made of metal in all its various forms.

Think of the list of weapons used, not only the guns, of which I have a small collection here before you, but the various other forms which metal takes. In the list of guns, including pistols, rifles, trench mortars, howitzers, long guns, big guns, and little guns, there are literally hundreds of types. Then take the shells, beginning with the .30 caliber service cartridge, and there are some half dozen and more types of that. I have them all here to-day, including the service bullet, tracer bullet, incendiary bullet, armor-piercing bullet, and so on. Then there are the larger shells, beginning with the 1 pounder, or 37 millimeter, and going all the way up through the sizes, and various kinds of shells, in almost every size—shrapnel, high explosive, gas, incendiary, and the rest—all incased in metal.

Then there are the bombs of all sizes, from the small lemon hand grenade, that is thrown by the individual grenadier, up to the largest bomb that has yet been dropped from the clouds. We do not know just how large that has been. We are making them up to 500 pounds, to be dropped out of airplanes. In my opinion they will be used very much larger than that.

Then those great monsters used in the service, that invention of the British, the tank, which is really a great armored land cruiser, with its armament of guns of all sizes, able to travel not only on the roads but over all kinds of ground, including shell holes and trenches.

The shoulder rifle itself is an intricate and complicated machine. It is not always realized, but the shoulder rifle has more parts than the machine gun itself. I shall touch a little later upon the situation which confronted us at the beginning of the war in regard to the shoulder rifle.

DEVELOPMENT OF SMALL ARMS.

It is my privilege to talk to you about the development of the production of firearms in this country since the beginning of the war, with special reference to the small-arms situation. The committee of the House of which I am a member does not handle the large guns. We consider the appropriations for the small arms and ammunition, bombs, airplanes, and accessories, but not the large guns, which are handled by the Fortifications subcommittee of the Appropriation Committee. Therefore, the subject with which I am most familiar is that connected with small arms.

Long before this war came on, or at least before we came into it, I had become a student of small arms. I felt that perhaps it was the highest duty that I could perform. I come from what they call down at Washington the "munitions belt." We are accustomed to make firearms in large numbers and varieties in the State of Connecticut. I was a member of the great war committee in the House of Representatives. I felt that it was

the duty of some Member—and if some one, why not I—to become thoroughly acquainted with this most important branch of our national defense. Hence my study of the subject of firearms. The more I delved into it the more interesting it became to me, of course, as such things always do. I have continued my study and feel that I am beginning to know a little something about the rifle and the machine gun.

Therefore I have chosen these two weapons to bring to you to-day, not that you are or expect to be engaged in the production of firearms, as I understand that is only an allied industry to the ones represented by you gentlemen, but because the very problems that were faced in the firearms situation are kindred, in many cases quite similar, to the problems that have to be faced in what you are doing.

Primitive men fought with the weapons that nature gave them. I say this incidentally, because men always have fought. There is an opinion, or shall I call it a hope, voiced oftentimes by prophets and dreamers that there will come a time when men will beat their swords into plowshares and their spears into pruning hooks and that there will be no more war; but so far as we know from the beginning of time men have fought. They began fighting with the weapons that nature gave them. Then they improvised clubs. Then they used wooden spears and put stone heads on them. Later they developed the bow and arrow.

Finally, tradition, as well as the Bible, tells us came Tubal Cain, probably the first president of the hardware manufacturers' association of his day. He developed the use of metal by making sharp-edged instruments—swords, at any rate—and after that day for many millenniums mankind carved his fellows with cutting instruments. This method continued until about the middle of the fourteenth century, when the invention of gunpowder came, making the carving method obsolete, because it was too slow. Since that time men have preferred to blow each other to pieces with gunpowder and other explosives used in connection with various projectiles.

With gunpowder began the development of firearms, but, as in the case of most industries, that development was rather slow. Within the memory of men now living—I will not say any of those before me, but certainly within the memory of men now living—the old flint-lock musket was in use. Since that time the development has been somewhat rapid. In the Civil War, and certainly some of you present will admit to being here at that time, only a muzzle-loading rifle was used, except toward the latter part of the war there were some of the organizations on the Union side who were armed with a breech-loading gun.

Even in the Spanish War my own regiment and most of the other regiments were armed with the old Springfield rifle, using the old black powder. Firing as much as 500 yards, the trajectory of the bullet was so round and looped so high in the air that one could camp a couple of regiments in perfect safety between the firing point and the target. Where the bullet finally came down the danger space was only about 30 yards, so one had to be a pretty accurate shot to hit anybody at all at that range.

The great jump in the development of the art came with the invention of smokeless powder, which was just about that time. In fact, some of the regular regiments in the Spanish War were armed with the Krag-Jorgensen rifle and used smokeless powder. The black powder, as you probably know, is an instantaneous powder. When it is fired, it all goes instantaneously, the whole pressure being exerted at once, the pressure diminishing in the barrel from the moment of the explosion until the missile passes out of the muzzle.

The smokeless powder is a progressive burning powder. It starts to burn, and although it seems to the unaided human senses to be instantaneous it really burns progressively, and the gases continue to increase in pressure until the missile reaches the muzzle of the gun. This gives a high muzzle velocity, and what we call in the military a flat trajectory. In other words, it goes comparatively straight to its mark without describing the high loop in the air.

The point-blank range of the Springfield service rifle which I hold in my right hand, using the service cartridge that we are using to-day, is 547 yards. This means that if this rifle were held near the ground, as it is usually held in firing, and aimed at a target on the ground 547 yards away the trajectory of the bullet is so flat throughout its entire flight that it will shoot the top of a man's head off even at the highest point of its flight. This is called the point-blank range of the rifle.

There came another development, and a necessary development, accompanying the use of smokeless powder. We had always before used the lead bullet. Upon attempting to use the lead bullet with smokeless powder, instead of getting the twist

from the rifling as it goes out through the barrel in order to give it accuracy of direction and power of penetration, the smokeless powder, exploding behind the lead bullet, stripped it right through the rifle without turning it at all. Therefore they had to adopt a metal jacket for the bullet.

Like most things in the arts, this progressed gradually. The steel-jacketed bullet used with the Krag had a round nose. Then some wise German came along and discovered that if he made the bullet sharp it would have a longer range, a flatter trajectory, and more piercing power. Therefore he sharpened the bullet, and all the world followed suit.

Here is the German cartridge, the bullets in this one being copper-plated for use in the airplane, so that it will pierce through the slightly armored seat of the pilot. The copper-plating furnishes a lubricant. Our cartridge is very much like it in size, shape, and design. Here is our .30-caliber service cartridge.

The change to a pointed bullet worked all right with all the nations except Great Britain. When Great Britain attempted to sharpen her cartridge she found that, owing to the shape of the bullet, in firing, as soon as it left the muzzle, it began to depress, soon somersaulted, and lost all direction, control, and distance. Therefore it was necessary to either revise the rifle entirely, making the chamber all over—which, as you all know, is a very serious proposition—or they had to change the bullet in some way. The problem was solved by putting a little aluminum in the core of the bullet, in front of the lead.

Here is the half of a British bullet sectioned. Perhaps you can see the bright spot at the forward end of the core. It is the aluminum in the point of the British bullet, put in to restore the balance. Putting it in makes one additional material and complication in the making of it, although our American makers, who have been making British cartridges by the billion, have overcome the difficulty in a measure. Nevertheless it adds a real element of inferiority or undesirability, I may say, without any reflection at all upon the British cartridge.

In addition the British cartridge shell has the rim. You will observe the rim here at the base of the cartridge. It is a real objection. The cartridge is more apt to jam. The rims of the cartridges catch over each other and cause a jam, while cartridges with the cannelure, such as the German and American cartridges have, are free from this defect. The cannelure is the slight groove around the head of the cartridge in which the ejecting mechanism works. You will observe that shells made this way will pack in clip or magazine with ends flush with each other and with bodies of shells in close contact throughout the main length of the shells.

Great Britain had determined about 1913, I think it was, to change her cartridge; in fact, change the entire rifle. The rifle was designed anew, and those designing it borrowed liberally from the Springfield, from the German Mauser, and from other up-to-date rifles. It must be said to their credit that they designed a first-rate rifle. It was designed to use a rimless cartridge of a slightly smaller caliber. The caliber of the old British Enfield is .303, whereas our caliber, as you know, is .30.

When war broke suddenly in the middle of 1914 the new rifle of the British was entirely on paper, and you, as practical manufacturers, know what that means. They had a perfectly fine gun, all on paper. In that shape it was not a suitable weapon with which to fight Germans. All the facilities they had were for manufacturing the old Enfield rifle, chambered for the .303 ammunition, with the rim and the aluminum-tip core. From sheer necessity they had to go on manufacturing the old rifle. Their total manufacturing capacity was such that they could not at first supply one man out of ten with a rifle, so that British recruits were drilling with walking sticks and all sorts of improvised guns for many months after the war began.

British agents rushed to this country to place contracts for rifles. They brought the designs of the new gun, except that it was changed back to shoot the .303 rim cartridge. The reason for this change is that it is a great disadvantage to have rifles shooting two kinds of ammunition in the same service. Therefore they came over here with the designs of the new and improved rifle, changed only to the extent of chambering for the old .303 British ammunition. Instead of the new ammunition which it was intended to have if the war had not come on. They came to this country to make contracts for rifles, and they were in a great hurry for them. Time was the most essential element of every contract made.

Our manufacturers were then unhampered by war conditions; in fact, were in the midst of profound peace, with business dull, especially in the metal industries. Skilled labor—in truth, all labor—was plentiful. Everything was favorable to the immediate carrying out of such a program as putting a gun into immediate production. Contracts were made with the very best man-

manufacturers of the entire country, concerns with unlimited credit and every facility for manufacturing firearms, and they set to work with a will to put this gun into quantity production. A year went by and there were no rifles from America. British blood was being spilled, battles were being lost for lack of rifles. It began to dawn upon thoughtful people that even the best manufacturers in the world could not create overnight the capacity to produce rifles.

A year went by and, as I have said, there were no rifles. Months went by in the second year before our most capable American manufacturers were able to deliver the improved Enfield rifle to Great Britain in quantities. You will understand that this is no reflection on our manufacturers at all. They did better than anybody else could have done; but the problem was a great one. The putting of a rifle into production is a great problem, and you who are acquainted with manufacturing analogous to this will understand the problem with which they were confronted. As an earnest student of the problem I became deeply interested in its vital bearing upon our own national defense. As a member of the Committee on Military Affairs and as an individual I have been urging upon Congress and the country to observe and profit by the experience of others. I have complained that as a people we failed to learn the lesson as it was exemplified under our very noses, because there was the best place in the world to learn that it takes time, and a long time, to put a rifle or any other complicated mechanism into manufacture on a quantity basis.

At the end of two years and a half we were producing rifles in quantities in this country. When I say we, of course I refer to our private manufacturers. Government manufacture in all of these things can be eliminated practically, because it was small, and our Government did not make the Enfield rifle at all.

What was our own situation as to rifles during the period I have just described? I hold in my hand the service rifle with which our small Regular Army and the National Guard were armed, and there were a few in reserve at the time the war began in Europe. When we entered the war finally we had only about 700,000 of them. No better rifle had been made by anyone. Upon entering the war the first thought of those who do not understand production was naturally, Why not go ahead and make the Springfield rifle? We had 700,000 of them at that time, and two little arsenals, one at Springfield, Mass., and one at Rock Island, Ill., with a total capacity, running day and night, of probably 1,500 a day. Fifteen hundred a day would mean just about the wastage on the 700,000 rifles in comparatively quiet or easy service. Certainly not any more. If we had started our full capacity manufacturing Springfield rifles day and night, we probably should not have gotten a single rifle ahead. It would have taken the entire capacity to supply the wastage from the use of the 700,000 rifles.

What were we to do? There was some little discussion in the newspapers, but there was no question among men who knew what they were talking about as to what we should do. It was too late to increase our capacity in time. There was only one thing to do, and that was to take over the rifle that Great Britain had already put into production in this country. In other words, Great Britain had paid us to get ready to manufacture this rifle in large quantities. It was peculiarly fortunate for us that, without any special foresight on our part, we were ready at the time we went into the war to manufacture the British rifle in large quantities—it is said about 15,000 a day. I am quite sure that the capacity was close to that at the time we went into the war.

Then there arose the question of the ammunition we should use, whether it would not be better for us to go ahead and manufacture the British rifle just as it was then made, chambered for British ammunition, and make all our cartridges to fit that rifle. There was something to be said on that side. It would make the problem of the ammunition supply simpler on the other side. There were, in fact, a number of things to be said on that side, but there were also a number to be said on the other side. In the first place, it would put our 700,000 Springfield rifles out of use for active service and the capacity we had to supply the wastage. After the war was over we should find ourselves with a large stock of British rifles on hand, chambered for British ammunition. In other words, we would have gone over entirely to a rifle which uses ammunition that the British themselves were preparing to abandon when the war came.

Therefore it was decided, and decided wisely, after a conference with the leaders among the rifle makers in the country, that it would be better only to make the necessary modification to shoot our cartridge in the British rifle. The newspapers called it "re-chambering." Of course, there was nothing like that to do. It was not re-chambering at all. It was changing

the design to the extent necessary to fire American instead of British ammunition. I have here one of the very first Enfield rifles turned out in this country, chambered for American ammunition. It is called the United States model 1917. It is the improved Enfield rifle, slightly modified to fire American ammunition, and this is the arm with which our National Army is being equipped.

It took a little time to change over from the British to the American. Here they are together. I can turn them around, and you can not tell which is which. The one I hold in my right hand is the British rifle, chambered for British ammunition. The one in my left hand is the United States model 1917. It is exactly the same rifle, with just the slight modification mentioned. The making of the special tools, gauges, and all the rest for this slight modification required three or four months before we were turning out the modified rifles.

Before I leave the rifle situation I should like to have anybody in the audience who so desires ask me a question, unless I am taking too much time—

The President. No, indeed.

Mr. TILSON. I assure you that it does not bother me in the slightest to have anybody in the audience ask me questions. I am accustomed, when I make what they call down in Washington these kindergarten lectures to the Members, to invite questions, and I get them whether I invite them or not. Instead of bothering me they assist me, stimulate me, because I know that I have the interest of at least the one who is asking the question. I feel that this class is very much advanced in such subjects over the kindergarten class I have down in Washington, and yet I shall be very glad to be questioned as to rifles before I pass from that phase of my subject.

A MEMBER. How does the trajectory of the modified Enfield compare with the old one?

Mr. TILSON. Practically the same, with our ammunition. You see our cartridge is a more powerful cartridge. The reason for difference of the trajectory is largely the power in the cartridge. Here is the British and here is the American cartridge. The one on the right is the British, the other is the American. You see the British cartridge case is much smaller, contains less powder, and the bullet is a little larger. The muzzle velocity is considerably less. Using the regular American service cartridge, we get about the same results as we do with the Springfield itself.

There was some thought at first that, owing to the rifle being designed for a less forceful cartridge, we might have trouble. The trouble was not as anticipated, possibly because of the fact that the rifle was designed originally to shoot a more powerful cartridge than the .303 British.

A MEMBER. What is the range of that rifle?

Mr. TILSON. Well, the range of all of these improved rifles is farther than you can see. You are limited by the physical limitations of vision. It is sighted for about 2,600 yards, I believe, about a mile and a half. It would kill a man 2 miles away.

A MEMBER. What is the jump in the mile range? What is the arc?

Mr. TILSON. I have not figured it out for a mile. It increases rather rapidly when it gets up to the long ranges. At the extreme range that it will carry the rifle has to be elevated considerably, theoretically 45°, to get the farthest possible range. Of course, you must make some allowance for the action of gravitation.

A MEMBER. Is our cartridge rimless?

Mr. TILSON. Yes. The British have a rim and the French also. I have here a clip of French cartridges and call your attention to the fact that they are made of solid copper. The French, the Russian, and the British cartridges have the rim. However, it is conceded to be a disadvantage in a cartridge.

A MEMBER. How do they prevent catching in the chamber? Does not the rim prevent that? The rim prevents it from going into the barrel, does it not?

Mr. TILSON. It is simply to engage the extractor.

A MEMBER. And the extractor catches in the cannellure?

Mr. TILSON. Yes; in the cannellure. In the American, the German, and other modern rifles the extractor catches in the cannellure.

A MEMBER. Then in reality there is no standard? The French have one and the United States another?

Mr. TILSON. There are just as many standards as there are countries. No two are the same.

A MEMBER. Are we making enough rifles now to cover all the troops who are going abroad?

Mr. TILSON. We thought we were. We have not yet put our capacity up, as I understand it, to our potential capacity. Our potential capacity for manufacturing this rifle would be the same as we were making for the British when we were at the

top of production. It was not thought necessary for us to go quite up to that maximum, because if we make 9,000 a day—and we are now up to 9,000 a day—it will equip two divisions a week, and that is as fast as we supposed we could send men across. If, however, we make an unusual call of men to the colors right away, it might prove that we are not manufacturing rifles quite rapidly enough. We have, however, sufficient potential capacity, so far as rifle manufacture is concerned, if for nothing else. Our position was most fortunate in regard to rifles, as I have observed. Our lack of preparation and foresight was such as to merit our being caught without rifles, except our stock of Springfield, or without capacity to manufacture them, except our small arsenals, and we are blessed lucky that it did not require two years, as it did the British, to get ready to manufacture a rifle. That is what we deserved if we fared by justice instead of mercy.

A MEMBER. How about cartridges? Are we producing them fast enough?

Mr. TILSON. The cartridge is a much simpler matter. Although it requires about 75 different operations to make it, still, in its entirety, it is a comparatively simple operation. With our capacity for manufacturing foreign cartridges readily convertible, added to our own, we have a very large potential capacity for manufacturing rifle ammunition. It is necessary to produce an immense quantity, as you know, because the machine gun fires the same ammunition as the rifle. I say the same ammunition, although in our present case, with the comparatively few troops we now have in Europe, they are not in that fortunate situation as yet, which is a handicap of which I may speak further when we get to the machine gun.

Mr. PLUMB. Was Great Britain able to spare the production which we took away from her when we took the 15,000 rifles a day?

Mr. TILSON. I think so. Great Britain had been pushing up her production very rapidly and had been reaching pretty nearly the top of her man power. Therefore she was not calling to the colors very great numbers of new men, as you will understand, and had only to take care of little more than the wastage which must be sent to the troops already in the field. Our contracts to produce rifles for Great Britain were nearly completed at the time we came into the war. Meanwhile Great Britain had been tooling up her various rifle factories and was ready to produce a very much larger number than she had been previously.

A MEMBER. Are we called upon to supply our allies with any rifles now?

Mr. TILSON. With a single exception, I do not believe that we are making rifles at the present time for our allies. We were making some for the French, a large number for the Russians—before the great collapse—and a still greater number for Great Britain, during the time that Great Britain was calling men to the colors so rapidly; but we are now making very few rifles except for ourselves.

A MEMBER. Where has Italy been able to get her small arms?

Mr. TILSON. Well, Italy has been dependent largely upon others for a number of things, especially materials, and, as I think, has been treated somewhat like a stepchild by the other allies. I do not believe we have given the proper attention to Italy and the possibilities of Italy, making it possible for the surplus man power of Italy to use the surplus materials that the other allies have, Italy being largely a dependent country so far as materials are concerned. To my mind, that is one of the places where the allies have failed to utilize all the available material to the best advantage. Necessarily hindsight is better than foresight, and do not understand me to place myself in the position of a critic or as saying that I might have done better if I had been in control. I might have done worse. However, as we look back now, that is my opinion.

A MEMBER. Where is Belgium obtaining her ammunition and small arms?

Mr. TILSON. I do not know whether all of her factories were wiped out or not. Most of them certainly were. Since you remind me of Belgium, I think that we are producing some rifles in this country for Belgium; probably cartridges, too. I know that one plant at Norwich, Conn., was manufacturing rifles for Belgium. I have in my collection at Washington a Belgian rifle made at Norwich.

A MEMBER. About what is the wastage in rifles? About how often does a soldier need a new rifle in trench warfare?

Mr. TILSON. As you can see, that is a very hard question to answer. Formerly it was put as low as 40 per cent; that is, a little less than half an extra rifle each year; but we find now, in actual warfare, that figure very much too small, and we should figure two rifles a year, at least, for every man. It is not a matter capable of being definitely settled, because you can not

tell what is going to take place. If there is a great disaster, or even a retreat, like we had on the eastern front, or even like the retreat of Gough's army in March of this year, the loss of arms is very great. For the present, I should say at least two rifles a year would be the smallest amount we should figure on for wastage.

Lest I take too much time, I shall pass at once to the machine-gun situation. We were not so fortunate in regard to machine guns as we were as to rifles. There was present the same lack of foresight which we showed as to rifles; in fact, even greater lack. Then, there is ever present the difficulty of doing things in a democracy like ours, one of the disadvantages of being a free people, although this disadvantage is minor as compared with the advantage of being a free, self-governing people. We would rather be a free, self-governing people and make mistakes than be anything else and not make them.

One of the reasons we were caught unprepared was that as a people we were not genuinely interested in things military. You gentlemen understand this. Apply to it yourselves five years ago. How many thought seriously about the military situation or of national defense? We might just as well own up and be honest with one another and with ourselves, especially. Very few men in the country were interested in the military situation at all. If you and all the other men over the country had been alive and awake on this subject, which we were not, you would have seen to it that somebody else was interested. Your interest would have been communicated from one to another until after a while we should have had general interest and all of these things would have been done. We were engaged in something else, however, and were too busy to bother with little things like national defense; hence we failed to be prepared to defend our own national existence.

As a result of this national attitude machine guns and other things of that sort received all too scant consideration, for lack of interest. The Lewis gun will serve to illustrate. There has been much said about it. There seem to be two general ideas about the Lewis gun. One is that it is the greatest gun now in the world or that ever could be invented, and therefore that we ought to have taken it and thrown all other guns into the discard without ever trying to get anything better. The opposite idea seemed to be held by some men in the Army, who thought it never would be a satisfactory gun and therefore we ought not to have anything to do with it at all. Between these two extreme views, both wrong, we halted and continued to halt without doing much of anything. What we should have done and what we ought to do in everything—airplanes, guns, and everything else—is to take the best we can get at the time, the best that is already developed, the best that is available and in production, and adequately supply ourselves with that. Meanwhile we should go on with our development, testing out the new, trying to get something better, but never letting go of that which has been tested and tried until we are sure that we have something better and are ready to produce it. [Applause.]

Our situation as to machine guns is indicated by a report made before the war that there were 1,077 machine guns then on hand. These were a miscellaneous assortment of guns of various types, largely the old Benet-Mercier type, which was neither light enough to be a readily portable gun nor heavy enough to be a good defensive gun. It is a gun which falls between the two purposes and not entirely satisfactory for either. It would kill people, at any rate, and if we could not get anything else we ought to have had the Benet-Mercier in larger quantities. We had but a small quantity of these.

At the time of the Mexican border trouble I was down there with my regiment. We had the Benet-Mercier gun. We had what now seems a ridiculous number, four with a regiment. Some of the other regiments that were with us did not have any of any kind until somebody in Washington hustled around and bought 300 Lewis guns, chambered for British ammunition, because there were no Lewis guns at that time chambered for American ammunition; in fact, it had been said by some that the Lewis gun could not be changed over to shoot American ammunition on account of the higher pressure of our cartridge. At any rate, somebody bought 300 Lewis guns, with a small stock of British ammunition, and sent them down to us on the border. Fortunately we did not have to use them, so we had no difficulty arising from the use of mixed ammunition.

I refer to the border incident simply to show one phase of our military preparedness as late as 1916. Unfortunately we had not progressed very much further at the time we got into the war. After the war began and became so general, after all Europe was ablaze, then, at least, we ought to have set about preparing for our own defense. The situation remained practically the same as to machine guns until after we got into the

war. One of the few things changed for the better was that we had ordered a few Vickers guns. Some of you have seen the Vickers gun. It is a beautiful gun, a fine shooting gun, an excellent gun of the heavy type for defensive work.

One trouble with the Vickers gun is the difficulty of reducing it to quantity production.

As for a light gun, we were still experimenting. The Lewis gun and other guns were being considered. Finally, last May, after we had been in the war a month, a test was held and it was decided to adopt the Browning gun in two types; in fact, three types, the heavy type being divided into two classes, one with the water jacket left off for the airplane gun, and the other with the water jacket on, to be used for ground work.

This [indicating] is the light Browning gun. The idea of a light gun of this sort follows the French Chaucut gun, which weighs a little over 3 pounds more than this one. The French use it from the hip to fire as they go forward. It is a good gun for attack and is used for that purpose. The light Browning is used in many respects as a rifle, because you see it can be carried on the shoulder. It can be fired from the shoulder or it can be fired from the hip. It is either fully automatic, so that you pull the trigger continuously and all the cartridges go, or by the change of a lever you can make it semiautomatic, so that you can take deliberate aim and pull the trigger when ready. It is going to be a great addition to a soldier's effectiveness if he can have one of these guns.

Another development of this war has been that whereas we had been accustomed to using, even on the Mexican border, as I have told you, four machine guns to a regiment, it was soon seen that we must use great numbers of these guns in this war. Therefore our ideas of production must be changed entirely from a small production to a very large production, and they must be turned out in quantities comparable only to the shoulder rifle itself.

Since last May, or as soon thereafter as the proverbial Army red tape could be unwound, we have been working on putting the Browning, light and heavy, into production. I am glad to say that at this time they are coming along very well, especially the light Browning gun. I know that the Winchester Co., in my own town, is now turning them out pretty well, not in full production in the sense that you gentlemen understand those words, but doing very well indeed.

A MEMBER. How many are you getting a month—total production?

Mr. TILSON. Something like 100 a day now, I should say, which is coming along pretty well. The net result is that probably we shall be able to supply our armies with Browning guns, light and heavy, by the beginning of next year. We are not so far along with the heavy Browning gun, although they are beginning to come through at an encouraging rate.

A MEMBER. Meanwhile, are they using any others?

Mr. TILSON. Yes; that is one thing that very little is said about in the newspapers. I am sorry to have to mention it here even, but we can not get by the fact that our men in France, where they are divided into separately as a fighting unit, instead of having our own American arms or arms that will shoot our American ammunition, are now armed with French guns—the French Hotchkiss for the heavy type and the French Chaucut, the one I described as being about three pounds heavier than the light Browning, for the light gun. Both of these are chambered to fire French ammunition. I shall be glad if at the end of this year, when we come to study the details of our work "over there," there shall turn out to be no case where the mixture of ammunition has caused disaster more or less great. It is an unfortunate situation, but probably for the rest of this year we shall not have a sufficient supply of our own types of guns, certainly not of the heavy Browning gun.

Are there any questions about the machine-gun situation?

A MEMBER. Are we using any automatic shotguns?

Mr. TILSON. Yes; we are using a short shotgun with a bayonet.

A MEMBER. That is not automatic, though, is it?

Mr. TILSON. I am unable to say, as I have not seen one of the shotguns. I have the information from the Ordnance Department and from the Secretary of War himself as to the fact that they are in use. I knew of there being an order at one time from Gen. Pershing for 10,000 shotguns, and I have the information that they were sent over and are being used.

A MEMBER. Do they use buck in those?

Mr. TILSON. I understand they use buckshot.

A MEMBER. Are they making any Lewis guns?

Mr. TILSON. Yes. We are procuring a considerable number of Lewis guns in this country, but they are for airplanes entirely. We are not using them for trench guns, although the

British are using them for that purpose in great numbers. In my humble judgment we ought to have had enough of these and other available types for trench guns. We could have had both the Lewis and the Marlin; and while they may not be the best ever produced, as some say they are, while the magazine of the Lewis sometimes gets dirt in it and sticks, it is said. Nevertheless, in my opinion, it would have been much better to use these two guns, with American ammunition, than to use the French guns. I may be mistaken about this, but it is my best judgment.

Here is a colored detail cut of the Lewis gun. It is sectioned by a vertical cut through the center of the gun. You will see here is the magazine, which is claimed by some to be the weak point of the Lewis gun. It is a revolving tin-pan arrangement which sits on top of the gun and contains 47 cartridges. It is said that if the magazine is dropped the weight of the cartridges in it will jam it so that it will not function. We are planning to use the Lewis gun in airplanes alone. You are not apt to drop a magazine from an airplane, and if you do you can not pick it up very handily. Therefore we are not likely to suffer from warped magazines in the airplane.

We are having a considerable number of these guns made for the flexible gun in the airplane. You, perhaps, understand the difference between the flexible gun and the fuselage gun in the airplane. In a single-seater fighter, where there is only one man in the airplane, he can not leave the post of piloting his machine to turn his attention to the firing of a gun fixed on a pedestal of any kind. He must give his attention to driving the machine. Therefore, in order for him to operate successfully a machine gun, he must have the machine gun built into his machine, built into the fuselage on a line with the axis of the machine. The pilot aims his machine at the target, and knowing that his gun is then pointed at the enemy he can pull the string.

For the fuselage gun we are preparing to use for the present this gun, the Marlin aircraft. It is a development of the Colt machine gun. This particular gun is not made to operate by hand on the ground. It has no wood on it at all. Anyone would have an uncomfortable time if he attempted to handle it after firing a few shots. It is built right into the fuselage of the machine and is synchronized. Single-seater fighting machines are generally what are called "pullers," the propeller being in front. In order to aim and shoot it is necessary to shoot through the propeller blades.

In the early days, before they attempted to synchronize, they tried to put steel plates on the propeller blades, so as not to injure them, but that was unsatisfactory, and a number of shots were lost in that way. Attention was directed to synchronizing the shots from the gun so that they would pass between the blades of the propeller as it revolves. In New Haven there is a special plant at which this is being done. Those in charge of this plant have not only synchronized this gun most beautifully, but they have synchronized the new heavy Browning. On behalf of this Marlin aircraft gun it must be said that no gun works more perfectly as a synchronized gun than this one, which from 0 up to 2,000 revolutions a minute can be made to fire between the propeller blades.

A MEMBER. Is not the uncertainty of powder quite a factor in synchronizing?

Mr. TILSON. I think the principal point is the mechanism of the gun itself—how accurately it can be timed with the bullet passing out from the muzzle of the gun. I know that the Lewis gun is not able to be synchronized at all, therefore, although it is used in airplanes a great deal, it is used as what is called a flexible gun.

Are there any questions in regard to the machine-gun situation? I think I have taken about enough of your time, but I should be glad to answer any questions which you have to ask me.

I have dwelt somewhat at length upon these matters, because I have felt that you are not only interested in them as patriotic American citizens interested in the basic arm of the foot soldier, who, after all, must bear the brunt of the trench work, but being engaged in lines somewhat analogous or allied to gun manufacture, that you would be especially interested from the production point of view. I have hoped that you would be able to draw helpful analogies and comparisons between the problems which have been faced by the small-arms manufacturers and those which you must face in doing the work not only that you are doing now, but in the increasing variety and quantity of work all of you will have to do before this war is over. In talking with Mr. Murray Sargent in regard to it, I thought that it might be not only a matter of interest but might prove helpful to you in your consideration of the problems which are going

to confront you in increasing numbers as this war develops. This is my excuse, if excuse be necessary, for bringing this small-arms exhibit here, which is a little bit out of your line, and taking your time this morning to explain it to you.

I feel that you will be able from your experience and from your superior knowledge of matters connected with production to draw useful lessons from it. Knowing that you have already started an organization, and have it well under way, by which you are to keep yourselves in more vital contact with the Government itself, I thought you might be able to use helpfully the few thoughts I have brought to you this morning. If I have suggested anything that will be helpful to you in your good work, in addition to such information as I have tried to give you concerning firearms, I shall be more than repaid. [Applause.]

EXTENSION OF REMARKS

OF

HON. S. HUBERT DENT, JR.,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 5, 1918.

Mr. DENT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a statement from Gen. E. H. Crowder, Provost Marshal General, as to what has been accomplished by the draft law up to date.

The statement is as follows:

WAR DEPARTMENT,
OFFICE OF THE PROVOST MARSHAL GENERAL,
WASHINGTON.

The Provost Marshal General has sent to all the governors for publication to local and district boards the following telegram:

"One year ago occurred the first registration for military purposes of the young manhood of the Nation. Ten million men responded in a single day. This accomplishment was nothing short of marvelous. The task of utilizing this enormous force seemed unachievable. But the work of classification of this great mass of man power in such a way as to permit of its organization and molding into an effective army was entrusted to 4,663 local boards and 156 district boards, constituting a force of nearly 15,000 of the leading citizens of every community, who, assisted in their work by more than 100,000 equally patriotic volunteers, have performed a work that challenges the attention and excites the admiration of all our people.

"Well may we pause to-day, while another million of our youths enter the list, and survey the results of the year's work. Each registrant has been examined and his availability for military service has been determined. In other words, these millions of men have been classified in such a manner that the Nation may now call for them to come forward into the Army. No call can be so large that it will not be filled immediately, whether the number be such as may be filled by those who have been found to stand in the first rank of availabilities or so great that men standing in the second, third, or fourth ranks of availability must go forward. In other words all these millions of men, who one year ago were an inert mass, have become a mobile army. Each has found his place and each in his proper turn has marched or awaits the order to march.

"These results could not have been accomplished except through the devoted and unselfish labor of patriots. The local and district boards have scored an unprecedented triumph and have earned the undying gratitude of the Nation. Their achievement is one of the great successes of the war. They have already sent into camp, including those under orders for June mobilization, an army of more than a million and a half men. They have already produced as soldiers one man out of every six registrants, and the world stands in profound astonishment as it views this accomplishment.

"Statistically stated the local boards have sent and are sending their registrants to camp in the following numbers: September, general, 296,678; October, general, 163,644; November, general, 35,721; December, general, 20,320; total furnished to January 1, 1918, 516,363. January, specialists, 2,024; general, 21,264; total, 23,288. February, general, 78,672; specialists, 5,107; total, 83,779. March, general, 121,915; specialists, 10,569; total, 132,484. April, general, 166,343; school, 7,334; specialists, 700; total, 174,377. May, general, 345,862; school, 10,175; specialists, 17,026; total, 373,063; total furnished to June 1, 1918, 1,803,354. June, general, 252,468; schools, 25,073; specialists, 14,813; total, 292,354; a grand total of 1,595,708.

"Compensated poorly, if at all, except by the gratitude and affection of their neighbors and of the Nation at large, the boards have labored incessantly through the enervating heat of last summer only to find a still greater task awaiting their unceasing devotion throughout the rigors of the following winter. Then, having accomplished the classification, they found themselves confronted with the mobilization of millions of men, and accurately and promptly they have performed and are performing this labor.

"Much work yet remains. To-day the new men of 21 are being registered and must be speedily classified. On the first of next month the local and district boards will be invested with the still further responsibility of preventing idleness and unproductive employment which is not effective to the Nation in the emergency. Some boards will review their work and correct those inequalities which have been unavoidable in so tremendous an undertaking.

"The Nation, however, with full confidence in the men who have performed these great tasks in the past faces the future without foreboding. The splendid work of our local and district boards and of the other great volunteer army of assistants has filled us with admiration. They have been tried and found true, and so long as this war may last our people are happy in the complete assurance that this great organization will not fail the Nation.

"CROWDER."

The Great Majority of Our Foreign Born are Loyal Americans.

EXTENSION OF REMARKS

OF

HON. CHARLES A. NICHOLS,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 8, 1918.

Mr. NICHOLS of Michigan. Mr. Speaker, in accordance with the permission of the House I am presenting below the address delivered by my colleague, Hon. W. FRANK JAMES, of Michigan, at mass meetings of Croats, Serbs, and Slovenes at Detroit, Mich., on April 21, 1918, and at Pittsburgh, Pa., on April 28, 1918:

ADDRESS OF HON. W. FRANK JAMES.

Mr. Chairman and fellow Americans, to-day you are assembled to commemorate the anniversary of the martyrdom of two of your most illustrious national leaders in the past, the anniversary of the day when they suffered the death penalty as "traitors" from the hands of a traitorous Emperor.

Everyone of you, I know, is quite familiar with the historical events which led to the beheading of two of your noblest heroes, but, nevertheless, let me briefly refer to them.

Count Peter Zrinski and Prince Krsto Frankopan tried to free their country and people from the yoke of the Hapsburgs. They failed.

George Washington, the Father of his Country, tried to free his land from the oppression of George the Third. He succeeded, and is known the world over as one of the great fathers of liberty.

Zrinski and Frankopan, although they failed and paid with their lives for their failure, are heroes and entitled to the same honor and veneration as if they had succeeded. They did almost 500 years ago what to-day your whole Nation is doing—they struggled for liberty.

Then, the same as to-day, the House of Hapsburg has by trickery been able to play one nationality against another and thereby keep themselves in power.

The policy of "divide et impera," which has been the red thread and the fundamental principles in the history of the Hapsburgs from their accession to the "holy" German throne to the very present day, has never ceased to make the Hapsburg Empire the hotbed of continuous revolt. From this policy indescribable sufferings have resulted for all the peoples of the Empire except the Germans. The non-German peoples were only considered as slaves—good enough to break under the strain of carrying the Hapsburg chariot to the peak of might and power.

The Croatsians, Serbs, and Slovenes stood for hundreds of years between the "unspeakable Turk" and Christian civilization. Their only desire and only anxiety was to get enough help to completely defeat the Turk. They implored Austria to help them with enough men, not only for their own sake but also for the sake of Christianity and the safety of Europe. But the wily Hapsburg sent only as many men as were necessary to temporarily check the Turks, but never enough to defeat the Turk decisively. In addition, in many cases instead of really helping the Jugo-Slavs they behaved worse than the "unspeakable Turk" themselves.

Several times—and this is in keeping with the history of the Hapsburgs—when arrangements were nearly completed by the Serbs and Croats with the French court and the Doge of Venice the selfish scheming of the Austrians upset the plans. To show the scheming of the House of Hapsburg let us see what they did in the so-called treaty of Vasvar.

Your people, with superhuman efforts, defeated the Turks so decisively that the Turks were already preparing to retreat, when they were halted by messengers from Vienna proposing terms of peace and a new treaty.

These proposals were shameless and cowardly, and your ancestors had reason for being angry when they found that the new treaty, signed without their knowledge and consent, gave to the Turks everything that they claimed—all of it being at your expense. In other words, after your ancestors had won a victory over the Turks on the field of battle it was turned into a defeat for them and a victory for the Turks by Hapsburg "diplomacy."

This disgraceful treaty not only took part of the territory of the Jugo-Slav and gave to the Turks, but also imposed other degrading restrictions which were unbearable. Among other things, the castles and palaces of the Zrinski which had been

destroyed by the Turks in the fighting were not allowed to be rebuilt.

These things naturally incensed your people, and a delegation—among them the Ban of Croatia, Nicholas Zrinski, and his brother, Count Peter—went to Vienna to complain. They were received by the Hapsburgs with the usual falsehoods and hypocritical promises.

While there, Ban Nicholas Zrinski was killed in a forest near his castle. The Austrian official announcement ascribed his death to an attack by a bear, but popular belief—and rightfully—ascribed it to murder by Austrian hirelings.

About that time the Turks came back again, and the coward on the Hapsburg throne, Leopold the First, became so frightened that he turned for help to the despised Croats, and appointed Count Peter Zrinski as successor to his brother as Ban of Croatia.

In his supreme desire to settle once and for all accounts with the Turks, Peter Zrinski, who was then in Vienna, hurried back to Croatia and sent word to the Turks that he was ready to meet them. The great reputation the Zrinskis enjoyed as fighters throughout the world frightened the Turks and they retreated without giving battle.

This gave Peter Zrinski the opportunity for trying to completely expel the Turks from Europe, but all his endeavors to get the necessary men from Emperor Leopold failed, the Emperor being quite satisfied that your ancestors bear the struggle alone and be exterminated as much as possible.

In such conditions things drifted on until several years later it looked as if there was going to be a rebellion in Hungary. Ban Peter Zrinski was sent by Leopold I to Hungary to try and settle the matter.

Arriving there, the Hungarians succeeded in convincing Ban Peter that if he and his people went in with them that it would mean absolute independence for Croatia as well as Hungary. As Ban Peter had looked forward to a free and independent Croatia for many years, the plan appealed strongly to him, and he hurried back to Croatia and induced Prince Frankopan and many others to agree with him. As usual, the Austrians got word of the plans, and Zrinski, Frankopan, and others were invited to come to Vienna and talk over their grievances and were promised the safety of their lives by Emperor Leopold himself.

His promise was as good as any promise of a Hapsburg.

In a letter to the King of Poland Ban Peter described the Hapsburg correctly when he said: "What help can Poland expect from an idiotic ruler whose treasury is empty, whose credit is nil, who is despised by his neighbors, scoffed at by his friends, and hated by his subjects? Add to this his deep-rooted hate for Croatia, which land he would like most to destroy. The Austrian Government's interest for Catholicism is only a mockery; in truth this Government is mendacious and full of hypocrisy, seeing its peace only in the trouble of others. It looks for its fortune in the misfortune of others, and it seeks its greatness and glory in the destruction of freedom. There is no Government in the world which is as depraved and which could entertain such bestial feelings as regards God and international rights as the Austrian Government, and there is no hope that it will ever improve."

After Zrinski and Frankopan arrived in Vienna they were thrown in jail and kept there for a year. Finally they were tried by a mock court and sentenced to death. On April 30, 1671, they were beheaded in Wiener-Neustadt.

In his proclamation Emperor Leopold stated that Zrinski and Frankopan were traitors, and that Zrinski wanted to make himself King of Croatia. Their estates were confiscated for the benefit of the House of Hapsburg, and it was ordered by the Emperor that their "memory has to be extinguished forever."

But the tyrant was mistaken. The names of Peter Zrinski and Krsto Frankopan have not been forgotten, and the things they tried to accomplish are, I hope, nearer fulfillment to-day than they have ever been.

My friends, we did not start this war, we were not looking for this fight, but we are going to finish it, and we are going to finish it right—and that is by the absolute destruction of Prussian militarism and the overthrow of the Hapsburgs and the Hohenzollerns.

The enemy try to tell us this war started because the Crown Prince was killed. We all know better than that.

The real reason is that Germany wanted to dominate the entire world, and I am going to prove that by the testimony of one man, the one and only man who knows—the Kaiser himself—who said in a proclamation in June, 1915:

The triumph of the greater Germany, which some day must dominate all Europe, is the single end for which we are fighting.

Need we ask for any better evidence than that?

I want to see this war settled right, and one of the best plans I know of to defeat Germany and Austria in their "Mittel Europa" scheme would be a Jugo-Slav state that would take in all the Serbians, Croats, and Slovenes. This would make a land of about 12,000,000 people and would completely separate Germany and Austria from their unspeakable allies, the Turks and Bulgarians.

Then I would go a little further. I would drive Turkey out of Europe, and I would take enough land away from Bulgaria so that she would never be able to make any further trouble.

When you think of Bulgaria and remember that if it was not for Russia there would be no Bulgaria, and when you remember what they did to people of their own blood—the Serbians—then you can not help but think of Bulgaria as a land of traitors—yes, a land of Judas Iscariots and Benedict Arnolds.

Personally I would have voted for war when the *Lusitania* went down. I would like to have voted for war with Austria when we voted to declare war against Germany, and I would like to have voted for war against Turkey and Bulgaria when we voted for war with Austria. I could not see then, and I can not see now, why we want the unspeakable Turk and the treacherous and traitorous Bulgarians on our side, even if they want to be, and I hope that in the very near future we will vote for war against them.

For a while I was afraid that the claims of Italy might interfere with the hopes of the Jugo-Slavs for a free land in the near future, and I was glad to see that at a conference held in Italy lately between representatives of Italy and the Jugo-Slavs they had agreed on a satisfactory arrangement. This ought to settle the matter, not only because it is right but because it will help to keep the peace of the world.

Seeing the agreement has been made between Italy and your representatives, I expect to see the other allies recognize your rights in the near future, and I hope they will pledge themselves to see that when terms of peace are made one of the conditions will be a land known as the land of the Serbs, Croats, and Slovenes.

I believe that the national aspirations of the Jugo-Slavs should find not only earnest and sincere sympathy from the United States, but also our help in their struggle for national liberation and unification. I also believe that by joining the ranks of the free peoples of the world they will become—the same as ourselves—defenders of peace and participants in its benefits, a peace which shall guarantee to all the people the right of national existence, freedom, and progress, and in the near future I expect to introduce in Congress a resolution along these lines.

You know that we entered the war because of the treatment we received in this war. Your people had to suffer through hundreds of years shameful treatment from Germany and from Austria. For this treatment you hate them.

The present war has given Austria-Hungary a pretense for even worse treatment than before.

Nearly all the male population has been called to arms, and as the Hapsburgs evidently wish to exterminate as many of the Jugo-Slavs as possible the Jugo-Slavs have been placed in the front rank in every attack. They were brutally compelled to die for the glory of their oppressors.

When I say that it is generally understood that in addition to those who have fallen on the battle field more than 100,000 have been exiled, several hundred thousand more driven from their homes, and thousands more hung and shot we can understand a little of the brutality of the Hun.

We have read many stories of the outrages committed in France, Belgium, Italy, and Roumania; but I believe about the most damning thing I have read is the speech made by Dr. A. Tresic-Pavicic, who represents the Dalmatian Isles in the Vienna Parliament.

Not a single one of the dreadful charges made by Dr. Tresic-Pavicic were denied by a single member of the Parliament.

This detailed and most terrible indictment of the Austro-Magyar official terror was preferred in the Vienna Parliament on October 19, 1917. Unfortunately only part of the speech was made public, and I presume the remainder will not become public until the war is over.

I can not read it all to you, but let me read some of the speech:

When I recently refused to speak it was not from fear—the interpretation maliciously put upon my reticence by certain persons—but for entirely different reasons. . . . Silence would only be cowardice and a betrayal of every human ideal. . . . I here declare that if by any means I should disappear, the reason for it must not be sought in that I am weary of life, although for nearly three years already death has often appeared to me as a thing very desirable.

In this war, as always, our people have been placed in the first line of fire, exposed to the hail of red-hot iron, to its complete destruction, while on its native soil it was being systematically exterminated by

halter, bullet and bayonet, dungeon, deportation, imprisonment, and evacuation, by court-martial, by famine, by concentration camps, and by intentionally induced disease.

When, after three months of imprisonment in Marburg, I was brought up before a judge, the latter said to me: "I don't know what the charge is against you, and this you will easily understand when you consider that in Dalmatia, Istria, and Carniola alone we have arrested more than 5,000 people." I leave it to you to imagine how many persons have been arrested in Bosnia, in Herzegovina, in Slavonia, and in South Hungary.

We traveled for four days in filthy coaches, without food, without sleep, exposed to blow from butt ends of rifles. At the end of these four sleepless nights we were locked up in the stables of a riding school, whence a few days later more than a hundred loads of horse manure were taken away. On this manure we had to lie down and sleep, half suffocated by the smell of urine. With our own eyes we saw the soldiers spit into the cauldron containing the soup we were to eat. [Astoundment among the deputies.]

However, I do not want to speak of Maribor and Graz, because I do not wish to speak of my own sufferings.

In Mostar the prisoners slept in the basement, on the floor, crowded one on top of the other. The famous bucket was always full and overflowed on the floor upon which they had to move, sleep, and eat. [Cries.] The greatest horror of this dungeon was the gaoler, Kasper Scholze. This individual, armed with an iron crook, which he named the "Kronprinz," used to call on his unhappy charges more often than the latter found desirable, and belabored them recklessly about the head and shoulders with his "Kronprinz" while the blood ran down the faces of his victims. He struck out so unmercifully with his "Kronprinz" that the priest became unconscious. Blood poured over his shoulders and chest from the blows he had received, for the crook of the "Kronprinz" had torn away great strips of skin. Tichy truly died a martyr's death.

The hair of more than one man was bleached in a single night with terror.

When the cold weather came the dead were stripped in order to cover the living who lacked clothes.

The autocrat of Bosnia, Gen. Potiorek, had given orders to remove all Serbs of Bosnia-Herzegovina from the frontier. His orders were conscientiously carried out. The inhabitants of the village of Sirce were all removed both young and old. When they arrived at Mount Rudo their escort ordered them to halt and compelled them to dig their own graves and lie down in them quietly, each in his own grave. Many women lay down in their graves with their children in their arms. The soldiers did not shoot them all at once, but one by one. The survivors had to shovel earth upon the dead until it came to be their turn to have their graves filled in by the soldiers, who thus saved themselves all trouble. [Cries of consternation.]

There is a good deal more of this remarkable speech, and we can readily imagine that there would be "cries of consternation" among some of the members of the Vienna Parliament. As I have said, not a single deputy, either that day or later, attempted to reply to Dr. A. Tresie-Pavicic.

On account of the sufferings of your people and the fact that you are heart and soul for this country, your men who go to fight in our Army have a double reason for doing so.

First, you want to show your loyalty to this land, and, secondly, you want revenge for the brutal treatment of your people for hundreds of years.

Your boys who have become citizens and fight in our armies are heroes, but your men born over there in the Jugo-Slav lands, and oftentimes with relatives there, and going to fight in the Serbian Army, are doubly heroes, as they know they will not receive the treatment of prisoners of war, but of traitors. They also will know what will happen to their wives, children, fathers, mothers, and other relatives.

We are all in this war to live or to die together. Better to die than be slaves of Austria and Germany.

As I have said, we did not start this fight; we were not looking for this fight; but by the Great Eternal we are going to finish it, and we are going to finish it right—that is, not only by the absolute destruction of that vile thing, Prussian militarism, but we might as well rid ourselves of the houses of Hapsburg and Hohenzollern at the same time.

By the way, we do not hear so much about the "scum" of southwestern Europe these days, as they used to call the Italians, Serbs, Croats, and Slovenes.

This war has proved what I have always claimed, that the men who came here from southern Europe to escape persecution were as loyal to this land as the native-born American, and that when the time came they would offer up their blood on the battle fields of this country just as freely as any native born would do. Am I right? Is there a man in this hall who is not willing to fight for America? No; not a one, as I thought.

I have always been against anything that would discriminate against the people of your land, and I am glad to state that the Congressman of your district, Hon. CHARLES A. NICHOLS, has always been the same way. In addition, he has stood for the rights of Americans and of America before and since we entered the war.

THE FOREIGN BORN.

Who are the foreign born? Not those
Whose pulses to Old Glory thrill,
Who would protect it with their blows,
From insult of a tyrant's will.
What though their bodies sprang from earth
Upon a strange and distant strand;
'Tis here their spirits found their birth,
And they are natives in the land.

Who are the native born? Not those
Who falter in the flag's defense,
Who would not die against its foes
And count the joy a recompense.
What though the ancestry they scorn
Runs backward to the Pilgrim band?
Their spirits have been elsewhere born,
And they are aliens in the land.

—McLandburgh Wilson.

As I said, we are all in this war together, and anyone who thinks he can be loyal at the same time to this country and to Austria, or who talks against Serbia, France, Italy, Great Britain, or any one of the allies, and who tries to breed ill feeling against either of these nations, is at heart a pro-German and a pro-Austrian, and is just as disloyal and traitorous as if he talked against this country.

If the allies win, we win; if the allies fail, we fail, and we will pay on account of our immense wealth and Germany's intense hatred of us a far greater price in every way than any other country.

In 1870 Prussia demanded an indemnity of \$1,000,000,000. To-day the central powers are demanding \$2,000,000,000 from poor Roumania. They would want at least \$200,000,000,000 from this country and a slice of our territory as well.

It is hard for the average American to understand what difference, if any, there is between Serbians, Croats, Slovenes, Montenegrins, and so forth.

If we were to put it this way we will understand it a good deal better: Let us suppose that Mexico was to take all of the United States south of Mason and Dixon's line; that would represent the taking of Serbia, Montenegro, Bulgaria, and Bosnia Herzegovina by Turkey. The peoples of Maryland, Virginia, Alabama, Texas, and so forth, would still call themselves Americans, although a part of Mexico.

If Great Britain and Canada were to conquer all of the States north of the Mason and Dixon line, that would represent the taking of Croatia by Hungary and that of Bohemia by Austria.

If Maine, New York, and all the States east of the Mississippi were captured by Canada, the inhabitants would call themselves Americans and not Canadians.

If Iowa, Nebraska, and all the States west of the Mississippi were captured by Great Britain, they would consider themselves Americans and not British.

If Alaska should be divided by Canada, Great Britain, and Russia, and parts be called Russian Alaska, British Alaska, and Canadian Alaska, we would have the case of Poland to-day.

If the people heard that their fellow Americans of Georgia, Alabama, and Louisiana, and so forth, had thrown off the yoke of Mexico, then we would know the feeling of the Provinces of Croatia, Bosnia, and so forth, when they heard that the fellow nationals had formed an independent Serbia.

If New Mexico and Arizona would rebel and form a new republic, the rest of the Americans would be as joyful as when Serbia became a free land. The same feeling would happen if Virginia, North and South Carolina, and Georgia were to conduct a successful rebellion against Mexico—all other Americans would rejoice. This happened when Bulgaria fought Turkey and won its independence.

If New Mexico and Arizona—our fellow Americans—were attacked by Great Britain and Canada and the Americans of New York, Pennsylvania, Ohio, Michigan, and so forth, were conscripted to go and defeat the Americans of New Mexico and Arizona, you can imagine how we would feel, and so we can understand why the Croats and Slovenes rebel against their fighting their brothers of Serbia.

To compel Americans of Ohio, Indiana, and New Jersey to go to fight the Americans of Georgia, Alabama, and Louisiana would be the same as it is compelling the Czecho-Slovaks and the Jugo-Slavs to fight Montenegro.

If the Americans of Virginia, North and South Carolina, and Georgia, instead of fighting on the side of New Mexico, Arizona, Georgia, Alabama, and Louisiana, were to fight on the side of Mexico, Great Britain, and Canada, then we can understand the hate and contempt that the Czecho-Slovaks and Jugo-Slavs have for Bulgaria.

As I have said, I sympathize with your people in their hopes for a Jugo-Slav nation, and hope some day that it will come.

We are proud of our Declaration of Independence and our Constitution; France talks about her Code of Napoleon and England of her Magna Charta, and in years to come you will talk of your Declaration of Corfu.

This tells your hopes and your aims and aspirations far better than I can give it in my words. I will quote it to you:

THE DECLARATION OF CORFU.

At the conference of the members of the late Serbian coalition cabinet and those of the present cabinet, and also the representatives of the Jugo-Slav committee in London, all of whom have hitherto been working

on parallel lines, views have been exchanged in collaboration with the President of the Skupstina, on all questions concerning the life of the Serbs, Croats, and Slovenes in their joint future State.

We are happy in being able once more on this occasion to point to the complete unanimity of all parties concerned.

In the first place, the representatives of the Serbs, Croats, and Slovenes declare anew and most categorically that our people constitutes but one nation, and that it is one in blood, one by the spoken and written language, by the continuity and unity of the territory in which it lives, and finally in virtue of the common and vital interests of its national existence and the general development of its moral and material life.

The idea of its national unity has never suffered extinction, although all the intellectual forces of its enemy were directed against its unification, its liberty, and its national existence. Divided between several States, our nation is in Austria-Hungary alone split up into 11 provincial administrations, coming under 13 legislative bodies. The feeling of national unity, together with the spirit of liberty and independence, have supported it in the never-ending struggles of centuries against the Turks in the east and against the Germans and the Magyars in the west.

Being numerically inferior to its enemies in the east and west, it was impossible for it to safeguard its unity as a nation and a State, its liberty, and its independence against the brutal maxim of "might goes before right" militating against it both east and west.

But the moment has come when our people is no longer isolated. The war imposed by German militarism upon Russia, upon France, and upon England for the defense of their honor as well as for the liberty and independence of small nations, has developed into a struggle for the liberty of the world and the triumph of right over might. All nations which love liberty and independence have allied themselves together for their common defense, to save civilization and liberty at the cost of every sacrifice, to establish a new international order based upon justice and upon the right of every nation to dispose of itself and so organize its independent life; finally to establish a durable peace consecrated to the progress and development of humanity and to secure the world against a catastrophe similar to that which the conquering lust of German imperialism has provoked.

To noble France, who has proclaimed the liberty of nations, and to England, the hearth of liberty, the great American Republic, and the new, free, and democratic Russia have joined themselves in proclaiming as their principal war aim the triumph of liberty and democracy and as basis of the new international order the right of free self-determination for every nation.

Our nation of the three names, which has been the greatest sufferer under brute force and injustice and which has made the greatest sacrifices to preserve its right of self-determination, has with enthusiasm accepted this sublime principle put forward as the chief aim of this atrocious war, provoked by the violation of this very principle.

The authorized representatives of the Serbs, Croats, and Slovenes, in declaring that it is the desire of our people to free itself from every foreign yoke and to constitute itself a free, national, and independent State, a desire based on the principle that every nation has the right to decide its own destiny, are agreed in judging that this State should be founded on the following modern and democratic principles:

(1) The State of the Serbs, Croats, and Slovenes, who are also known as the Southern Slavs or Jugo-Slavs, will be a free and independent kingdom, with indivisible territory and unity of allegiance. It will be a constitutional, democratic, and parliamentary monarchy under the Karageorgievitch Dynasty, which has always shared the ideas and the feelings of the nation, placing liberty and the national will above all else.

(2) This State will be named "the Kingdom of the Serbs, Croats, and Slovenes," and the style of the sovereign will be "King of the Serbs, Croats, and Slovenes."

(3) The State will have a single coat of arms, a single flag, and a single crown. These emblems will be composed of the present existing emblems. The unity of the State will be symbolized by the coat of arms and the flag of the kingdom.

(4) The special Serb, Croat, and Slovene flags rank equally and may be freely hoisted on all occasions. The special coat of arms may be used with equal freedom.

(5) The three national designations—Serbs, Croats, and Slovenes—are equal before the law throughout the territory of the kingdom, and everyone may use them freely upon all occasions of public life and in dealing with the authorities.

(6) The two alphabets, the Cyrillic and the Latin, also rank equally, and everyone may use them freely throughout the territory of the kingdom. The royal authorities and the local self-governing authorities have both the right and the duty to employ both alphabets in accordance with the wishes of the citizens.

(7) All recognized religions may be freely and publicly exercised. The Orthodox, Roman Catholic, and Mussulman faiths, which are those chiefly professed by our nation, shall rank equally and enjoy equal rights with regard to the State.

In consideration of these principles the legislative will take special care to safeguard religious concord in conformity with the spirit and tradition of our whole nation.

(8) The calendar will be unified as soon as possible.

(9) The territory of the kingdom of the Serbs, Croats, and Slovenes will include all the territory inhabited compactly and in territorial continuity by our nation of the three names. It can not be mutilated without detriment to the vital interests of the community.

Our nation demands nothing that belongs to others. It demands only what is its own. It desires to free itself and to achieve its unity. Therefore it consciously and firmly refuses every partial solution of the problem of its national liberation and unification. It puts forward the proposition of its deliverance from Austro-Hungarian domination and its union with Serbia and Montenegro in a single State forming an indivisible whole.

In accordance with the right of self-determination of peoples, no part of this territorial totality may without infringement of justice be detached and incorporated with some other State without the consent of the nation itself.

(10) In the interests of freedom and of the equal right of all nations, the Adriatic shall be free and open to each and all.

(11) All citizens throughout the territory of the kingdom shall be equal and enjoy the same rights with regard to the State and before the law.

(12) The election of the deputies to the national representative body shall be by universal suffrage, with equal, direct, and secret ballot. The same shall apply to the elections in the communes and other administrative units. Elections will take place in each commune.

(13) The constitution, to be established after the conclusion of peace by a constituent assembly elected by universal suffrage with direct and secret ballot, will be the basis of the entire life of the State; it will be the source and the consummation of all authority and of all rights by which the entire life of the nation will be regulated.

The constitution will provide the nation with the possibility of exercising its special energies in local autonomies delimited by natural, social, and economic conditions.

The constitution must be passed in its entirety by a numerically defined majority in the constituent assembly.

The constitution, like all other laws passed by the constituent assembly, will only come into force after having received the royal sanction.

The nation of the Serbs, Croats, and Slovenes, thus unified, will form a State of about 12,000,000 inhabitants. This State will be the guaranty for their independence and national development, and their national and intellectual progress in general, a mighty bulwark against the German thrust, an inseparable ally of all the civilized nations and States which have proclaimed the principle of right and liberty and that of international justice. It will be a worthy member of the new community of nations.

Drawn up in Corfu, July 7-20, 1917.

NIKOLA P. PASHITCH,
The Prime Minister of the Kingdom of Serbia
and Minister for Foreign Affairs.
DR. ANTE TRUMBIC,

The President of the Jugo-Slav Committee, and Advocate, Deputy, and Leader of the Croatian National Party in the Dalmatian Diet, late Mayor of Split (Spalato), late Deputy for the District of Zadar (Zara) in the Austrian Parliament.

There is not a man or woman in this hall who does not want peace, but we want it on the basis of a permanent and a lasting peace.

Any peace now means not only a peace "made in Germany" but a peace in Germany.

Ask the women of France, Italy, Belgium, Serbia, and Montenegro if they want that kind of a peace.

Ask the parents who have seen their children cruelly mutilated if they want that kind of a peace.

Yes; we want peace, but we want it on the basis of a permanent and a lasting peace.

When we have driven the Hun foot by foot out of bleeding Belgium; when we have driven them foot by foot out of heroic France; when we have driven them out of northern Italy; when we have driven them out of every foot of brave Serbia and little Montenegro; when we have pushed them back on German soil; seen them, in retreat, burn and destroy their lands as they have destroyed the fertile fields of France and Belgium; when the flag of Belgium, the tricolor of France, the Union Jack of Great Britain, the flag of Italy, the flags of Serbia and Montenegro, and our own glorious Red, White, and Blue float proudly in the breezes as we march toward Potsdam; when the Kaiser is willing to expiate his sins on the desolate isle of Dry Tortugas, where the assassins of the martyr Lincoln were banished; when the terms of peace will be made in Germany, but made by men favoring a permanent and a lasting peace—then we will talk peace, but, by the Great Jehovah, no red-blooded American wants any talk of peace until that day comes!

In conclusion, my friends, were I a poet like Edmond Vance Cook, I would alter his beautiful poem, "The Red and White Flag," to suit this occasion, and say:

These men of the race of the Serb and the Croat,
Hats off in salute to the heroes they are;
Each stands to his gun with a noose 'round his throat,
More honored by that than by ribbon and star.

Land of the Jugo-Slav, you shall arise
From the night of distress you have suffered so long,
The flag of your freedom shall brighten the skies,
And the laughter of children shall break into song.

O hasten the day when they come into their own,
And the Hapsburg usurper is hurled from his throne,
And the joy of free peoples leaps out of their throats,
Where the flag of the Serb and the Croat proudly floats.

Cooperation and Coordination Obtained.

EXTENSION OF REMARKS

OF

HON. CHAS. POPE CALDWELL,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 11, 1918.

Mr. CALDWELL. Mr. Speaker, under the leave granted to me as one of the Members of this House to speak on the military appropriation bill I desire to call attention to the remarkable coordination and cooperation secured from every branch of the Government, every line of business, and every walk of life in our country, and the loyal support of our people of every race and religion.

The cordial and cooperative spirit existing between the executive and this legislative branch of the Government is perhaps best shown in the following letter addressed to me by the Secretary of War, one of similar purport having been sent to the several members of the Committee on Military Affairs of the House who have participated in the debate upon the Army appropriation bill. I will read:

THE SECRETARY OF WAR,
Washington, June 1, 1918.

MY DEAR MR. CALDWELL: I have just finished reading the debate on the Army bill in the CONGRESSIONAL RECORD. The War Department is fortunate indeed to have such loyal and helpful support as the committee has given it, and the country will be stirred and stimulated by the record of things done which this debate contains. For your own helpful share in all this I am deeply grateful.

Cordially, yours,

NEWTON D. BAKER.

HON. CHAS. POPE CALDWELL,
House of Representatives.

In addition to this, the President has on numerous occasions thanked the House for its cooperation, and it has been the boast of Republicans and Democrats alike that party lines disappeared when the Nation's welfare was involved. There have been occasions when partisanship has gotten the better of a few of the Members on the other side of the House, and while frequently the more zealous of them have sought to make political capital of slight mistakes and seeming contradictions, still, on the whole, I think that it is a matter of which we may all be proud that partisanship has contented itself with criticism, sometimes fair, sometimes strained, and sometimes almost vicious, and has not gone into the roll call, where the people would feel that Congress was divided in its support of the President.

I wish it were possible to say the same thing of another legislative body, but there we find occasional obstructions, actuated in some instances by something more than partisanship. I have explained this attitude to my own satisfaction by recalling the experiences of other Presidents. Washington had a Continental Congress on his hands, and had it not been for the financial assistance furnished the Continental Army from private sources I fear that we would still be an English colony. Madison had a committee of the Senate to contend with in the War of 1812, and the trials of the martyred Lincoln, on account of the inefficiency of a legislative committee, were even greater. In our own generation the late lamented McKinley was handicapped by such supervision. It is well to note that the head of that part of our armed force that acquitted itself with the greatest honor in the Spanish War was Admiral Dewey, whose first act on entering the engagement at Manila was to cut the cables.

We have had some criticism of the legislative branches of the Government for not having appointed a committee to superintend the present war. To a student of history this criticism will have small weight and as we have a student in the White House I fancy there is small probability of such a committee being appointed. I would not wish it to be understood that these remarks are intended as a reflection upon that body nor as having been directed at the great majority of them nor do I intend that they should be used as particularly applicable to any one Member, for, on the whole, the legislative body has, in view of historical precedent, conducted itself in a most admirable way and of the few Members who have from time to time shown an inclination to become restive I am quite sure none have been actuated by impure motives or a desire to impede.

The harmony with which the legislative and executive branches of the Government have worked on the war program has not been exceeded. But the whole-hearted and enthusiastic support and cooperation of the men who have in public, professional, business, and private life distinguished themselves fills our people with gratitude.

When war was declared, these men volunteered in large numbers. Many of them, at a great personal sacrifice, have devoted a great deal of time, energy, and thought to the work of winning the war. But the public seems and, I fear, some of us seem, to have forgotten, if we ever knew of the sacrifice made by these men, in about the same measure as we have failed to appreciate the wonderful and undreamed of accomplishments wrought by this administration.

This is due, no doubt, largely to the fact that there was also a great rush to Washington of lesser lights, many of whom were of draft age, and, as the gentleman from Ohio [Mr. Gordon] would say, "gun shy and looking for a bombproof job," but were accepted then as the most available aids, but who have been and are being, under the criticism justly hurled at them, fast eliminated from these soft berths.

It is with much hesitation that I mention any of these prominent citizens who have performed this patriotic service. Because of necessity I can mention only a few, and I have found much difficulty in arranging them in an order that would satisfy even my own judgment. Those, therefore, whom I shall mention, it must be understood, are not selected because they are the greatest, nor are they named in the order of their success, but are selected as they first came to my mind as typical of the character of men and the work that has been done by them in their endeavor to aid the country in which they have grown great.

With this explanation in mind, let me mention a few of these men: Ex-President William Howard Taft is a member of the Labor Adjustment Board, famous for the confidence he has instilled in the hearts of the people by a just administration of the Nation's affairs and whose kind heart is his greatest weakness. Ex-Justice of the Supreme Court Charles E. Hughes, Republican candidate for President in the last campaign, is investigating the air service of the Army, aptly selected because he made his first reputation as an investigator. Elihu Root, the advisor of past Presidents, ex-Secretary of War, and ex-Senator, headed a special mission to Russia, and Col. E. M. House, advisor of the present President, journeyed to France to establish the Allied War Council. Vance C. McCormick, ex-chairman of the National Democratic Committee, is the chairman of the War Trade Board. William R. Wilcox, ex-chairman of the Republican National Committee, is assisting the Alien Property Custodian, while Bainbridge Colby, of Progressive fame, is Commissioner of the United States Shipping Board, and Henry Ford, the peace advocate, is making ships by the "endless-chain" method developed in his automobile factory.

The railroads have given of their talent. H. M. Adams, of the Missouri Pacific, is in charge of the inland transportation; W. W. Atterbury, of the Pennsylvania Railroad, is in charge of the railroad operations in France, ably assisted by J. A. McCrea, of the Long Island; Samuel M. Felton, of the Great Western Railroad, is director general of military railways. The president of the Baldwin Locomotive Works and the president of the American Locomotive Works have approved the engines for our railroads in France.

Business, too, has given its share. Among them, Julius Rosenwald, of Sears, Roebuck & Co., Chicago, is handling the wool situation; Robert J. Thorne, of Montgomery Ward & Co., and many others of lesser fame are helping in the Quartermaster's Department of the Army; John D. Ryan, of the Anaconda Mining Co., is in charge of aircraft production; Charles M. Schwab is chairman of the Emergency Fleet Corporation; Henry P. Davison is devoting his energy to Red Cross activities; and E. J. Stettinius, of J. Pierpont Morgan & Co., is Second Assistant Secretary of War.

Among the professional men, George W. Goethals, a retired Army officer, it is true, but the head of one of the most efficient engineering companies in America, is now director of purchases, storage, and traffic; and A. A. Hamerschlag, of the Carnegie Institute of Technology, is his assistant, in charge of industrial research.

The greatest response among the professional men has come from the engineers and surgeons, many of whom have accepted commissions from which they receive an annual salary considerably below their former monthly earnings. I have not available anything like a complete list of the notable engineers who have attached themselves to this service, which I regret, but I have a partial list of the famous surgeons who have come to the relief of the country. Among them are the famous Mayo brothers, of Rochester, Minn.; Dr. Franklin H. Martin, president of the American Association of Physicians and Surgeons; Dr. William H. Lusk, professor of surgery, Fordham University, and chief surgeon at Harlem Hospital, New York, now assigned as chief surgeon of Base Hospital No. 8, in France, with the rank of captain; Dr. J. M. T. Finney, professor of surgery at Johns Hopkins, now director of surgery abroad; Dr. Richard H. Harts, professor of clinical surgery, University of Pennsylvania, senior surgeon to the Pennsylvania Hospital, Philadelphia, assistant director of surgery abroad; Dr. Charles H. Peck, professor of surgery at Columbia University, surgeon Roosevelt Hospital, N. Y., assistant director of surgery abroad; Dr. George Brewer, professor of surgery, Columbia University, chief surgeon Presbyterian Hospital; Dr. George W. Crile, professor of surgery, Western Reserve University, chief surgeon Lakeside Hospital, Cleveland, Ohio; Dr. Harvey Cushing, professor of surgery, Harvard, chief surgeon of the Brigham Hospital; Dr. Fred Beasley, professor of surgery, Northwestern University of Chicago, surgeon of Mercy and Wesley Hospitals; Dr. W. T. Longcope, professor of medicine, Columbia University, Surgeon General's Office; Dr. Frank Billings, professor of medicine, University of Chicago, chief of the medical department, Presby-

terian Hospital; Dr. Victor C. Vaughan, professor of medicine and dean of the medical department, University of Michigan; Dr. W. R. Parker, professor of ophthalmology, University of Michigan; Dr. A. B. Kanavel, professor of surgery, Northwestern University, of Chicago.

Under the skillful direction of these men contagion is almost unknown in our Army and venereal disease has been all but eradicated, and the methods of restoration and reeducation of injured are producing marvelous results. Compare what you see of our Army with what you know happened in the Spanish-American War, where 14 died of disease to 1 from bullets.

The ex-mayors and judges of high courts of record throughout the country who have volunteered their services are too numerous to mention.

Among the first difficulties that appeared upon our entrance into the war was the assumed inability of America to produce an adequate high-powered motor for aircraft. To solve this problem, Henry Souther was commissioned a major in the Officers' Reserve Corps and upon his suggestion and about May 25, 1917, several of our best-known experts on interior-combustion engines were invited to Washington and after a conference with the members of the British and French commissions, from May 28 to June 1, 1917, sketches of the Liberty motor were submitted at the joint meeting of the Aircraft Board and the Joint Army and Navy boards about June 4, 1917. The first samples were of the eight-cylinder model, which, however, was never put into production, as advices from France indicated demands for increased power would make obsolete the eight-cylinder models before they could be produced. The following is a brief summary of the design of the Liberty engine:

Cylinders: 1. Followed practice used by German Mercedes before the war and through the war. Cylinders are steel inner shell surrounded by pressed-steel water jacket. Valve cages are drop forgings welded into cylinder head as in the German engines. Principal departure from German practice is in location of holding down flange several inches above the mouth of the cylinder and the unique method of manufacture evolved by the Ford Co. Output now approximately 1,700 cylinders per day.

Cam shaft and valve mechanism above cylinder heads: 1. Design based on Mercedes, but improved by Packard Co. for automatic lubrication without wasting oil.

Cam shaft drive: 1. Copied almost entirely from Hall-Scott motor; in fact several of the gears in the first sample engines were supplied by Hall-Scott Co.

Included angle between cylinders: 1. In the Liberty this is 45°; in all other existing 12-cylinder engines this is 60°. This angle new with the Liberty engine and adopted for the purpose of bringing each row of cylinders nearer vertical and closer together, so as to save width and head resistance.

Electric generator and ignition: 1. Standard generator and battery system as used on practically all American motor cars, but especially designed to save weight and to meet the special conditions due to firing 12 cylinders with an included angle of 45°.

Pistons: 1. Hall-Scott design.

Connecting rods: 1. Forked or straddle type, first used on the French De Dion car and in this country by the Cadillac motor car.

Crank shaft: 1. Standard 12-cylinder practice, except as to oiling.

Lubrication: First system. 1. Followed German practice, using one pump to keep the crank case empty into an outside reservoir and another pump to force oil under pressure to the main crank-shaft bearings. Followed German practice in allowing overflow in main bearings to travel out the face of the crank cheeks to a scupper, which collected this excess for crank-pin lubrication. This is very economical in use of oil and is still standard German practice. 2. Present system. Similar to above, except while under pressure is not only fed to main bearings but through holes inside of crank cheek to crank pins, instead of feeding these crank pins through scuppers. The difference between the two oiling systems consists of carrying oil for the crank pins through a hole inside the crank cheek instead of up the outside face of crank cheek.

Propeller hub: 1. Hall-Scott design adapted to power of Liberty.

Water pump: 1. Packard type adapted to Liberty.

Carbure or: 1. Developed by Zenith for this engine.

Crank case: Follows standard practice, except as necessary to accommodate different included angles.

Bore and stroke: 1. Five by seven, the same as the Hall-Scott A-5 and A-7 engines, and as used in the Hall-Scott 12-cylinder 300-horsepower engine.

The Liberty motor is now under factory production and is being turned out in quantity sufficient to meet requirements and

has demonstrated its success to such an extent that criticism has ceased. The following is an excerpt from a report of the London war office:

Experience shows that as a rule, from the date of the conception and design of an aero engine to the delivery of the first engine in series by the manufacturer, more than a year elapses.

When we write of the accomplishments of the executives and the members of the legislative branches and detail the activity of the civilians and commissioned personnel we have not told all of the story for, as I have often said, in the last analysis it is the man with a gun in his hand that must be depended upon to win this war. The courage, bravery, strength, and character demonstrated by the enlisted men, volunteer and conscript, fill the mind with enthusiasm, the heart with pride, and add new strength and determination to our spirit. I could not hope to write the deeds of valor of the private soldier who has carried the American colors into the trenches in France. Some one has said of an American soldier—

"Like some tall giant on the field of blood,
Undaunted midst the gallant slain he stood,
He knew no fear in danger's darkest storm;
His cause is the cause of the freedom of the free;
His glorious watchword, Death or Liberty!"

Perhaps this spirit is best typified by the story of Corporal Harry F. Caron, who, while in combat on April 10, mortally wounded, passed the remainder of his grenades to a comrade saying, "I can not use these; you hurl them at the enemy." Nor can we ever forget the American engineers who, in the Cambrai raid and again at Amiens, threw down their picks and shovels and took up arms; nor the recent success of our Marines at Chateau Thierey.

The cool nerve and quick forethought should also be remembered of the unknown and unrewarded soldier, who, when the *Tuscania* went down, realizing the great loss of life that would be occasioned by confusion and that every soldier on board had been taught to stand at attention at the singing of the national anthem, started to sing the "Star Spangled Banner."

And no American worthy of the name but is thrilled with pride at the thought of the sailor boy of the crew of the *Jacob Jones*, who, when the vessel was sunk by a German U-boat, pushed his head up and, shaking the water out of his eyes, called out, "Oh, boys, where do we go from here?"

Why should not the American boys make the best soldiers in the world? They are the descendants of the ambitious and energetic of every race, from every clime, attracted to America because of her free institutions, who have come with their minds filled with ambition, their hearts with hope, and their bodies with energy. In the melting pot of a common opportunity they have created a new race that is kin to the whole world but fears none of its kin.

Our people of every generation since the establishment of the colonies have not hesitated to take up arms in the support of the American ideal even against those of their own blood. So, therefore, while it might be expected that the ties of blood existing between the American of Teutonic descent and our common enemy might cause certain heart pangs and some hesitancy, it is not to be expected that these of our citizenship would fail to bear their just share of the burden of this conflict. Facts have demonstrated that they have responded nobly to the Nation's call and it would be a pity if any of us should by our conduct discredit the great body of loyal Americans of Teutonic descent, simply because there are a few German spies and un-Americanized Germans from that country who have abused the privileges accorded them. We must remember that there are within the United States of those born in the central powers and the children of at least one person so born more than 10,000,000 people, and if we count the third and fourth generation that there are perhaps 30,000,000 with Teutonic blood in their veins. The German Empire has but little more than twice that number. Yet the German Kaiser through his German agent, a guest of this country and under our protection, sought to incite a yellow race to wage war upon us and offered as a price or reward a strip of our territory bigger than the whole Central Empire. If the Teuton loved his Fatherland much when he became an American, he loves this land more now.

In 1775 and in 1812 the Tories of English descent in America lent aid and comfort to an invading army. From 1861 to 1865 the "copperheads," natives of the North, and the "nigger lovers," natives of the South, lent aid and comfort to the enemy. In each instance the work of these malcontents was large and effective.

In the past we have dealt with the disloyal in the American way. And in the American way we will deal with them now.

I would not excuse nor palliate an offense of this character. Treason and sabotage should be dealt with as the law prescribes and as harshly as may be necessary to prevent repetition, but

not in such way as to discourage the loyal and true of any race, but rather to encourage and, if possible, improve the support given our military enterprise by Americans of Teutonic descent.

It may be well to remember that there is a larger percentage of men in the volunteer branch of our Army of Teutonic descent than there is among the drafted forces, and that in the list of the lost on the *Tuscania* of the first five reported three bore Teutonic names.

The second congressional district of New York has the heaviest German-speaking population in the United States, yet has oversubscribed its quota of liberty bonds in every issue; it has more than met every request for contributions to the Red Cross, the Y. M. C. A., the Knights of Columbus, and other kindred organizations, and has sent by voluntary enlistment twice as many men as were drafted.

The first man who asked me to get his son into the Army after the declaration of war was the president of the United German Language Singing Societies of the City of New York, a native of Germany but a citizen of America. And in my experience I have not yet received a single application from a man born in Germany who has asked me to have his son exempted from the draft.

Our critics have demanded the appointment of a minister of munitions or a committee of control, losing sight of the fact that we have a unity of interest never paralleled in history, and a master mind as Commander in Chief, vested with more authority, better loved and respected, and more willingly obeyed than any people ever enjoyed. He has sought and obtained the aid of the skilled of every creed, race, and political affiliation, who have demonstrated a whole-hearted willingness to help rather than destroy, and his achievements thus attained fill us with a just pride in our institutions.

EXTENSION OF REMARKS

OF

HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 10, 1918.

Mr. SIEGEL. Mr. Speaker, one of our former colleagues, and now the junior Senator of Wisconsin, delivered a patriotic address that is bound to thrill the country. It is as follows:

ADDRESS OF UNITED STATES SENATOR LENROOT, OF WISCONSIN, AT INSTITUTIONAL SYNAGOGUE, ONE HUNDRED AND SIXTEENTH STREET AND FIFTH AVENUE, NEW YORK, MAY 26, 1918.

Mr. Chairman, ladies, and gentlemen, I am very grateful for the kind words of introduction by Representative SIEGEL, and I am more grateful than I can say for this very cordial greeting by you. I was very glad to accept the invitation of Congressman SIEGEL to be with you this morning. It is quite impossible for me to accept even a very small fraction of the invitations that I receive to participate in patriotic gatherings like this, although I would like to accept them all, if I could. I was glad to accept Representative SIEGEL's invitation, because he is esteemed and respected by every Member of the House and the Senate because of his splendid ideals, his staunch patriotism, and his sterling Americanism.

I felt that a district that would send to Congress such a patriot as he must itself be intensely patriotic. And as I look at the service flag showing that more than 80 of the young men of your institution are fighting for America, I am confirmed in the impression that I had that there are no more patriotic Americans than you are. On next Thursday once more we will observe Memorial Day. But this Memorial Day will be more significant than any that you or I have seen. We will then honor not only those who have gone in the past, who have sacrificed their lives for their country, but we will honor and revere the boys who are now fighting to preserve the ideals that have been secured for us in the wars that have gone.

Last June I stood, for the first time, at Valley Forge. You remember that Valley Forge was the camp of George Washington and his little army in that dark winter of the seven long winters of the Revolutionary War. As I stood in that little stone house in the valley—the house occupied by Washington personally as his headquarters—standing there to-day exactly as it stood then—and as I climbed the hills and along the crest of those hills observed the earthworks that were put up by that little army of Washington's—the little sentry houses still standing as occupied by the sentries then—and as I finally climbed the great tower that has been erected upon the top of one of those

hills so that observers might observe the camp, as I stood on top of that tower and looked over toward Philadelphia, 24 miles away, I tried to visualize how that looked in that winter of the Revolutionary War when those men were there watching and waiting for Gen. Howe's army to come and attack them from Philadelphia, which they had occupied. As my mind went back and I remembered of reading in my history of that little band of 11,000 soldiers during that winter—ragged, hungry, freezing, and enduring untold hardship—I wondered if those men could have realized even in the remotest degree what the sacrifices they there were making would accomplish for the future of mankind.

As I stood there another thought came to me, that if it had not been for the sacrifices there made, the men who died there in order to establish the Republic of the United States, I probably would not have been upon this side of the sea, for my parents, as many of yours, came here from across the sea. My parents came to America 63 years ago because they believed they would find here a greater measure of liberty, a wider field of opportunity, a brighter future for themselves and their children. Perhaps a very large percentage of you here this morning are foreign born and came here as my parents did to enjoy the blessings of this free Government of ours.

Later I stood on the field of Gettysburg, that battle field that up to that time was the greatest battle field known to modern history, where thousands of men in blue and thousands of men in gray gave up their lives. As I wandered over that battle field and followed the course of the three days' battle and read the different tablets showing that so many of this division fell here and so many men of that division fell there, I again wondered whether those men who there gave their lives for their country could have realized even in a small degree what the sacrifices they there were making would mean for the future of America. I wondered if they could possibly have realized that only a little more than 50 years from that day the time would come when the men still living who wore the gray would thank God for Abraham Lincoln—thank God that the North did win that war and not the South.

Nearly all of those men who fought in that war have gone. Most of them have entered their eternal rest. To those who still remain with us, and who are soon also to go, we can not, especially at this time, do too much to show that we revere and respect and we honor them for the sacrifices that they have made for us.

Not so many years ago—20 years ago—we had another war. The Spanish-American War was not in some respects a very important one from the standpoint of sacrifices, but it had this ideal in it—the love for humanity. There were no selfish purposes in our war to free poor little Cuba from the outrages and indignities that had been inflicted upon her. We honor those boys because they risked their lives and many gave them for a great ideal.

Now we are again engaged in war—the greatest war the world has ever known—a war which America must continue to fight until it is won. We are more and more realizing that this is not a war primarily to make the world safe for democracy, although it will do that when we have won it; it is not primarily a war to restore Belgium, although it will do that; it is not a war primarily to preserve the rights and liberties of small nations, but it will do that before it is through; we realize now that this war is primarily a war to save America, to preserve American ideals, to preserve the principles upon which this great American Republic was founded. And we are going to win it.

Americans realize more clearly now than they did a year ago—although they were loyal then, but they realize more clearly to-day—that until the German autocracy is crushed we can not stop.

Then some talk about negotiating peace with the Kaiser of Germany. My friends, the American people should never permit a negotiated peace with the present German autocracy. We should not make a treaty of peace with a man who regards treaties as "scraps of paper." We can not make a treaty of peace with a wanton murderer; we can not make a treaty of peace with a man or Government that violates all laws, human and divine. This war must go on until the military power of Germany is crushed and destroyed. We can not begin to think of peace until the German military, the German people themselves, take such measures as to control their own Government. This great war that we are now engaged in is one upon the part of America that knows no race, that knows no particular religion, but is for all America. Unless we win this war freedom, religious toleration, the freedom to worship God according to the dictates of one's conscience, will be destroyed.

We have every race and every creed fighting for America. Especially in your great city of New York there have gathered

together peoples from every country under the sun, but after they pass the Statue of Liberty it is not long before there is but one flag for them—the Stars and Stripes.

My friends, America is a wonderful country. You know that a man may be a better American the very moment that he passes the Statue of Liberty for the first time than a man who may trace his descent back to those who came over in the *Mayflower*. Americanism is not a matter of birth; it is a matter of the heart, of the spirit, of ideals.

This great cosmopolitan population of ours—why is it so cosmopolitan? Not merely because of land or opportunity to make money, but because of the ideals of America. Your parents and those of you who were born upon foreign soil, you began to be Americans before you came here or you would not have come.

The spirit of America brought you. And let me say this: that those who were either born across the sea or are of the first generation of those that were, have added reasons for being patriotic and fighting for our country and doing everything that they can for it, because they or their fathers came here and found this country established—found freedom, liberty, and religious toleration. They did not have to sacrifice their lives for it, and so there is an added obligation upon their part to be patriotic to the very highest degree.

Congressman SIEGEL referred to the situation in Washington when war was declared a year ago. You know that in Washington in the Congress of the United States, we have Representatives there to-day, some born in Germany, some in Bohemia, some in Norway, some in Russia, some in Ireland, and we have a large number of them in the first generation born from almost every race. In what other country on the face of the earth could that be, where men of every race or nationality could so rapidly become a part of the national unity as took part in those most important deliberations?

When President Wilson saw the correct course to pursue with reference to certain war legislation, and some men of his own party did not see it, it fell to a man born in Germany—a Jew, JULIUS KAHN—to take charge of it and lead the fight for it. He has led the fight for proper war legislation, and because of his sterling Americanism, though born in Germany, there are few men in the United States who are better known or more highly respected than Mr. KAHN.

In the casualty lists from day to day as we read them we can tell all down through the lists the parents of this soldier came from this country, the parents of that soldier came from that country, but they are all Americans. About a year ago I became acquainted with a young man from your city of New York. He enlisted in the National Guard, was called into service last July and expected to go to the front. Last week I received a letter from him. He said that he was broken-hearted because he was rejected for over-sea service on account of the fact that about 25 years ago his father, born in Austria, returned there and was married there. Before they came back to America this boy was born. Now the birth records show that he was born in Austria and was therefore disqualified for over-sea service. This young man was born in Austria, but no better American lives than the sentiment he expresses. He was rejected not because the Government says to him, "No; you are not loyal," but because the Government says, "You must stay here, because if captured they might treat you as a traitor and execute you." The boy is heartbroken because he can not go. That is the kind of Americanism that we need in this country from one end to the other. That is the kind of Americanism we are getting day by day.

There may be some of you who have never read a little story written by Edward Everett Hale during the Civil War entitled "The Man Without a Country." I am sure many of you have, and I know of nothing in any language that teaches a better lesson of patriotism than that little story. May I take just a moment in outlining to you this morning the story, in the hope that those of you who have not read it will do so?

The story is laid in the beginning of this Republic, in 1807. The character in the story, for it is only a story, is a young lieutenant in the United States Army by the name of Philip Nolan. He was a friend of Aaron Burr, and you will remember that about that time Aaron Burr was suspected of being in conspiracy to destroy this young Republic of ours and of designs to form a monarchy. He was exiled, tried for treason at Richmond, Va., but acquitted. This young lieutenant became acquainted with him and joined the conspiracy. He was arrested and tried by court-martial for treason against the United States. As the evidence came in overwhelmingly of his guilt, that he was plotting against the flag that he had sworn to protect, the presiding officer of the court finally called him up and said, "Have you anything to say in your behalf?" Nolan stepped up and said, "Damn the United States! I wish

I may never hear of the United States again!" The court-martial retired and found him guilty in a few minutes. This was the sentence that he received:

The sentence of the court is that you shall never hear of the United States again. You will be taken aboard a naval ship at New Orleans, with strict instructions to the officers and all on board to never, as long as you live, mention the United States to you or give you any information concerning it.

The order was carried out. He was taken on board ship and for 55 years Nolan lived aboard naval ships. No one was permitted to mention the United States to him. No one was permitted to give him any information concerning our flag or our country. He saw from day to day the Stars and Stripes flying from the mast of the ship, from which he knew that the United States still lived. From year to year he saw new stars added to the flag, from which he knew that new States had been added to the Union, but he did not know the names of the States. Finally Nolan came to his dying day. Instructions had been given that when that time should come Nolan might be told anything that he desired. The ship physician informed the officer that Nolan had but a short time to live. The officer went down to him. Nolan knew what he was coming for and he said to the officer:

I know I am about to die. I can not go home, and am sure you will not refuse to speak to me now. But before you speak, let me tell you that which I am sure you will know and which I am sure every man upon this ship knows, that there is not in all America a more loyal man than I. There is no man who loves the old flag as I do, hopes for it as I do, prays for it as I do.

The officer then told Nolan what had happened in the United States since 1807.

He told him the names of the 17 new States represented by the additional stars upon the flag, told him of the invention of the steamboat and railroad and the wonderful progress that this country had made. Nolan drank it in as a man dying of thirst. Finally he said he was satisfied. He lay back and asked the officer to take down the prayer book on the shelf. It opened at a place marked in red. The prayer began, "For ourselves and our country, O gracious God, we thank Thee," and they read it to the end of the prayer. Then he asked him to turn to the last one of the prayers in the book, beginning with these words, "Most heartily we beseech Thee with Thy favor to behold and bless Thy servant the President of the United States;" and they read that prayer. He then told the officer, "I have repeated those prayers night and morning, it is now 55 years." In an hour Nolan was dead.

In the book they found a slip of paper and on it these words were written by Nolan: "Bury me at sea. It has been my home and I love it. But will not some one set up a stone in my memory at Fort Adams or Orleans that my disgrace may not be any greater than I ought to bear? Say on it, 'In memory of Philip Nolan, a lieutenant in the Army of the United States. No man ever loved his country as he loved her, but no man ever deserved less at her hands.'" My friends, that is the story of the man without a country.

I am sure there is no one in this audience this morning who is without a country, but I ask you to take that story and read it to your boys and girls. It will be good for them and will make better citizens of you all. A man is without a country here if he does not do that which is best for America and to preserve it. A man is without a country in America, even though his ancestors may have fought in the Revolutionary War, who would deprive the Government unlawfully of that which belongs to it. A man is without a country in America if he ever uses his vote except as his conscience tells him is right. The only man who has a country, that has a right to call America his country, is a man who loves it and who is willing to sacrifice himself for it and die for it.

In this great crisis that the Republic now is in we have no right to ask our boys, like those represented on your flag, to make all the sacrifices for us. My friends, any man or woman in the United States who is not making some sacrifice for our country, who is not doing something for our country that costs him something, is not doing his share. I do not think we ought to congratulate ourselves too much for buying liberty bonds at 4½ per cent interest, with the best security in the world, for before we can begin to say to ourselves we have done something for our country we must make some sacrifice for it. This Red Cross campaign, as Representative SIEGEL has said, has given a real opportunity for men to dig down in their pockets and give something for their country and deprive themselves of something.

I want to say a few words, especially to the women. I want to say to you that the women of America are more patriotic than the men. They make more sacrifices than the men. They have been giving for the past 12 months. You can go from coast to coast, from the Canadian border to the southern border,

everywhere you will find the women giving their days and their nights to Red Cross work and other war activities. You say, "Look at the young men who are offering their lives." Yes; but after all, there is one class of people that are making a greater sacrifice than those boys are, and that is the mothers. And while we can not too highly commend our boys, we must remember there is a mother who stays at home, willing that the boys should go, yet she suffers alone.

A few weeks ago, after making a speech at a patriotic meeting, a little gray-haired old woman stretched out her hands, the tears were running down her cheeks, and she said, "Mr. LENROOT, I have a boy, the only boy I have, and he is over in France." She broke down, but quickly recovered herself. Her eyes flashed, and she said, "I would not have him anywhere else in the world than where he is." That is the spirit we need to win the war. We need the spirit not to subscribe to these various things because we think we ought to, but because we want to. We need the same spirit the boys "over there" have when going "over the top." When the officer gives the command they do not go because they think they ought to go, but because there is nothing on earth that can stop them except death. That is the spirit that will win the war; that is the spirit that we need in all our relations with our country.

In conclusion, I want to say one word with reference to one class of people, the Socialists. Some of them would withdraw our troops from France, stop this war, and make a peace with the present Government of Germany upon a pretended basis of the very highest ideals. They tried to do that in Russia. We all know the result. Any Socialist in the United States who is not willing to loyally fight and support this war in every particular is not a good American. May we have the spirit of patriotism, of love for America, in everything we do. There will be mourning in many a home throughout this land of ours before this war is done, but it must go on, so that when it is done there will be liberty secured for America and for all peoples.

The Italian in America, while he is fighting for America first, is fighting for Italy, too, in this war; the Frenchman in America, while he is fighting primarily for America, is fighting for France as well; the Pole in America fights for both the country he loves first, America, and his former country, too. And, above all, whatever may come to pass, it must be America first in the heart of every citizen.

The Sherwood Pension Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ASHBROOK,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 7, 1918.

On the bill H. R. 9959, a bill increasing rates of pensions of soldiers and sailors of the Civil War.

Mr. ASHBROOK. Mr. Speaker, I gladly support the amended Sherwood bill, not because I think it is the best bill that we could enact into law for the benefit of the Civil War veterans, but because by accepting this bill it will mean an immediate increase of pension for nearly every one of these old soldiers. Surely if we honestly intend to do anything for them it must be done quickly, as they are dying daily at an appalling rate. An amendment of any kind, no difference how unimportant or insignificant, would send the bill back to conference. It would then be necessary for both House and Senate to agree to the conference report, which might not be made for weeks, or possibly defeat its passage. In the meantime hundreds of these old comrades would have passed over. Therefore there is but one thing to do, and that is to forget our own pet notions on this legislation and let it go through without amendment or prolonged debate.

In this connection I am proud to cite to you the magnanimity and high position taken by that grand old man, Gen. SHERWOOD, the chairman of the House Committee on Invalid Pensions, who without a moment's hesitation surrenders his own honest convictions as to some of the provisions he believes should be incorporated in this bill and moves to concur in the Senate amendment. He does this because he wants no further delay in this legislation and understands, as we all do, that all legislation is made up of compromises.

The House passed the Sherwood bill on the 6th of last month. The Senate amended the bill by substituting what is known as the Smoot bill and passed it on June 4. It was referred back

to the House on the 5th. Gen. SHERWOOD was then lying in bed at his hotel suffering from the effects of being knocked down by a street car in this city a few evenings ago. He immediately called the committee together to meet at his hotel yesterday morning. I am pleased to say this bill was agreed to without a dissenting vote, and feel honored that I am a member of the committee which has to do with this legislation. The committee believed that it was wise to accept the bill, even though the members felt as I did that it could be improved, rather than take chances of delay.

And here comes the splendid climax of this deserving piece of pension legislation. It was indeed a noteworthy sight to see hobbling through yon door of this historic Chamber that grand old veteran, Gen. ISAAC R. SHERWOOD, respected and loved by all, now in his 84th year, and who enlisted on April 6, 1861, as a private and was mustered out as a brigadier general on October 8, 1865, after four and one-half years of distinguished and faithful service to his country, and who to-day, though considerably disabled, has lost none of his fine spirit, as is evidenced by his cheering assurance to friends who assisted him to enter this Hall. He said, "I do not think I was born to be killed by bullets, shrapnel, or street cars," and puts his seal of approval on this bill by moving to concur. And still there are some cheap and partisan enough who would like to rob Gen. SHERWOOD of the credit of this legislation. Is there a man in this House to-day who has plead longer or more consistently and zealously for liberal pensions than my distinguished colleague? If there is I would thank some gentleman to name him. There is not another Member here in his class as a true friend of the old soldiers.

I was fortunate to come here with Gen. SHERWOOD in the Sixtieth Congress, and have been daily associated with him for the past 11 years. I recall how in the Sixtieth and Sixty-first Congresses it was impossible for Gen. SHERWOOD to even get a hearing on his dollar-a-day bill, and not until the Sixty-second Congress did the Sherwood act of May 11, 1912, become a law. It was the most generous pension law ever enacted at that date, and I think no one will fail to give full credit for this law to Gen. SHERWOOD. Because this bill to-day comes back to us amended takes none of the credit from its author, who inspired the legislation. It is still the child of the parent who conceived it. I give full credit to all those who have aided in the passage of this bill in its present form, but it is none the less the Sherwood bill, and I believe his old comrades all over this broad land of ours will not be unmindful of their great obligation to Gen. SHERWOOD.

The original Sherwood bill, as it passed the House on May 6, recognized the disabled veterans. This bill does not. It provided for a maximum pension of \$50 per month, while this bill makes \$40 the maximum. It increased all pensions on an average of over 30 per cent, and had it fixed the minimum pension at \$30 per month would, in my judgment, have been a far better bill than the one now made a law. It may be well said, however, that no general pension law ever did or ever will do exact justice to all beneficiaries, and as this bill will bring substantial relief to practically every surviving soldier, I am delighted to support it, because I am, as you well know, a firm believer in liberal pensions.

There are living to-day less than 305,000 Civil War veterans. Their average age is 75. Ten years from to-day there will probably be less than 10,000 of these old comrades alive. One hundred are dying every day. One old hero closes his eyes to open no more on earth every 15 minutes. They are practically all down and out. Their great service to this Nation can not be overestimated. When we consider their sacrifices and gallant service, the pension we pay them are still a pittance. God bless the old blue-coat, brass-buttoned veterans! I do not believe there are 10 men in Congress to-day who in their hearts begrudge the pensions paid them by a grateful Government.

The great war now upon us has changed the views of practically all in favor of liberal pensions. To-day the strong arm of law reaches out and commands every young man between the age of 21 and 31, with but few exceptions, to abandon the plow, the shop, the store, the profession, and put on the uniform, to take up arms to defend our country, and make liberty and freedom lasting and secure. How many who have contributed a son or loved one to this righteous cause—and but few homes will escape—feel that the pay of a soldier is a just estimate and recognition that their boy should receive for the offer of his life in the defense of our country? Not one will say our soldiers have been well paid; and when they come home, if they do—thousands maimed, crippled, and diseased for life—will say, "We are through with you; you have been well paid; now dig for yourselves." These brave boys are not fighting for themselves. They are fighting for you, and for me, and for all

humanity. Those who remain at home in security and peace to enjoy the prosperity that war ever makes have not discharged their debt when they have paid the soldier for the service that he has rendered. Not one of our brave lads should ever suffer for the necessities of life, and, I trust, never will. I am proud that our soldiers to-day are the best-paid soldiers in the world; and yet we have no warrant to boast. It is still too insignificant to boast about. Let us do by others as we would have others do by us. I have always entertained these views of the debt of a nation to its defenders, and that is why I have always earnestly advocated liberal pensions. That is why I favor this bill. That is the way I feel not only toward the Civil War veterans and their dependents, but toward all soldiers of all wars. It is a disgrace to permit a soldier to die in an almshouse. I warn my constituents not to send me back to Congress if they do not want me to work and vote for liberal and generous pensions.

I desire to here include in my remarks a copy of a bill (H. R. 7355) which I introduced on December 11, 1917:

SECTION 1. That any person who served in the military or naval service of the United States during the late Civil War who has been honorably discharged therefrom, and who is now on the pension roll or who may hereafter be placed on the pension roll, and who has reached the age of 70 years or over, shall, upon making proof of such facts, according to such rules and regulations as the Secretary of the Interior may provide, be entitled to receive a pension as follows: In case such person has reached the age of 70 years, \$30 per month; in case such person has reached the age of 75 years, \$35 per month; in case such person has reached the age of 80 years, \$40 per month. That any person who served in the military or naval service of the United States during the Civil War and received an honorable discharge, and who was wounded in battle or in line of duty and is now unfit for manual labor by reason thereof, or who from disease, accident, or other disability is now totally incapacitated to perform labor of any kind, and who is without income other than his pension, shall be paid \$50 per month, without regard to age.

I know it is using water that has gone over the wheel to refer to my bill, but it is, in my humble judgment, a better bill than the one we have before us, and I regret exceedingly that I could not secure its passage.

I also wish to here insert the amended Sherwood bill, which is to become a law, for the information and benefit of those who may read these remarks:

That the general pension act of May 11, 1912, is hereby amended by adding a new section, to read as follows:

"SEC. 6. That from and after the passage of this act the rate of pension for any person who served 90 days or more in the military or naval service of the United States during the Civil War, now on the roll or hereafter to be placed on the pension roll and entitled to receive a less rate than hereinafter provided, shall be \$30 per month. In case such person has reached the age of 72 years and served six months, the rate shall be \$32 per month; one year, \$35 per month; one and a half years, \$38 per month; two years or over, \$40 per month: *Provided*, That this act shall not be so construed as to reduce any pension under any act, public or private: *Provided further*, That no pension attorney, claim agent, or other person shall be entitled to receive any compensation for presenting any claim to the Bureau of Pensions under this act, except in applications for original pension by persons who have not heretofore received a pension."

Mr. Speaker, I wish to refer to a little incident which came to my notice to-day while serving as one of the conferees on the 10 omnibus pension bills now in the Senate, if I may do so with propriety. I might say that some of these bills have been in the Senate since last December, and I discovered that six of the beneficiaries from my district have died since the House passed those bills, a fresh example of what delay in this legislation means. One of the items was in favor of the widow of an old soldier who now lives in the far West. Her soldier husband was at one time Commissioner of Pensions. She wrote the former Speaker of this House, Uncle JOE CANNON, and thanked him for the interest he had taken in securing the passage of her bill. It is the splendid, unselfish spirit of Uncle Joe, quite in contrast with that of some others, which struck me most forcibly, as I know it will you, when I quote from this widow's letter: "Mr. CANNON wrote me that Gen. SHERWOOD had more effect in putting this bill through than he had," and so forth. Hats off to Uncle JOE CANNON! He does not seek to unduly take credit to himself for that which may justly belong to others. If the Danville district and the Toledo district do not keep in Congress to their last day—and may their days be many—their present Representatives, they will lack the good judgment I accord to them. This pair of octogenarians are the pride and delight of the House, and I think I voice the sentiment of every Member when I express the fervent wish that they may both die in the harness.

I repeat that I am glad to support this bill, as I have all other pension legislation. The beneficiaries will not long enjoy the increased pensions which are so justly due them, but I hope and pray that they will add somewhat to the happiness of their last days, and that they may appreciate and know that Congress and the American people will never forget or forsake those who offer their lives for the cause of liberty, freedom, and justice.

Military Bill.

EXTENSION OF REMARKS

OF

HON. JAMES H. MAYS,
OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 31, 1918.

Mr. MAYS. Mr. Speaker, the military bill carries the largest appropriation of any measure ever passed by any legislative body in recorded history. More than \$12,000,000,000 are made available to the Military Establishment. We have recently appropriated \$1,400,000,000 for our Navy, making a total of nearly \$14,000,000,000 to be devoted to our fighting forces for the next fiscal year.

These stupendous sums are voted without opposition. Even those who opposed the war with Germany, who would have submitted to the intolerable aggressions of the Imperial Government, are supporting this bill.

All those who favored a craven submission to German domination and were willing to warn our citizens off the high seas will cheerfully vote for this measure.

The Members who protested against the arming of our merchant ships in their own defense against the insidious bushwhackers of the deep, whose specialty is the slaughter of the inoffensive without warning, are now enthusiastic for this colossal appropriation.

Those who vigorously opposed the selective-draft act, urged by the President as the fairest and most effective measure of securing an army, are impatient with delays which postpone the vote on this bill till another day.

Even the Members who favored special exemptions for citizens of German and Austrian extraction, and those who urged in this body that every soldier so desiring be excused from pursuing the enemy beyond the shore lines of our country are now anxious to be favorably recorded. This complete concord of purpose assures a victorious conclusion.

Some were reluctant to engage in war. They will be as reluctant to cease fighting till victory is achieved. The whole force of the Nation—material, financial, and spiritual—is marshaling and concentrating to the task before us.

The largest and best-equipped army ever raised by any nation in twice the time is assembling at the front. Those not yet permitted to sail are impatient with delay. Every mail brings us appeals for assistance in securing prompt transference to the front. No people with such a spirit of determination can be defeated. This spirit is illustrated by numerous letters which come to hand from boys of my district, typical examples of which I insert in the Record, one from a young student who is impatient with delay and the other a young man now in France bravely contending against the German horde.

MEMORIAL DAY.

MY DEAR MR. MAYS: I do not intend to let this great day slip away without passing my thanks and indebtedness to you for helping me to the place it is now my honor and privilege to hold. It is my hope and aim that I can fill it with justice to myself and honor to our people and country and that I can aid to further to a successful end the cause in which so many of us have enlisted. I am indeed glad I can do my bit to do honor to those who have given their all.

I was given my commission as a second lieutenant in the Signal Reserve Corps last month after qualifying as a reserve military aviator. It's the only branch of the service. Before leaving San Diego I spent a day with Harold and had a real visit with him. He is devoting his best energies to the branch he is in and has already made a mark for himself as a corporal. It won't be long till he grabs the next step. He is satisfied with his branch now and is making it his game of study. He has not let his failure to get in this branch discourage him, and his optimism and patriotism are to be admired and rewarded.

My brother Lamar is piloting a bombing machine on the front, where I hope to be soon. I have been at this concentration camp over two weeks now and all those who came with me have been ordered out, and I am wondering if my name has been lost at Washington. If I am not remembered in a week or so I may annoy you by asking assistance to move to further schooling and if possible to get "over there" near Lamar.

Wishing you continued success and power, I beg to be remembered.

Yours, very sincerely,

CLARON NELSON.

SOMEWHERE IN FRANCE,

March 28, 1918.

MY DEAR AUNT LUCY: To-night I sit in a place not too warm nor too dry. With many around me, I am quite alone. Alone with my thoughts—thoughts which take me 6,000 miles over land and sea to another world. From the devil's playground to a land of peace, contentment, and happiness; from a land of hate and sorrow, where a human life is not worth the value of a copper cent, to a land of freedom, where freedom and life are the heart and soul of the people and the most priceless things in the vaults of a Nation. Indeed, it is 6,000 miles. Not far to travel, don't you know, but quite a step from home

and mother to where you see a friend by your side shudder and die before you know he's been hit, and then you smile grimly and drive one more nail in the beam for "them" to pull out with their teeth. Oh, it's all true, everything we talked of and lots we didn't. I talked to an old woman from "Roya" the other day. I wish I could tell her story. It was translated for me by a French sergeant. I will say this, though, and let it mean all it can to you and all others who are in a position to make it forceful, as you are: There is no sacrifice too great to make, no price too great to pay, if we must, in order to beat this thing, this most ghastly of all ghastly things the world has had to endure.

There are many of us here and more coming every day. Let me say that there is not one among us who would be anywhere else in the world. All feel the same. There's ghastly work to do, but it must be done and done well. Let every effort be put forth. Let everyone do, not his bit but his damndest, and let it be done well.

Not "might is right," but "right is might." I know it and feel it in my heart. I know the United States boys are going to beat them, and let me tell you what makes me feel that way. The spirit that made it possible for me, on another ship, to hear, as the boys from the ill-fated *Tuscania* were being lowered over the side, some to their death—the spirit which made it possible for me to hear, floating out over the inky waters, on that very memorable night in our Nation's history, the words and tune of a heretofore foolish song, "Where Do We Go From Here, Boys?" will carry us to victory where others might fail.

Your nephew,

Lieut. JOHN L. VANCOTT.

EXTENSION OF REMARKS

OF

HON. C. FRANK REAVIS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 11, 1918.

Mr. REAVIS. Mr. Speaker and gentlemen of the House, the statement that republics are ungrateful belongs to another age. Republics of this day are indicating in a substantial way the great sense of gratitude they entertain toward those who have contributed largely to the national welfare.

On last Friday, actuated by a compelling sense of justice toward those who preserved the Union and who made possible the preservation of the mighty force which in the present conflict is to save civilization to the children of men, this House concurred in the Senate amendment to the House general Civil War pension bill, and thereby gave to the Civil War veterans the Smoot-Bland bill in the stead of the Sherwood bill, passed by the House some weeks ago.

Because of many inquiries regarding this important measure, occasioned, no doubt, by the parliamentary fog with which it was enveloped, I desire to put in the RECORD a résumé of the various stages of its journey toward final enactment.

The Sherwood bill, which was reported from the Invalid Pension Committee of the House, was reported by Gen. SHERWOOD, the chairman of the committee, and was passed by the House on May 6 last. Concurrent with this report there were filed by Representative OSCAR E. BLAND, a Republican member of the committee, certain minority views in which were pointed out the bad features of the Sherwood bill, particularly section 3, and the substitution recommended of a bill afterwards introduced by the gentleman from Indiana [Mr. BLAND], which provided a minimum pension of \$30, and which was identical with a bill introduced in the Senate by Senator SMOOT.

Mr. BLAND's minority views included the report of the Secretary of the Interior, which was employed by Senator SMOOT in the Senate. The objections to section 3 of the original House bill were directed to the \$1,000 income and the soldiers' home provisions as being not only unfair and tending to put the payment of pensions on the basis of charity but as being productive of delay and confusion in administration at the hands of unfriendly departmental clerks.

It was quite apparent in the House that the Smoot-Bland bill would be overwhelmingly substituted for the Sherwood bill if the parliamentary situation was such as to permit the membership to express its real preference. This was known to those in control of the measure when they presented it to the House under a suspension of the rules on suspension day, and it was likewise known to them that under the rules the bill so presented could not be amended, nor could another and more liberal measure be substituted in its stead. This parliamentary situation, so antagonistic to the interests of the Civil War veterans, was called to the attention of the House by the gentleman from Indiana [Mr. BLAND] and others on the Saturday previous and was then charged by them as being in furtherance of the intention of the Democratic majority in the House to prevent any amendment that would liberalize the Sherwood bill. The Sherwood bill, so offered to the House and so entrenched against at-

tack by the rules of the House, was passed by a vote of 241 to 46, of which vote 133 Republicans and 108 Democrats voted in the affirmative. Those voting against it were 46 Democrats and no Republicans.

When the Sherwood bill reached the Senate the Republican members of the Senate committee, aided by one Democratic member, substituted the bill introduced in the Senate by Senator SMOOT and in the House by the gentleman from Indiana [Mr. BLAND] in place of the Sherwood bill, and the substituted bill so reported passed the Senate.

When the bill so amended by the Senate was returned to the House the parliamentary situation was quite different. Under the rules of the House several motions were in order, among them the motions to disagree to the Senate amendment and ask for a conference, to recommit the bill and amend, or to concur in the Senate amendment. The motion to concur or agree to the Senate amendment was a privileged motion and took precedence over other motions. The gentleman from Indiana [Mr. BLAND], a member of the committee and entitled to recognition, had given it out that he intended to make the motion to concur in the Senate amendment. There is no one who will dispute that such motion would have overwhelmingly carried in the House. This fact was so apparent that the most speedy action was required to meet the situation by those who had camouflaged their real desires in the first instance by technical parliamentary rules. Consequently the Pension Committee was called together and its members, the majority of whom reported the original bill out under circumstances that prevented the substitution of the Smoot-Bland bill, directed the chairman of the committee to move to concur, which motion was promptly made by that gallant old veteran, Gen. SHERWOOD, of Ohio. So in the fullness of time it came to pass that a show-down was necessary on pension legislation; that the House could no longer employ the friendly offices of parliamentary law and technical rules to shield them, but was compelled to come out of the trenches and engage in a little open fighting. The vote on the motion to concur was 118 Republicans and 76 Democrats for. Sixty-eight Democrats voted against and 1 Republican.

The pension legislation is distinctly a Republican measure. It was introduced in the Senate by Senator SMOOT, of Utah, a Republican, and in the House by the gentleman from Indiana [Mr. BLAND], who is likewise a Republican. Many Democratic Members in the House supported the measure and are entitled to individual credit for their votes.

Of the 69 votes against the bill all were Democratic excepting 1. Those Democrats who favored the legislation, however, were deprived of the opportunity of expressing their preference in the first instance by the manner in which the Sherwood bill was reported, and would have been deprived of the opportunity of amending the Sherwood bill had it not been for the efforts of Senator SMOOT and his Republican colleagues on the Senate committee.

During the entire session Senator SMOOT and the gentleman from Indiana [Mr. BLAND], as members of the congressional Pension Committees, have been untiring in their efforts to have reported to the Congress pension laws that are in harmony with the requirements of present economic conditions. The realization of the necessity for haste if any real service was to be given to those who offered the sacrifice supreme on the altar of their country is indicated by the fact that the Republicans of the House in conference unanimously decided to support the Smoot-Bland bill at the earliest opportunity.

That the Republicans in Congress are responsible for the legislation is disclosed not alone by the fact that its author is a Republican but as well by the fact that out of 69 votes against the measure all excepting 1 were cast by Democratic Congressmen.

The Smoot-Bland bill as it goes to the President from the hands of Congress is as follows:

An act increasing rates of pensions of soldiers and sailors of the Civil War.

Be it enacted, etc., That the general pension act of May 11, 1912, is hereby amended by adding a new section to read as follows:

"Sec. 6. That from and after the passage of this act the rate of pension for any person who served 90 days or more in the military or naval service of the United States during the Civil War, now on the roll or hereafter to be placed on the pension roll and entitled to receive a less rate than hereinafter provided, shall be \$30 per month. In case such person has reached the age of 72 years and served six months the rate shall be \$32 a month; one year, \$35 per month; one and a half years, \$38 per month; two years or over, \$40 per month:

"Provided, That this act shall not be so construed as to reduce any pension under any act, public or private: *Provided further,* that no pension attorney, claim agent, or other person shall be entitled to receive any compensation for presenting any claim to the Bureau of Pensions under this act, except in applications for original pensions by persons who have not heretofore received a pension."

The Spirit of Nathan Hale.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,
OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 6, 1918.

Mr. LONERGAN. Mr. Speaker, it is fitting to-day, which marks the one hundred and sixty-third anniversary of the birth of Nathan Hale, American patriot and martyr, to direct attention to his supreme sacrifice for his country—especially fitting on this day when there comes from France news of the valiant work of the American troops at Veully and Jaulgonne, another glowing page in the story of Pershing's men, already bright with the accounts of Cantigny and Seicheprey.

The same spirit that animated Hale and brought from his lips that immortal sentiment, "I regret that I have but one life to give to my country," was the spirit that carried our troops to victory in France. Hale spoke with the noose of the oppressor already around his throat. Our men in France faced death that the great oppressor of to-day might be brought to judgment.

Connecticut, whose son Nathan Hale was, is to-day proud also of the achievements of her men in France. Death to Nathan Hale was less than the honor of his country. He was scarcely over 21 when he yielded up his life for it, but in those short years he fulfilled a long time. He was a true Yale man.

The sacrifice of Nathan Hale was not made in vain. From it, and from the blood of other men like him, the young Nation he championed drew inspiration and courage, threw off the chains of slavery, and took its place among the free nations of the world. It is true that at that time there was but one race in America. Since then we have become, in fact, a polyglot people. France, England, Germany, Italy, Austria, all grew great through uniformity of ideas, of tongue, and of national aims; and there were those in recent years who stated America was composed of so many races it would not stand the strain of war against a land closely associated to any one of these groups.

How inspiring has been the strong proof that such speculation was based on wrong premises!

The call to arms came. The Congress of the United States formally recognized the state of war thrust upon America by the Imperial German Government. Ten millions of men, and this week a million more, came forward with pride and subscribed their names as willing to place their all at the disposal of the land of their birth or adoption.

Some are already in the field, aye, many have by now laid down their lives for the principles of democracy. Race, creed, material conditions, private hopes, and ambitions all were forgotten, as these men went forward to the battle line for the rights of a free Nation, their Nation.

Led by a great leader, inspired by the highest ideals, followed by the fondest hopes of a people ready to sacrifice all for humanity, they, too, advance to victory over death and tyranny, with their motto their only regret that they have but one life to give to their country.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MASON,
OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 11, 1918.

Mr. MASON. Mr. Speaker, the good people who have been working to relieve our country from the shame of child labor were sorely disappointed last week when the Supreme Court of the United States declared our act unconstitutional, which excluded from interstate commerce the product of child labor. Nothing can be gained by excited criticism of this opinion, though the field is most inviting. The court has repeatedly held that Congress had the power to pass this and similar bills regulating interstate commerce, and repeatedly said that the judicial branch of Government could not limit the exercise of the admitted power of the legislative department. Under this wise rule, they sustained the law protecting the people against fraud in butter, the law protecting the people against shipping lottery tickets, whisky, and prostitutes. In many cases the

effect was to control matters outside the "power" of Congress; but the court has closed its judicial eyes and said in substance: "This bill is to obtain revenue—that is within the 'power' of Congress and we can not raise the question of its effect." Now, by a majority of 1, they say, in substance, "The Congress has 'power,' but the 'effect' transcends the power. True, we sustained other bills exercising admitted power, the 'effect' of which was to prohibit food and drug adulteration, gambling, prostitution, and intemperance; but this bill has the 'effect' of interfering with the State's right to compete with other States, ignoring the fact that our bill interferes with the two-legged swine who prosper by brutally destroying the minds and bodies of our American children."

Mr. Speaker, pardon this digression, which shows my sympathy with the minority opinion, and permit me to say the majority opinion is the law of this country. The construction given to our Constitution is the construction we are in honor bound to sustain until it is overruled or until the Constitution is amended. I have no sympathy with the childish, un-American cry to try and amend the Constitution by an act of Congress, nor can I sympathize with the idea suggested by some good and well meaning people to provide by law that a judge is to be automatically removed from office when he does his duty by deciding a law unconstitutional. I think every informed citizen can see at a glance that such a law would fall, even if it could be passed, which I doubt. If such a law could be sustained, Congress could at once deprive any citizen of life, liberty, and property by legislative whim. The safety of our country lies in obedience to law. The Constitution, our supreme law, can be amended in only one way; that is, the way provided in section 5 of that great instrument. The mob seeks to make and execute laws, and we only imitate that force when we try by legislative threat to secure judicial action. Public opinion will favor any proper way in which we can prevent this traffic in children's blood and will, in my opinion, ratify an amendment, such as I offer to-day, giving Congress the power to regulate or prohibit the employment of child labor.

Meantime, during this war, when the taxing power of Congress is being carefully guarded, it has occurred to me that if we amend our next revenue bill so as to tax all people who employ children under 16 in the mines or under 14 in the factories \$2 per day for each day for each child so employed, it may have a healthy effect in bringing about this much-hoped-for reform. This amendment I have offered and sent to the Committee on Ways and Means and hope for its favorable consideration.

The Stars and Stripes.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS,
OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 11, 1918.

Mr. HICKS—

O brave flag, O bright flag, O flag to lead the free!
The glory of thy silver stars,
Engrailed in blue above the bars
Of red for courage, white for truth,
Has brought the world a second youth
And drawn a countless human host to follow after thee!

First of the flags of earth to dare
A heraldry so high;
First of the flags of earth to bear
The blazons of the sky;
Long may thy constellation grow,
Foretelling happy fate;
Wider thy starry circle grow,
And every star a State!

O bright flag, O brave flag, O flag to lead the free!
The hand of God thy colors blent,
And heaven to earth thy glory lent
To shield the weak, and guide the strong,
To make an end of human wrong,
And draw a hundred million hearts to follow after thee!

(Henry Van Dyke.)

The flag held in reverence by 100,000,000 of our people is a modern standard. There are no myths or legends associated with its origin; it tells no story of crushed liberties or violated rights; it sprang neither from the sorrows of the oppressed nor the sufferings of the conquered. Its majestic beauty expresses the independence of a thoughtful, courageous, conscientious people; the faith, the lofty aspirations, and the high ideals of rep-

representative democracy; the advance of a new Nation dedicated to liberty, to law, to justice, and to human rights.

The flag of America does more than proclaim mere power or acclaim a great and glorious history. Its rippling folds wave a benediction to the yesterdays of accomplishment and beckon the to-morrows of progress with hope and confidence; it heralds the noble purposes of a mighty people and carries a message of hope and inspiration to all mankind. Its glowing splendor appeals to us to demand international justice and arbitration; it commands us to self-sacrifice and to universal obligation of service which alone can maintain equality of rights and fullness of opportunity in our Republic. Its stars and its stripes voice the spirit of America calling to a Nation of indomitable courage and infinite possibilities to live the tenets of Christianity, to teach the gospel of work and usefulness, to advance education, to demand purity of thought and action in public life, and to protect the liberties of free government from the aggressions of despotic power. This is the call of the flag of the Union in this hour of crisis and turmoil, when civilization and the laws of nations and of humanity are being engulfed in the maelstrom of death and destruction.

Patriotism is more than a sentiment; loyalty is more than an expression. The one is the acceptance of the duties—absolute and universal—which every citizen owes his country; the other the determination—sincere and unflinching—to perform those duties irrespective of the sacrifice.

With hearts throbbing with patriotism and souls inspired by devotion to our own flag, our thoughts span the billowed deep and with love and veneration embrace the shell-torn flag of France. What hallowed associations cluster around that noble banner as we remember the heroism, the sacrifice, and the loyalty of France in the dark days of our struggle for liberty! The memories of 150 years ago recall the glories of victory, when the flag of France and the newborn standard of America waved side by side in the cause of human freedom. Inspired by that heroic past and in the spirit of Washington and Lafayette and the patriots of our Revolution, we extend our hand of sympathy and friendship to our sister Republic across the seas in this hour of her affliction. The laurel wreaths of triumph, faded but not forgotten in the flight of years, will again entwine the flags of America and France as they are carried onward to victory and to glory.

And what shall we say of that banner to-day, the unconquered and the unconquerable flag of France? As the Stars and Stripes wave above the demolished homes and desolated fields of the Somme and the Aisne, with the tricolor on one side and the ensigns of Great Britain and Italy on the other, we declare that that flag and the flags of the allies fly over armies consecrated in a holy cause—the salvation of civilization and the protection of humanity.

The Stars and Stripes were carried in the Battle of the Brandywine, they waved in triumph over the victorious field of Saratoga, and cheered the ragged patriots of the Continental Army amid their sufferings around the camp fires at Valley Forge. Beneath their folds the immortal Washington marched onward to undying fame.

Since then the Stars and Stripes have been carried in triumphant peace across a mighty continent, attuned to the song of the plowshare turning the virgin soil and the laughter of the children of the pioneer as "westward the course of empire takes its way." To the accompaniment of martial music they have been unfurled in victory from the snows of Canada to the deserts of Mexico; they have risen in the glory of a reunited people above the clouds of smoke of the battle fields of the Civil War; they have been planted in the jungles of the far-off Philippines and upon the great wall of China. They have waved amid the solitude of every sea, and everywhere that banner has been the resistless herald of the Nation's supreme will, standing between capital and labor, between the strong and the weak, between want and wealth, guaranteeing impartial justice to all alike.

"The flag for which the heroes fought, for which they died, is the symbol of all we are, of all we hope to be," and to-night 700,000 of America's sterling manhood stand on the battle lines of northern France determined to make the supreme sacrifice for the honor and glory of that flag. Our forefathers took from the skies the eternal stars, emblazoned them upon our banner, forming a new constellation emblematic of the aspirations of our people. As the stars in God's firmament are countless, so without number are the hosts of our patriots, ready to march to victory in vindication of the lofty principles of our Republic.

That flag is a pledge for the present and a promise for the future—the hope of mankind. Upon its triumph depends the victorious ending of this war. It will fly over the battle-scarred fields of France and Belgium and Italy until the work to which

we have set our hands shall have been accomplished. It will fly until broken Belgium shall have been restored. It will fly until bleeding France shall have been freed from the invader. It will fly until international treaties shall be recognized as sacred contracts; until the freedom of the seas shall be made absolute and the lives of American citizens respected and protected everywhere. It will fly until military autocracy has been annihilated and until arrogant Prussia shall be driven suppliant to her knees before the enlightened democracy of triumphant America.

Let us twine each thread of the glorious tissue of our country's flag about our heartstrings, and looking upon our homes and catching the spirit that breathes upon us from the battle fields of our fathers, let us resolve, come weal or woe, we will, in life and in death, now and forever, stand by the Stars and Stripes.

In silent grandeur the flag waves over the tombs of the dead, over the homes of the living; the emblem of truth and righteousness, inspiring men's hearts on the land and on the sea with faith and hope, the symbol of power, the unity and purpose of our Republic, now and forevermore.

Pensions.

SPEECH

OF

HON. FRED S. PURNELL,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918.

The House had under consideration the bill (H. R. 9959) increasing the rates of pensions of soldiers and sailors of the Civil War.

Mr. PURNELL. Mr. Speaker, next to winning the present great war and the speedy passage of such legislation as will insure that end nothing appeals to me more than to see full justice done the Civil War soldiers of this country. They ask for nothing more; they should have nothing less. To-morrow they will be gone. If we are to do anything for them, we must do it now. Only a remnant of that great army of defenders remains. There are, I believe, only about 300,000 Civil War veterans on the rolls, and they are passing away at the average rate of about 100 per day, 3,000 per month, or 36,000 per year. Their average age is 73 years. Even while we are discussing this measure many have answered the last roll call.

Leaving all sentiment out of this matter, we are confronted with the fact that the tremendous increase in the cost of living demands a general increase in pensions. It takes twice as much to maintain a family at the present time as it did in 1900. This statement comes from the United States Bureau of Labor, which reports a wage of \$1,500 per year will now provide only a minimum standard of comfort for a wage-earner's family. The purchasing power of a dollar has decreased to less than 60 cents as compared with very recent years. Rent has advanced 59 per cent. The price of clothing has been doubled. Food, fuel, and lighting show a similar advance.

Mr. Speaker, I shall support this bill not because I approve it, but rather because it is a question of taking this or nothing. I regret that a bill of this importance should be brought before the House under such parliamentary conditions that it can not be amended or even discussed intelligently. It is an outrage upon the surviving members of the Grand Army of the Republic. I had intended to offer an amendment fixing the minimum at \$30 per month, as I believe this is the least amount any soldier entitled to pension should receive. I certainly hope that when this bill goes to the Senate and comes back through conference it will be more equitable and just.

I am unalterably opposed to section 3 of this bill and would move to strike it out if it were in order. Both provisions contained in this section are wrong and should be stricken out. Section 3 provides that no pensioner shall receive the benefit of this act for any period while he is an inmate of any State or National soldiers' home, and that no pensioner who has a net annual income from all sources of \$1,000 per year shall receive the benefit of this act. These old soldiers who live in soldiers' homes do not do so by choice, but rather because of necessity. We must not forget that many of them who go to these institutions are compelled to break up their own homes and home ties and very frequently leave their faithful old wives outside. They should continue to receive their pensions. I am not willing to penalize thrift by denying a pension to any soldier who may have an annual income of \$1,000. Both of these provisions are wrong, and I wish we might strike them from the bill.

I have cheerfully voted to increase the pay of our present soldiers and shall continue to do everything within my power to add to their comfort and safety as well as the comfort of their dependents at home. However, we must not forget the old boys of other days, but for whose great sacrifices there would be no country to fight for to-day. [Applause.]

Our one great concern now is to equip an army that will be a factor in winning this war. We have made great strides toward this end. The enemy has already felt the might of America. We hear much of the need of morale for a successful army. Nothing will strengthen the morale of our Army more than to show our boys of to-day that we have not forgotten or neglected the old boys of yesterday. [Applause.]

We are appropriating billions as against millions of former years. We are dealing in staggering terms. We have pledged the unlimited wealth of America to the successful prosecution of this war. We must not forget that these old heroes made it possible for us to make this great contribution. Every dollar in the Treasury is there because the young manhood of this country in 1861-1865 fought and suffered and made it possible to be there. I want to make their declining days just as pleasant as it is possible to make them. The Nation owes a debt of gratitude to them that can not be paid in dollars and cents. All we are and all we hope to be we owe to them. [Applause.]

On the Life, Character, and Public Services of Hon. John H. Capstick, Late a Member of the House of Representatives From the State of New Jersey.

MEMORIAL ADDRESS

OF

HON. EVERIS A. HAYES,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, May 19, 1918,

On the following resolution:

House Resolution 352.

Resolved, That the business of the House be now suspended that opportunity may be given for tribute to the memory of Hon. JOHN H. CAPSTICK, late a member of this House from the State of New Jersey.

Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk transmit a copy of these resolutions to the family of the deceased.

Mr. HAYES. Mr. Speaker, JOHN H. CAPSTICK became a Member of this House on March 4, 1915. He brought to his duties a ripe and successful business experience, and at once impressed his colleagues as a man of strong convictions and fearless character, and one well equipped for useful service here. Mr. CAPSTICK did not disappoint these first impressions, but at once entered with zest into the activities and legislation of this body, and those who came to know him came to appreciate, even in the short time he served here, his splendid qualities of heart and brain. His business experience and ability were very valuable to his colleagues and to his country, and would have become increasingly so with the experience which years would have brought him had he been spared to us.

Reared and educated in New England, he went to New Jersey when 27 years of age, where he became associated with his father in the manufacture of textiles, under the name of John Capstick & Sons. He continued this business, of which he later became the head, until his death, and in the prosecution of it acquired that experience and developed the character and qualities which distinguished his service here.

I have a conviction that too few practical business men are sent by the different constituencies of this country to the House. Legislation here is very largely a matter of business. A very large proportion of the time of this body is spent in the consideration of revenue bills and appropriation bills; in providing for the income of the Federal Government and in disbursing this income to maintain its various activities and functions. In fact the business of the United States, under the control in its first stages of the House of Representatives, is the greatest business in the world. It is so vast and embraces so many different activities that no matter how able a Member may be or how long he serves here, he comes to know thoroughly but a very small part of the great governmental and business interests with which this House has to deal. A man coming here with a large business experience has a great advantage in taking up his duties over those who prior to coming here have had no such business

experience. Such a man has a different viewpoint than has the professional man, for example, and brings to the discharge of his duties a knowledge which can be acquired in no other school but the school of business. Because Mr. CAPSTICK had a large knowledge thus acquired, as well as because of the splendid qualities of his character, I regard his death as a distinct loss to this House and to his country.

Our late colleague rapidly made friends, and although among us comparatively but a short time he made many friends who will sadly miss him and whose loving thoughts and affection follow him into the great beyond.

The human, the social, side of the life here makes the service of a Member of Congress much more attractive than it otherwise would be. To all of us association with our colleagues is a great pleasure and delight, and fast friendships are formed here that last to the end of life. When these associations are abruptly terminated by death, the pain that comes to the friends of the stricken one is second only to that which wrings the heart when one's family circle is broken by death. To me the last day of each Congress is a day of sadness, because on that day I bid farewell to many near and dear friends upon both sides of the aisle whose service here has finally terminated, whose faces I do not expect again to see, whose sympathetic handclasp I never hope in this life again to feel.

But I like to feel, as thoughts of the severing of these ties of love and friendship come at all times to me and to all of us, that somewhere in the great unknown, when the physical bonds that limit our habitation to a fixed place have been cast aside, we shall find it easier to meet and associate with those we loved here. In an environment where love and harmony are the ruling influences we may even find a higher and a sweeter pleasure in the society of our old friends and loved ones than we experience while here. As another has beautifully expressed it:

There is a mystic borderland that lies
Just past the limits of the workday world,
And it is peopled with the friends we met
And loved a year, a month, a week, a day,
And parted from with aching hearts; yet knew
That through the distance we must lose the hold
Of hand with hand, and only clasp the threads
Of memory. But still so close we feel this land,
So sure we are that these same hearts are true,
That when in waking dreams there comes a call
That sets the threads of memory aglow,
We know that just by reaching out the hand
In written words of love, or book, or flower,
The waiting hand will clasp our own once more
Across the silence in the same old way.

The Question of Labor in Relation to Shipbuilding.

EXTENSION OF REMARKS

OF

HON. DAN V. STEPHENS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 12, 1918.

Mr. STEPHENS of Nebraska. Mr. Speaker, I am in receipt of a number of telegrams and letters from members and officials of commercial clubs in Nebraska that have been provoked by a speech made by one Capt. W. H. Stayton, supposed to be representing the Navy League, protesting against the passage of a rider to the Navy appropriation bill to prevent the use of the stop-watch system in Government yards and shops. I have prepared an answer to my petitioners, which I ask unanimous consent to insert in the Record, as I am sure the facts collected on the subject are of widespread interest to the country:

CHAMBER OF COMMERCE,
Omaha, Nebr.

GENTLEMEN: I am in receipt of your telegram reading as follows:

Omaha Chamber of Commerce, representing twenty-six hundred business men, through executive committee, went on record vigorously opposing provision, Navy appropriation bill, forbidding time measuring of shipbuilding or offer of premiums or bonus on jobs. Consider this almost treasonable in war time. Hope you vigorously oppose.

OMAHA CHAMBER OF COMMERCE,
CHAS. C. GEORGE, President.

In reply, will say I have received telegrams and letters making the same protest from both commercial-club officials and members of clubs from Lincoln, Beatrice, Fremont, Norfolk, and a few other cities. So much interest has been aroused on this subject I have decided to make a formal and rather complete reply and give it to the press.

It appears that a retired naval officer, one Capt. W. H. Stayton, has caused this general apprehension among Nebraska business men through speeches he is making, supposedly for patriotic purposes, before various commercial clubs of the country. He is alleged to speak for the Navy League, which organization has no connection with the Navy, but, on the contrary, has on one occasion at least been publicly reprimanded by the Secretary of the Navy because of some slanderous statements made by its president.

In order that we may get at the facts quickly I will quote the so-called anti-efficiency amendment, which is a term used by these agitators to discredit it. Here it is:

That no part of the appropriations made in this act shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government while making or causing to be made with a stop watch or other time-measuring device a time study of any job of any employee between the starting and completion thereof, or of the movements of any such employee while engaged upon such work; nor shall any part of the appropriations made in this act be available to pay any premiums or bonuses or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant.

I have a stenographic report of Capt. Stayton's speech at Norfolk, Nebr., in which he states:

They have passed through both Houses a bill which says it shall be held lawful to say how many rivets they may drive, and Nebraska's Members of Congress all voted for it.

In the first place, his statement is absolutely false, as no such legislation was even dreamed about, and in the second place the naval bill passed the House without a record vote, and the chances are 10 to 1 that not a dozen men in the House voted at all, as there was not a voice raised against the bill.

One can see by comparing the amendment above quoted with the Captain's statement that there is no relationship between what he says and what the amendment covers, but what he said in connection with this statement has left in the minds of the men who heard him a doubt as to the sanity and patriotism of Congress. In fact, he has done more to destroy confidence in the fidelity and courage of public men than have all the pro-Germans in my State put together. Certainly I do not question his patriotism and great desire to serve, but I do question seriously whether he should not be refused a public audience during such a crisis as we are now passing through.

This antistop-watch amendment is not a new thing, but, on the contrary, has been in every appropriation bill for the past several years. It was written into these bills first in 1913. In 1912 a thorough report on a stop-watch system then in use in one of our Government arsenals was made to Congress. It was alleged by witnesses that abuses had grown up under the system which caused constant friction with the employees, to the detriment of both the employees and the Government. The practice was to time the most efficient employee on a piece of work and then attempt to force all others to conform to the standard so set. The system was so obnoxious that it resulted in the whole matter being thoroughly investigated and debated in Congress, and a conclusion was reached preventing the use of the system in the Government yards and shops by the adoption of this amendment. It was argued that it was an indignity to labor and did not add to the general efficiency of the plant. So much for the history of the legislation.

Now, Capt. Stayton's misstatement of facts lends color to the suspicion that large employers of labor are attempting under the cloak of patriotism to change the established policy of the Government in this matter while we are facing a foreign foe by reestablishing an obnoxious system of shop management which had been rejected after long debate. They claim that since labor troubles have almost disappeared on all Government work and production is going forward in leaps and bounds it is rather remarkable that a provision in the law—stop-watch amendment—that merely expresses a policy and has no bearing in fact upon production should become an object of attack at this time when complete unity of action is so much desired.

As matter of public policy, assuming that this amendment should be stricken out of the bill, does it strike your membership as a wise step to take at such a critical time, when ships and munitions are so badly needed? It has been a part of the law for years, and by cutting it out now we invite the suspicion above referred to, and such a suspicion would soon bring on strife, thereby causing the very thing we would avoid—a shortage in production. There are labor agitators just as adept at agitating as is Capt. Stayton, and they can stir up trouble with labor with the same facility the Captain can stir up employers of labor. The question then is, Are we in a better position to start a row in our shops now, when at war, than we were in time of peace? Considered from the standpoint of public policy, I do not think it shows good business sense to attempt such

a move as this at present. As to the merit of the question, it goes without argument that one ought not to favor a system in Government shops he would not use in his own. I would not use in my own shop the stop-watch method that this amendment was intended to abolish, and I doubt if anyone would use it save in a modified form.

As to the last half of the amendment referring to bonuses, that was stricken out in the Senate and is now in conference between the two Houses. What the conclusion will be no one knows. I will do my best to vote according to the evidence presented when the case comes up, and I will wait till both sides are heard before I come to a conclusion. I am sure it would not be wise to act upon Capt. Stayton's unsupported statements.

However, the Shipbuilding Labor Adjustment Board of three members, one appointed by the President, one by the shipbuilders, and one by the American Federation of Labor, decided not to permit the payment of bonuses or premiums in addition to wages because it permitted shipbuilders to bid against one another for labor, which kept the roads hot between yards, as labor shifted from one place to the other as bids for it went up. Anyone can readily see that our success in building depends upon stability and uniformity of the wage schedule in all shipyards. The embarrassing thing to Capt. Stayton in the action of this board is the fact that labor unions did not ask for this decision, but the employers did ask for it, and claimed it was necessary to prevent the employers themselves from running wages to the skies in competition for labor and breaking down the whole program. Labor patriotically gave up its opportunity to profiteer by agreeing to cut out all bonuses. I insert here the order of the wage board on the bonus question and am wondering just how Congress is going to meet the demands of the Nebraska commercial clubs on this question without repudiating the findings of this board composed of a representative, first, of the people, second, of capital, and third, of labor. Here are the board's findings on the bonus question:

In addition to the straight day wage and the piece-wage systems we have found in operation in different yards numerous bonus, premium, and contract systems of wage payment. The minimum-wage scale and the piece-rate scales which we prescribe are designed to introduce a greater degree of uniformity in connection with wage payments. We, therefore, direct that no bonus or premium in addition to the rates of wages prescribed in this award shall in future be paid, except with the express permission of this board. This is not intended, however, to prohibit shipyards from paying piece rates to employees in other occupations than those covered by the appended piece-rate scales.

CULTIVATING CLASS HATRED.

Capt. Stayton is alleged to have painted a painful picture of the inefficiency of our shipyards as a result of this antistop-watch provision which he terms contemptuously the "anti-efficiency amendment." He told a fabulous story about a negro who drove 4,800 rivets in a day and that labor unions had fixed 75 rivets as a day's work, thereby proving how utterly lacking in patriotism labor was in a crisis like this, and so forth. If his facts and his inferences were true, there would be cause for worry, but neither are true, for which we are thankful. It is unfortunate that the sins of a few selfish and unpatriotic workers here and there could become so magnified in the mind of this gentleman that he can not see uncounted thousands of patriotic men who are toiling in shifts day and night in the bowels of the earth, in great foundries and forges, in steel mills and shipyards, producing the implements of war so necessary and in quantities so vast that production in the past seems trifling in comparison.

These men are toiling in industries that are at least about one-third as hazardous to life as going to war, yet when they go down in the grime and grease by accident they die for their country nevertheless, though unheralded and unsung. Their names are not carved in stone as are those of our brave lads who march under the flag; but it should not be forgotten that the glory of our arms rests upon the toiling millions who supply the implements of war and the ships and supplies that are so essential to the conduct of war. Because there may be a few grafters and traitors is no excuse for indicting the whole labor world by instituting a system of scrutiny that insults its dignity and questions its patriotism. I do not represent a labor constituency, but at least I can be just to the men who are doing the heavy work of the world.

MARVELOUS ACCOMPLISHMENT.

The shipbuilders and their coworkers have constructed or have in course of construction 819 shipways, 661 of which have been completed. This is twice the number of shipways in all the rest of the shipyards of the world combined. On all these completed shipways cargo ships are in course of construction, and if each shipway turns out three cargo ships of an average of 6,000 tons each next year, which Chairman Hurley says is feasible, we will build about 15,000,000 tons, or as much as Great Britain ever built in any five years of her history. Chairman

Hurley of the Shipping Board says the American workmen have made this great expanse possible. There are now 550,000 men employed in shipbuilding and allied trades alone. Before 1920 we will have a million men in this work.

In the face of this wonderful accomplishment I suppose Capt. Stayton would say, Just think what could have been done if we had held a stop watch on these workers. Usually when a business house has a big year it calls in all hands and makes each man a present of a slice of the profits. These men who have hung to the sides of the great iron ships in the hot sun or the biting cold, riveting together the sheets of steel that we may win the war, have done a big year's work, and the dividend Capt. Stayton wishes to hand them without even a hearing as to facts is a stop-watch system which is an offense to them.

BUT ARE WE EFFICIENT?

That is the prime question. What are the facts? Secretary Daniels, of the Navy, says, in a letter on the subject written to Congressman GOULD and inserted in the RECORD by Senator SWANSON, that he has methods of securing efficiency, and that this so-called antiefficiency amendment is of no particular moment to him. Here is what he says:

MY DEAR CONGRESSMAN: Upon my return to the department from a speaking tour for the Liberty loan, I find your letter of April 15, 1918, in regard to the provision in the pending naval appropriation bill prohibiting time studies in manufacture.

The provision is a continuation of one incorporated in the naval appropriation act approved March 3, 1915, and carried in all subsequent naval acts; and while its inclusion in the bill now pending was made without the recommendation of the department, the department is not opposed to it, and, in fact, advocated it at the time the naval act of March 3, 1915, was under consideration.

Its continuation from year to year has not operated to prevent satisfactory ascertainsments by other means of the comparative efficiency of employees.

Very sincerely,

JOSEPHUS DANIELS,
Secretary of the Navy.

This letter was addressed to Senator SWANSON while this amendment was under discussion in the Senate a few weeks ago. It clearly shows that the Navy has efficient methods for conducting its business without using this method that is obnoxious to labor. I learn upon inquiry that the labor in Government yards and shops is classified according to ability and efficiency, so that the man who does the least is assigned to a low class, and as his proficiency increases he is promoted, upon recommendation of his foreman, to the next higher class, which commands higher wages. The result of this classification is to stimulate men in a normal way to seek promotion to a higher class where more and better work is done at higher pay. The Navy and Shipping Board appear to be getting most excellent results with this method, and the labor troublers have almost completely disappeared, except in Capt. Stayton's mind. Their patriotism is just as sound as that of the rest of us, and there are no more traitors among them than can be found in other classes.

My own personal opinion is that a man or a group of men who tie up ship construction at such a time as this for any cause whatever of a personal nature are committing a crime against our country, whether they know it or not. I sometimes think most of the unpatriotic acts of men are due wholly to the ruddled state of their minds and to selfishness. This statement applies with equal force to those who would use this war situation to rob labor of a decent environment in which to work, hoping it will be a long time before former conditions can be restored.

THE ANSWER TO THE RIVET STORY.

Capt. Stayton's story of the negro rivet driver appeared to make his audience sizzle with anger. It was to the effect that a negro under test conditions somewhere drove 4,800 rivets in a day, and that labor unions in the shipyards on the Pacific coast had arbitrarily fixed 75 as a standard day's work. Such a thing, if true, is outrageous; but, fortunately for us all, the lie is nailed, but it will continue to be repeated as long as the war lasts by those who want to use it for the purpose of arousing prejudices. In answer to my inquiry as to the accuracy of the story, the Secretary of Labor laid before me the following telegram:

[Telegram.]

SEATTLE, WASH., May 9, 1918.

SECRETARY OF LABOR,
Washington, D. C.:

Actual scientific survey for planning division of Shipping Board, under direction of Dr. Henry Suzzallo, president University of Washington, submitted to Shipping Board March 4, and covering the eight steel shipyards in Washington and Oregon, shows average, including pick-up and all classes of most difficult rivets, of 258 rivets per gang driven in eight-hour shifts, and an average of 347 on approximately straight-away work. These averages based upon approximately 900 rivet gangs and 5,000,000 rivets. Most competent opinion, checked by records, establishes a good standard for riveter driving all classes at 300 per eight-hour day. This vitally depends on sufficient quantity of air at proper pressure, efficient planning of work, and maintenance of tools.

Unions placing no restriction on number of rivets driven. No material changes of significant proportions in yard conditions since report submitted. In some types of difficult work 60 rivets is a good day's work. Statement that the general average per day is 60 rivets is absurd.

HUGHES.

Two lies are nailed by this telegram, one as to the number of rivets that constitutes a fair day's work and the other is the story that labor unions have fixed 75 rivets as a day's work. As further proof of the patriotic action of labor, I append another telegram as to the conduct of the calkers:

[Telegram.]

SEATTLE, WASH., May 12, 1918.

SECRETARY OF LABOR,
Washington, D. C.:

Referring further to your telegram of the 6th, have fully investigated calkers' situation this district. District supervisor wood ship construction, Emergency Fleet Corporation, and officers of Washington Shipbuilding Association confirm the statements of calkers' representatives that the calkers are cooperating to the fullest extent in producing maximum results. Prior to March 11 last it was the custom to have one apprentice to each shipyard, and the calkers did the beetling and spinning of oakum. March 11 calkers agreed to one apprentice for each calker and the employment of beetlers and spinners. This increased the production approximately 150 per cent. Calkers also agreed to use of calkers' apprentices and helpers when necessary.

HUGHES.

It will be noticed that the shipbuilders themselves indorse the statements made herein as to the conduct of their employees. Where does Capt. Stayton get his alleged information? He is quoted as saying he has the fullest indorsement in his work by Chairman Hurley, of the Shipping Board. I am sure he does when he is doing the work of the country, but let us see what Chairman Hurley says of this so-called efficiency program:

SHIPPING BOARD DISAPPROVES STRENUOUS RIVETING CONTESTS.

PHILADELPHIA, May 30.

Riveting contests carried to the point of speeding up one man's work at the expense of the general efficiency of the plan are not favored by Chairman E. N. Hurley, of the Federal Shipping Board.

"The record for a month is much more important than a record for a day," said Mr. Hurley to-day.

"Contests which cause men to overwork themselves for the sake of establishing new records, with the result that they are incapacitated for several days afterwards and the general system of the yard is demoralized, are to be discontinued. What we are trying to do is to encourage a spirit of sportsmanship that will stimulate all the men to do their best at all times."

It appears from this that Chairman Hurley absolutely disapproves the methods of abnormal stimulation of labor advanced by the Navy League spokesman.

After placing in evidence the two highest authorities we have against the stop-watch system which the so-called antiefficiency amendment prohibits, namely, Secretary of the Navy Daniels and Chairman Hurley, of the Shipping Board, the case is made up against Capt. Stayton. However, I offer one other proof of the patriotic efforts of these countless thousands of men upon whose backs we are to ride to victory in this war by inserting another telegram of accomplishments on the Pacific coast:

[Telegram.]

SAN FRANCISCO, CAL., May 29, 1918.

SECRETARY OF LABOR,
Washington, D. C.:

Sanfacon's investigation and my own in this district demonstrate absurdity of any representation regard curtailment of effort on part of shipworkers. Best proof of work being done is launching 16 vessels Fourth of July.

BOYCE.

There can not be such general inefficiency as the Captain leads us to believe with such results as these to show for the work of the Navy and Shipping Board. This telegram also brands as absurd the charge that unions are limiting work. As a further proof of it, I reproduce a news item from the Bulletin, San Francisco, June 3, 1918, as follows:

R. S. BROWN SCHAW-BATCHER WINNER—OTHERS IN DOUBT.

R. S. Brown has been returned the winner of the Bulletin's riveting contest for the Schaw-Batcher plant for the week ending Saturday, and will be awarded the Bulletin's prize of \$25 offered to the man making the best riveting record for the week. Brown led on four out of five working-days of the week. Brown set a terrific pace during the entire week, most of his work being on a shell under difficult conditions. He drove common-head rivets, which require calking, and all of his riveting was water-tight work. On the first day of the contest he broke a world's record. While there are no definite standards of comparison, owing to the widely varying conditions of shipbuilding work, officials at the plant said Brown's performance was undoubtedly among the world's best showings for a single week's work.

The Union Works leaders were so closely bunched that no decision could be announced to-day. The counting department of the works is reviewing the records, and a decision probably will be announced tomorrow. Young, Stewart, and Fetisoff, all star riveters, came under the tape so close together that this special survey of the week's work was made necessary. At both plants the men were highly commended for the week's showing, and although Memorial Day being a holiday cut into the week's total the returns for the five days were among the best for any similar period in the history of the two plants.

The big Oakland contest, with three plants, the Bulletin offering a \$25 prize for the leader in each plant, started this morning. Next week the Vallejo shipbuilders, competing for the same prize, will show what they can do in the way of knocking out destroyers.

TYNAN ACCEPTS ARMES'S \$10,000 RIVETING WAGER.

Coincident with the beginning of the Oakland week of the Bulletin's riveting contest J. J. Tynan, general manager of the Union Iron Works, has accepted the offer of a \$10,000 wager by George Armes, president of the Moore Shipbuilding Co., that a gang of Moore riveters can beat any gang in the world. Tynan read of Armes's challenge while on his way West after a business trip to New York and Washington. From Julesburg, Colo., he sent the following telegram to San Francisco:

"I accept George Armes's challenge of \$10,000 to be posted as a wager that a team from any department of the Moore Shipbuilding Co. can defeat any similar team from any other yard in the United States."

"J. J. TYNAN."

Armes, in issuing his challenge last week, criticized many claims to riveting prowess made throughout the East and in England, saying that investigation would show that the spectacular records were for "snap" riveting on inside water-tight work, and that competition with the countersunk water-tight rivets, where it is necessary to calk the rivet with a flush die, would tell a different story. He believes he has some world-beating gangs. On the arrival of Tynan plans for the big sporting event probably will be concluded. It will be necessary to standardize the competition to insure a contest under as nearly as possible even conditions.

Tynan already has a personal wager of \$5,000 with Vice President Powell, of the Bethlehem Steel Co., pitting the Union Iron Works against the company's Fore River plant in this year's output of destroyers. The men of the local works have taken the Fore River men on for a bet of \$20,000 on this issue.

WINNING RIVETERS.

Schaw-Batcher: R. S. Brown finished with the highest score for the week. He led the gangs for four out of five working-days of the week, finishing third on the fifth day.

Union Iron Works: No decision could be announced to-day until the counting department has had an opportunity to make a further examination of the records. Young, Stewart, and Fetisoff are bunched in the lead, and a decision is difficult on account of varying conditions of work.

SATURDAY'S RECORD.

Schaw-Batcher: Brown, driving four hundred and thirty 7-8-inch common head rivets in a shell in four hours; Kesler, second; Ventura, third. Union Iron Works: Young, first, driving three hundred and twenty 3 1/4-inch rivets in a keel in four hours; Beggs, second; Stewart, third.

BULLETIN'S RIVET CONTEST ON TO-DAY IN EAST BAY YARDS.

OAKLAND, June 3.

The Bulletin's contest between riveters at work on Uncle Sam's big steel ships, which closed successfully on Saturday night in San Francisco, was transferred this morning to the east-bay cities, where three large shipbuilding firms are rushing contracts on Government work to beat the Kaiser's U-boats. The contest will continue all week and at the end of the week a prize of \$25 will be given the man who makes the best average record in each of the three yards.

The Bulletin contest is not between the yards, but between the men in each yard. There are three of these yards, all doing their utmost to rush the program laid out by the Emergency Fleet Corporation, and rivalry between the men at each yard is running high as to which of the thousands of riveters can put home the greatest number of rivets.

The yards that are holding contests are: The Bethlehem Shipbuilding Corporation, Ltd. (Alameda branch); the Moore Shipbuilding Co., in West Oakland; and the Hanlon Drydock & Shipbuilding Co., at the foot of Fifth Avenue, in East Oakland.

Daily reports of the contest will appear in the columns of the Oakland edition of the Bulletin.

It seems to me that the irrefutable evidence I have here offered is quite sufficient to show that Capt. Stayton is doing the country a positive injury in destroying the confidence of the people in their own public officials and in the men who are doing the world's work by garbling facts and misrepresenting conditions.

In conclusion, I wish to thank you for your telegram. It has given me an opportunity to set forth the facts as the record shows them, and that is what we all need before we arrive at a conclusion.

With kindest regards and pleasant recollections of the Omaha Commercial Club, among whose membership I have many personal friends, I am,

Sincerely, yours,

DAN V. STEPHENS,
Member of Congress, Nebraska.

The Smoot-Sherwood Pension Bill.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 8, 1918.

Mr. BROWNE. Mr. Speaker, when I voted for the Sherwood bill I stated that if an amendment were in order I would move to amend it. Under its parliamentary status the bill was not subject to amendment. Those of us who believe that the pensions of the Civil War veterans were not increased sufficiently under the Sherwood bill have now an opportunity to vote for the Smoot substitute bill. I for one am glad of this opportunity. This bill provides as follows:

SEC. 6. That from and after the passage of this act the rate of pension for any person who served 90 days or more in the military or naval service of the United States during the Civil War now on the roll or

hereafter to be placed on the pension roll and entitled to receive a less rate than hereinafter provided shall be \$30 per month. In case such person has reached the age of 72 years and served six months the rate shall be \$32 per month; one year, \$35 per month; one and a half years, \$38 per month; two years or over, \$40 per month: *Provided*, That this act shall not be so construed as to reduce any pension under any act, public or private.

Since I have been a Member of the House of Representatives nothing has given me more satisfaction and pleasure than voting for the various pension bills.

Over half a century has passed since Lee surrendered to Grant at Appomattox. The ranks of those mighty armies that struggled for supremacy for four long years have been sadly depleted. The mighty hosts that marched through the streets of the National Capital in grand review at the close of the war passed under a large banner upon which was written, "There is one debt that this Government can never repay; it is the debt of gratitude it owes its citizen soldiers."

I wish photography at that time had reached its high stage of perfection that it has at the present in the invention of the moving picture, that great invention which immortalizes, so that this historic scene could be reproduced in all its thrilling splendor. The generation born after the war must content itself by reading the descriptions of that scene and viewing the marble statues of those mighty leaders.

Because of the deeds of valor of the men in blue who traveled the blood-stained road that began at Bull Run and ended at Appomattox, this great Republic lives, a blessing to the world and to the ages.

Allen Slackers.

EXTENSION OF REMARKS

OF

HON. ROSCOE C. McCULLOCH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 20, 1918.

Mr. McCULLOCH. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a memorandum I submitted to the President of the United States, personally, on the occasion of an interview I had with the President in regard to alien slackers. The memorandum is as follows:

MEMORANDUM FOR THE PRESIDENT FROM ROSCOE C. McCULLOCH, MEMBER OF CONGRESS, SIXTEENTH OHIO DISTRICT.

The status of aliens under the selective-service act of May 18, 1917, has been a subject of discussion in its various phases ever since the measure became effective.

When the first announcement was made by the War Department of the quotas for the various States and their subdivisions it was apparent that an injustice had been done many northern industrial communities because the quotas were figured on a basis of the registration instead of on the actual population of the States and their various subdivisions as the law provided.

I pointed out this inequity in a brief filed with the Secretary of War, contending that the quotas should be figured on the basis of the actual population and not on the registration of June 5, 1917. If, however, it were decided to figure the quotas on the basis of the registration, I contended that before figuring the quotas the number of aliens who are exempt because of alienage should be eliminated by subtraction.

I also suggested that the injustice might be remedied by legislation requiring aliens who are citizens or subjects of the countries associated with the United States in the present war to waive their exemption because of alienage or be deported.

Maj. Gen. Enoch H. Crowder, Provost Marshal General, in a memorandum to the Secretary of War, which was transmitted to me, objected to figuring the quotas on the actual population and also to eliminating from the registration before figuring the quotas aliens who were exempt under the law, but he admitted the injustice and favored correcting it by legislation requiring aliens of the allied countries to serve.

The House Military Affairs Committee refused to act favorably, or did not act at all, on the proposal to draft aliens of the allied countries. The House Committee on Naturalization and Immigration reported favorably the Burnett bill, which provides for the deportation of aliens of the allied countries unless they waive their exemption from service on account of alienage within 90 days.

The House delayed action on the Burnett bill, at the request of the Secretary of State, for a number of months, so that the State Department could negotiate treaties with the allied countries, which, it was claimed, would accomplish the same result as the

provisions of the Burnett bill and with less danger of complications.

The House, after frequent delays, passed the Burnett bill on February 27, 1918, by a vote of 344 to 21, and the bill went to the Senate. The Senate has not acted. My information is that it has not even been considered in the committee to which it was referred, and that it is not likely to be acted upon. I understand, further, that the State Department has not accomplished anything material in the treaty negotiations.

According to a recent report of the Provost Marshal General, 772,744 citizens or subjects of the belligerent nations of military age are entitled to exemption under the provisions of the selective-draft law. This number is sure to be increased materially with each registration. Many of these citizens of belligerent countries have come to America for the purpose of evading military service, and some have remained here for years, benefiting by our institutions and the opportunities our country has afforded them, without making any attempt to avail themselves of the privilege granted by our naturalization laws to become American citizens. They are now exempt from military service absolutely, for they are not within the jurisdiction of their own countries, and they are exempt under the draft law in the United States because of their alienage.

Many of them are slackers of the worst kind, and the United States now is placed in the attitude of protecting alien slackers by exempting them from military service because of alienage. This not only deprives the countries fighting Germany of a source of man power, but it has a detrimental influence upon the patriotism of the American people, especially among those who come in contact with these alien slackers, either in business or otherwise. The alien slacker in America is constantly flaunting in the face of the American boy of military age, his friends, and his family, the fact that he, an alien, although physically fit and otherwise qualified, is favored by exemption from military service. This attitude on the part of alien slackers has become very obnoxious in many sections of the country, and I have noticed it personally in my congressional district with no small feeling of alarm.

One of the great arguments in favor of the draft law was that it placed the burden of military service equally on all classes in the community. But here is a class immune from service, but less entitled to such favoritism than any other class. Every alien physically fit and otherwise qualified who is taken into the Army, either of the country to which he owes allegiance or the American Army, reduces by just one man the necessity for taking the American boy. In other words, some American boy must take the place of every alien who is exempted.

There has been no attempt made in the Burnett bill to draft alien neutrals. The bill only applies to aliens who owe allegiance to the countries with which we are associated in the present war.

It has been contended that the Burnett bill, if put in operation, would violate existing treaties, especially with Italy. This phase of the situation was argued at length in the House when the Burnett bill was being considered. No one wanted this country to be in the attitude of violating its treaty obligations, and I would not now even for a moment suggest any action that would mean a violation of existing treaties. The Burnett bill does not violate any treaties, and in this opinion I am supported by some of the best international lawyers in the country, who are Members of the House and whose arguments are all set forth clearly in the record of the debates in the House.

Our great task is to win the war. Our people and the peoples of all the allied countries are bending every effort for success. The patriotism of the American people has no parallel in the history of the world. The citizen of our own country who does not do his part is roundly and severely criticized everywhere, yet because of the inaction of our own Government the alien slacker is favored and America has become a haven of refuge for foreigners, many of whom came here for the express purpose of evading military service and who are reaping and will continue to reap a rich financial harvest here while the American boy leaves everything and goes valiantly to the front to fight for the liberty and the freedom of the world, which those alien slackers will be permitted to enjoy and benefit by in future years.

Our cause is in common, and the allied countries are equally interested with us in seeing to it that every element that will contribute to the success of the war is utilized. The allied countries which have provided for the drafting of their citizens and all their men of military age who are physically fit and otherwise qualified within the jurisdiction of those countries have been called or are subject to call. But the alien slacker in this country is outside the jurisdiction of his own country and is secure from liability to military service under our present selective-draft act because of the fact that he has come to America.

The United States by requiring these alien slackers to serve will be assisting our allies as well as ourselves in utilizing this additional man power. The Burnett bill is just and fair in every way. The American people favor its passage. No one except alien slackers can complain of it. Certainly the allied Governments should not complain of it, because it assists them as well as ourselves in the common cause. Under the bill the alien slacker has the choice of serving either in the American Army or in the army of his own country. Could anyone seriously contend that he is entitled to any greater consideration?

More than a year has passed since the draft law went into effect. More than a million American boys have been called to the colors. I feel that the time has come when the alien slacker should be required to do his part. There has been too much delay already. If it can not be accomplished by treaties without the delays that are incident to diplomatic negotiations, then it should be accomplished by legislation.

Mr. President, this is a situation which calls for action. It is not a question of method but a question of getting results. It is for that reason, and because of the intense feeling which exists in my congressional district in regard to this important matter, that I have ventured to bring the facts to your personal attention.

If you concur in the views I have expressed, and if you agree that the whole matter is of vital and immediate importance, your great influence, if thrown in the balance for prompt action, would mean immediate results, either through the speedy negotiation and ratification of treaties or the passage of the Burnett bill by the Senate.

I appeal to you because of my feeling of confidence that you will not permit this great injustice to the American boy to continue and that you will see that equity is done to all.

Respectfully submitted,

ROSCOE C. McCULLOCH.

Pending Census Legislation.

EXTENSION OF REMARKS

OF

HON. JAMES B. ASWELL,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 21, 1918.

LEGISLATION BY PRESENT CONGRESS NECESSARY.

Mr. ASWELL. Mr. Speaker, it is not true that the next, or Sixty-sixth, Congress will "have time and opportunity to prepare a census bill for April 15, 1920." Whether the date of the next census is April 15, as recommended in the minority report, or January 1, as provided in the bill under consideration, any legislation providing for that census must be enacted by the present Congress if it is to be enacted at all; when the next Congress meets, in December, 1919, it will be too late. The preparation for the Fourteenth Census must begin long before that date. There is little likelihood that a bill introduced in December, 1919, would be passed before the end of February, 1920. But even if it could be enacted in December and the date of the census was made April 15 instead of January 1, it would not give time enough to prepare for the census.

VIEWS OF FORMER DIRECTOR NORTH.

Every Director of the Census has emphasized the importance of the early enactment of census legislation. In 1907, prior to the Thirteenth Census, Hon. S. N. D. North, Director of the Census at that time, expressed himself on this question as follows:

The time is rapidly approaching when preparations for the taking of the Thirteenth Census must begin. The first step to that end is the framing of the law under which this census is to be taken and its enactment by Congress. A bill for that purpose should become a law during the first session of the Sixtieth Congress. The Director of the Census is entitled to at least two years in which to prepare for the greatest single piece of work which the Government undertakes; and in order to make this preparation intelligently and to the best possible advantage he should know for that length of time just what are the provisions of the law under which the work is to be undertaken.

The most serious faults in all previous censuses have been due to the lack of sufficient time prior to the actual enumeration to select and instruct the supervisors and enumerators. The supervisors should be designated at least one year in advance of the enumeration, so that the enumeration districts can be laid out and their geographical limits clearly defined and scrutinized in each locality, with a view to the correction of omissions and errors. This has never yet been possible at a Federal census.

DELAY IN PASSING THIRTEENTH CENSUS ACT.

The bill for taking the Thirteenth Census, which was introduced at the Sixtieth Congress in accordance with Director

North's recommendation, was passed January 28, 1909, but was vetoed by President Roosevelt because of its failure to place the special clerical force under the civil-service rules; and the act under which the Thirteenth Census was taken was, in fact, not passed until July 2, 1909, at a special session of the next, or Sixty-first, Congress. Commenting on the situation thus created, E. Dana Durand, Director of the Thirteenth Census, said in his annual report for the year 1909-10:

The passage of the census act only nine months before the date of the enumeration of population and agriculture, which was fixed at April 15, 1910, allowed very little time for the heavy task of organizing the field force and preparing the schedules. Had it not been for the fact that the Census Bureau was a permanent organization, having in its employ many officials and clerks experienced in the work of prior censuses, it would have been practically impossible to arrange properly for the taking of the census. At each of the three preceding censuses the census act was passed at least 15 months before the date of the enumeration, and it had been the desire of the Census Bureau that in the present case an even longer time should be allowed. It can not be too earnestly urged that any new legislation which may be required for taking the census of 1920 should be passed much more promptly than was done at the present census.

It will be noted that even this delayed legislation in 1909 was enacted more than nine months before the date of the census to which it applied, and never had any previous general census law been enacted within less than a year of the date of the census. To talk, then, of introducing a bill for taking a census within four and a half months of the date of enumeration is nothing more or less than absurd. The present Congress may not see fit to pass this bill or any bill for taking the Fourteenth Census, but whatever it may do or not do, it should not act or fail to act under the mistaken impression that there will be time enough to pass a bill after the next Congress meets.

A CENSUS IN WAR TIME.

As to taking a census in war times it is to be noted, in the first place, that whether we have war or peace a census of population must be taken as a basis for the apportionment of representatives under the Constitution of the United States. The only possible question, then, is whether the census shall be reduced to its lowest terms, to cover nothing but a mere count of the number of inhabitants, or shall cover the subjects and details which have usually been included in the census, or, as another alternative, shall cover some of those subjects, omitting others. In brief, the only question that may be considered is whether we shall provide for a complete census, or for a curtailed census, or for a mere enumeration of population.

The census normally covers four main subjects: Population, agriculture, manufactures, and mining. The details, or sub-topics, included under each of these main subjects are indicated in section 8 of the present bill. If the census is to be curtailed, Congress must decide what subjects or topics are to be left out, and the decision must be made now and by the present Congress. We can not wait to see what will happen before the next Congress meets.

That conditions at the present time are very abnormal is obvious to everyone, and in 1920 they will still be abnormal, even though, as we all hope, the war may terminate before that year arrives, for in any event it will take some time to effect a readjustment to normal peace conditions. It is true that industries and industrial conditions have been greatly disorganized and disturbed by the outbreak of this world war, all the more so since this country has taken its place on the side of the nations fighting for liberty. But is it not important to ascertain statistically the exact extent of the disorganization which has taken place? Is it not important to know the extent to which the war industries have absorbed the labor force, raw materials, and capital of the country? Is it not important to know the extent to which women have entered industrial pursuits to replace the men called into the military service of the Government? Is it not important to know in these troublous times the numerical strength and influence of the various foreign or alien elements in our composite population—the various nationalities represented, the number of foreign-born naturalized citizens, and the number of aliens? Was there ever a time when such information was of greater importance than it is now?

In this connection it may be noted that in addition to those industries engaged in producing munitions and other war materials certain important peace industries, such as the dyestuff industry, for instance, either have been practically called into existence in this country or else have undergone a great development as the result of the cutting off of importations from foreign countries. The public policy to be pursued regarding the perpetuation of such industries after the war will soon have to be considered, and for intelligent legislation on that question a knowledge of the extent of this new development will be essential. In this and many other respects a census of manufactures is greatly needed in these times.

As regards agriculture there has been no serious disorganization of that industry, and there never was a time when reliable statistics regarding the agricultural resources of the country were so urgently needed as they are now and will be while this war lasts. The crop figures that are published from time to time by the Department of Agriculture are only estimates, which go back to the last census as their basis or starting point, and after a lapse of 10 years need to be revised and corrected by a new census. The investigations conducted by the Food Administration are admitted to be incomplete and unsatisfactory, but have to be accepted as the best means of information available in the absence of an actual census. It is almost inconceivable that anybody should seriously contend that the war makes a census of agriculture unnecessary or inadvisable.

CENSUS DATA AVAILABLE ONLY BY A HOUSE-TO-HOUSE CANVASS.

It should be noted that the taking of a census, even though it be restricted to a mere enumeration of population, will involve, nevertheless, a house-to-house canvass of the entire United States. The enumerators must visit every dwelling and farm in every community, whether urban or rural, if only to ascertain for the purposes of the apportionment of Representatives how many people are residents in each city, town, or village. This house-to-house canvass, thus virtually required by the Constitution of the United States, represents what may be termed a statistical opportunity; that is, an opportunity to collect data regarding the population and resources of the United States of a kind that can be obtained in no other way. The decennial census is the only occasion on which every home and every family in the United States is visited and the people interviewed by an agent of the National Government. This circumstance explains the growth of the United States census from little more than an enumeration of population to a comprehensive statistical survey. But it should be noted and emphasized that for the most part the data comprised in this survey are such as can be obtained only by the house-to-house canvass, and, so far as that is the case, if the data are not obtained at this time and in connection with the decennial census they can not be obtained at any other time or in any other way.

NO DUPLICATION.

The various statistical inquiries enumerated on page 2 of the minority report cover for the most part the regular interdecennial work of the Bureau of the Census prescribed by the organic act establishing the permanent bureau. Where that is not the case, they are provided for by special authorizations. They do not in any sense duplicate the work of the decennial census or render it superfluous. In the case of manufactures, the subject is covered by the decennial census also, but that is the case simply because Congress considered that the subject ought to be covered more frequently or at shorter intervals than every 10 years. A census of manufactures taken in 1920 and covering the year 1919 could hardly be regarded as duplicating a similar census taken not in 1916, as stated in the minority report, but in 1915, and covering the year 1914.

The decennial census does not cover (C) water transportation, or (E) electrical industries, or (F) vital statistics, or (G) financial statistics of cities, or (H) of States, or (I) tobacco and cotton statistics. The subjects enumerated under (J) are either special studies derived from and based upon available statistics, or else special original compilations expressly authorized by law and not covered by the decennial census.

It is not true that recent special censuses have been taken covering all industries (A). As regards most industries, there is nothing more recent than the manufactures census of 1915 covering the year 1914.

It is obvious, then, that the various statistical inquiries carried on by the Census Bureau in the interdecennial period do not render the decennial census unnecessary or superfluous in the sense that they cover the same field or duplicate the work. It is hardly to be supposed that the Congress which enacted the legislation under which the bureau carries on its work would have authorized these inquiries and at the same time retained the decennial census had that been the case. The same statement may be made regarding the various statistical inquiries carried on by other bureaus. They do not duplicate the work of the census or cover the same field.

MORE STATISTICS NEEDED.

But aside from this attempt to show duplication, the author of the minority report, in enumerating the statistical work carried on by the Census Bureau and other Government agencies, apparently means to imply that the Government is doing all the statistical work that is justified or worth while under existing conditions, and that as a measure of economy the decennial census should therefore be omitted or greatly curtailed.

Regarding this contention it may be said that there never was a time in the history of the United States when the demand for statistics was as urgent or as great as it is at present. For the successful conduct of the war the Government needs more exact and complete knowledge regarding the population and resources of the United States than can be obtained through any statistical inquiries now in progress or recently completed. Of the various special statistical inquiries instituted and hurriedly organized to meet war requirements, some cover only a very limited and narrow field, while others of a broader scope are based upon partial and incomplete data, and are not regarded as satisfactory, but have to be accepted as the best information that can be obtained in the absence of a complete census.

VIEWS OF PROF. YOUNG.

Regarding the value of statistics in war times and their cost, Prof. Allyn A. Young, of Cornell University, in an address delivered last December before the American Statistical Association, of which he was at that time president, said:

When compared with our aggregate annual expenditures for war purposes, our expenditures for statistical purposes are seen to be almost pitifully inadequate. . . . They are not a thousandth part of our aggregate war expenditures. It might easily be wise economy to increase them ten or twenty fold. This much, at least, is certain: In range, in completeness within the field which they cover, and in accuracy the statistics now available furnish a wholly inadequate basis for the most efficient conduct of the task in hand. Our statistical apparatus has not expanded in any such degree as the field of public interest has grown. Confronted as we are by the necessity of making the most effective disposition of our national energies, we have not attempted to secure anything like a complete and accurate statement of the forces at our disposal. In some special fields our knowledge may be fairly complete, but in other fields it is either incomplete or non-existent. Most of all we lack the materials for a picture of the whole economic situation, invaluable as it would be as an aid in the shaping of national policies.

Prof. Young did not reach these conclusions on the basis of his academic experience. He realized the need for statistical data as an employee of the Government actively engaged in war work in Washington.

AFTER THE WAR.

The demand for statistics will not diminish with the coming of peace, for it is evident that the war is going to effect profound changes in society and the body politic, the character and extent of which no man at the present time can foresee. Important measures or reforms, some of them of very radical character, will demand the attention of the country. Congress will be called upon to legislate upon questions affecting taxation, the tariff, immigration, labor conditions, industrial organization, political and constitutional rights, and other matters of fundamental importance. In considering and debating these questions there will inevitably be a great need and demand for statistical data. We shall be living in a new world and dealing with conditions for which there is no precedent in all history. To act intelligently and wisely on the questions that will confront us we shall need all the information we can obtain from the census and all other sources. Abraham Lincoln once said, in reference to the greatest question of his day, "If we could first know where we are and whither we are trending, we could better tell what to do and when to do it." There never was a time in the history of this country when the knowledge of where we are and whither we are trending was as urgently needed as it will be in the period following this war.

WHEN THE CENSUS FIGURES WILL BE PUBLISHED.

It is not correct to say that "the census of 1920 would not be completed in time to be of any special value to us until 1922 or 1923." The population figures will be given out before the close of the year 1920, and a large proportion of the other data will be made available in the form of bulletins issued during the year 1921. It is true that the bound volumes constituting the completed census reports will probably not all be issued much before June 30, 1922, the date of the termination of the decennial census period. But a large part or most of the data which they contain will have been published before that time.

PERMANENT BUREAU FORCE HAS NOT BEEN INCREASED.

It is not true that the Census Bureau has recently been much enlarged. On the contrary, the present statutory force of 563 is smaller by 73 than was the corresponding force 10 years ago. Its total force of 1,368 includes 767 local special agents employed to collect statistics of cotton, who work only at intervals and are paid on a piece-price basis.

TABULATING MACHINERY PERFECTED.

The computing and tabulating machinery of the bureau has been perfected and extended for the very purpose of being in readiness for the next census. The statement that the bureau's efficiency has been increased in this respect is therefore true, but it is difficult to comprehend why this should be mentioned as an argument against taking a census.

CHANGES IN THE BILL.

The author of the minority report (p. 4) says that the present bill contains "many extreme, radical, and revolutionary changes," and then cites three instances of changes having this alleged revolutionary character, namely, (1) the increase in the office force, (2) the change in the date of the census, and (3) the change in the method of appointing supervisors.

INCREASE IN OFFICE FORCE FOR FOURTEENTH CENSUS.

(1) Some increase in the office force is obviously a necessary result of the growth of the country. Considering that the population of the country will have increased by probably about 20 per cent between 1910 and 1920, that the output of the country's farms and factories will have increased in quantity to a still greater extent and in value to a very much greater extent, the proposed increase in the office force can hardly be regarded as unreasonable, to say nothing of being radical or revolutionary. The minority report says that "the full field force at the last census was 60,000," and that "it is estimated that the field force for the coming census will be 100,000." As a matter of fact, the field force of the Thirteenth Census, comprising supervisors, enumerators, special agents, and other employees, numbered over 75,000, and it has been estimated that the field force for the Fourteenth Census will number from 85,000 to 100,000. The increase will be a normal one and will be no more than is necessitated by the growth of the country's population and industries.

The provision for the 15 statistical experts at the small salary of \$2,000 will, it is hoped, make it possible to obtain a grade of assistance which has been employed at every census and is necessary. It is not an innovation or a radical change. The only difference is that these employees were formerly classed as clerks and could receive a salary of only \$1,800. The small increase of salary is not more than sufficient to obtain the grade of ability required for the work, and in general the same statement may be made regarding all increases of compensation proposed in the present bill. They do not more than correspond with the general increase in salaries and wages which has taken place in the last few years. Any commercial or industrial organization which was prevented by law from paying any higher wages or salaries than it paid 10 years ago would simply have to go out of business, and the situation is not essentially different as regards the business of taking a census. The grade of assistance required for the work can not possibly be obtained without paying somewhat higher compensation than was paid in 1910.

QUESTION OF CENSUS DATE.

(2) As to the date of the census, January 1 was decided upon after conference with officials representing the Department of Agriculture, and the decision both of the census officials and of the department officials was unanimous in favor of that date. Dr. Pearl's statement that this is the worst possible date for a census of live stock is not supported by the testimony of other agricultural experts and perhaps rests upon a misapprehension regarding the real purpose of the census. In this connection the following extract from a letter written by George M. Rommel, Chief of the Animal Husbandry Division in the Bureau of Animal Industry, Department of Agriculture, and addressed to the chief statistician for agriculture in the Bureau of the Census, is of interest and is quoted with the permission of the writer:

I can not quite agree with Dr. Pearl that January 1 is the worst possible date that could be taken. I think that the date of April 15, from the live-stock standpoint, is absolutely the worst, because that is in the midst of the season when the young animals are being born. However, I do not believe it would be possible to get an ideal date. If you will recall, one reason why the representatives of this division agreed to January 1 was that the number of young animals was at a minimum and that this date coincided with the date used by the department.

I feel that the great necessity in the live-stock census at this time is to determine what is the actual breeding power of our live-stock industry. That we do not know at present. We simply have estimates, which are confessedly inaccurate. The fact that January 1 is an objectionable date for the reason suggested by Dr. Pearl and Dr. Wright makes it all the more necessary to have an accurate count of the breeding animals on hand on that date, so that we can distinguish between those animals which will enter more or less speedily into the food supply and those whose effect on the food supply is likely to be projected over one or two years. Of course, it is extremely important for us to know when the meat supply is likely to be for the next six months, but the supply which is available to-day is practically gone six months from now. It is much more important for us to know whether our stocks of animals on hand at this time are sufficient to give us a necessary meat supply a year or two years from now.

Whether more or fewer people are likely to be absent from their homes in January than in April is a question on which opinions may differ. But in any event the difference between the two seasons in that respect is not likely to be a material one.

The suggestion by the author of the minority report that the change of date was made for the purpose of forcing a bill through the present Democratic Congress, so as to avoid taking any chances on the next Congress, is not worthy of serious con-

ment. No one who has had anything to do with the framing of this bill ever thought of that, and, furthermore, no change of date was necessary for that purpose, because the legislation providing for the next census will have to be enacted by the present Congress even if the date of enumeration is changed back to April 15.

APPOINTMENT OF SUPERVISORS.

(3) Regarding the supervisors, since they are to be employees of the Census Bureau, it does not seem unreasonable that they should be appointed by the Secretary of the department of which the bureau forms a part and upon the recommendation of the Director of the Census, who will be finally responsible for the accuracy and completeness of the enumeration of which they are to have charge under his general supervision; and it is difficult to see how this method of appointment will lend itself to partisan politics or spoils any more readily than the method followed in prior censuses. But be that as it may, the primary purpose of this proposed change of method was not in any sense or degree political, but was simply to insure the prompt appointment of the supervisors in ample season for the efficient organization of their work. Referring to the last census, that of 1910, when most of the supervisors were appointed in August or September, 1909, Director Durand said that "the supervisors had scarcely time enough to prepare satisfactorily for the enumeration of their respective districts, * * * particularly in the country districts," where they "found a large amount of correspondence necessary for the perfection of the plans of division, and the time in some cases was too short for the completion of this work in a thoroughly satisfactory manner."

The author of the minority report speaks of turning "this army of 100,000 political appointees loose in the Nation in the presidential campaign of 1920." He seems to overlook the fact that if the census is taken in January, 1920, the supervisors and enumerators will have completed their work and been paid off and dismissed months before the presidential campaign begins.

IMPORTANCE OF TAKING A COMPLETE DECENNIAL CENSUS OF POPULATION, AGRICULTURE, MANUFACTURES, AND MINES AND QUARRIES IN 1920.

It may be taken for granted at the outset that there is no question as to the value, in normal times, of detailed census statistics regarding population, agriculture, manufactures, and mines and quarries, and that the only question to be considered, therefore, is that as to the wisdom and practicability of making the usual inquiries along these various lines at a time when the country is engaged in war or is passing through a period of transition from a war to a peace basis.

Population census: The enumeration of the population of the country is required by the Constitution to be made "within three years after the first meeting of the Congress of the United States and within every subsequent term of 10 years." (Art. I, sec. 2.) It is not understood that any question has been raised in regard to making an enumeration of the population along the usual lines in 1920. This branch of the decennial census will not, therefore, be discussed further.

Census of agriculture: It may be mentioned at the outset that, even though the need for agricultural statistics were not, as pointed out below, more urgent at present than in normal times, a potent reason for taking the census of agriculture in connection with that of population is found in the very great saving in cost—a saving amounting to more than \$4,000,000—which will result from the combination of the field work on the two censuses. This is because the field work is done by the same enumerators, at the same time, and is supervised by the same supervisors. Much of the time consumed by the rural enumerator is spent in traveling from farm to farm, and the time thus consumed would be precisely as great if he were taking a population census alone, or an agricultural census alone, as if he were taking a complete census.

Moreover, the supervision of the field force would be substantially as great a task in one case as in the other. It is true that in the larger cities the supervisors' districts include no rural territory whatever, and to this extent it might appear that a census of agriculture would cost somewhat less for supervision than a combined census of population and agriculture. The difference, however, would be slight, since it would be necessary to have skeleton organizations in the cities to look after the enumeration of live stock, including poultry and bees. Practically, therefore, there would be no material reduction in the supervision cost of a census of agriculture alone as compared with a combined census of population and agriculture.

But, aside from the matter of cost, the need of up-to-date data in regard to all phases of agriculture is actually greater in abnormal times like the present than in normal times. Changes in agricultural conditions in the United States are taking place rapidly, and it is important for the country to know just what these changes are, especially with reference to live stock, grain

crops, and crops for export. The Department of Agriculture issues monthly and annually estimates of acreage and production of leading crops and of numbers and values of live stock. These estimates, however, are not independent of the census figures, but are based primarily upon the accurate and reliable data secured from individual farmers by the Bureau of the Census once in 10 years. Crop estimates are made in the following manner: Crop reporters employed by the Bureau of Crop Estimates throughout the country send in their estimates of the percentages of increase or decrease in acreage and in crop conditions as compared with those of the preceding year. An average of the percentage estimates is then made, and the figures representing the estimates for the preceding year are increased or decreased accordingly to obtain the estimates for the current year. Thus, when eight years have elapsed since the last census, the estimates are the product of a compounding of eight estimated percentages of increase or decrease, each with its possibility of error. It is obvious, therefore, that these estimates—which are without question the best that can be made under the conditions existing—can not be expected to provide a reliable substitute for an actual census.

It is an admitted fact that neither any private interest nor any branch of the Government service has any intelligent or accurate knowledge of the number and location of the live stock in the United States at the present time. Large numbers of horses and mules have been shipped abroad for war purposes, as well as many cattle for feeding the armies and the civil population of the allied countries. The demand for live-stock data, and especially data as to live stock for food purposes, will increase as the war progresses. In this connection it may be mentioned that the Food Administration is now anxious to have a census of live stock in the United States.

All plans and calculations in regard to handling and transporting food supplies must be based upon estimates of production, and estimates of production in turn must be based upon census figures. The importance of these figures in times like the present can not be overemphasized. It is worthy of mention here that the Thirteenth Census act provided for a mid-decennial census of agriculture, restricted in scope as compared with the decennial census, to be taken in 1915 and at 10-year intervals thereafter, but that this provision of law was repealed. If such a census had been taken in 1915 many of the difficulties now besetting the Food Administration would have been avoided. It is to be hoped that there will be no repetition of such false economy.

In the case of the field work for the census of agriculture, since a farm-to-farm canvass must be made in any event, there would be comparatively little saving in cost if the inquiry were restricted in scope so as to cover only the items of information especially needed in connection with the conduct of the war—assuming the war to be still in progress when the census is taken. If, by narrowing the inquiry so as to make it comprise only, say, one-third as many items of information as are obtained at a normal census of agriculture, it would be possible to reduce the expense involved and the time consumed to only one-third of the normal, it might perhaps be a wise thing to do so if the country should still be at war. In practice, however, the saving in time and expense thus effected would be very much less than the proportion indicated by the shortening of the schedule, and would not be great enough to justify the loss of valuable information that would result from such a course.

A census of agriculture at this time would clarify the food situation as no other single act could do. There is an impression in the minds of some that a recent census of food supplies has been taken by the Department of Agriculture. This is not the case. That department has made, it is true, a food survey. This, however, was not a food census, in that it by no means covered the entire food supply of the country, especially that in the hands of the farmers. An agricultural census will really be needed at the end of the current year, and if the war continues its need will be no less pronounced a year thereafter—that is, at the beginning of the year 1920. In fact, in war times a country has pressing need every year of reliable data as to all classes of agricultural products. If, on the other hand, the war shall have come to an end before 1920, the need of an agricultural census will be at least as great as in normal times. To state the matter in another way: If the war shall have come to an end before January 1, 1920, there will exist at least the usual degree of need for an agricultural census; and if the war is still in progress the need will be greater, not less, than usual. The continuance of the war, therefore, if the war does continue that long, is a reason for, not against, the taking of an agricultural census in 1920.

It may be mentioned here that an accurate, detailed census covering agriculture and certain other aspects of the life and

industries of the people has been taken by Germany within the past three years. It would be bad policy for this country to overlook the importance of a census of this character, the value of which, from both an economic and a military standpoint, is so well understood by that nation which for more than 40 years past has made preparation for war, and war itself its chief business.

The importance of the agricultural census as a basis for the activities of the Department of Agriculture must not be overlooked. The crop estimates have already been mentioned. In addition, the department makes estimates as to live stock and live-stock products, based primarily on the data obtained at the last decennial census. But the census figures are of use to the department in numerous other ways as well. Many of the intensive and practical studies made by it are carried on and rendered comparatively simple and easy through the use of census figures. By means of the data supplied by the Bureau of the Census the department's experts are enabled to solve some of their most difficult problems and present their solutions to the public with the assurance that their conclusions are correct and unassailable. In fact, a very large part of the work of the Department of Agriculture—which is acknowledged by all to be one of the most useful and progressive governmental agencies—is based upon data collected, compiled, and published by the Bureau of the Census.

It is a matter of interest in this connection that the products of the farms of the United States in 1909 (making no allowance for such duplication, the amount of which could not be ascertained, as resulted from the feeding to live stock of a part of the crops, the value of which was included in the total value of crops reported) had an aggregate value of something like \$8,500,000,000, or substantially the same as the value added to raw materials by the manufactures of the country in that year; and the total value of farms, buildings, live stock, and implements and machinery amounted to nearly \$41,000,000,000. At the present time, of course, in view of the increased production and of the greatly increased prices, the value and output of American farms represent very much greater sums than these.

The cost of the next census of agriculture, estimated at \$6,049,000 if taken as a part of the regular decennial census, will be equal to only about one-fourteenth of 1 per cent of the value of farm products reported at the last census, and only a little more than one-seventieth of 1 per cent of the total value of farms, live stock, buildings, and implements and machinery, and will represent considerably smaller proportions—less than one-twentieth of 1 per cent and less than one-hundredth of 1 per cent, respectively—of the values of farm products and of farms and their equipment in 1919. Surely an inventory costing only \$1 in every \$10,000 of the value of the stocks inventoried is by no means an extravagance in times when so much depends upon having it made, and made properly.

Censuses of manufactures and of mines and quarries: What has been said as to the need of up-to-date statistics of agriculture applies with equal force to manufactures and mining. It is true that a census of manufactures has been taken since the last decennial census, so that our statistics on this subject are more recent than those pertaining to agriculture. Nevertheless, in view of the radical and revolutionary changes which have taken place since December 31, 1914, the close of the year covered by the last manufactures inquiry, the statistics derived from that inquiry are of little more value for the purpose of portraying present-day conditions than are those derived from the last census of agriculture, which covered the production of the year 1909.

The need for statistics of certain groups of raw materials used in manufactures, and of certain manufactured articles derived therefrom, is so great that the Bureau of the Census has recently undertaken, at the urgent request of a number of the war agencies, a canvass of stocks on hand of these raw materials and manufactured products. It is the desire of the war agencies that for certain commodities—leather, for example—the canvass be repeated at monthly intervals throughout the period of the war, and for other commodities quarterly statistics are desired.

The inherent value of industrial statistics is now so great and so well recognized as to need little explanation. Not only are such statistics useful from the sociological and educational standpoints, but they have a pronounced practical commercial value as well. At the present time most large industrial organizations have established statistical divisions, whose duty it is to bring together all available data pertaining to the respective industrial classifications to which the establishments belong. So far has this use of census statistics progressed that not infrequently large manufacturing concerns have changed entirely

the plans of their selling campaigns as the result of the study and application of the data contained in the census reports. Manufactures statistics are also much in demand by chambers of commerce, boards of trade, and other trade organizations.

Industrial statistics are thus of very great importance and value in times of peace, and when the country is at war and its entire industrial fabric has undergone so many and so radical changes it is of far greater importance than usual to have available a reliable inventory of its resources.

If the war shall have come to an end before the census is taken it will be highly important to have statistical information as to the basic facts in regard to our industrial organization at or about the close of the war, which will then be in a highly unstable condition, to serve as a guide for an intelligent return, made with as little friction and derangement as possible, to a peace basis. The shift from war to peace will be in some respects more sudden and violent than the shift from peace to war; and if Congress and those in control of the country's important industries are to be able to legislate intelligently and plan intelligently for a return to normal conditions, it will be necessary for them to have access to reliable data on which to base their legislation and plans.

It may be remarked that in the case of the censuses of manufactures and of mines and quarries, as in that of the agricultural census, the extra cost of securing the information in the customary detail, as compared with that of obtaining merely the data needed for war purposes, will be comparatively slight, since in any event it will be necessary to send a considerable number of special agents into the field to visit those establishments from which satisfactory reports can not be secured through correspondence, so that there will be no good reason for limiting the inquiries strictly to the items of information needed for war purposes.

In regard to the mines and quarries inquiry, arrangements will be made, as heretofore, between the Bureau of the Census and the Geological Survey for the conduct of the canvass in such a manner as to avoid duplication of work. It should be borne in mind that the collection, compilation, and publication of statistical data constitute only a small part of the Geological Survey's work. The only statistics published by the survey which in some measure parallel those derived from the census inquiry relate to the quantities and values of mineral products, whereas the census statistics cover such matters as number of establishments, wage earners, wages paid, capital invested, hours of labor, and so forth. Moreover, such parallelism as exists in this respect is not continuous, since the survey's figures cover certain commodities derived from minerals by simple manufacturing processes, which commodities are treated by the Census Bureau as manufactured products.

Enhanced value of agricultural and industrial statistics if secured at the same time as those of population: A particular reason for taking a complete census in 1920, along the usual lines, is found in the enhancement of the value of the agricultural and industrial statistics which results from their comparison with population statistics through the medium of accurate per capita figures. The difference between correct per capita figures and those based on censuses taken at different times is somewhat like the difference between a panoramic photograph of a number of groups of individuals, taken at one time, and a set of photographs, one of each group, taken at different times, the individuals within the groups having meanwhile shifted with reference to each other, although the relative positions of the groups themselves have remained unchanged. It is obvious that the first photograph would afford by far the better picture of the relations and interrelations between these groups and their component individuals.

It may be mentioned here that a census of agriculture has been taken in conjunction with each decennial census of population, beginning with that of 1840; that a census of manufactures has accompanied each population census, beginning with that of 1810, with the single exception of the census of 1830; and that an inquiry in regard to mines and quarries has been made as a part of each decennial census since and including that of 1840, with the exception of the census of 1900, following which, in 1902, an interdecennial census of mines and quarries was taken.

Use of census statistics by governmental agencies generally: The use made of the census statistics by the Department of Agriculture has already been pointed out. The bureau's reports along other lines are also of great value to many other governmental agencies in connection with their work. The population statistics in particular are put to use by practically all branches of the Government service, and the reports on the other census topics—not only those embraced in the decennial census but the quinquennial and annual inquiries as well—serve as a basis for

Federal and State legislation. In fact, it may be said that the census figures form, in large measure, the statistical foundation of a large part of the Nation's governmental activities.

No duplication between census work and that done by other governmental agencies: It should be understood clearly that there will be no duplication between the work of the Census Bureau and the statistical work done by other governmental agencies. It has already been pointed out that the crop and live-stock estimates made by the Department of Agriculture are based upon census figures and could not be made without them; also, that arrangements will be made between the Bureau of the Census and the Geological Survey for the conduct of the mines and quarries inquiry in such a manner as to avoid duplication of work.

The work of the Census Bureau does not in the slightest degree duplicate that of the Bureau of Mines, which is nonstatistical in character, being limited mainly to such matters as investigation of methods of mining, prevention of accidents, improvement of conditions under which mining operations are carried on, tests and analyses of mineral fuels, and other technological investigations.

The numerous inquiries conducted by various war agencies and other organizations during the past year have been made because census data covering the same ground were not available or related to a period so long past that they were of little or no value as affording light upon present conditions. It goes without saying that none of these emergency inquiries which would duplicate the census work will be made in 1920.

Summary: The need for complete statistics along all the usual census lines has been increased, rather than diminished, by the fact that we are at war. If the war is still in progress at the beginning of 1920, therefore, there will be no reason for curtailing the census, but on the contrary there will be still greater reason for taking it as usual. In fact, as bookkeeping is essential to the success of any business, and as in times of stress it becomes still more essential, so are industrial statistics essential to the success of a nation engaged in the tremendously important business of war. And when the war is a life-or-death struggle of liberty and civilization against autocracy and scientific barbarism a complete victory must be achieved; and it would be exceedingly poor policy for that nation to neglect the making of suitable inventories of its resources in personnel and matériel.

If the war shall have come to a close by 1920, the need of the census statistics will be at least as great as usual, if not greater, by reason of the fact that by portraying the abnormal industrial conditions then existing these statistics will aid in an intelligent return, with a minimum of friction and confusion, to a normal status.

Since it will cost more to take the census by piecemeal than at one time, a complete census should be taken in 1920. A further reason is found in the increase in the value of the agricultural and industrial statistics which results from making them accurately comparable with population statistics.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. BROWNING,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 21, 1918.

Mr. BROWNING. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article from the Washington Post of yesterday on the military record of Gen. Barnett, United States Marine Corps.

The article is as follows:

UNDER FIRE FOUR TIMES—GEN. BARNETT FOUGHT IN SPANISH WAR—WITH TROOPS 37 YEARS.

EDITOR OF THE POST: During the debate in the House of Representatives yesterday on the Senate amendment to the naval appropriation bill, giving to the major general commandant of the Marine Corps the temporary rank of lieutenant general during the period of the war, it appears from the CONGRESSIONAL RECORD that Representative KEATING stated that the commandant of the Marine Corps, Gen. Barnett, was never under fire, and that while he would vote to confer any rank within reason upon the men who are doing the fighting in France, that he insisted that they be recognized first before "rocking-chair warriors" be given high positions, and that there had been a determined effort started by the commandant of the Marine Corps to get in the amendment making him a lieutenant general.

As a matter of fact, Gen. Barnett has had a total of 41 years' service, of which 4 years only have been spent on duty in an administrative position in Washington, while more than 38 have been at sea and on foreign service.

Gen. Barnett was appointed a midshipman at the Naval Academy in 1877, graduated in 1881, spent two years at sea, and was appointed second lieutenant in the Marine Corps in 1883. From 1883 to 1914, in which latter year he was appointed major general commandant of the Marine Corps, his service was entirely that of a line officer on duty with troops in the Marine Corps, being exactly the same duty as any other line officer of appropriate rank from second lieutenant to colonel. During these long years of service he has served practically at every post, both at home and abroad, in the Marine Corps, and, in addition, on board the following ships of the Navy: The *Pinta*, the *Iriquois*, the *Vermont*, the *San Francisco*, the *New Orleans*, the *Chicago*, the *Solace*, the *Kentucky*, and the *Wisconsin*.

The statement that he had never been under fire is refuted by the official records which show that during the Spanish-American War he was under fire four times while in command of the marine guard of one of the vessels of the Navy.

From 1910 to 1914 he was in command of the advanced base force of the Marine Corps on the east coast, and as regimental and brigade commander during this period he participated in three expeditions out of the United States.

The statement that he lobbied to secure the Senate amendment giving him increase in rank is erroneous, as the Senate amendment to confer this rank upon him was inserted in the naval appropriation bill by the Senate Committee on Naval Affairs without his knowledge, and was as much a surprise to him as to anyone else.

Practically all of Gen. Barnett's service, prior to his appointment as commandant of the Marine Corps, has been line duty with troops, and so far as the records show he has never held a staff appointment, and 37 of his 41 years of service have been on duty with troops and not in any way connected with Marine Corps headquarters.

He is at the present time a line officer, detailed for a certain period as commandant of the Marine Corps, and this detail was made by the President solely by reason of the excellent record made by Gen. Barnett in his capacity as an officer of the line while in command of troops of the Marine Corps.

He holds the Sampson medal and the West Indies and Cuban pacification campaign badges.

EXTENSION OF REMARKS

OF

HON. JOHN A. ELSTON,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 21, 1918.

On the League for the Protection of American Prisoners in Germany.

Mr. ELSTON. Mr. Speaker, in order to promote wider knowledge of a movement originated by loyal women of Berkeley, Cal., and now spreading throughout the Nation with wonderful rapidity, I beg to trespass on the time of the House for a brief period. So far as I am informed, Mrs. John Snook, of Berkeley, conceived the idea only a few months ago of the League for the Protection of American Prisoners in Germany. Since then it has grown into a Nation-wide organization. I can best give the objects of the league by quoting, as follows, from the literature which is circulated with its pledge card, viz:

The League for the Protection of American Prisoners in Germany asks the women of the United States to join in their task of protecting from indignities and insults American soldiers in German prison camps. Do you know what the allied prisoners have endured? Have you heard of crucifixions, of atrocities, of mutilations unmentionable?

Do you believe that our boys will escape what others have endured?

Let us take no chance.

Germany's first problem after the war will be an economic one.

The action of the women would be the final word.

Where there are no purchasers there can be no sales.

The League for the Protection of American Prisoners in Germany proposes to pledge the women of America and their daughters not to purchase German-made articles after the war if any American prisoners of war receive other than humane treatment at the hands of Germany.

Our league believes that a movement of this character among the women of America will impress upon the rulers and people of Germany the enduring and effective resentment that will avenge any barbarities inflicted upon American soldiers, and will add untold weight to any international agreement between the United States and the enemy. Official contracts with Germany may in the future, as in the past, be mere scraps of paper, but the unofficial covenant of American women for two generations will be written in the heart.

Our verdict will not depend on anything but the officially acknowledged word of men released from prison camps.

The league does not wish its pledge signed lightly.

It would rather have the signature of a few earnest women who mean to stand by their pledge than the meaningless list of thousands of names signed carelessly.

The necessity for such a movement as the league has undertaken will hardly be questioned by anyone who has even a superficial knowledge of the treatment accorded prisoners of war in German camps; your assistance and cooperation in the work of the league will go far toward accomplishing the end of safeguarding our boys at the front.

Possibly we may not accomplish all that we have undertaken; but we want our sons, our husbands, and our fathers to know that we are behind them to the last moment—in the trenches, on the battle field, and in that limit of all horrors, a German prison camp—that staying at home while they daily face a hell on earth we are not forgetting them. Doing this, when the war

is over we can at least say, "We have done our best; we have left untried nothing that might have helped our boys." More than that it is not possible for human effort to accomplish.

By signing the pledge submitted to you you become a member of the league for the protection of American prisoners of war in Germany, and informally promise to cooperate in its work, to assist in increasing its membership, and to spread its gospel by exerting such personal influence as is possible for you to do.

To be effective the league must have a membership enrolling every woman in the United States; hand must touch hand across the continent, and in every tiny village, as well as in the great cities, mothers, wives, and daughters must see to it that there is no weak link in the chain.

Absolutely no financial obligation is assumed by becoming a member of the league beyond the voluntary offering of 10 cents, which constitutes the fund by which the league may "carry on."

The pledge recites that the signer pledges herself to refrain from buying German-made articles after the war if American prisoners of war receive other than humane treatment at the hands of Germany. It is conceived that if the German military rulers are not amenable to conscience, good faith, and humane feeling, they will at least pause at the prospect of trade retaliation on the part of the women of America.

The national headquarters of the league are located at No. 2437 Telegraph Avenue, Berkeley, Cal., and the present officers are as follows: President, Mrs. John Snook; vice president, Mrs. Charles Mills Gayley; treasurer, Mrs. Charles E. Bancroft; secretary, Mrs. J. U. Calkins; assistant secretary, Miss Margaret Cooley.

EXTENSION OF REMARKS

OF

HON. JAMES B. ASWELL,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 22, 1918.

Mr. ASWELL. Mr. Speaker, under leave to extend my remarks I print the following letter on the pending census legislation, which presents the matter accurately and forcefully:

WEST VIRGINIA UNIVERSITY,
Morgantown, W. Va., May 20, 1918.

MY DEAR DR. ASWELL: I have just had opportunity to read over the hearings before the Committee on the Census on a bill to provide for the fourteenth and subsequent decennial censuses. Realizing that you are a member of that committee, and knowing that you will remember me and my general knowledge of census work, I am writing to you with reference to several points which it seems to me deserve special attention at this time.

The first question in my mind, and one which seems to have been brought up again and again at the hearings, is the matter of legislation now or at a later date. I am sorry to feel that any leading American citizen has not been converted on this matter of foresight and preparedness. Surely we have had enough of difficulty because of our proneness to put things off to the last minute. The American seems in words, if not in deeds, to have rewritten the old adage, "Never put off until to-morrow what you can do to-day," and our policy seems to be "Never do to-day what you can put off until to-morrow." Our present status in the terrible war is a concrete illustration of our policy. The last census is as good an illustration. Necessary legislation at the last census was not finally approved until after the census period had begun. The result was congestion, changes, error, and experiment. During the first half of the census period orders changed from day to day. Reverses and new instructions, which you know, even if it does not appear in the public press, is the one vital thing which has left our aeroplane program where it is to-day. Unless necessary legislation is passed now, the Census Bureau will be forced to go through the same experience again. Results will not be as prompt; they will not be as accurate; duplications and changes in instructions, in plans, and in other matters will cost the Government an extra million or two millions of dollars. The people of the country will blame the Government for its inefficiency. I might write at length pointing out in detail that this legislation is as thoroughly war legislation as it is peace legislation. Surely members of the committee know that, in spite of war, Germany has during the last three years taken an accurate, detailed census of agriculture, as well as of other phases of the life and industries of the people. And so with other nations. Even this country has spent many hundred thousands of dollars making superficial surveys which only approximate the truth. This is necessary because of the lack of accurate census reports of recent date. Had the agricultural census of 1915 been taken, as originally contemplated, it would have been worth to this country many times its cost, and yet we hesitate. I said above that large numbers of surveys, which only approximate the truth, are being made, and doubtless more will be made and must be made. Together they will cost many times the cost of an accurate, complete census. In the State where I now live the National Government made a sudden call for a survey of the status of farm operations a few months ago. The cost was almost equal to the cost of an accurate census of the State; and yet, because of haste and the absence of organization and preliminary preparation, the reports from only 10,000 farms could be used. Since there are in the States almost exactly 100,000 farms, according to the best estimates, the results secured were multiplied by 10 in order to get some sort of an approximation of the present situation. The results were, of course, worth much. They were far better than nothing, but they may vary in the case of individual crops, types of live stock, or products as much as 5, 10, 15, or even 20 per cent too high or too low. The margin of

error is from 20 per cent too high to 20 per cent too low in individual items. The best that can be claimed is that the figures show the tendency. For instance, it showed definitely the tendency to increase corn acreage and decrease wheat acreage in certain sections in spite of propaganda, the farmer realizing that he could secure a yield of corn double the yield of wheat from an acre, and enlightened self-interest, which is synonymous with patriotism, prompted him to go against propaganda. It showed the distinct upward movement in number of sheep and no accurate measure of extent. So I might go on at length pointing out the necessity for immediate legislation, but the sentiment of the committee now seems to be favorable to early action. I am stating the above more to urge upon you the desirability of fighting for the legislation on the floor of the House and prevailing upon your colleagues from Louisiana to actively work for this legislation in the Senate.

There seems to be some uncertainty in the minds of the few as to the best date for the next census. Every possible consideration was given to all different dates when January 1 was decided upon. Taking the country as a whole, the month of January is the best time to collect data. More people are at home. It is closer to the close of the year's activities—in this case, the agricultural and industrial activities of 1919. Gathering data, beginning January 1, will give the bureau five or six months of start in tabulating, thus giving the Nation the benefit of the results five or six months earlier. From the standpoint of agriculture and the Nation generally, this is the best time in the year to secure 75,000 or 100,000 enumerators for two or three weeks. Trading is reduced to a minimum and thousands of clerks are available. Other thousands of college boys can better be absent from schools for two or three weeks than at any other season of the year. During the summer they wish a full summer job and not a two or three weeks' job. Tons or even hundreds of thousands of farm boys of the highest type are less busy at this time of year and available for three or four weeks at a minimum of cost. At this season of the year also the field force can be organized with the least disturbance to agricultural and industrial life and with the least cost to the Government. At the same time more accurate data will be secured because of the type of employees available.

I noted much in the hearings with reference to cooperation with other Government bureaus and departments. A sufficient illustration with reference to the fact that at the last census several employees of the Department of Agriculture were transferred to the Census Bureau and even put in charge of important pieces of work, and were in turn transferred back to the Department of Agriculture, and hold responsible positions at this time. The same may be said with reference to cooperation with other bureaus and departments.

Much has been said with reference to the necessity of a census, because, in the minds of some, guesses, estimates, and approximations seem to suffice. I could draw a thousand illustrations of the point that the blunders, errors, and misfortunes of our Government and our people are the direct result of depending upon guesses and approximations. There is no question but that the reports of the United States census are the best in the world. I think you know that I have personally visited some 15 or 18 countries and have personally inspected their census methods and census reports. I can therefore speak, not from hearsay or guesswork, but from first-hand knowledge. Ours is not so detailed as some. In some countries the census of cattle, for instance, would show especially the number of Jerseys, Guernseys, Holsteins, Ayrshires, etc. Similarly, they would show the number of different varieties of apples. In other words, some countries go much more into detail. In this country we have left it for the Office of Farm Management to study typical sections in detail; we have left it for the Bureau of Markets to study details along other lines; and we have left it for the Bureau of Crop Estimates to take up still other matters. At the present time the Food Administration is giving attention to matters of storage, etc. In some countries the census reports reach out into a far broader field than here, but none is more thorough in its field and none is as accurate as ours. While on this point let me give you a simple illustration of the value of this accurate census. In 1910 figures were published for a county in Illinois. A Member of Congress was sure that he knew more about agriculture in that county than did the Census Bureau. The census report showed a falling off in land under cultivation. He insisted that there were large increases on account of drainage projects, etc. The whole matter was reworked at his request, and after he examined all of the facts in the case he found that cities were expanded and using agricultural lands. Interurban lines were taking rights of way, the result being that there was an actual decrease. His personal knowledge of the situation and familiarity with details there still led him astray. So I could give hundreds of other illustrations of this type.

The question has been raised as to the desirability of a full and complete census versus an abbreviated, bob-tailed census. I feel that it is my duty to strongly urge a complete census. The results will make the cost absolutely insignificant. In many cases there will be an actual decrease in cost because of securing details. If you ask a farmer how many fruit trees he has he must stop and add together the apples, peaches, pears, plums, cherries, etc. How ridiculous it would be to stop there on the farm and make additions and calculations and after getting the total have your figure quite useless. Much more accurate data will be secured by asking a farmer the number of dairy cows, calves, etc., than by merely asking the total number of cattle. My years of experience have absolutely convinced me that more accurate data will be secured by asking details than by asking a small number of general questions. And the details are more important than the totals. Then, again, it would be most unfortunate to have one of the decennial censuses a mongrel from the standpoint of future work when comparisons showing tendencies and numbers will be wanted. Ten or 20 years from now we will look back and say, "What fools we were!" Then, too, we should remember that there is constant shifting in agriculture as well as in population and industry generally. New areas of land are being brought into use, new cities are being developed, and new industries are appearing. At the same time there is falling off in old areas. It is suggested by some that the bureau ask only acreage in crops. That would leave us to guess the quantity produced. Yields are changing, going down in some sections and going up in others. It is of fundamental importance that these be accurately secured and compiled at least once in five years. How unreasonable to send a field agent a mile to visit a farmer, using the best part of an hour to get there, and then allow him to omit a question which could be answered in a minute and which may be so fundamental. During the last decade—in fact, in a year—new industries appear like mushrooms, as pointed out to you by Secretary Redfield. The same is true in agriculture. I would like to deal with this at greater length than is possible in a letter. There will come up in your own mind such crops as alfalfa, soy beans, velvet beans, feterita, durra, milo, etc. Some of these have increased many, many thousand per cent in 10 years, having jumped from local experi-

ments to crops of national importance. The by-products from some of these now equal in value some of the crops formerly considered of great national importance.

Just one more point, but one which really gives me some concern, and that is the matter of securing an efficient, interested staff of workers. In the past there has been some criticism in the United States to the fact that some large enterprises, such as insurance companies and railroads, absorb too large a percentage of their funds in overhead charges. The opposite criticism can and should be made of the organization of the Bureau of the Census. No enterprise as important as the taking of the next census would be handled by any competent business man without putting three or four times as much in a large number of higher paid directing and supervising positions. I notice that no increase is proposed in salary for the Director of the Census for a period of 20 years. Even in 1900 the Director was paid \$7,500. I can readily understand why members of the staff of the Bureau of the Census, including the Director, are loath or hesitate to ask increases for their own salaries. It opens them to the charge of trying to feather their own nests. Many, in fact most of them, prefer to get out rather than do this. You will recall that I, myself, was receiving the maximum salary for statisticians when only about 30 years old and that I left the bureau realizing that I had reached the top and would stagnate the rest of my life and was not willing to go before a committee of Congress and beg for an increase of a few cents or a few dollars. Commission after commission has been created in the last five or ten years, with as many as five or seven members, each drawing a salary of \$10,000, and probably no one of these commissions has a larger total responsibility than this bureau during this one period. The same may be said with reference to the Assistant Director. In 1910 he was paid \$5,000, and now, with men of the caliber needed receiving 50 to 100 per cent increase over this in the busy outside world, the bill which has just come to my attention, dated May 8, calls for an Assistant Director at \$4,500. No business man of ability can be secured for this amount. No leading professor, even from a big university, trained in statistics and economics, would think of giving up permanent positions with larger salaries for a three-year appointment at such a salary as this. The same can be said of the statisticians. You can not hold statisticians at \$3,000. The rest of the world has moved on. Friends of mine in this type of work serving individual manufacturing enterprises or individual insurance companies or individual transportation companies seldom draw less than \$5,000 and many others have salaries of \$12,000 and \$15,000. I wish opportunity presented itself for me to bring more forcefully before you, more than is possible in a letter, the necessity for providing a directing force which will work to the limit, giving every minute of their time toward carrying out this perfectly immense task promptly and thoroughly. The Director should have not less than \$10,000, the Assistant Director not less than \$7,500, and the statisticians certainly not less than \$5,000 or \$6,000. This is especially true of those employed in connection with that part of the census which deals with the three great, in fact, tremendous, divisions of work imposed upon the bureau during the three-year period. I refer to population as one, agriculture as a second, and manufacturing, mines, etc., as a third. Of course, vital statistics, municipal statistics, etc., are annual investigations and are not materially changed because of this immense undertaking. I feel it my bounden duty to appeal to you to secure an opportunity, either in committee or on the floor of the House, to provide adequate salaries and to insist upon immediate legislation providing for a full and complete census.

Please feel free to call upon me at any time if there is any point upon which you feel should be substantiated or if there is any matter concerning which you think I can be of any service to you.

With best personal regards, I am,
Sincerely, yours,

JOHN LEE COULTER,
Dean and Director.

Hon. JAMES B. ASWELL,
House of Representatives, Washington, D. C.

EXTENSION OF REMARKS OF HON. HENRY I. EMERSON, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 24, 1918.

Mr. EMERSON. Mr. Speaker and Members of the House, I am in favor of this fortifications bill and shall vote for it. We are in this war, and we might as well go the limit and appropriate all the money necessary to provide our soldiers and sailors with all the necessary equipment and munitions. No citizen of the Republic desires to retire from this war in dishonor. We must put every ounce of energy we have into the successful prosecution of this war.

The people of this Republic are now thoroughly aroused and are standing loyally behind the Government. The figures mentioned in this bill are large, extremely large, but we will be rewarded for every dollar we spend in the prosecution of this war in the good it will do this country for ages to come. In the first place we will Americanize this Nation. We will solidify the people of this country. We will make the Nation more efficient. We will be at the close of this war the greatest industrial and commercial Nation in the world. We will be more than that, we will lead all nations in all that is good for the welfare of the people. I have stood by my country and its President from the very beginning of our trouble with the Kaiser and I propose to vote for each and every measure that has to do with the successful prosecution of this war.

This bill meets my hearty approval, as I feel the only way to talk to the Kaiser is through the mouth of a cannon.

Addresses Delivered at the National Press Club, Washington, D. C., on Saturday Evening, May 11, 1918.

EXTENSION OF REMARKS

OF

HON. JULIUS KAHN,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 24, 1918.

Mr. KAHN. Mr. Speaker, availing myself of the privilege granted me to extend my remarks, I take pleasure in submitting the official report of the addresses delivered at the National Press Club, Washington, D. C., on Saturday evening, May 11, 1918. They are as follows:

ADDRESSES AT NATIONAL PRESS CLUB, WASHINGTON, D. C., SATURDAY EVENING, MAY 11, 1918.

INTRODUCTION BY MR. GUS. J. KARGER, PRESIDENT OF NATIONAL PRESS CLUB.

Gentlemen, the handbills have informed you that we are putting on a double-header this evening. This is to be a red-letter night in the history of the club, a red-letter night because of the presence here of Lord Reading, ambassador to the United States of the British Government and the British people, who in the hour of their greatest peril and greatest trial, with their backs to the wall, are making the most gallant fight in the history of men, that liberty may not perish from the earth—dogged, resolute, with lines unbroken and invincible in the righteousness of their cause. It is a red-letter night also because we have with us America's best-beloved private citizen. [Applause.] You seem to know whom I mean and to approve of the characteriza-

tion. I will name him—William Howard Taft, whose occasional visits to the National Press Club will ever be to us a source of sincere pleasure. It is a red-letter night also because we are honored with the visit of these distinguished members of the British mission, to whom we extend a cordial welcome. I knew of no more fitting way to do honor to Mr. Taft, to Lord Reading, and to ourselves than to invite Prof. Taft to function to-night as president of the National Press Club. He has had previous experiences in "presidenting," most of them pleasant, but he has never been president of a press club. And I hope he will regard this honor as one of the crowning distinctions of his great career. It is unnecessary to draw lavishly upon adjectives in presenting Mr. Taft to this assemblage. He is so firmly established in our affections, and he must know it so well, that it is unnecessary for me to carry to him assurances or protestations. I would present him to you, gentlemen, as a patriotic citizen of the Republic, proudly doing his part, and who through his connection with the War Labor Board is destined to perform a public service fairly comparable, I believe, with that of a general victorious in battle.

Gentlemen of the National Press Club, the honorable William Howard Taft.

ADDRESS OF MR. TAFT.

There is something in sacred history about somebody offering something on a high mountain that he did not have, but I accept the presidency of the Press Club. I accept it as far as the grantor has any title in his despotic reign of to-night, and accept it with great pleasure in presenting to this club the ambassador from England, the Lord Chief Justice of England, Earl Reading. I consider it a great honor to be permitted on behalf of the National Press Club to welcome this great jurist, this great statesman, this great patriot, the successor, and worthy successor, of Lord Mansfield, uniting what I am bound to say are unusual qualities—that of being a great chief justice, a great statesman, and a great diplomat.

We have one instance in our own country where we called upon the services of one of our Chief Justices to act as ambassador to England. He who made Jay's treaty was, at the time he made it, Chief Justice of this country. But I know that the present Lord Chief Justice of England, when he goes back to his home, will have a reception far different from that which was accorded our Chief Justice when he came back to this country.

I count it a special honor and privilege to be able to introduce a Lord Chief Justice of England. Educated as a lawyer, saturated with respect for the growth of the common law and the principles of liberty that were worked out through its operation, I have looked up all my life long with profound regard and affectionate respect to the English judiciary. Denied any opportunity to come into contact with them personally, it was a

part of my pleasure, on account of my study, to acquaint myself with their character through their judicial opinions. And I am bound to say that in no country can you study the character of judges from their opinions as you can from the opinions or judgments of the English judges. They manifest their individual spirit, they show their character, in what they say. What they say as their judgment is the expression of the moment. It is not a carefully drawn, soporific exhibition of judicial learning. It is a statement that comes as a spark comes from an anvil. And so there is pleasure in reading those judgments. And with a respect founded upon that kind of an education, you can understand what pleasure and honor I feel in standing on this platform with a Lord Chief Justice of England. Of course, that is personal and perhaps ought not on this occasion to be brought forward, but I can not help it. When you are forced into a situation by having a friend in power you can not avoid being personal, and then, when you know Lord Reading and come into contact with him, his personality requires it. And there you are! Now, his coming here is, of course, an evidence of the good will of the man, the good will of the great country he represents, and the desire to recognize a courtesy by the press of the United States. And I am going to seize the opportunity to say a word that doubtless has been said at times, but which at this moment is appropriate to say.

The work which Great Britain has done in this war is something that we can not appreciate or estimate. We are in comfort; we are in luxury; we have lost comparatively few men; we have not been in the valley of the shadow of death as Great Britain has been. And we who owe our liberty to Great Britain—I mean our liberty in the sense of understanding what real constitutional liberty is—we who are the inheritors of liberty hammered out by a thousand years of struggle, may well have a filial affection for Great Britain and a filial admiration for her in that struggle that she has been carrying on for now four years, giving of her life blood and of her treasure in our behalf as well as in behalf of the rest of the world. So much courage has been displayed by all countries in this war that it is invidious to institute comparisons; and I would not do it. But here, to-night, I am irresponsible; I can say anything I please, and I may express my real feeling; and it is a feeling that is stirred up by insinuations, by efforts to create a prejudice and an unjust feeling against Great Britain in our great country of a hundred million people, that makes me want to-night to say what is the fact.

England, Great Britain, rid the world of the greatest military conqueror the world ever saw, and she did it by sacrifice and holding on. Think of the tragedy of Pitt going down to his death after Austerlitz, believing that all was gone. But the British lion and the British bulldog remained in those who were left, and in the end St. Helena told the story of British pertinacity and British determination to stand up for civilization and against tyranny and world domination. And her function in this war is the same. We in this country owe it to her to have her know that we are back of her and our other allies in this fight to the end. And those who by insinuation against Great Britain, Irish or others—I do not care who they are—would seek to divide this country in backing up England, whatever they intend, are traitors in effect. When we are fighting with another we stand by them. If we do not, we do not know what fighting is; we have not the game spirit; we do not understand the object. The poor fools who, as some one has said, are affected by the treason of misdirected emphasis, are like the Bolsheviks, seeing before them the division of land and social reform, make a treaty of peace, and gave up the army before they made it.

Now, I constantly forget that I am introducing an ambassador. He has a delicate position to occupy, and therefore he is not responsible for me—I am irresponsible—and he does not have to deny anything or prove anything, either; but I am president of the Press Club to-night. And if in any way I have conveyed to him the impression that I am all over for Great Britain in this war I have succeeded.

Now we are facing a crisis. It may grow worse, but it does not make any difference how worse it grows, we have got to meet whatever disaster presents itself. And the thought of Pitt comes back to me every time; and the thought of Lincoln and the Civil War. What we have got to do now by our legislation and by our executive action is to make a great, broad plan for an army big enough to do the business, and send word over there, send it to Great Britain, that as she holds on we are going to hold on, and that we are going to send her an army big enough to carry the world's cause; and send it to France, and send it to Germany. And let us do it now, let us make the declaration now, say what we are going to do, fix the number, be definite; and then, when we say we are going to raise an army of 5,000,000 men, let us put it on the statute book, and then

give opportunity for as much more as our Executive chooses. That means business.

Lord Reading, I agree I have trespassed on the proprieties of the occasion. There was a man who went up into New York City to make an address. He had to catch a train. His introducer took 40 minutes in presenting him and only left 10 minutes for him to speak. As the introducer closed, he said, "And now we will hear the guest of the evening, who will give us his address." And the guest of the evening arose and, said he, "My address is 50 West Seventieth Street, and I am going there now."

Now, I apologize. But from the bottom of my heart, my fellow members of the Press Club, my constituents of the Press Club, I present to you with the pleasure that I have expressed, the ambassador from Great Britain, the Lord Chief Justice of England, Earl Reading.

ADDRESS OF THE EARL OF READING.

Mr. President and gentlemen of the National Press Club, I thank you for offering me this opportunity of meeting so many of your members this evening. More especially do I thank you for having enabled me to listen to the speech of your president, Mr. Taft. As Lord Chief Justice of England—if I may for a moment just recall the fact that I occupy that position—I thank you from my heart for the observations which you have been good enough to make about the judiciary of England. I shall tell them when I return, if they do not hear it before, of the opinion expressed by you before such an influential audience as is here to-night; and I shall remind them also that I believe this is one of the very few occasions on which it was recalled to me that I was lord chief justice.

I thank you also for all that you have said of me as ambassador. You have been good enough, Mr. Taft, in your enthusiasm to refer to me—I believe I am quoting you correctly—as a great diplomat. I am a child in diplomacy. I am really only cutting my teeth. I am learning the arts as I proceed; and at least I find them very easy in this country, where I have observed that complete frankness is the best passport for anything that may be required.

I beg also to thank you, Mr. Taft, and all of you, gentlemen, for the reception which you have given me, and for the words pronounced by Mr. Taft upon the efforts of Great Britain. There were moments, sir, when my heart was full in consequence of what you said. There are things that pass through our minds in this country to which we do not give utterance. You, Mr. Taft, have spoken from a position in which you have had the privilege of saying exactly what you thought. I thank you not only for myself but for all the members of the British mission who are here and also for all my countrymen, both here and in my own country; and if I say no more than that with regard to some of the observations that you have made and that have been received with such applause here, believe me it is not because I am not fully sensible of all the good feeling that prompted them, but because, were I to speak for an hour, I could not express to you any more deeply or earnestly how much I am touched by your reference to what we in England have gone through in the last four years.

But I come to you to-night, gentlemen, honored by your invitation to address you here at the Press Club. In these times attention is arrested more by what men do than by what they say, except with regard to the utterances of those great leaders of thought and policy whose declarations are translated into acts. Realities stare us in the face. We are engaged with them daily; and it is your business to chronicle the deeds that happen, to give the information to the public; for, indeed, the general public gets little but what you choose to tell them in the organs of your daily press. When one thinks of the eagerness, the avidity with which a man looks to his morning paper in order to see the news, the elation or, it may be, the depression, the emotions that are roused by the news that he reads, one forms some idea of the influence of the press in your country as in mine. Powerful as it is in that respect in times of peace, at this moment and in these times it has even a greater influence; it is fraught with a deeper responsibility, for one of the chief duties of the press in my country, as I understand it, and, I believe, in yours—because so far I have failed to find the difference—is for it to stimulate patriotism, loyalty, devotion to the common cause, to arouse the spirit amongst men which makes inevitably for success, to send through your newspapers all over the country to the vast millions who are waiting for the news, that information and that inspiration which will help in the end to win the victory for which we are all striving.

Gentlemen, let us not, if I may be permitted to say so, strain to look into the nooks and crannies to discover some mistake, some blunder, some disappointment, which may have been

caused, probably, in consequence of the very great expectations that were formed when this war was begun, and again when you entered into it. The only value of the discovery of a mistake is to root out the evil and to set to work with the utmost energy and with the greatest rapidity to apply the remedy in the way that you of all people know how to apply it. But let us not be misled into considering too much those mistakes which inevitably do arise when a country is engaged in an enterprise of the gigantic magnitude represented by an entry into this war. Let us fasten our attention also upon the great achievements of your country. I am not going to recount to you, who are all so familiar with them and who are in the habit of recounting them to us that we may read of them, the great achievements of your Navy and its magnificent cooperation with the British Navy, so that they stand now, as one might say, as one navy over there, neither one seeking to get, it may be said, the better place, but both of them seeking, as if they were one, to do the right thing. I shall not stop to tell you of the enormous assistance that your Navy is rendering in stopping the great submarine warfare which Germany is waging.

I need not again pause to tell you how much you are beholden to that Navy, as to ours, for the work that is being done now in the transportation of your troops that are being carried so rapidly across to help in this emergency. I will only say to you that we in our country are deeply sensible of all that most valuable assistance that they are giving us. I am not going to speak to you of the reinforcements which you are sending as rapidly as ships can carry them, filling the ships as quickly as they can be brought to embark the troops; neither will I again dwell to you upon the unselfishness and upon the swift, unhesitating response that was made by your President when the question was put to him as to whether he would help in a particular way by sending the troops over that they might be used as was deemed best in the common emergency. I will only say to you in this connection that every ship that sails carries a message of hope, courage, and determination, which you send in your valiant young men to our country or to France to help, so that we may all stand together, as I said just now of the Navy, as one Army, under one command, with one aim, determined to win in the common cause.

Neither will I refer to that great program of shipbuilding; to all the vast resources which you are putting at the disposal of the allies. I have had other opportunities of referring to them; and indeed to you, to this audience, it would be idle, because you know them as well and even better, possibly, than I. I will content myself with the observation that we—and I am sure I am justified in speaking not only of Great Britain but indeed of all parts of the great British Empire, and the allies, one and all—are deeply beholden to you for the assistance which you are giving in this great crisis. You, Mr. Taft, have spoken those wonderful words of encouragement to us. I wish my countrymen could hear them. But the spirit of them will be carried across. They are here; and they will know that when you speak of the loyalty and devotion of America to the cause which you have espoused you are saying that which I truly believe every American feels in his heart.

What is the great test? As the mists have cleared, as our vision has managed to perceive the happenings, gradually there has emerged the true contest. It is not really between people; it is a contest between two systems of government, the only two systems of government which can really be said to exist. On the one hand you have that government in which the State uses the men as if they were mere pawns, for the purpose of the glorification of the State or the dynasty and with utter disregard of all the morals and ethics with which we are accustomed to judge conduct. On the other you have a government which exists for the protection of the weak, for the safeguarding of the rights and the liberties of the individual, for civil and religious liberty, for equal opportunity, so far as human beings can enforce it, for all, so that they may rise to the top, if so be they have the qualifications to bring them there.

These are the two systems of Government. They can not coexist. The first is best illustrated by the words of Nietzsche, "Life is in its essence injury; the overpowering of whatever is foreign to us and weaker than ourselves, suppression, hardness, the forcing upon others of our own forms, incorporation of others, or, at the very least and mildest, their exploitation." The other is based, in the language of Burke, upon keeping the sovereign authority of the country as the sanctuary of liberty. One or the other must give way, when there has been a challenge thrown down by the first, which is that of a military despotism, to that of all democracies, which is represented by the second system.

And I am minded, when I think of it, just to call your attention for a very few brief moments, if you will permit it, to the

fact that our two great commonwealths, the American Republic and the British Empire, both belong to the second system to which I have referred—that is, to a government which is based on democracy. It is not necessary, in addressing this audience, for me to impress upon you the twin pillars of liberty and justice upon which your Republic stands; indeed, it were presumption of me to attempt to do so. What I will try to do is to bring very briefly to you what Great Britain and the British Empire stand for, and why I venture to say to you that we equally stand on these same pillars. I will not indulge even in historical retrospect. The temptation is always great to do so, but I refrain. I will only just say that Rome, which set out for the conquest of the world as it then was, by force of arms, by its military power, and which brought to itself all the spoils that could be won in war, ended in degeneration and decay. I will not travel over the other empires the memory of whose history will come to your minds very quickly. I will pass them over at once, for indeed I do not wish to detain you too long. But I will say this, that whatever you may seek in the history of any one of them, be they the Portuguese, be they the Dutch, be they other empires, you come to this conclusion: The empires crumbled and died because they were not based upon liberty and justice, as the British Empire must crumble and die and would indeed long before this have come to its end had it not been based, as it is, on those two great solid rocks which defy time and defy all effort to demolish them and to break down the edifices above them. Take, indeed, the great Dominion of Canada—and when I say it I am pleased indeed, for I have the opportunity of speaking here before Sir Thomas White, the minister of finance of Canada—Canada, who has played her part so nobly in the war; take Australia and New Zealand; take South Africa—and that evokes memories.

I will restrain myself from indulging in the memories of South Africa and of all that happened only a few years ago, and merely draw to your attention, as the best instance that I can give of the genius of the British Empire and of the dominating force which links the Empire together, the fact that it was only in 1902 that peace was made with that very country, which now forms a part of the British Empire in the Union of South Africa, and which has sent to us not only Gen. Botha to lead his forces over there to the British Empire but also Gen. Smuts to take his part in the battle line.

I ask you to put to yourself this one question: What is it that binds these dominions to the mother country? What is the great solid force that holds them? The answer is that there is none; they are bound to us by ties of affection and that alone. They are part of us because we form one family. We are held together by threads as light as gossamer and yet strong as the links of the best forged steel that ever existed. It is because we rest upon that affection, because these dominions govern themselves according to their own views, and because we have the same traditions, the same heritage, the same ideals, the same principles of government, that we manage to exist, as we do, as a united family. Can I point, Mr. President, to anything better than that to illustrate to you that we, although an empire in name, are a great democratic commonwealth, as you are here in the American Republic?

May I add in passing that I would not rest only upon the great dominions. Let me turn to that great dependency of India—India which for the last 50 years has been assimilating our ideas, accumulating, no doubt, knowledge from our inventions, learning of our western political ideals; India, which, in spite of all that Germany could do both before and after the beginning of the war to foment rebellion which was to distract England's attention, has remained loyal and devoted to the British Empire. You have only to turn to the native rulers and to the natives themselves and see the enlistment that takes place and the forces that have battled for us to realize that at least that great dependency regards itself as bound to the Empire by ties of affection and loyalty. The men and the money which India has furnished to help in this cause are doubtless well known to you. May I just perhaps give one figure that occurs to me in passing, and only one, because I am not going to weary you with statistics. I should ill repay you if I did for your hospitality and courtesy. But in India the native regiments stood at a little over 200,000 when the war was started, and at the present moment there have been recruited between 900,000 and 1,000,000 of these men ready to do battle for the British Empire.

I could tell you, indeed, if only there were the time and opportunity, of Egypt and the Soudan, of all that existed there in the old days, where you may perhaps have forgotten that for some years, up to about 1894, 6,000,000 were sacrificed to the rule of Mahdism that prevailed in those days; and now both Egypt and the Soudan are countries in which happiness and prosperity reign. Oh, that I had the time, and one of these days, I tell

you—and I warn you now that that is a threat—I shall examine every stone of those edifices and test it by the standards of your American democracy, and I will call upon you, a liberty-loving, justice-loving people, to give your verdict when you have heard all the facts of the case.

And, Mr. Taft, I have only desired, in the observations that I have made to you, to get rid of some false notion of imperialism which may linger in the minds of some who do not like the word "empire." It is so that we may understand, so that I may have the opportunity of putting before you what is the true spirit of the British Empire, that I have ventured to trespass upon your kindness in dealing with something to-night that is purely British.

Of one thing I do believe I can be assured, whatever criticisms may be leveled at the British Empire—and I admit there are many, particularly in the past—we have had lessons to learn, and you taught us the biggest one—wherever the Union Jack flies there British rule is administered with justice. We may make mistakes; of course we do; but the men that go out to rule are the men who are saturated, to use the expression which I love—and that came from you, Mr. Taft, and coming from you it meant a great deal—saturated with the great ideals which you have formed of British justice. Nothing is to me so gratifying, not because I am the permanent head of the British judiciary, but because it is a British tradition that there should be justice; it is because it embodies exactly what you and we so much love. When I hear from great lawyers and your most distinguished citizens, like Mr. Taft, and those with whom I meet in familiar conversation, that you have the greatest admiration for the British judges—may I say particularly of the past—then I realize that that is a bond between us, one which helps us with our empire and forms the closest parallel with one of the ideals of your Republic. Through it all, looking at every aspect of it, there we see the old Commonwealth, this old British Empire, from whose loins issued that young child which has grown to immense stature now, and its young and ardent manhood, going over to France to take its part with the young and virile manhood of the old country, neither one of them thinking which is the older and which is the younger country, neither one of them thinking which one of us is really going to gain the greater laurels, but both of them thinking only of this, "How can we best serve our country? How can we best manage to do our share for a victory of the common cause?"

We are living in a time of great crises. Do not let us make any mistake about it, and, above all, do not let us be misled by a false optimism. The man who is so far a true optimist that he never doubts the ultimate victory any more than he would doubt his religion is the man who at the same time looks the facts in the face and takes care that, although he is certain of the victory, there shall be no neglect of the preparations necessary to secure it.

When I think of all that has happened since this war started, in August, 1914, of all that has been suffered by the allies, by our noble and heroic allies, the French, with their country invaded and some of its wealthiest and most productive parts in the occupation of the enemy, with its women to-day working, aye, as women never worked before, I am reminded of a picture that I have seen myself over there. I remember one day standing with a great French general and seeing a village being shelled by the Germans. As we stood there I saw, early in the morning, somewhere about half past 6 o'clock, when it was barely light, an old man and an old woman coming along from that very village. I watched them approach, one carrying a loaf of bread under an arm and the other a chicken in a bag and vegetables in another, and I wondered. You can picture to yourself the scene, with shells bursting around them, far nearer to them than they were to us, they coming out of the very village upon which the shells were being poured and which were then shattering the homes. I asked the French general what it meant. He said, "It is that those old people have lived all their lives in the old cottage in that village. Everything they care for is there, except their children, who are out there in the trenches. These people go back to their home at night, when they think they will be safe, because there will be no shelling." This was in the early days of the war, before there was so much night shelling as there is now. "They go back there, knowing the risk they run, merely that once again they may sleep in the old home. In the early morning out they come and walk some distance off beyond reach of the shells, carrying their food with them for the day. They sit and rest until night and then they go back to the home to see if it still exists or if it has been shattered by German shells."

When you think of it, that is, after all, but a simple incident, but it came to my mind as I was speaking to you, and I need not excuse myself for having related it. Similar incidents are seen daily. There that country stands, never wavering.

Neither will I dwell upon the wrongs of Belgium; they are too familiar to us all. Nor will I dwell upon the fortitude of that people which is vanquished for the moment, but only for the moment, and so far as the occupation of its territory is concerned. I am not minded in addressing you to go through the various allies and deal with them. It is sufficient to say they are all splendidly playing their parts. I want to impress upon you, if you will permit me, that we must keep our attention steadily concentrated on our aim. We must not allow ourselves to be deflected in any way from our purpose. We must never allow ourselves to waver in our determination. We must "carry on," determined, come what may, that there can be but one end, and there will only be an end when at last out of all this horror and misery, out of all the sacrifices that have been brought to the altar of the common cause, there is secured in the end that justice and lasting peace which will mean victory for you, victory for us, victory for all who care for justice, victory for all who love liberty, victory for all who have at heart the benefit of all humanity.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. VARE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 13, 1918.

Mr. VARE. Mr. Speaker, notwithstanding the report of the congressional committee, composed of three Members of the House and three Members of the Senate, which agreed, with a vote of 5 to 1, that the pneumatic-tube service is efficient, the attacks against this service are continued.

The substitution of automobiles in the place of the tube mail service in Philadelphia would not be a move for economy, because it is shown in the appropriation bills that the cost of automobile service has increased 300 per cent in the last few years, with no reduction in any other branch which the automobile service was supposed to assist. It is fair to assume that if the cost of the automobile service in other branches of postal work has increased it would do so in taking the place of the pneumatic tubes.

The city of Philadelphia has been favored with this excellent service since 1893, and during that time there has been no meritorious complaint. It has been commended by business men and postal officials. The present mayor, Hon. Thomas B. Smith, former postmaster in Philadelphia, assures me that during his term as postmaster the service was excellent, being efficient and a great benefit.

The streets of Philadelphia are congested. Traffic in the central part of the city is becoming a very serious problem. The coroner's court is being called upon almost daily to pass upon deaths of citizens caused by automobile trucks. The city of Philadelphia is doing everything to relieve this congestion, having obtained permission from the State legislature to construct subways for the double purpose of rapid transit and relieving congestion on the surface. The general tendency is to get as much as possible of the public-utility service underground.

It is my firm belief that in the not very distant future it will be necessary for the officials of Philadelphia to consider the advisability of double-decked streets to relieve congestion in the central part of the city.

The distinguished chairman of the committee [Mr. Moos] said that if we wanted pneumatic-tube service we should build a larger one. This surely is not in line with conservation. The Government is calling all the labor available and for all the material that can be manufactured to aid in carrying out the war program. Therefore additional tube service can not be considered now. To purchase additional automobiles at extravagant prices is not good business judgment. To take additional chauffeurs, whom the War Department so badly needs, would be hampering the war program and interfering with the war transportation service.

So far as the price is concerned, which is to be fixed by the Interstate Commerce Commission, I feel that there could not be any overcharge for the system and that the method of purchase is eminently fair. To have these power houses idle and to have these underground tubes out of service would be criminal, considering the demands of the country for an efficient war service.

I hope that the Members of this House passing finally on this proposition will bear in mind that Pennsylvania is furnishing one-tenth of the men to help win the war, one-tenth of the money to finance it; that the city of Philadelphia is furnishing almost one-half of the ships which will be used to transport men and

supplies to Europe, and surely when the claims of Philadelphia are presented in such a fair proposition as this they should be considered favorably by this House, and I hope the Senate amendment will be agreed to.

I am inserting a letter from the joint committee of Philadelphia trade bodies on retention of pneumatic-tube mail service to Postmaster General Burleson on the question, which is self-explanatory. It is as follows:

HON. ALBERT SIDNEY BURLESON,
Postmaster General,
Washington, D. C.

SIR: In my letter of April 11, addressed jointly to you and to Hon. A. B. ROUSE, I demonstrated that the latter's personal minority report condemning the pneumatic mail-tube system is a mere echo of your previous attacks, while your pronouncement of March 22, reechoing your echo discloses you as the sole source and inspirer of the campaign.

I address to you, therefore, my further examinations of the methods employed to discredit the tubes by you or your representatives. By some strange means postal employees have been induced to reverse the uniformly favorable judgment which the department had passed on the tubes for nearly a quarter of a century. Isolated criticisms have been singled out of reports otherwise favorable and presented as adverse opinions of experts. Manipulated statistics, inaccurate comparisons, and unwarranted conclusions abound in both your attacks and Mr. ROUSE's report.

It is understood that you have never examined the pneumatic tubes and their operation with your own eyes. Do you not assume the character of a destructive critic rather than that of a constructive administrator when you abuse the business men, city officials, and editors of the five chief cities of the country for testifying to the daily experience of actual benefits derived from tube service, on the ground that they are not personally familiar with the mechanical working of the system, while you are ignorant both of the mechanics and the results, though it is your duty to acquire personal knowledge of this important service of your department, at least before you attempt to destroy it?

In the hope of repairing to some degree your lack of knowledge of the object of your attacks, I am sending you a folder, prepared by the Pneumatic Transit Co., and furnished, at my request, to our committee, containing numerous pictures of the pneumatic mail-tube equipment in Philadelphia. These pictures, taken within the last two years, are representative of conditions at the present moment, not only in this city but also in New York, Chicago, St. Louis, and Boston.

I suggest that you owe it to the public carefully to examine these pictures and note the refutation they give to two allegations against the tube system. Some of the postal officials who, at your direction, have recently drafted briefs strangely at variance in their unfavorable view of the tubes with the previous departmental attitude have dilated on the extravagance of paying rental for the space used by the tube equipment. The argument lacks any element of good faith. No Government-owned post-office building has been built larger to accommodate tubes, nor have larger quarters for substations been rented because of them. The space is there; the question is how to use it to the best advantage of the service.

Now, while you may never have seen a tube, possibly at some time in your career you have looked in at a post-office station, and I call upon you to admit that the tube terminals as pictured in the accompanying folder occupy no more space than a motor-truck load of pouches would cover if dumped on the same floor. As to the compressing apparatus supplying the motive power for tube operation, in each case it is installed in a basement and adds nothing to the rental cost of the post office or station.

But these pictures are even more important as refutations of a more serious charge against the tube system, its advocates, and its owners. In your annual report for 1917 and your statement of March 22, 1918, you charge that the tube properties have become worthless; that they are worn out and dilapidated; and that their owners desire to unload them upon the Government, knowing that they are about to break down and become unserviceable. Mr. ROUSE, in his personal minority report, faithfully echoes you in expanded form, but he reaches a climax which I should suppose the tube companies might consider dangerously near the border of libel when he says:

"Every influence possible has been exerted by the owners of the tubes to unload onto the Government this property, which within a few years, unless entirely rebuilt, will become 'junk.'"

That is a serious charge. It stigmatizes the tube companies as attempted defrauders of the Government. But if it has no basis in fact it stigmatizes those who make it as attempted misleaders of public and congressional opinion. I ask you to study these pictures and then put the question to your own conscience, Is it fair, Is it sensible, to call these businesslike engines, these sturdy tubes and containers, "junk"? Can you point to any sign that they are worn out? Do they look like something "worthless" which must be "unloaded" or like well-conditioned, competent, up-to-date apparatus? "Junk"? Is it not a curious kind of "junk" which forwards 25,000,000 pieces of first-class mail daily and expedites from five to seven million pieces daily beyond the speed of any other service yet devised? Nowhere in all your attacks have you or Mr. ROUSE denied these accomplishments. Are you not a bit careless with your rhetoric when you call the system which does this "junk"?

Mr. ROUSE even takes liberties with the record by intimating that the engineering firm of Stone & Webster, employed by the congressional commission to investigate the tubes as a utility, made no investigation of the physical condition of the properties. Yet one has only to turn to the report of the engineers to read these statements:

"As a mechanical device, we find the pneumatic tube to be a well-developed mechanism.

"There are practically no interruptions due to defects in the plant or design.

"The amount of money spent for maintenance of the machinery has been relatively small, yet the equipment appears to be in good operating condition. We had opportunity to examine the underground pipes at several points and found no evidence of deterioration.

"In our opinion, the pipe and street work, which includes the larger part of the total investment, should have a physical life of upward of 50 years."

Really this is a most healthy lot of "junk" which, after a quarter of a century's hard, practical usage, shows no sign of deterioration and is good for 50 years yet. And let it be noted that these conclusions of Stone & Webster bear out exactly the conclusions of the 1914 congressional commission, which also examined the tubes with care.

In fact, it would seem that to you and Mr. ROUSE belongs exclusively the discovery that the pneumatic-tube system is "junk."

Very truly, yours,

EMIL P. ALBRECHT.

The Pneumatic Tube Mail Service in the City of Chicago, Ill.

EXTENSION OF REMARKS

OF

HON. EDWARD J. KING,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 13, 1918.

Mr. KING. Mr. Speaker, the motto of the city of Chicago is "I will," which is expressive of her initiative in all things for her civic advancement, and is, at all times, emblazoned on her banner which is carried in all her offensive and defensive battles. This motto is sometimes modified to mean "I will not," losing thereby some of its strength. If you propose to her to advance, her answer is, "I will"; if you propose to her to retreat, her answer is, "I will not." She is righteously mighty in her work of creating the greatest city on earth and she is equally mighty and strong in cleaving to those things which she has and which are a necessary and vital part of her life and progress.

Every time you strike to injure the city of Chicago you strike directly at every city and farm in the Middle West. There is not a congressional district in the States of Wisconsin, Iowa, Illinois, Indiana, or Michigan the interests of which are not affected immediately by any injury done Chicago. It is, therefore, the duty of every Member hailing from any of those States to rise at once to her defense, and it is the special duty for a Member from Illinois, in a down-State district, to rise in defense of his metropolis.

For more than 20 years a large district of the city of Chicago has enjoyed, to its great advantage, the delivery of its first-class mail by a system of pneumatic tubes. This system consists of nine connecting stations and approximately 10 miles of double or outgoing tubes and incoming tubes, connecting the main post office with the following substations, to wit: Illinois Central Station, Twentieth Street, Armour, and stockyards to the south; Chicago Avenue to the north; and La Salle Street Station, Union Station, and Grand Central to the west. The tubes are laid between the stations in the streets below the surface, and are made of cast-iron pipes 8 inches inside diameter, whose life is estimated at more than 50 years, and which are supplied with suitable apparatus for dispatching and receiving the containers.

The function of these tubes is to dispatch rapidly letter mail from post offices and branch stations to railway terminals, and the reverse. Interruptions in tube service are mostly traceable to carelessness of employees or to interference with lines from outside causes. It is conceded on all sides that the pneumatic-tube system in Chicago is mechanically perfect and is now performing and has performed its functions with rapidity and exactness.

The records show—upon a test being made in 1915—that in Chicago the total number of letters mailed per day at tube stations was 2,028,469 and local-delivery letters 319,884; and the records in the Post Office Department show that from three to five million letters are advanced in delivery each day by the tubes which otherwise would be delayed. Therefore there can be no doubt that the pneumatic-tube mail service in the city of Chicago is a going concern. Mr. Montgomery, speaking for the Chicago Association of Commerce of the system in Chicago and its work, said:

Such pneumatic-tube service is a convenient, expeditious, and valuable auxiliary in the transportation of mails, and such pneumatic-tube service should be enlarged and extended to other points of collection and distribution in order to make it a properly efficient part of the Government local system.

It is now proposed, by the defeat of the appropriation now under discussion, to "junk" the entire pneumatic-tube system, to throw conservation of material to the winds, and increase the scrap pile by adding to it the entire pneumatic-tube mail system of Chicago, installed at the cost of \$1,000,000, and in perfect working order to-day. And what for? To transport the mails over the cobblestones and through the congested thor-

oughfares of Chicago in rubber-tired automobiles, the most expensive method of transportation yet devised by man. It is proposed to tear up the tubes through which containers carry mail without interruption at the rate of 30 miles an hour and supplant them by "tin Lizzies," and this move is sought to be made against the city of Chicago, without its consent, and against the expressed, unanimous desire of its citizens. Mr. Montgomery says:

Construction by the Government of an additional pneumatic-tube service can relieve the streets of Chicago from further congestion.

Mr. John W. O'Leary, president of the Chicago Association of Commerce, on this point says:

We believe that pneumatic-tube service is or can be made vastly superior in service rendered to truck deliveries, and that such service is demanded by the physical condition of our streets.

Mr. D. F. Kelley, of Mandel Bros., says:

We feel certain that with the present congested condition of the downtown district it would be disastrous to have additional automobiles come in, which would be the case if the tubes were abandoned.

Mr. Homer J. Buckley, a prominent business man of Chicago, says:

Gentlemen, the present attitude on the part of the mail-wagon men of Chicago and the way they drive around is a positive disgrace. The lives and property of the citizens of Chicago are in jeopardy every minute. They take the right of way of the pedestrians of Chicago and trample right over them.

Mr. Seaver, chairman of the postal-service committee of the Chicago Association of Commerce, testified before the committee as follows:

The CHAIRMAN. Are you satisfied that this pneumatic-tube service gives you a more efficient service as to letters than an automobile would give you, or not?

Mr. SEAVER. To get some basic fact, I should say "yes." Illustrating it by an absolute fact, you can send a letter from here to the stockyards district through the carrier in 8 minutes. It comes out there in 8 minutes if put in that tube, and a man out there can get a proof of an advertisement and can make his corrections on that proof and you can get action in 30 minutes. Now, if you had to act through an automobile, as Mr. Buckley has said, coming down at breakneck speed as they do, certainly it would not give us business men the service we get; and to increase that service and to send an automobile to the stockyards every 30 minutes would greatly increase the congestion with which our mail is handled. . . . Every additional truck put on the streets increases the congestion. That's our great argument why we should like the tube service continued.

Mr. Heller, of the North Central Business District Association, says:

The two fast trains between Chicago and the East—the Twentieth Century and the Broadway Limited—get into Chicago about 9.30 in the morning. The mail from those trains is tubed over to the general post office and to our station in time to make the 10.30 carrier. The man can get his mail from those two trains from the East some time shortly after 10.30, depending how far along the route he is; and the returning trains to the East leave about 12.30 at noon and the mail from our Chicago Avenue station for those trains closes at 12.15. Now, if he gets his mail around 11 o'clock, he can answer that letter, get it into the Chicago Avenue station, and have it tubed down to the general post office and have it catch that train. Now, if truck service were depended upon we could not do that.

From the foregoing testimony it is not difficult to gather what the consensus of business opinion is in Chicago on the subject of junking the pneumatic-tube system and substituting the automobile. The very situation of the main post-office building, in the center of the crowded loop district, and the traffic conditions surrounding it, preclude the possibility of successfully carrying the mail by autos which is now pushed through the tubes in the city of Chicago.

To illustrate this, let me refer to the vehicle traffic as shown by the report of an expert on the four sides and through the center of the main post-office building in Chicago, which is bounded on the north by Adams Street, on the east by Dearborn Street, on the south by Jackson Boulevard, and on the west by Clark Street.

On September 28, 1917, when the test was made, 206 vehicles passed toward the west between 11 a. m. and 12 noon, and 210 toward the east on Adams Street, adjoining the post office and in front of the entrance to the driveway which passes through the center of the post-office building. During the same hour 270 vehicles passed north and 255 vehicles passed south on Dearborn Street, on the west side of the post-office building, and on the south of the said building during the same hour, and in front of the entrance of said driveway, there passed, going west, 559 vehicles, and going east 592 vehicles; and on Clark Street during the same hours, on the west side of the post-office building, there passed 229 vehicles going north and 223 vehicles going south.

On the same day, between the hours of 5 p. m. and 6 p. m., there passed on Adams Street and in front of the driveway of the post-office building, 200 vehicles going west and 229 vehicles going east; and on Dearborn Street during this hour there passed 244 vehicles going north and 263 vehicles going south; and on Jackson Boulevard, in front of said entrance and during

the same hour, 603 vehicles passed west and 595 vehicles passed east; and on Clark Street, during the same hour, 202 vehicles passed north and 168 vehicles passed south.

And on the same day, between the hours of 8 a. m. and 6 p. m., there passed in front of the entrance of the north driveway of the said post office 1,879 vehicles going west and 1,820 vehicles going east. And on Dearborn Street during said hours there passed 2,162 vehicles going north and 2,353 vehicles going south; and on Jackson Boulevard, which passes the south entrance of said post-office building, on the same day and during the said hours there passed 5,024 vehicles going west and 5,229 vehicles going east; and on Clark Street, on the same day and during the same hours, between 8 a. m. and 6 p. m., there passed 2,095 vehicles going north and 2,016 vehicles going south; and during this same time there were 455 vehicles which entered and passed through and out of the driveway of the post-office building, and during the same time there were 55 interruptions in traffic every hour.

The total number of vehicles passing on all sides of the said post-office building in the 10 hours from 8 a. m. to 6 p. m. on September 28, 1917, were 10,293. Therefore it will be seen that to attempt to substitute as quick a movement of mail as the underground pneumatic tube, out of and into this building, is practically an impossibility, and, as a matter of fact, can not be done without great additional expense, delayed mail, and tremendous interruptions to traffic.

For this pneumatic-tube service the Government pays the company now operating the same in the city of Chicago the sum of \$170,583 per annum. It is proposed rather than junk this valuable property that the Government purchase the same, including all the other plants in the country, at a sum not to exceed \$4,432,622, which sum should be extended over a period of years in such a manner that partial payments, together with 4 per cent interest on unpaid balances, including cost of operation, as reported by the commission's engineers, shall not exceed the present annual expenditure of approximately \$776,000 for tube service. It is further proposed that the purchase price for the pneumatic-tube system in Chicago be determined by a reference to the Interstate Commerce Commission, who shall fix a physical valuation for the same, considering the nature and conditions of the titles to the property. On the 3d day of March, 1917, the whole controversy was referred to a joint commission of Congress, headed by that distinguished statesman, Senator J. H. BANKHEAD, which commission investigated thoroughly the whole subject; first, as to the value of tube service; second, as to the value of properties, franchises, and equipment; and third, as to the cost and terms upon which the same might be purchased. This commission has recommended the purchase and taking over of these pneumatic-tube systems by the Government, and it seems to me that the recommendation of this high commission should be adopted without a dissenting voice.

As for the great city of Chicago, nowhere do I find anything but the warmest commendation for the efficiency of the system and the necessity for the continuation of this service; not only that, but so enthusiastic are the citizens of Chicago, as represented by its business associations, financial institutions, and large business and manufacturing concerns, that they are demanding an extension, so that the same shall be branched out and operated over the entire municipality. This desire is reflected in the following resolution adopted by the Chicago Association of Commerce, to wit:

Resolved, That in the judgment of the Chicago Association of Commerce it would be a mistake and a step backward to discontinue or impair the pneumatic-tube service, but that, on the contrary, it should be extended and enlarged as conditions and postal requirements develop, and that the character of such utility as a part of the Postal System of the Government logically demonstrates the desirability of its ultimate control and operation and ownership by the Government.

And the Chicago Examiner of January 28, 1918, says:

Not this community alone, but a hundred other business communities throughout the West and Middle West are widely interested in the prompt handling of first-class mail in this city.

This paper, speaking generally, says:

The tubes are already constructed. They are satisfactory, too. They are fully indorsed by many millions who use them, who have paid for them, and protest against their removal. . . . The Post Office Department can not afford to take such a reactionary step as this, and the great American cities can not afford to have reactionary steps taken which will place them under burdens and difficulties in so important a matter as the prompt delivery of the daily mail.

And as late as January 14, 1918, the Chicago City Council passed the following resolution, to wit:

Resolved, That the pneumatic mail service now existing in this city is not only indispensable to the prompt and uninterrupted movement of letter mail, but it is also desirable as a means of lessening traffic congestion and danger, and the abolition of that service would be seriously detrimental to the residents of this city, especially to the business interests.

The Rotary Club of Chicago has made a recent examination of the pneumatic system in Chicago and commends the same, as indicated in the following letter, to wit:

CHICAGO, March 21, 1918.

HON. EDWARD J. KING,
Representative from Fifteenth District of Illinois,
House Office Building, Washington, D. C.

DEAR MR. KING: It gives me considerable pleasure to have received your letter, in which you intimate that we are right on the question of our pneumatic-tube service in the city of Chicago. Our organization always tries to be right on public questions, and we never indorse anything until after a thorough investigation. Our committee investigated these tubes during 1916, and before the joint congressional committee conducted their hearing in Chicago in 1917, they inviting our organization to appear before them, our representatives, in order to be prepared with first-hand information, made another investigation. This committee was composed of Mr. C. W. Smith, editor of Farm Engineering, and Mr. William E. Kier, of the Kier Letter Co., of Chicago.

Respectfully,

(Signed) ROTARY CLUB OF CHICAGO,
CHAS. J. BECKER,
President.

In the interest of economy, Mr. Speaker, in support of good business judgment as well as good horse sense, it would seem that the report of the commission should be followed and the pneumatic system passed into the hands of the Government for future expansion and development.

Prussianism.

A masterly analysis of Prussian thought and purpose in relation to other Governments and free peoples.
The supreme duty of America to "carry this war to victory and peace."

EXTENSION OF REMARKS OF HON. JOHN H. SMALL, OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 14, 1918.

MR. SMALL. Mr. Speaker, under the leave granted to me by the House to extend my remarks in the RECORD I append an address delivered by the Secretary of State, Hon. Robert Lansing, at Union College, Schenectady, N. Y., on June 10. Very seldom have I submitted such a request, and I was induced to do so in this instance after reading this very timely and appropriate address. It gives evidence of careful preparation and is expressed with the accuracy and forceful diction so characteristic of this distinguished premier under the present administration. It is a masterly analysis of the Prussian thought and purpose as exemplified by the Imperial Government of Germany in its relations to all independent Governments and peoples. Its defiance of all moral obligations, its "deification of brute force, with the attendant right of the strong to be masters of the weak," and its evil dream of world domination are set forth in such an impressive and convincing manner as will arrest the attention and arouse the determination of the American people to win this war and remove this menace to world peace. It was scarcely necessary for the speaker to have expressed his conclusion regarding the duty of free America to conquer and humble this monster among the nations of the world, but it will serve as an incentive to stronger and more persistent determination and action. I hope that the address will be widely read by intelligent citizens who will wish to learn from such an authoritative source a recapitulation of the compelling reasons why America entered this war.

The address is as follows:

"In these days when the thought and energy of the Nation are concentrated on the terrible drama in which we are playing so vital a part it would be idle to take as the theme of a discourse one not directly connected with the subject which is dominant in every mind. It is, therefore, my purpose to consider for a few moments the origin and elements of Prussianism and its relation to the world-wide desire for peace.

"The American people by a gradual process of reasoning have reached the firm conviction that a German victory in the European struggle would result in the greatest of perils to this country and to those principles of government which have been ours since we became an independent Nation. Whatever may have been our past judgments, we now realize the sinister character of Prussianism which has been manifested in this war. And yet, with this realization of the truth, I find that many Americans, even among those intellectually equipped, have but

vague ideas of the perverted mental attitude which made Prussianism possible, and of the reason why a compromise founded upon the Prussian conception of international rights must not even be considered.

"To a man who thinks true in these days, when passion or hysteria distorts opinions, Prussianism and the idea of an enduring and just peace among nations can never be brought into harmony. They can no more mingle than can oil and water. They are at the very antipodes of human thought. We should, then, comprehend the true meaning of Prussianism in order to understand the great obstacle to-day to a return to peace while Prussianism is still in power.

"In considering the elements of Prussianism which made this war inevitable, we should also consider the relation of Prussianism to peace, the supreme desire of mankind, and its relation to war with all its sufferings and destructiveness. The wastes of western Europe, the ships and corpses in the ocean's depths, the forest of crosses marking the graves of slaughtered men, the legions of torn and crippled humanity, and the wretched throngs of unhappy women and children are sad witnesses to the horrors of war. On these spectacles of brutality, misery, and desolation, all civilized peoples gaze with anguish and bitterness.

"As there comes an increasing realization of the needlessness of it all, indignation and anger burn in the hearts of men. But in spite of the bitterness aroused by these tragical scenes they hope for peace, they pray for peace, and they look forward to that day when rest will come to this tormented world which has endured so much. Yet, even as they hope and pray and search the future with yearning eyes, the armies and navies of democracy fight on with a grim determination which seems to contradict the hope and purpose of humanity.

"Peace the world may seek with passionate longing, but not a peace which contains the seeds of future wars and future suffering. When an end comes to this great war, as it will come, it must result in a peace that is final and enduring.

"Surely mankind has not borne this burden of agony for naught. After all this woe and waste a temporary and unstable peace would be a curse rather than a blessing. A firm foundation must be found and is to be found in the frank and clear declaration by President Wilson of the aims which the Republic seeks in this war and which, with God's help, it will attain, whatever the cost may be. Nothing less will satisfy the American people; nothing less will content the democracies of the earth.

"The conditions which prevailed prior to August, 1914, produced this conflict. It is not, then, in a return to the status quo ante that lasting peace is to be found, though that with domination of the Slavic peoples on their eastern borders appears now to be the minimum terms of the Teutonic powers. To restore those prewar conditions would be to invite a new disaster. Peace must rest on a more substantial basis, for the world seeks to have done with war and with conditions which produce war. However long it may take, however great the sacrifice may be, physical might uncontrolled by morality must never again be considered a standard of international right. Justice must and will become the supreme force in human affairs. No other result will insure civilization against the evil passions which to-day convulse the earth.

"I do not believe—in fact, it seems to me to be unbelievable—that the blood of brave and devoted hearts, so generously poured out on land and sea in the cause of liberty, is being shed in vain, or that the vast treasures, wrested from the earth by man's enterprise and industry, are being wasted in the support of so sacred a cause. But these lives and these riches have been wasted unless from the ashes of these sacrifices, which have been offered on the altar of liberty, there arises a peace which shall endure. It can not be that the merciful Ruler of the Universe has permitted humanity to suffer all this without conferring a lasting blessing.

"The conditions which brought on this war are rooted in the past and are not of sudden or spontaneous growth. They are the natural development of influences which have been long at work in Prussianized Germany and which the rest of the world ought to have perceived but did not. We can now with a clear vision look back through the history of Prussia and see the motives which inspired the conduct of her rulers. We can now read the words of Prussia's statesmen and of the masters of recent German thought with understanding minds.

"We now recognize that the policies of the Imperial Government of Germany and the boasted 'kultur' of the German people have been concentrated on the single purpose of expanding the territory and power of the Prussian Emperor of Germany until he, through the possession of superior force, became the primate of all the rulers of the earth. World dominion was

the supreme object. That was and is the central thought of Prussianism. It excited the cupidity of the governing and wealthy classes of the Empire and dazzled with its anticipated glories and by its promise of a boasted racial superiority the German millions who were to be the instruments of achievement. Germans of high and low degree believed dominion over all nations to be the destiny of their race, and with a devotion and zeal worthy of a better cause turned their energies into those channels which would aid the ruling class in their plans to attain the summit of earthly power, Germany's vaunted 'place in the sun.'

"I know that many Germans indignantly deny that this ambition for supremacy has inspired the conduct of the German Government or that it existed in the minds of the German people. I wish sincerely that it were so, for it would make the problems of the future far more easy of solution. But the numerous utterances of German thinkers and writers belie these defenders of Germany's purity of motive.

"It is hardly open to debate, in the light of subsequent events, that the philosophical and political ideas which have been taught for years from the university platforms, from the pulpits, and through the printed word to young and old in Germany excited in them an insolent pride of blood and infused into their national being an all-absorbing ambition to prove themselves 'supermen,' chosen by natural superiority and by divine mandate to be rulers of the earth. Not only in Germany but among those of German descent in other lands has this pernicious belief spread, linking Germans everywhere to the 'fatherland,' in the hope that they would be considered worthy to share in the future glory of the masters of the world.

"A few examples of the teachings which have so moulded German character and implanted in the German mind false conceptions of life will suffice to show their nature and the evil influences which they exerted on a people peculiarly susceptible to flattery and possessed by a selfishness which blunted their sense of honor and of moral obligation.

"Prof. Theuden, imbued with an astounding vanity, which is characteristically German, declared, as the great war began, 'Germany, as the preponderant power in a pan-German league, will with this war attain world supremacy.' And Pöhlmann, in considering the good to Germany which would result from the conflict, wrote to his fellow countrymen: 'We shall be an unconquerable people capable of ruling the world.'

"These words but described those visions which the German philosophers, acting possibly under the direction and certainly with the approval of their Government, had so constantly conjured up to allure and tempt the German people. They were uttered before the great Prussian war machine had failed in its first endeavor to plow its way through to Paris and in proving itself to possess the irresistible force in which its builders believed.

"A decade before the war, Reiner, inspired with the imperialism of Prussia, announced:

"It is precisely our craving for expansion which drives us into the paths of conquest, in view of which all chatter about peace and humanity can and must remain nothing but chatter."

"Not less ominous to liberty are the words of Prof. Meinecke:

"We want to become a world people. Let us remind ourselves that the belief in our mission as a world people has arisen from our originally purely spiritual impulse to absorb the world into ourselves."

"Observe that extraordinary phrase 'to absorb the world into ourselves.' To conceive such a national destiny is to resurrect the dead ambitions of an Alexander or a Caesar; to teach it as a right to young men is to sow in their minds an egotism which breeds distorted conceptions of individual honor and justice, and gives to them an utterly false standard of national life.

"Not alone from the lecturer and the essayist came this idea that the Germans are a superior race set apart to rule the world. It was preached in the pulpits as a divine truth by those who even had the effrontery to support their assertions by references to the Holy Scriptures. Listen to some of the thoughts proclaimed by ordained ministers of Christ to their German congregations:

"It may sound proud, my friends, but we are conscious that it is also in all humbleness that we say it: The German soul is God's soul; it shall and will rule over mankind."

"May we be spared the consequences of German 'humbleness,' which fairly struts and swaggers and which finds further expression in the words of another doctor of divinity when he declares: 'Verily the Bible is our book. It was given and assigned to us, and in it we read the original text of our destiny, which proclaims to mankind salvation or disaster as we will it.'

"As we will it.' There in four words is the whole story of

the Prussian doctrine of the 'superman,' of a 'place in the sun,' of 'world dominion.' What a combination of sacrilege and vanity to assume that the Almighty would confer on a people such as the Prussians have shown themselves to be Divine powers on earth!

"These are enough, though many more might be given, to show the monstrous ideas which have for a generation been poured into the receptive minds of a stolid, stubborn people unhabitu-ated to think for themselves, and who have, through these ideas, become fairly saturated with belief in their invincible power, in their racial superiority, and in God's selection of them, or, rather, of their rulers, to be His partners in governing the world.

"Side by side with the egotistical conception of the Prussians that they have a monopoly on the favor and power of the Creator there is another which is utterly savage and un-Christian. While it has been variously expressed by the materialists of this generation, Felix Dahn 40 years ago uttered the naked thought which has since been interpreted into action by German militarism. Thus wrote the poet, 'It is the joyous German right with the hammer to win land. We are of the hammer god and mean to inherit his empire'—that is, the earth.

"This deification of brute force with the attendant right of the strong to be masters of the weak touched a responsive chord in the Prussian mind and was by some paradoxical process welded to the so-called Christian philosophy of Prussia's theologians. Thus Thor and Odin stalk again along the shores of the Baltic summoning the tribesmen to battle. Their blood-stained altars have again burst into flame in the hearts of the Prussians. Their fierce priesthood again clamor for victims. In the place of a God of love and mercy, the Teutons of the north have raised on high their ancestral gods of brutality and war.

"Paganism, tinctured with modern materialism and a degenerate type of Christianity, broods to-day over Germany. Christian ministers have proclaimed Jehovah to be the national deity of the empire, a monopolized 'German god,' who relies on the physical might of his people to destroy those who oppose his will as that will is interpreted by his chosen race. Thus the Prussian leaders would harmonize modern thought with their ancient religion of physical strength through brutalizing Christianity.

"Minds filled with such conceptions of the sacredness of conquest and of the divine right of a ruler to command obedience have furnished fertile soil for the Prussian policy of acquiring territory and mastery by brute force regardless of justice, morality, or the rights of others. This strange mental slavery of a people as highly developed intellectually as the Germans is one of the most extraordinary psychological phenomena of modern times. It is hard to analyze it and even harder to find for it a plausible explanation.

"In such congenial environments the ideas of the absorption of Belgium and the Netherlands, of the Germanizing of the Scandinavian and Slavic countries of Mittel-Europa, and finally of a world empire greater even in relative extent than that of Macedon or Rome, germinated and thrived. To make ready for the year and the day when these extravagant dreams of conquest were by force of arms to be made realities and when all nations would be subjugated by the imperial power of Germany absorbed the thought and dictated the acts of the Prussians, who had so successfully subdued their Germanic neighbors, at first physically and later mentally, until they belonged, body and soul, to their war lords.

"With this vast ambition in their hearts the rulers of Germany sent forth swarms of agents throughout the world to create, in so far as they were able, conditions favorable to the great enterprise. Some sought to win the good will of the nations to which they were sent; others to alienate or weaken the friendships between nations whose alliance or mutual support the German Government feared would constitute a possible obstacle to its great scheme of world conquest.

"Sincere and honest governments, against which these intrigues were directed, believed the Imperial German Government to possess a character like their own. Naturally trustful they fell victims to the snares set to entrap them. There seem to have been no depths of infamy which the Germans did not sound in carrying out their foreign policy of deception.

"In what a new light many events of the past appear when the truth becomes known. The 'yellow-peril' speech of the Kaiser, the wholly unjustified suspicions of imperialistic designs on the part of the United States whispered artfully among nations of South America, the financial schemes and revolutions promoted secretly by Germans in the Caribbean countries, the

encouragement of continued turmoil and anti-American feeling among warring factions in Mexico, and the propaganda of distrust and hostility carried on in this country and in Japan are among the things 'made in Germany' directly affecting the international relations of the United States. It is only within a comparatively recent time that we were fully convinced of their origin and gave them their true labels. Yet because we were so innocent and trusting the unpleasant truth comes as a greater shock and excites a deeper resentment.

"In addition to these practices, which had been in operation long before the great war and were preliminary to that supreme event in the Prussian plan, I might refer to the plots which, after the war began and while this country was still neutral, were directed, approved, or financed by Count Bernstorff, Von Papen, Boy-Ed, Luxburg, Von Eckhardt, and other official representatives and secret agents of the Berlin Government. But the activities of these men have been exposed and their disgraceful record is common knowledge, arousing a just indignation throughout this country.

"I think I might say, however, that for a long time before it was considered wise to make the facts public the American Government, possessing evidence of their improper conduct, kept constant watch over these conspirators who depended upon the innocent credulity of 'those idiotic Yankees,' as Capt. von Papen sneeringly called us. These complacent plotters little suspected how much was known of the activities of the German Embassy in Washington, the military agency in New York, the consulates in various cities, and the numerous spies in German employ by those whom they thought they were deluding. These agents credited the miscarriage of many of their schemes to chance, which, had they known the true cause, would have given them some very indigestible food for thought.

"In view of this spirit of hypocrisy and bad faith, manifesting an entire lack of conscience, we ought not to be astonished that the Berlin Foreign Office never permitted a promise or a treaty engagement to stand in the way of a course of action which the German Government deemed expedient. I need not cite as proof of this fact the flagrant violations of the treaty neutralizing Belgium and the recent treaty of Brest-Litovsk. This discreditable characteristic of the German foreign policy was accepted by German diplomats as a matter of course and as a natural, if not a praiseworthy, method of dealing with other governments. Frederick the Great, with cynical frankness, once said, "If there is anything to be gained by it, we will be honest. If deception is necessary, let us be cheats." That is, in brief, the immoral principle which has controlled the foreign relations of Prussia for over a hundred and fifty years.

"It is a fact not generally known that within six weeks after the Imperial Government had, in the case of the *Sussex*, given to this Government its solemn promise that it would cease ruthless slaughter on the high seas, Count Bernstorff, appreciating the worthlessness of the promise, asked the Berlin Foreign Office to advise him in ample time before the campaign of submarine murder was renewed in order that he might notify the German merchant ships in American ports to destroy their machinery, because he anticipated that the renewal of that method of warfare would in all probability bring the United States into the war.

"How well the ambassador knew the character of his Government and how perfectly frank he was. He asked for the information without apology or indirection. The very bluntness of his message shows that he was sure that his superiors would not take offense at the assumption that their word was valueless and had only been given to gain time, and that, when an increase of Germany's submarine fleet warranted, the promise would be broken without hesitation or compunction. What a commentary on Bernstorff's estimate of the sense of honor and good faith of his own Government!

"Before this war began we would not have thought any Government on earth capable of such indifference to truth. We admit that we have been the dupes of the military clique in Berlin, because dishonesty of this sort seemed to us inconceivable in these days of international honor and Christian civilization. But I believe that the nations, and I am certain that the United States, will never again be caught in a net of duplicity equal to that which was spread all over the world by the Berlin Government. We have learned our lesson, and it has cost us dear. We will never have to learn it again.

"In this consideration of Prussianism, with its pagan philosophy and its perversion of the German mind, I shall not attempt to enter upon a recital of the horrible brutalities perpetrated by the German armies in the prosecution of the war. They have been too often told to require repetition. It would be the needless reading of a catalogue of black deeds of cruelty, which would sicken a tiger, by a nation which claims not only to be moral and possessed of humane sentiments, but to be actually

commissioned by the Supreme Being to carry out His will. I only mention them here as a further manifestation of the revival in Germany of the adoration of brute strength and pitiless war and of the subordination of every noble instinct to the heartless materialism of the ruling class, who seek only power and possessions, without regard to the means by which they are attained—in a word, to show what Prussianism means when translated into action.

"But we ought not to be surprised at these terrible manifestations of frightfulness in view of the past record of Prussia. It was Goethe, I think, who said, "The Prussians are naturally cruel; civilization will make them ferocious." It has made them ferocious. Acquired science merely gave them increased ingenuity in the indulgence of their passion for cruelty. Let me read you an extract from an article which appeared in the *Fortnightly Review* of February, 1871; and, as I read, remember this was written of the German invasion of France nearly half a century ago. It might have been written in February, 1915, so truly does it portray Prussianism as we know it to-day:

"For six months one-third of France has been given up to fire and sword. For 300 or 400 miles vast armies have poured on. Every village they have passed through has been the victim of what is only an organized pillage. Every city has been practically sacked, ransacked on system; its citizens plundered, its civil officials terrorized, imprisoned, outraged, or killed. The civil population has been, contrary to the usages of modern warfare, forced to serve the invading armies, brutally put to death, reduced to wholesale starvation and desolation. Vast tracts of the richest and most industrious districts of Europe have been deliberately stripped and plunged into famine, solely in order that the invaders might make war cheaply. Irregular troops, contrary to all the practices of war, have been systematically murdered and civil populations indiscriminately massacred, solely to spread terror. A regular system of ingenious terrorism has been directed against civilians, as horrible as anything in the history of civil or religious wars. Large and populous cities have been, not once, but twenty, thirty, forty times bombarded and burned, and the women and children in them wantonly slaughtered, with the sole object of inflicting suffering. All this has been done, not in license or passion, but by the calculating ferocity of scientific soldiers."

"And yet the world, in spite of this hideous picture of Prussianism, failed to read the truth or to profit by it. To-day the beast is again at large devouring the helpless victims who fall into his power. Has not the time come to end this fiendishness?

"Much as enlightened mankind may revolt at the idea, the only way to stay this onrush of blood and desolation, which is the direct consequence of the mad impulses which now hold sway over the German mind, is to prove conclusively that the Prussian masters of Germany, though they are armed with the full strength of the Empire and of its subservient allies, do not possess the physical might to impose their will on the human race, that the ancient gods of the Teutons are false gods, and that the philosophy which has cast over the German people a robe of superior attributes is the product of a consuming vanity and pride.

"This idea is distasteful, as it should be, to a world which loves peace and craves repose, because the only instrument which can be employed is force of arms. It means war, unceasing war, until the arrogant and brutal Prussians are humbled, until the Kaiser and his military chieftains despair of their ambitions, until the German people realize that their insolent lords are not touched by divine fire and do not have at their command the powers of heaven. The great free nations of the globe have the task laid upon them to destroy the spirit of Prussianism. This they must accomplish if they would preserve for the future those rights of man which it has taken centuries of struggle to wrest from the grasp of despotism.

"If the German Government as it is now constituted should succeed to any extent in its purposes, or even if it should not be defeated in the present war, the doctrines and hopes which are now dominant over the German people will not die. Peace under such conditions could hardly mean more than a brief respite from bloodshed, an unstable truce, during which the Prussian rulers of the central powers would devote their energies to preparing for another onslaught on democracy and liberty, for another attempt to win world sovereignty.

"It is true that the free peoples of the earth would never again be found so unprepared as they were before this war to meet a militant Germany and would never again be victimized by German intrigue and perfidy. Every government would look to that. But such a state of uncertain peace would compel the whole world to remain under arms in anticipation of German aggression. The resources of the nations, already so heavily taxed by this war, would have to be further burdened for the maintenance of great military and naval establishments. Peace would be in constant jeopardy, because it would depend on the belief of Germany's rulers as to their ability to succeed in a new essay of conquest.

"It is not such a peace as that which will satisfy the longing of the world. It seeks and must have a peace which will silence for the future the clash of arms and will make needless the mar-

shaling of armies and the assembling of navies, a peace so secure and so certain that man's energies may be safely devoted to the productive and not the destructive pursuits of life, and nations may develop without fear of becoming the prey of foreign aggression.

"This great war must end with a decision which will be a blessing and not a curse to the present generation and to future generations. Prussianism with its distorted ideas, its false conceptions, and its intolerable cruelties must be brought to an end. The Germanizing of other countries must cease. The dream of 'Hamburg to the Persian Gulf' and of an enslaved Poland and Russia must be dispelled. German diplomacy and intrigue, as now practiced, must be proclaimed an international crime and suppressed forever. The philosophy of the 'superman' and of world mastery must die discredited. The evil influences which have so long poisoned the minds of the German people must lose their potency.

"Until these great objects are accomplished, as they will be when the war aims stated by the President are attained, we must go on with the war. There is no other way. Peace without a radical change in present conditions or even in those conditions preceding the war would be interpreted by the German people as a vindication of Prussianism. The German Empire would continue to accept its doctrines and to menace the world.

"We must go on with the war, intensifying our efforts and expending all our energies and resources, if need be, to obtain the great purpose for which we strive. This task must not be left half done. We must not transmit to posterity a legacy of blood and misery. The world must be made a safe place in which nations and individuals may live free and happy lives.

"We must go on with the war until the desire of the nations is satisfied and until human liberty is forever freed from the peril which is ours so long as greed and ambition and blood lust dominate the German Empire; so long as Prussianism is supreme in the mind of the German people.

"We may in this great conflict between civilization and savagery go down into the valley of shadows, because our foe is powerful and inured to war. We must be prepared to meet disappointments and temporary reverses, but we must, with American spirit, rise above them. With courageous hearts we must go forward until this war is won.

"Closely associated, as I have been in these critical days, with our great leader, Woodrow Wilson, I have been more and more impressed with his wise judgment, with his stern determination to lead democracy to victory, and with his utter confidence in the unity and splendid spirit of the Nation.

"Let us, as loyal citizens of the Republic, serve in this mighty crusade against Prussianism, confident, as our President is confident, that the righteousness of our cause and the courage and tenacity of the American people will carry this war through to victory and to peace."

EXTENSION OF REMARKS

OF

HON. JOHN M. C. SMITH,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 13, 1918.

Mr. SMITH of Michigan. Mr. Speaker, under leave granted to extend my remarks I wish to make a statement in relation to the laws which provide for granting pensions to our veteran soldiers.

The bill passed by the Senate, June 4, 1918, known as the Smoot amendment, was signed by the President on the 10th day of June, 1918, and is now a law. It is an amendment of the Sherwood pension bill, which passed the House on the 6th day of May, 1918. It provides a minimum pension for all Civil War and Mexican War soldiers now on the pension roll of \$30 a month.

Gen. SHERWOOD, now 84 years of age, who saw four and one-half years' service in the Civil War, and one of the most distinguished Members of this body, has always contended for a dollar-a-day pension, and I am glad he has lived to see such a pension bill enacted into law. I have always favored the dollar-a-day Sherwood pension bill.

The new law practically repeals the Sherwood-McCumber law of May 11, 1912, granting pensions for age and service, since the highest rate for age and service by that law was \$30 a month, which rate is now to be paid to all honorably discharged soldiers pensioned for 90 days' service or over.

I incorporate a chart of the Sherwood-McCumber law. All soldiers drawing less than \$30 a month under this law will now be raised automatically to \$30:

The Sherwood-McCumber law.

TABLE OF RATES UNDER ACT MAY 11, 1912.

Age.	90 days.	6 months.	1 year.	1½ years.	2 years.	2½ years.	3 years.
62.....	\$13.00	\$13.50	\$14.00	\$14.50	\$15.00	\$15.50	\$16.00
68.....	15.00	15.50	16.00	16.50	17.00	17.50	18.00
70.....	18.00	19.00	20.00	21.50	23.00	24.00	25.00
75.....	21.00	22.50	24.00	27.00	30.00	30.00	30.00

For convenience of reference I also wish to have incorporated a table giving the rates of pension granted under the new law:

Sherwood-Smoot law.

RATES UNDER ACT JUNE 10, 1918.

Service.	90 days.	At age.	6 months.	1 year.	1½ years.	2 years.
Rate.....	\$30.00	7.	\$32.00	\$35.00	\$38.00	\$40.00

The following circular letter was issued by the Commissioner of Pensions, which is in explanation of the provisions and construction of the new law:

DEPARTMENT OF THE INTERIOR,
BUREAU OF PENSIONS,
Washington, June 10, 1918.

The act of June 10, 1918, amending the pension law of May 11, 1912, provides the rate of \$30 per month for soldiers and sailors of any age who served 90 days or more during the Civil War and were honorably discharged, and who are now receiving a lower rate. Those who are 72 years of age or over and who served six months are entitled to receive \$32 per month; those who served one year, \$35 per month; one and one-half years, \$38 per month; and two years or over, \$40 per month. These increases will be granted automatically and without application of any kind to the Pension Bureau to all soldiers and sailors now pensioned under the act of May 11, 1912, and who have attained the required age and served the necessary length of time.

Soldiers and sailors who served during the Civil War and are pensioned at lower rates under some other law, but who are entitled to pension under the act of May 11, 1912, will be required to file an application under that act in order to receive the benefits of the new law.

The Pension Bureau will make these allowances with all the dispatch possible under existing conditions. A special force for the adjustment of cases within the provisions of the new law has been organized which will handle these cases exclusively. It should be borne in mind by those concerned that there are now nearly 268,000 pensioners under the act of May 11, 1912, and all are urged to exercise patience and consideration. While every effort will be made to hasten this work, there will be no avoidable interference with the progress of claims now on file or hereafter filed under other laws. A special effort will be made not to interfere with the adjudication of widows' claims.

It will be wholly impracticable to make any payments at the increased rate on July 4, 1918, but it is hoped that payments due August 4, 1918, may be made at the rate provided by the new law. It will not be necessary to write the bureau about these increases. Letters of inquiry will simply delay the work of making allowances.

No attorneys' fees will be allowed or paid for services in securing increase of pension under the act of June 10, 1918.

G. M. SALTZGABER, Commissioner.

By this law an increase is given to all Civil War and Mexican War veterans now drawing a lesser rate than \$30 a month. I would have been more pleased if it had also provided an increase for every veteran soldier now drawing a pension. The high cost of living brought about by the war conditions of to-day applies to all alike. The purchasing power of all pensions has been reduced from one-fourth to one-half. Our soldiers offered their lives for their country, and to them we owe our national existence. The situation in Congress was such that we had either to pass this bill or submit to such uncertainty and delay as to jeopardize the passage of any bill at all during the present session.

I received many letters to support the Smoot amendment. It increases the amount of pensions paid to veteran soldiers throughout the country to an amount exceeding \$43,000,000. This amount will continue to decrease from year to year as the pension roll grows shorter and shorter. They are passing away at the rate of 3,000 every month, 100 each day, or 1 every 15 minutes. It is estimated that within 10 years the roll will be entirely depleted of those who fought so valiantly during the years from 1861 to 1865. When they are gone their memory will still be with us, and as the centuries go on their good deeds will be cherished by a loyal and appreciative Nation which they saved.

By the circular letter of the Commissioner of Pensions it will be seen that all persons now receiving a pension under the Sherwood-McCumber Act will receive their increase in pension automatically and without making a new application.

But every soldier who is receiving a pension by special act or under the general law, and is now drawing less than the amount

provided for by the act of June 10, 1918, in order to get an increase must make a new application in writing to the Commissioner of Pensions, showing that he served at least 90 days and has an honorable discharge, and bring himself within the provisions of the act of May 11, 1912.

Veterans drawing a pension under the general law or by special act and who are entitled to an increase under the new law should file their application for increase forthwith, since their increase will commence only from the date of filing their new application.

It will take a little time to set the new law in running order. The Commissioner of Pensions has asked that the veterans exercise patience and give the department an opportunity to adjust itself to the new law. Every soldier entitled to a pension and who is entitled to an increase by this law will in due course be put upon the roll and receive his pension, but it takes a little time, and I trust by the time named in the circular, August 4, 1918, that the new law will be in full operation and each veteran get his pension according to the new rate.

The following is the Smoot amendment now enacted into law:

An act to amend an act entitled "An act granting pensions to certain enlisted men, soldiers and officers, who served in the Civil War and the War with Mexico," approved May 11, 1912.

Be it enacted, etc., That the general pension act of May 11, 1912, is hereby amended by adding a new section to read as follows:

"Sec. 6. That from and after the passage of this act the rate of pension for any person who served 90 days or more in the military or naval service of the United States during the Civil War, now on the roll or hereafter to be placed on the pension roll and entitled to receive a less rate than hereinafter provided, shall be \$30 per month. In case such a person has reached the age of 72 years and served six months, the rate shall be \$32 per month; one year, \$35 per month; one and a half years, \$38 per month; two years or over, \$40 per month: *Provided*, That this act shall not be so construed as to reduce any pension under any act, public or private: *Provided further*, That no pension attorney, claim agent, or other person, shall be entitled to receive any compensation for presenting any claim to the Bureau of Pensions under this act, except in applications for original pension by persons who have not heretofore received a pension."

Approved, June 10, 1918.

EXTENSION OF REMARKS

OF

HON. WILLIAM F. STEVENSON,
OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 25, 1918.

Mr. STEVENSON. Mr. Speaker, on the 7th of this month, in a short talk on the floor of the House, I stated that calling loans on cotton held by farmers and difficulties of shipping cotton looked as if it was done in the interest of the manufacturer who could buy the cotton and leave it where it was, in the warehouse. Mr. David R. Coker, of the Council of National Defense for South Carolina and a director in the Federal reserve bank at Richmond, Va., published all over the State of South Carolina a denial that the Federal reserve bank was doing it, to which I replied, citing one instance exactly in point. I now cite a letter from the Federal reserve bank at Richmond, as follows:

FEDERAL RESERVE BANK OF RICHMOND,
FIFTH DISTRICT,
June 1, 1918.

PEOPLE'S BANK OF SUMTER, Sumter, S. C.

GENTLEMEN: We have placed five of the six notes, amounting to \$6,800, listed on your application of the 31st ultimo, to your credit to-day and return here the note of C. C. Osteen for \$7,700. The warehouse receipts for the cotton securing this note are dated in October and November, showing that the cotton has been held by the maker of the note since that time. We see no justification for his holding the cotton at this time, when he has had the opportunity to sell it at the highest price ever known, and we do not feel that banks should lend money to any but those who are engaged in manufacturing cotton goods on the security of cotton unless the cotton has been sold by the owner to some one who, in turn, will manufacture it.

Our Government is in need of credit for the purpose of prosecuting the war, and only those can borrow who can show that the transaction is free from speculative features and that the proceeds of their notes are being used in useful enterprises.

Very truly, yours,

THOS. MARSHALL, Jr., Assistant Cashier.

The above letter confirms my theory entirely that manufacturers will be financed to buy and hold what farmers are to be forced to sell and pay loans on it.

Again, in a letter from the Hon. Eugene W. Able, of Saluda, S. C., I quote the following:

I see in to-day's State the first mention of your controversy with Mr. Coker about the Federal reserve bank calling loans on cotton. I hasten to write you that, as president of the Saluda Wholesale & Warehouse Co., of Saluda, we have had our loans, to all intent and purposes, called by a member of the Federal reserve, and we saw instructions from Richmond under which the local bank was acting. While these

instructions were not in so many words, the conclusion was inevitable. As a result, we have had to unload several hundred bales of cotton at serious loss.

I also quote from a millman from another part of the State, who says:

There is no doubt in the world but the Federal reserve bank officials are behind the millmen in forcing the 1917 cotton crop on the market and not allowing the farmers to hold for better prices when the mills are making such an extravagant price on their output. You hit it right by saying they were making 300 per cent. Why don't you have the governor of the Federal reserve bank appear before Congress and tell why they are forcing banks to call in their loans on cotton? There is something rotten somewhere, and you southern Congressmen should clear it out.

He sends me a letter from one of the great member banks of the section, from which I quote as follows:

There is so great a prejudice against the carrying of loans on cotton that we do not feel we can possibly continue to carry longer. Calls for accommodation are so exceedingly heavy that we must confine our loans strictly to our regular deposit customers.

I also cite the letter to the Union National Bank, of Columbia, S. C., published in my reply to Mr. Coker last week, as follows:

We have observed that you have been assured that this cotton is not being carried speculatively, but we can not see why farmers should be holding their cotton at this time and wish to advise you that the two notes secured by cotton must be retired at maturity, and we will not be willing to rediscount any renewals thereof.

Now, can there be a doubt that this was a deliberate act to force the producer to sell when the market was broken by manipulation?

Objects and Aims of the War.

EXTENSION OF REMARKS

OF

HON. HORATIO C. CLAYPOOL,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 28, 1918.

Mr. CLAYPOOL. Mr. Speaker, the people of this great Republic are to-day divided into two classes. One—and I hope this class is not a large one—is composed of people who desire the continuance of the war so long as they are not called upon to perform any of the essential functions thereof. I am sorry this class has an existence, but that it does exist no one an observer of the signs of the times will doubt.

The other class is a very large one and is composed of all true American patriots. This latter class hopes for an honorable peace whenever conditions are such that it can be maintained without a sacrifice of national honor and a reasonable assurance of its continuance. This class of true patriots is willing to undergo the hardships of war and endure its privations, that the world may be safe for democracy. And whenever that safety is assured these patriots want peace with all the world. It is impossible at this time to even approximate a date when conditions will warrant a peace proposition, but the time will surely come when war should smooth her wrinkled front and all the clouds now lowering upon our Nation be in the deep blue ocean buried.

The Constitution of the United States provides that the President shall be the Commander in Chief of the Army and Navy, and as such the present Congress has placed at his disposal all the man power and all the money power which he and his subordinates have requested. Should the war continue, the present Congress will continue to place at his command all the resources of this great Republic. We have fully appreciated the gigantic labors of the War Department in equipping an army of 2,000,000 men and conveying an army of 1,000,000 across the sea a distance of 3,000 miles in a few months. Never before in the world's history has such a labor been so successfully accomplished.

Members of Congress and the Cabinet have often differed in detail, but never as to the final object to be reached.

Some Members of Congress have contended for one method of assembling an army, while others have contended for a different system. These differences were such as would arise in any assembly of free men, and all were acting within their right as legislators. But it was always a matter of expediency and not as to final effect, for as to the latter there was never a difference.

While some designing persons, having in mind their own selfish interest, have from time to time tried to leave the impression on the minds of their neighbors that Members of Congress have not stood by the President, yet it is only the interested one

who complains and not the President. The President, as Commander in Chief, realizes and appreciates the fact that Congress has voted him more man power and more money than any other ruler ever had placed at his disposal since the world began. The records speak for themselves. If the administration says twenty-four billions is needed, Congress immediately goes about providing for that amount. True, Congressmen will differ as to the proper method of procuring so stupendous an amount, but the administration is interested chiefly in the result and not in the detail.

Again, there has not, from the very beginning of the labors of the present Congress, been the slightest disposition to look backward and reflect on what might have been had a different course been pursued. On the contrary, the voice of the majority has been accepted as final, and we have steadily looked to the future to see what important step must next be taken for the successful prosecution of the war. For we have never lost sight, for a single moment, of the main issue. We have kept constantly before us the fact of our being in the midst of a world war, and fully realized and agreed that the only true way out of it is through it.

Those who once hoped for peace while peace spelled "honor" have burned the bridges behind them and are now upholding the hands of the President as Aaron and Hur upheld the hands of Moses in his greatest battle.

The American people may be divided on many secondary matters, but they are a unit on the main proposition. The business of the Nation to-day is to win the war.

A mistaken notion seems to have crept into the minds of some of our people. They believe, or at least seem to believe, we are waging war against the German people and that our main duty is to cultivate a hatred against the very people whom we are hoping to relieve from the tyranny of a despotic government. We have time and again disclaimed any malice against those suffering people, but pity rather. We are waging war against a despotic power which governs the German people in spite of themselves, and when that despotism is crushed we are confident a world's treaty can be entered into that will secure to the present and future generations the kind of liberty contemplated by the Declaration of Independence, written by the master hand of Thomas Jefferson nearly a century and a half ago at the dawning of a new era in the world's history. Up to that time, it has been well said, the world had never really been fit for the habitation of man. But the principles of the government established, with the Declaration of Independence as the cornerstone, find us to-day the most stable and prosperous people in the history of the human race.

As far back as 1811, a little more than a century ago, Jefferson, viewing the situation and contemplating the successes of the Government he and his compeers had builded more perfectly than was their fondest hope, declared what we can say with equal emphasis to-day:

The eyes of the virtuous all over the earth are turned with anxiety on us as the only depository of the sacred fire of liberty.

And, again, only a little later, the same great statesman said: The sword once drawn, full justice must be done. Security for our future must be painted on our banners.

We must give up political differences for the present and unite as one man to defend our country's rights and bring success to our arms.

While the Goddess of Liberty is enlightening the world, let us continue to so conduct this grand Republic that the whole world may see the advantages of a representative democracy over a misrule of kings, and of their own free will follow our example.

Let us teach the world that the people are the source of political power, and their rulers only their agents and servants. Prior to the establishment of American liberty the world was ruled by the principle of the divine right of kings, the idea being that the only just power was called down from the clouds, and the kings pretended to divide with the Almighty what they stole from the people. It is a melancholy fact that some parts of the world have failed to make the change, but are still ruled by the divine right of kings.

But disclaiming the slightest hatred of the German people, and, on the contrary, recognizing the good that is in them when an opportunity is furnished them, we believe a free and democratic Germany is an essential to the world's continued peace and security. That being our decision, let us extend our help to those who are trying to make Germany safe for democracy. To fall short of this is not only to betray our own interest and the interest of our allies, but the true interest of the German people and of humanity wherever it may be struggling toward the light.

The great American Republic is aroused as perhaps never before in the last hundred years—certainly more than at any time in the last half century. We know no such word as fail. Our aim is the destruction of militarism not only in Germany but in all the world. We despise the system in Germany, but despise still worse the slightest appearance of the monster upon American soil, our slogan being "Make the world safe for democracy."

Mr. Speaker, while I must not be overoptimistic, while we all agree there must be a continuance of all the vim and vigor heretofore exerted in the prosecution of the war, even to the extent of getting ready for whatever may happen on the west front in France, yet you must pardon me for saying high hopes of success in the near future rise before us. With a million of our choicest young men now on the European Continent, backed up by a million more rapidly preparing for the overseas voyage, and supported by all the wealth of the greatest Republic that ever appeared upon the face of the earth, how is it possible for the dual monarchies to continue? In these young men, properly supported, we base our hope of the continuance of free government and security against a repetition of this grim and ghastly horror which has brought ruin and untold suffering to a large portion of the civilized world.

Mr. Speaker, when victory has crowned our arms and we have achieved the high aim for which we entered, or, rather, were drawn into, the war, when the world has been made safe for democracy, our work will hardly be complete without our taking a leading part in the formation of a league of nations, with a preamble to its constitution patterned after our own and which might be made to read something like the following: "We, the nations of the civilized world, in order to form a more perfect union, establish justice, insure the tranquillity of all the world, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and the civilized world for future ages, do ordain and establish this constitution for the league of nations."

A league of nations is a consummation devoutly to be wished. Since we regret that our Nation must endure the horrors of war, we must not permit this world conflict to pass without its reward. The American soldier must not suffer in vain. As a partial recompense for his fortitude he must have the pleasure of knowing he helped to perpetuate peace and prosperity to all liberty-loving people.

SPEECH

OF

HON. EDWARD C. LITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 16, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 10069) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. LITTLE. Mr. Chairman, the tremendous demands transportation is making require the utilization of every natural channel to the sea. River improvement and use deserves the most serious consideration right now. I think the Committee of the Whole will bear witness that I have not interested myself in the discussion of the water hyacinths or the hippopotami in any of the various alleged humorous features which this debate has developed, either at this time or before. Nature has given us the great waterways, perhaps her most magnificent donation to crying needs of the great war.

The Missouri is the greatest river in the world, and I think I should not let the debate go through without protest against the stand a few have taken in respect to it. I was much aggrieved and surprised yesterday to note that in the consideration of one of the appropriations for the Missouri River gentlemen did not seem to appreciate the importance of the development of that great waterway. There is the greatest waterway in the world, and if you can not make that go you might as well quit the whole business.

There is no stream that is up here for development that can be maintained in this forum if you are going to drop out the biggest river that carries, from its source to the Gulf, the most water in all the world. Men say there is not much business there. There was formerly a vast amount of business there. You might as well say that there was no business through the Panama Isthmus or the Suez Canal when somebody branched the scheme to build those canals. Every great river demands improvement. When it is not kept in order trade droops. That

is true of every river. In Egypt the Nile River boatmen complain that Government railway employees, in their desire to get the carrying trade, prevent proper Government aid to the Nile. Railroads always fight the rivers, and do here. That rivalry makes reasonable rates.

I heard men discussing the Ohio River yesterday. Fifty years ago when my father took his family down that river from Cincinnati, and we steamed out of Cairo, we ran into a sand bar. They have been working at that sand bar ever since, and they will probably be working at the Missouri River for a long time. There is the greatest commerce avenue in the world that nature has made, bar none. The present channel as now arranged for begins at Kansas City, Kans., where I live, and, of course, I have a personal interest in the matter. I will no longer disguise from this House that the district which I represent does more to feed the world than any other district in the United States.

It is a matter of some importance that that channel to the sea should be maintained. Our city, as I have said, is the second largest packing-house center in the world and the second milling center in the world. More flour and meat go out of that city than any other town in the United States, without a single exception. If we should have a railroad strike and close up the railroads, how would you expect to supply this country with the necessary things which our district presents to you? I defy any man here to demonstrate that his district does as much to feed the country and the American Army as this particular district; and under the plan now provided by the House, through the kindness of the chairman and through that of the gentlemen who opposed the bill last year, I was able to secure for the first time an amendment which carries that channel, when it is finished, beyond the State line of Missouri, where it lay before, catering to mere retail trade, and brings it 5 miles up, so that it includes the city where I live, which is the fifteenth manufacturing town in the United States. When work is well under way there many will be employed in river work there. The time will come when the wheat from the fields of the West, when the flour from the mills of the West, will float down the Missouri River in great barges to the sea and be scattered all over the world; and it is astonishing to me that men should criticize such an appropriation. The great principle that is back of this bill, that makes it possible, does not have a better illustration than the possibilities of development of the Missouri. Because of a year I spent in Illinois, I was surprised at the remarks of the gentleman whose district lies on the banks of the Illinois River. I can remember when a boy of 15 I worked for old Sim Johnson, who sold goods along that river in Illinois. He used to sing a song which went this way:

To the West, to the West, to the land of the free,
Where the mighty Missouri rolls down to the sea;
To the West, to the West, there is wealth to be won,
Forests to be cleared, and work to be done.

Two generations have been drawn westward by the great valley of the Missouri. Countless thousands have founded homes in that great territory. The wealth of an empire has in other days found way to the sea on its waters. There it runs forever, nature's road to the Gulf for a thousand generations to come. Yet men complain because, like every great river, it needs attention to get the best results—and they spend millions to build artificial waterways!

When I came here the improvement stopped at the State line, came as far as the city in which I live, and no farther; a very curious injustice. Last year I was able to secure on the floor an amendment extending the 6-foot channel plan about 3 miles to Quinoo Bend, to include Kansas City, Kans., which owns a great line of river front. This year the River and Harbor Committee made that connection a permanent part of the plan and bill. Kansas City, Kans., will not forget the committee and its urbane and able chairman. They have linked to the inland waterways the greatest food-producing city in our land. Before this great war we have vowed to win is terminated, it is quite possible our country may receive value returned in transportation rendered.

The Missouri is the mightiest channel that nature affords to the commerce of the world, and if we should cease to develop that, we would decline to accept the bounties that nature held out to this great country. The principle on which this provision is founded is the correct principle. It is abused many times, but if you are going to drop the principal thing in the whole business, you might as well drop the whole bill. I have no criticism to offer of men who come here and speak for this channel or that. I have no doubt that nine times out of ten they have a correct basis from which to work, and I have no doubt that occasionally there are false premises and selfish conclusions,

but I hope that nobody will come here again while there is a river and harbor bill to strike at the greatest channel that nature has provided in this great country. If in my service here I accomplished nothing else but to put Kansas City, Kans., on the river, to give it a waterway to the sea, I should always be proud of my record.

The Liberty Motor a Success and Aeroplane Production in Quantity a Reality.

EXTENSION OF REMARKS

OF

HON. LOUIS C. CRAMTON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 25, 1918.

Mr. CRAMTON. Mr. Speaker, since the entry of this Nation as a participant in the great world war our preparation for air warfare has had a special place in the interest of our people. American inventive genius first made feasible the flight of heavier-than-air craft through the air, and to administer decisive blows to our enemies and, perhaps, turn the scales of combat and win a decision for democracy and right and humanity in that field with American inventive, mechanical, and industrial skill, and physical alertness and daring has been a hope that they have treasured with peculiar and marked enthusiasm.

Therefore, it has been particularly depressing and disappointing to the American people to hear so much the past few months of the failure of our air program. What mistakes have or have not been made is now a matter of investigation elsewhere. That failure does not properly characterize the present status of that program, I am sure. There has come to me a statement from Mr. B. M. Kent, of Cleveland, Ohio, which I believe will be of real interest and helpfulness to all who are concerned about our air program and our part in the winning of a peace with victory. Mr. Kent is my personal friend and has written me this letter because of our mutual interest in the questions at issue. He is a skilled engineer and a lawyer of prominence in the field of patents. I know his statement is disinterested and is accurate as to present conditions. I believe the situation he presents will encourage every patriotic American who reads it. His letter to me is as follows:

CLEVELAND, OHIO, U. S. A., June 20, 1918.

HON. LOUIS C. CRAMTON, M. C.

Washington, D. C.

DEAR MR. CRAMTON: I attended the meeting of the Society of Automotive Engineers, which has been in session this week at Dayton, Ohio. As you probably know, the membership of this society includes the engineers who are largely responsible for the design and production of our automobiles and aeroplanes. In connection with the meeting, we were shown several specimens of the Liberty motor, together with un-assembled parts, and I have been so impressed with the information that I have been able to obtain that I feel that I should tell you about it, so that you may have some real facts on the aeroplane situation.

Yesterday, with several other members of the society, I went through the Dayton Wright aeroplane plant and saw real aeroplanes being made. They were not only real aeroplanes, but fighting planes, equipped with Liberty motors. The main building of this plant is about 250 feet wide by 2,250 feet long—almost a half mile. In this building we saw the parts of fighting planes being made in very large quantities. I was simply amazed at the great quantities of materials of all kinds that are moving through the plant, and the orderly and steady production. There were large numbers of Liberty motors, all complete, ready to be put into the fighting planes. The wings and other parts were being built in various parts of the plant and gradually moved to the assembling department, where they seemed to go together with remarkable accuracy, and one could literally see the aeroplanes growing. The thing that probably impressed me most is the fact that the parts are being manufactured with such accuracy and assembled so readily that as they emerge from the assembling room the machines are immediately sent up into the air, with a pilot and passenger, and soar around at various altitudes and as high as 12,000 feet. There was no delay in making adjustments and fitting and trying, and other time-consuming operations, but it was simply a matter of bringing the various parts together, putting in the connections, and the machine was ready for the air. This means that the business now is down to a manufacturing and production basis where machines can be turned out in enormous quantities.

The Dayton Wright Co. is now turning out from 16 to 20 fighting planes per day and the production is gradually increasing. I understand that the Packard Motor Car Co. is turning out 25 Liberty motors per day at the present time and its production is increasing. The Lincoln Motor Co., of Detroit, is producing 11 Liberty motors per day, and the Cadillac Co. is now producing from 5 to 6. The Ford Co. has not yet gotten into production, but will be very shortly. The Marmon Co., of Indianapolis, will also be producing within a short time, and if the other companies, like the Dayton Wright Co., are turning out the planes I predict that within six months the production will amaze the country.

I had an opportunity to examine the Liberty motor very carefully, assembled and disassembled, and I also saw the best of the English motors, the best of the Italian motors, and the German motors that have been taken from captured German aeroplanes, and I want to assure you that the Liberty motor is at least in the first rank. The

Liberty motor on official tests has developed 437 horsepower and the weight is 755 pounds—more horsepower per pound of weight than any other water-cooled motor.

The question that is commonly asked and one that you have no doubt often heard is, How fast is the Liberty motor? The answer is that the speed depends upon the plane that the motor has to propel, just the same as the speed of a locomotive depends upon the weight of the train that it has to draw.

With these facts as a basis it is perfectly evident that the Liberty motor can produce more speed in any plane than any other motor of equal weight. One of our men made a flight yesterday and made some observations as to the performance of the machine which, of course, had a Liberty motor in it. He told me that the machine was off the ground in less than 7 seconds, passed 1,000 feet altitude in 46½ seconds, and reached 7,000 feet in 6 minutes and 40 seconds.

Another question that has been common in connection with the aeroplane situation is as to why our engineers did not adopt the best European engine and get into production immediately upon that, instead of designing a new engine. The answer to this is that no European engine is adapted to the quantity-manufacturing methods that prevail in our plants. For instance, the Rolls-Royce factory in England has about 10,000 employees and produces 75 engines a week, whereas the Packard plant in Detroit, with fewer employees working on Liberty motors, is turning out at the present time 25 motors per day, or has a production of twice that of the England factory. This is a point that the average layman can not appreciate. As showing the difficulties that we would have been in had we attempted to produce one of the foreign motors instead of the Liberty motor the experience of the Wright-Martin Co., of Plainfield, N. J., is interesting. This company had a contract for a large number of Hispano-Sulza aeroplane motors for the French Government and was exactly one year behind its schedule in the delivery of the first motor on this order and it is impossible for them to produce the motors at what we would call a quantity rate. I heard one of the representatives of the Wright-Martin Co. admit these facts in open meeting and they bear out the judgment of our engineers in designing an entirely new motor for our aeroplanes.

On last Monday we were given an exhibition of "stunt flying" in which eight machines participated, all of the battle-plane type, equipped with Liberty motors, and these machines not only had tremendous speed but did all manner of stunts without a mishap of any kind. After the exhibition was over we were told that three of the eight machines were making their first flight, and this is a very significant fact and a good indication as to what we will do "in the air."

I have heard, as no doubt you have also, that about \$640,000,000 have been spent and only one aeroplane produced. We were informed by Mr. Coffin, former chairman of the Aircraft Board, that less than one-half of the appropriation has been expended and a large part of this had been used for the equipment of training fields, laboratories, and other facilities absolutely essential to the aeroplane program, and only a relatively small part of the appropriation has been actually used on aeroplanes. The investment is now represented by large stocks of all kinds of parts and supplies which will soon materialize, and are even now materializing into aeroplanes.

The country should be proud of the work that has been done in this field, and I am sure that no American could look over the various foreign motors and aeroplanes and compare them with the Liberty motor and our aeroplanes without feeling a sense of pride and realizing the superiority of our work.

I trust that I have not bored you with this long story, because I feel that you should know the actual facts without political or other selfish coloring. Aeroplanes with Liberty motors are now an accomplished fact, being produced in quantities that will total thousands within a very few months. All this has been accomplished in one year's time and involved not only the production of the aeroplane itself but the establishment of numerous auxiliary industries, such as the manufacturing of a substitute fabric for linen and the making of the various instruments with which the aeroplanes are equipped. The results have been little short of marvelous, and while there has been some delay in realizing the program, yet I believe that the delay is as nothing in comparison with the real accomplishments. The public should be given the general facts in order to counteract the sentiment that has been created by the wild rumors that have been afloat, and I wish that it were possible for everyone to see what I have seen.

One suggestion that I might make is that you should visit this great aeroplane plant and see these things for yourself.

With kindest personal regards, I am,

Very truly, yours,

B. M. KENT.

Our Official Bulletin.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 26, 1918.

Mr. MOORE of Pennsylvania. Mr. Speaker, we are making generous appropriations to obtain publicity for our governmental activities during the war. The chief medium through which the doings of the Executive and the various departments are made known is the Official Bulletin, edited by Mr. Creel. It is doubtless as impossible for Mr. Creel to keep in touch with everything that goes into the Bulletin as it is for President Wilson to give his personal attention to the contracts entered into by the various departments. Errors will creep in through the Official Bulletin despite Mr. Creel, just as mistakes will be made by departments notwithstanding the President's desire to keep things straight. Recently my attention was drawn to an article in the Official Bulletin which contained certain statements of fact that did not appear to be accurate. In consequence of those statements I addressed the Secretary of Labor, whose letter in

answer to mine is presented herewith. I am extending these letters in the RECORD because they tend to show the necessity of carefully scrutinizing all statements now made with official sanction. As will be observed, the statements referred to have to do with certain important phases of the work of the Department of Labor during the war:

JUNE 13, 1918.

HON. WILLIAM B. WILSON,
Secretary of Labor, Washington, D. C.

DEAR MR. SECRETARY: My attention has been called to the Official Bulletin of Saturday, June 8, 1918, page 13, in which, under the caption of "Personnel of the new Labor Policies Board and duties compared with War Labor Board," appeared three statements that seem to be somewhat conflicting.

First, "Immediate attention will be given to the consideration of plans for a central labor-recruiting agency," etc. Are we to understand that this is a new recruiting agency, or has it to do with the one now headed by Mr. Densmore?

Second, Third column, referring to the new Labor Policies Board, it is stated: "The latter was created by an Executive order of the President, and is in a sense the last court of appeal in labor disputes." Was this board created by Executive order?

Third, "Its findings are final and binding in all disputes between employers and employees where its principles of adjustment are in any way involved." Are the findings of the National War Labor Board "final and binding" since it has been generally announced that the board was to serve more as a board of conciliation and mediation during the war?

As these references affect labor policy and procedure, I will be obliged for your interpretation of them.

Very truly, yours,

J. HAMPTON MOORE.

DEPARTMENT OF LABOR,
OFFICE OF THE ASSISTANT SECRETARY,
Washington, June 18, 1918.

HON. J. HAMPTON MOORE, M. C.,
435 House Office Building, Washington, D. C.

MY DEAR MR. MOORE: Receipt is acknowledged of your communication of the 13th instant, calling attention to the "Official Bulletin" of Saturday, June 8, 1918, page 13, "Personnel of the new Labor Policies Board and duties compared with the War Labor Board," and requesting answers to three inquiries relating thereto.

The article above mentioned did not originate in the Department of Labor, and it is not responsible for the statements contained therein. The answers to your inquiries are as follows:

First, The central labor recruiting agency mentioned therein doubtless refers to the United States Employment Service of the Department of Labor, headed by Mr. J. B. Densmore.

Second, The language quoted seems to refer not to the new Labor Policies Board but to the National War Labor Board, which was created by the Secretary of Labor and proclaimed by the presidential proclamation of April 8, 1918.

Third, The findings of the National War Labor Board are not legally final and binding, but depend upon the conscience and patriotism of employers and employees.

I am inclosing herewith a copy of the proclamation of the President approving the appointment by the Secretary of Labor of the National War Labor Board, together with a circular giving functions, powers, and duties and the method of presenting complaints and the procedure relating thereto.

Respectfully, yours,

LOUIS F. POST,
Assistant Secretary.

EXTENSION OF REMARKS

OF

HON. EDWARD C. LITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 3, 1918.

Mr. LITTLE. Mr. Speaker, more than 80 miles northwest of Washington, Antietam Creek runs close by the village of Sharpsburg, as it did on the 16th and 17th days of September, 1862, when the destiny of the Nation was decided on its bloody field, where 4,000 gallant sons of the Republic sleep in unknown graves in a national cemetery which has no rival except that at Gettysburg. For many years the annual celebration on Decoration Day, in which I took a humble part this year, has been observed with ceremonies worthy of the traditions of that mighty victory and that august occasion.

The morning's drive to Antietam carried us by the home of Barbara Fritchie, across the battle field of South Mountain, through a beautiful country with historic associations extending back far beyond the time when my mother's grandfather, Samuel Elliott, a Maryland soldier of the Revolution, marched off from that congressional district to fight with Col. Carvel Hall or Col. Daniel Morgan, of Virginia, from Saratoga to the Cowpens. You can judge how such surroundings, the first of the family to return to them since he left, 121 years ago, how such an environment, presented for the first time to one who had taken a modest part under the flag of his country on the other side of the world to free ten millions from Spanish slavery, how such a ceremony commemorating the achievements of those who saved the Union there, and at a time when millions of our sons cross the seas to carry there the freedom the heroes of Antietam won here, appealed to me. Never since the great Civil War have the Decoration Day ceremonies been observed with more indignity

of purpose, with a grander conception of the lofty sacrifice which men made and which men are making for liberty and Christianity. On that day we were there among those who sank to rest by all their country's wishes blessed, taking part in the great national dedication of the Republic to the mighty purposes for which it was established by our fathers, that the sun of American freedom may light the hills and valleys of Europe with the inspirations which brought our ancestors across the ocean.

On that occasion the Hon. FREDERICK N. ZIHLMAN, the Congressman from that district, who is held in such high respect in this House, delivered an address so sensible in its purpose, so admirable in its execution, so patriotic in all its conception, so appreciatively and enthusiastically applauded by that great audience that I have felt it my duty to ask this House to permit me to extend my remarks by inserting it in the Record, which I now do. That the continuity of the day may be reflected on the pages of the Record, I insert the order of exercises and program so well carried out under the auspices of the Grand Army and citizens of Sharpsburg, so well presided over by the Hon. Raleigh Sherman.

The program and address are as follows:

IN MEMORIAM.

Program of exercises to be held at the Antietam National Cemetery, Sharpsburg, Md., on Thursday, May 30, 1918.

THE PARADE.

The procession formed in the following order:

Chief marshal, Clyde B. Roulette; aides, Otha H. Kaylor, George Thomas, Cleveland B. Earley, H. S. Churchey, Noah Churchey; Harmony Band; Red Cross; Knights of Pythias; public school; Rohrerstown Band; Independent Order of Red Men, M. W. A. Camp 11509; Boy Scouts; Sons of Veterans; Reno Post, No. 4, Grand Army of the Republic, Hagerstown; Mansfield Post, No. 75, Grand Army of the Republic, Keedysville; Antietam Post, No. 14, Grand Army of the Republic, Sharpsburg; Col. James Marrow, commanding.

AT THE CEMETERY.

Calling the assembly to order, bugle; music, Harmony Band; invocation, Rev. Paul E. Holdcraft; reading orders of commander in chief; solemn services by Antietam Post, No. 14, Grand Army of the Republic; benediction by post chaplain; music, Rohrerstown Band; America, chorus; reading, Lincoln's Gettysburg speech, Raleigh Sherman; music, Hagerstown quartet; oration, Col. Edward C. Little; music, Harmony Band; the American Creed, Hon. William Tyler Page; music, "Star Spangled Banner"; music, Rohrerstown Band; oration, Hon. F. N. Zihlman; music, Hagerstown quartet; music, Harmony Band; benediction, Rev. A. A. Kerlin.

By order of the committee:

JAMES MARROW, *Commandant*.
B. F. DELAUNEY, *Adjutant*.
RALEIGH SHERMAN, *Officer of the Day*.

ADDRESS OF HON. FREDERICK N. ZIHLMAN.

Mr. Chairman, ladies, and gentlemen: This Memorial Day is filled with weighty significance to our beloved Nation; for America and her allies are to-day face to face on the western front with what is possibly the most critical period of the present stupendous conflict.

We are partners in a grim and costly enterprise, one that is engaging the best efforts of nearly the entire civilized world. A conflict that has brought suffering and misery to more than 500,000,000 people.

The most diabolical and fiendish ingenuity man could devise has been resorted to in order that human life might be destroyed, the land devastated, and cities laid in ruin. The very height of fiendishness and cruelty seems to have been reached.

This world conflict has been carried on in trenches built under the ground, with poisonous gases and vapors; with great guns carrying many miles; with ships of the air and those that travel beneath the water, and every device that the genius and purpose of man could contrive has been brought into play in order to multiply human suffering and horror.

And to-day we, the great free Nation of the Western Hemisphere, having been drawn into the struggle, occupy our places on the battle line which stretches from the plains of Flanders to the Alps.

Back of us stands the glorious history of a free people, and in front of us on the one hand is a continuation of those principles and blessings for which our forefathers fought, and the extension of human liberty, justice, and equality.

On the other hand stand enslavement and serfdom, not only for ourselves but for the entire human race.

Down through the vista of the past comes the call of the mighty men of old, whose illustrious example now bids us do a man's work in the greatest of all struggles.

Before us are high hopes for a continuation of the blessings of free government, and the welfare of those near and dear to us, and the great and worthy work of making the world for all times safe against a repetition of this grim and ghastly horror, which has for nearly four years brought ruin and suffering to nearly the entire civilized world.

The giant of the Western Hemisphere, slow to awaken, patient under great provocation, has at last been aroused from its lethargy and stands prepared to strike and to hold aloft the torch of universal freedom and self-government, so that it may spread its bright glare over the tortured and darkened fields of the Old World, and proclaim to autocrats, despots, and tyrants that a new, a vital, power, seeking no indemnity, no self-aggrandizement, no extension of her borders, no blood money wrung from a helpless people, is now mobilizing her armies and her forces and is prepared to uphold the high and lofty traditions handed down to us by you men of the Grand Army of the Republic, as a priceless boon and privilege which we should keep unsullied before all the world.

For the time is at hand when we are called upon to complete what you began, and there is room in the armies of righteousness for every man who believes in the principles of human liberty and enlarged freedom, and that America, "land of the free and home of the brave," is destined to take and to hold her place for all the years to come as a Nation where the hopes and aspirations of free men are as sacred as the pledge of the living God; and that we will fight and suffer when necessary to maintain them against the world.

We entered this war with every provocation. We entered it unprepared and unready; we have made mistakes, many of them, in our mad rush to overcome our almost defenseless condition; and we pray that American ingenuity and American push and vigor will enable us to meet as free men and as patriots the tremendous problems of this day and hour.

Just as you men of the Grand Army of the Republic have endeavored since the inception of this sacred holiday to impress upon the younger generation the fact that the word "country" meant more than a government at Washington, or something to be spoken of in grandiloquent words at patriotic celebrations and gatherings; that it was something to do for, something to cherish and die for when necessary; so are the millions of young Americans throughout all the States of the Union rapidly coming to realize that our Government is not merely an ideal, but a real and tangible blessing, representing as it does the culmination of the hopes, the struggles, and the sacrifices of the free men of ages who gave their all that the blessing of self-government, of liberty, equality, and justice, might here on this continent for all time endure.

And there certainly must come to every American here to-day a feeling of pride in the illustrious example you have set and the fervent hope and prayer that we may be as successful in defending the flag and in establishing the supremacy and the perpetuity of the Republic as you were in your day and time.

Much as our people have wanted peace and a chance to grow intellectually, commercially, and without let or hindrance, yet we have all come to the conclusion that when peace does come it must come with honor, and we reecho those words of James Russell Lowell:

Better that all our ships an' all their crews
Should sink to rot in ocean's dreamless ooze,
Each torn flag wavin' challenge as it went,
An' each dumb gun a brave man's monument,
Than seek such peace as only cowards crave;
Give me the peace of dead men or of brave.

You men fought not only that the flag might wave over a free, a united, and a God-fearing people, but a Nation in which every man would stand equal in every field of endeavor and achievement; a Nation in which the highest and the humblest must obey and respect the laws of the land, each having in mind the admonition of Abraham Lincoln:

That to place one man above another in the structure of government was fraught with more danger to the Republic than chattel slavery in the days of its haughtiest supremacy.

Maryland is a border State. Our citizens fought on both sides in the great struggle of the "sixties," each for what he believed was the right. There is to-day left none of the old bitterness, none of the old hatred or animosities of those trying days. All have been wiped out by the effacing hand of time. To-day the descendants of the boys whose forefathers wore the blue and the gray are standing shoulder to shoulder in this greatest of all wars, and we can in all sincerity give our approval to the stirring words of George Morrow Mayo:

Here's to the Blue of the wind-swept North
When we meet on the fields of France;
May the spirit of Grant be with you all
As the Sons of the North advance.

And here's to the Gray of the sun-kissed South
When we meet on the fields of France;
May the spirit of Lee be with you all
As the Sons of the South advance.

And here's to the Blue and Gray as one
When we meet on the fields of France;
May the spirit of God be with us all
As the Sons of the Flag advance.

Beveridge said:

This Nation's duty is as sacred as its opportunities are real, and Americans never desert their duty.

So in this great crisis every American will and must do his full and honest duty in whatever position of responsibility and trust he may be placed, and in accord with the traditions of an aroused and virile Nation, which has for more than a hundred years builded in the white light of freedom and equality, this sleeping giant, which is but the creation and the handiwork of generations of free men, of past ages, and of many lands, and which strives now to carry out the high destiny the forefathers believed in, and not only prayed but fought for.

It is now 14 months since the President of the United States appeared before the Congress and delivered his message in which he urged a declaration of war against the Imperial Government of Germany; and I remember very vividly the concluding paragraph, in which he said:

It is a fearful thing to lead this great peaceful people into war, into the most terrible and disastrous of all wars, civilization itself seeming to be in the balance.

And looking back upon the stirring events of these past months of anxiety and preparation, we find these words painting an accurate picture of the conditions that now confront us.

For it has been a process of leading the American people to a full realization of the grim seriousness of this great problem of conducting a war 3,000 miles across the waters.

Our Nation is made up of men who come from every land and clime. Many of them have retained the customs and habits of their home countries, and are bound by blood ties to many of the men who make up the fighting armies abroad, and it was necessary to impress upon them by every known method the provocation and the wrong we had endured and the necessity of once and for all time rendering it impossible that there might ever be a repetition of this holocaust of blood and murder.

Due to the great work done by our churches, our educational societies and institutions, Americans are beginning to realize the necessity for sacrifice, for self-denial, and for a supreme effort in order that success may crown our military operations abroad and our endeavors here at home.

And when on the horizon rises
A war cloud to threaten the land,
With liberty native-born children
Shoulder to shoulder they stand,
For America ready to battle,
For America ready to fall,
Not Russians, nor Swedes, nor Italians,
But Americans all.

In our transformation from a peaceful people to a great military force and power many mistakes have been made, and it seems to me that it has been a grave error on the part of some of those in high places to mislead our people by misrepresenting, either through ignorance or design, the real dangers and the true conditions.

It would be infinitely better to acquaint the American people with such facts and figures as will enable them to visualize the real situation, in order that we can meet and cope with the problems now before us and others that are growing out of the war. In our more than seven-score years of national life we have met other imminent perils and dangers and have successfully coped with them, and we will do so again, provided, however the danger is before us and does not strike from the unseen blackness of the unknown.

I want to pay a tribute at this time to the splendid women of the American Red Cross who marched with you in review here to-day and to their millions of sisters throughout the land who have been giving of their time and talents to the great cause in which the Nation is engaged.

They have lived up to the high traditions and splendid example of the women of the mighty past. Of the wives and the daughters of the men who settled upon our shores and founded a Nation where men might worship God according to the dictates of their conscience, and who founded here upon our far-flung shores a Government which has become uncompromisingly wedded to the proposition that all men are created free and equal; the women who went westward with the pioneers and on the frontiers of civilization helped to rear a strong and sturdy race amid the dangers, the hardships, and the menace of the savage foe, far from the protection and influence of civilization.

And I say that not one whit less filled with unselfish devotion are the splendid women of to-day who are enrolled in the American Red Cross, the very mention of whose name brings up visions of their unselfish courage and devotion, tenderness, and care in the bomb-shattered hospitals of the war zone, where they set an example that all the world might follow.

The mistakes of the past are behind us. We should turn our eyes, our hopes, and our efforts to the future and emulate the words of the poet who wrote:

For to-day leads up on the hilltops
That are kissed by the rising sun;
To-day holds no tomb, life's hopes are in bloom,
And to-day holds a prize to be won.

May we face the long days of trial and strife, the period of waiting and prayer, with the unconquered spirit of American patriots and soldiers, secure in the righteousness of our cause, secure in the patience, the resourcefulness, the ingenuity, the industry, and the indomitable spirit of a free people armed in a just and holy cause, and with that spirit go on and never stop until we put the full force of American might and brawn beside the men of the British Isles, the brave sons of France, the broken army of devastated Belgium, the gallant sons of Italy, never stopping until the people of all those lands across the sea, engaged until they are spent and war weary, will lift their eyes to where the starry banner of the great Republic floats above our battle line, and reecho the words of the hundred million free men and women to whom the flag is as sacred as the cross before the army of Constantine:

She's up there—Old Glory—where lightnings are sped;
She dazzles the nations with ripples of red;
And she'll fly for us living, or drop o'er us dead—
The flag of our country forever.

She's up there—Old Glory—how bright the stars stream;
And the stripes like red signals of liberty gleam:
And we dare for her, living, or dream the last dream
Neath the flag of our country forever.

She's up there—Old Glory—no tyrant dealt scars,
No blur on her brightness, no stain on her stars;
The brave blood of heroes hath crimsoned her bars—
She's the flag of our country forever.

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 28, 1918.

Mr. TILSON. Mr. Speaker, in accordance with permission granted there is here inserted a speech delivered by me before the Republican State Convention at Hartford, Conn., on June 25, 1918:

WINNING THE WAR.

Mr. Chairman, delegates, ladies, and gentlemen: In this presence I am forcefully reminded of the rapid flight of time by the reflection that it was at a Republican State Convention 10 years ago that I was first nominated for Congressman at large. The nomination being ratified at the polls, I took my place at Washington as the Junior Representative from this State. Now I am the senior Representative in service from this State. It is pleasing to note so many familiar faces of those who then believed in me and honored me with a nomination. It is also quite gratifying to observe that for the most part time has dealt very kindly with you.

We are assembled under conditions such as never before confronted a party convention in this Commonwealth. We have heard and read much of Armageddon, which heretofore has been used as a striking figure of speech. Armageddon is now here in reality, with far the greater part of mankind actually lined up on one side or the other, and all the remainder deeply involved indirectly in the struggle.

Our own country, with its enormous wealth of man power and financial resources, has pledged itself even to the very last man and the last dollar necessary to win by force of arms an honorable and a lasting peace. We have done this advisedly, solemnly committing ourselves to the doing of a task from which we can not and will not turn away until it is finished. It will be finished when the combination that attacked humanity has been destroyed or rendered powerless to continue its onslaughts.

Already our choicest young men in considerable and rapidly increasing numbers have joined and are joining our brave allies on the western front in France. Already their blood has mingled with that of their French and British comrades on the plains of Picardy and on the hills along the Marne, the Meuse, and the Somme.

On this side of the water more than a million other young men are in training for the serious business ahead of them, while

other millions await with grim determination their turn to come to the colors when called.

Meanwhile in order to make effective the hands of those who are to fight our battles sums of money staggering to the imagination are being expended. Taxes that hitherto would have been unthinkable are being laid upon the people and being cheerfully paid by them, while burdens of indebtedness are being piled up which will prove grievous to be borne even by our children and our children's children.

In view of such conditions there can be but one thought uppermost in the minds of all patriotic Americans, and that is the war. It is the one all-absorbing subject of consideration among thoughtful men, because it is the one overwhelming event now transpiring in the world. All other governmental matters seem paltry when compared to it and fade into insignificance beside it.

It is, I am sure, with feelings inspired by a realization of this great world crisis that you meet here to-night as the chosen representatives of a great political party and will meet to-morrow to perform your duties as such representatives.

If I were asked to state in one sentence a rule of conduct for every man, woman, and child in the Republic I should say: "Help in every possible way to win the war in the shortest possible time." What is true of individuals in this regard must be preeminently true of political parties which seek power from its source—the people—to control the affairs of State and Nation.

In the present national crisis no political party is worthy of consideration, confidence, or support which does not stand firmly for the most vigorous possible prosecution of the war to a successful conclusion. No candidate of any party is worthy of being clothed with official power who is not ready, willing, and able to use effectively every possible means to win the war.

If as a result of your deliberations and action it shall be made manifest to the people of Connecticut that our party policies and candidates measure up to these standards, we have nothing to fear.

It has been suggested from high official sources that during the continuance of the war "politics be adjourned." Let me read the entire statement:

Politics is adjourned. The elections will go to those who think least of it; to those who go to the constituencies without explanations or excuses, with a plain record of duty faithfully and disinterestedly performed. I for one am always confident that the people of this country will give a just verdict upon the service of the men who act for them when the facts are such that no man can disguise or conceal them. There is no danger of deceit now. An intense and pitiless light beats upon every man and every action in this tragic plot of war that is now upon the stage.

These words were uttered by President Wilson, the leader of the Democratic Party, in an address to the joint session of Congress on May 27, 1918. It is quite evident that the speeches made by Vice President MARSHALL and others in the Indiana State convention the other day are not in accord with the President's proposition, but thus far I have failed to see where they have been called to account for their utterances. If by "adjourning politics" it is meant that, in the conduct of the war, nothing that is even tinged with partisan politics shall be permitted to interfere with efficiency, then we all concur. If, on the other hand, it means that during the war one party must cease its activities as a party while the other uses all the departments of the Government, and the war itself, to advance party interests, then I for one must vehemently dissent. One-sided partisan politics and all other politics that may impede the effective carrying on of the war should be adjourned "till it's over over there."

The war is not a political war, and this statement should apply with equal force to both political parties. You may search the Provost Marshal General's questionnaire in vain for any reference to the politics of the registrant. The local exemption boards make no inquiries on this subject when your boy or your neighbor's boy is summoned to the colors. The Republican boy and the Democratic boy march away side by side, and with them political partisanship is adjourned in reality until they return. In like manner should men of both parties who remain behind fall in line and work together in all matters touching the war.

In the campaign upon which we are now entering it may be attempted by our opponents to make an issue of standing by the President, although there can be in fact no such issue, because no President from Washington down has ever had such undivided, unqualified support as President Wilson has had from all parties. In all matters connected with the war Republicans have stood beside him, stood back of him, stood all around him; they have supported him on both sides; they have

backed him up; they have gone ahead in order to beckon him on, and by every means at their command have urged, aided, and assisted him toward a vigorous prosecution of the war.

Such an issue would be a dishonest subterfuge, and a resort to it would be an almost treasopable attempt to coin the blood and horrors of war into party advantage.

No one, whether of high or low station, can deny the fact that the Republican Party as a party and its members as individuals have supported loyally and unswervingly the President of the United States in the prosecution of the war. In this regard I am willing to place Republican States alongside Democratic States, individual Republicans alongside individual Democrats, and abide by the result of the comparison. In matters concerning the war I am willing to place the State of Connecticut, with our great war governor, alongside any sister State for comparison. In like manner our State delegation at the National Capital will not suffer in this respect by a comparison with other States.

I have sometimes wondered what would have been the result if in 1916 a few votes in California had been shifted and Mr. Hughes had been elected instead of Mr. Wilson. Probably war would have come to us just as it did come; in fact, it had come already if we had but recognized the fact.

Would the Democratic Party, would Democrats as individuals, have supported the war with equal unanimity and zeal? Would they have supported Mr. Hughes as we have supported Mr. Wilson? Let us hope so. It is not fair, even though according to scripture, to say that because the fathers have eaten sour grapes the teeth of the children are set on edge, but we can not restrain the reflection that the political ancestors of the present Democratic Party were not all so firm in their support of Mr. Lincoln when he was carrying the burden.

Truth is that never in all the tide of time has any ruler, emperor, king, prince, or potentate received such loyal, undivided support from all parties as has President Wilson in connection with the war. Never in all history have such fabulous sums been appropriated or such unlimited powers granted to any man as have been freely conferred upon him. If anything has been or shall be left undone that might have been done to win the war, it will not be because the representatives of both parties in both Houses of Congress have failed to vote money or grant power to the President.

Such opposition as he has had on the more important war measures has come largely from his own party, as, for example, the selective-draft law, the most important war measure of all. Leading Democrats in the House, including the Speaker and the chairman of the Committee on Military Affairs, opposed the bill, which was led in the House by Republican members of the Committee on Military Affairs and carried by Republican votes. It is only fair to say, however, that the New England and Eastern Democrats generally, as well as Republicans, voted for it.

In all fairness it may be doubted whether all the powers asked and conferred or all the purposes for which money has been asked and appropriated have been wise or needful; but Congress has granted both freely, denying the President nothing he might deem helpful in the great emergency. Whether this was wise or unwise as a matter of partisan politics was not considered. No party possessing patriotism could afford to do less than has been done.

After all, the great responsibility of carrying on the war is upon the shoulders of the President. Under the Constitution he is the Commander in Chief of the Army and Navy. His is the task of transmuting man power and money into effective blows. All men of all parties must and will support him in this. The Republican Party has never failed in such a duty and will not now or in the future.

There have been many places since the war began where it would have been an easy matter to play partisan politics on the Republican side. It would not have been patriotic to do so, however, and it has not been done.

In other countries where the government is responsive to the will of the people, in a great emergency of this kind, the entire control of the government is not intrusted to a single political party placed in power upon prewar issues, but men of different parties make up the government, provided only that they are in accord as to the war. Even under our Constitution in the Civil War Mr. Lincoln utilized in Cabinet positions the great talents of political opponents to help win the war.

You all recall the case of Secretary Stanton. He was a bitter personal as well as political enemy of Mr. Lincoln. At one time he had refused to try a lawsuit in which Mr. Lincoln was of counsel. He had even referred to Mr. Lincoln as a gorilla. He was a savage critic of the Lincoln administration. Nevertheless, Mr. Stanton had towering ability and a genius for organization, and

Mr. Lincoln made him Secretary of War. Yes; and Secretary Stanton helped President Lincoln win the war for the preservation of the Union.

It mattered not whether a man was politically or personally agreeable to Mr. Lincoln if only he could help win the war. That was the great broad-minded, broad-shouldered, patient Lincoln, bearing the burden of a divided country.

At the present time it is different. The President, in addition to his other duties, is the head and leader of his party, and as such frequently speaks and acts. He has placed at the head of all the executive departments men of his own party, chosen for party reasons. These men, under the direction of the President, are charged with the duty of executing the laws and securing results from the expenditure of public revenues.

It is human to err. Men make mistakes if they accomplish anything. It is necessary for the President to act through human agencies. Weak or unfit appointments have been made in many instances, while in others, in my judgment, the best use has not been made of the material at hand. Instance the case of Gen. Leonard Wood.

The war program is a Herculean undertaking, the magnitude of which it is difficult for the human mind to realize. In initiating and carrying it on there have been mistakes made. The heads of departments have made mistakes. Those working under them have made mistakes. Many of these mistakes should not have been made. None of them should have been persisted in or repeated. Some of them have been inexcusable blunders which have delayed and neutralized the effects of other necessary war work. Some of them have been of such a character as to call for investigation, criticism, and condemnation by some of the ablest and most patriotic members of the President's own party. Surely, if there was ever a favorable opportunity to "play politics" by taking advantage of the mistakes of the party in power, it was here.

I consider it one of the many nobly patriotic chapters of Republican history that no such attitude was taken. Patriotism prevailed over partisanship and Republicans took their places alongside of Democrats in helping to find and point out the weak places that they might be strengthened, to reveal incompetence that it might be replaced by efficiency, and to vote funds or legislation necessary to remedy the defects revealed.

There are those who in time of war would put an end to all criticism, constructive or otherwise. Such a policy would put an end to free government as well as to free speech and establish here an autocracy more to be dreaded even than that we are seeking to destroy in central Europe. Worst of all, it would be the surest means of defeating the very purpose we all have so much at heart. It would enshrine incompetence, put a premium upon extravagance, and leave the door of opportunity wide open to wrongdoing.

If airplanes by the thousands have been promised and produced by the dozen only, it is well to inquire whether the promise was too large or the performance too small. If machine guns or heavy guns are lacking for the use of our troops, we should know the reason why, so that we may the better and the sooner supply the deficiency. Mistakes and failures in these matters are proper subjects of criticism; the public welfare demands it; only timidity amounting to cowardice forbids it; but such criticism must be fair and just. It must be constructive and not destructive. In other words, the man who criticizes must be honest and know what he is talking about.

He who in this awful hour criticizes unjustly or unintelligently for the sake of personal or party gain is unworthy of public confidence; but he who in such a crisis withholds just, well-informed, constructive criticism of waste, incompetence, or wrongdoing is a coward and a "slacker."

I have no patience with the man who would imitate the ostrich in sticking its head in the sand to conceal itself from its enemies. We should parallel the success of the ostrich if we attempted to cover up incompetence, gloss over our shortcomings, or fail to seek out the causes of our failures. Such would be the result of restricting legitimate criticism, and we ourselves would be the only ones deceived by it. Certainly our enemy would not be misled by it.

Much has been accomplished in the way of making America the deciding factor in the war, and due credit should be given to all faithful public servants, from the President down, as well as to all patriotic private citizens, who have done their share. In this great accomplishment Republicans can justly claim a worthy part. That they have not done more is due rather to lack of opportunity than to lack of zeal, capacity, or willingness.

There remains much more to be done before peace will come through complete victory. Who can do it best? Both of the great political parties are thoroughly loyal in this great crisis. No party has a monopoly of patriotism or a proprietary right

to the flag. The untiring devotion of a party to the task of winning the war without regard to partisan advantage is the best proof of loyalty that it can give. He loves the flag most who serves his country best in whatever place he may be.

As I said at the outset I now say in closing, that the one great business of all political parties, as well as of all individuals, should be to win the war speedily. In this State the question will be which party and which candidates will best serve this supreme purpose. Judging the future in the light of the past, whether we go back over 50 years or go back only 1 year, there can be no question as to the answer. Proud of the record of the past, firm and steadfast in our devotion to the service of the present hour, we as Republicans can look forward with serene confidence to the day of greater and wider opportunities for serving the State and Nation.

The Spurious Ritual Bill.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 28, 1918.

Mr. HUDDLESTON. Mr. Speaker, having been for more than 25 years an active worker in fraternal orders, I have an intimate personal knowledge of the great work that they are doing. Fraternal orders in the United States have, together, more than 13,000,000 members, and their influence is steadily increasing. They have done much to teach Americanism and to promote the solidarity of our people. They have exercised always moral and spiritual influences upon their members. Their constant function is the relief of the sick and distressed, the care of widows and orphans, and, more than all, they strive to elevate the character of man. Anything which would tend to weaken the influence of the fraternal orders or to lower their dignity and standing should not be permitted.

Nearly all of the fraternal orders have secret ceremonies and also signs and passwords by which the members may recognize each other. So far as my knowledge goes of these organizations; these secrets are wholly harmless, though they add much to the interest of the members. An exposure of these harmless secrets tends to break down and destroy the order and to lessen the respect in which it is held. For this reason it seems to me that the public welfare requires that secret fraternities engaged in fraternal, charitable, and elevating activities should be protected by law from exposure of their legitimate secrets.

While I was grand master of the Independent Order of Odd Fellows of the State of Alabama I had occasion to observe how certain dishonest publishers are making money by the sale of alleged exposures of Odd Fellows, Masons, and other orders. Such dastardly work was being constantly brought to my attention. It consists largely in circulars sent indiscriminately through the mails giving what was represented to be extracts from their secrets and offering to sell a complete exposure of all the secrets of these orders for a small sum. The effect of these circulars upon the Odd Fellows under my care was to impair the standing and dignity of the order and to bring it into disrepute and to make a laughing stock of the efforts of its members to preserve its proper secrets. I was then impressed with the need of laws which would bar these circulars from the mails.

The activities of these dishonest publishers was nation-wide, and officials of the Independent Order of Odd Fellows over the country at large made many complaints, both in the Sovereign Grand Lodge and to the Grand Sire, who is the international head of the order. Some two years ago I received a letter from Hon. J. B. A. Robertson, who was then Grand Sire of the Odd Fellows, which was as follows:

SOVEREIGN GRAND LODGE OF THE I. O. O. F.
Oklahoma City, Okla., February 8, 1915.

HON. GEORGE HUDDLESTON,
Congress Hall, Washington, D. C.

DEAR SIR AND BROTHER: Having met you in the Sovereign Grand Lodge, Independent Order of Odd Fellows, and knowing your activity and influence in the order, I feel justified in writing this letter.

At the 1914 session of the Sovereign Grand Lodge a resolution was introduced authorizing the grand sire to take such steps, as in his judgment should be necessary, to secure the passage by Congress and the Parliament of Canada of a law that would protect the order not only against the wearing of its emblems by those not entitled to do so but also against their use for advertising purposes and to secure to the order the sole use of its emblems. Nothing was done by that

grand sire during his term of office, nor was anything accomplished by Judge Daniel during his brief term, and the recent session of the Sovereign Grand Lodge at San Francisco referred the whole matter to me for such action as I might deem advisable. In addition to the above, I might suggest a matter that you are well acquainted with, and that is we need a Federal law that will prevent transmission through the mails of spurious rituals, etc. It is unnecessary to suggest to you the urgent necessity of some law that will protect not only the Odd Fellows but all other kindred societies, and it seems to me that it would be an easy matter to secure the passage of such an act if the purpose and object thereof was thoroughly understood by all the fraternities.

I wish, if you are in a position to do so, that you would give the subject matter some consideration and advise me what, in your judgment, would be the proper steps to take. I am satisfied that in so far as the spurious rituals are concerned that nothing short of a prohibition against their transmission through the mails would be sufficient.

I am sending a similar letter to Mr. RAKER, Member of Congress from California, inasmuch as he and you are the only members that I can call to mind who have been grand masters and grand representatives, and therefore should be in harmony with this request.

Fraternally, yours,

J. B. A. ROBERTSON, *Grand Sire.*

On receipt of this letter I conferred with Judge RAKER with regard to the introduction of a bill along the lines suggested by Mr. Robertson, but nothing was done at that time. Mr. Robertson was succeeded as Grand Sire by Hon. F. C. Goudy, of Denver, who subsequently discussed the subject with me in a personal interview, and requested that I introduce a bill which would give fraternal orders legal protection from an exposure of their lawful secrets. In compliance with this request, on August 7, 1917, I prepared and introduced the bill known as H. R. 5712, which is as follows:

A bill (H. R. 5712) to make unlawful depositing in the mails of the United States advertisements of alleged exposures of the secret work of fraternal orders.

Be it enacted, etc., That, without authority from the governing body of such order, no letter, postal card, circular, newspaper, pamphlet, or publication of any kind containing any advertisement or offer to sell purported or ostensible exposures, copies, or extracts of the ceremonies, instructions, or work of a fraternal order, such as Masons, Odd Fellows, or Knights of Pythias, which, by the laws or rules of such order, members thereof are forbidden to disclose to persons who are not members thereof, shall be deposited in or carried by the mails of the United States.

SEC. 2. That any person, firm, or corporation violating this act shall be fined not more than \$1,000 or imprisoned not more than six months, or both: *Provided,* That upon the trial of any person, firm, or corporation charged with violating this act no witness shall be required to disclose the ceremonies, instructions, or work of any such fraternal order of which he may be a member, nor to establish said offense shall proof be required as to the true nature of such ceremonies, instructions, or work.

The fact that I had introduced the bill was reported by Mr. Goudy to the Sovereign Grand Lodge, I. O. O. F., at its Louisville session in September, 1917, and a resolution thanking me for having introduced the bill was adopted by that body. Later I was officially notified of this action by Hon. John B. Goodwin, Grand Secretary, by a letter, as follows:

SOVEREIGN GRAND LODGE OF THE I. O. O. F.,
Baltimore, Md., November 14, 1917.

Hon. GEORGE HUDDLESTON,
Grand Representative, Birmingham, Ala.

DEAR BROTHER HUDDLESTON: Referring to the last session of the sovereign grand lodge and to your action introducing a measure in Congress intended to prevent the advertisement of spurious rituals by denying the use of the mails to the same, it gives me much pleasure to say that the legislation proposed by you was approved, and also, on motion of Past Grand Sire Cockrum, of Indiana, a vote of thanks was extended to you for your services in connection with it. As it is a matter of interest and importance to the entire membership of our order, am sure your efforts in behalf of it are greatly appreciated.

I am, with kind regards,
Fraternally, yours,

JOHN B. GOODWIN,
Grand Secretary.

I also received a letter from Grand Sire Goudy upon the subject, as follows:

SOVEREIGN GRAND LODGE OF THE I. O. O. F.,
Denver, Colo., November 5, 1917.

Hon. GEORGE HUDDLESTON, M. C.,
Washington, D. C.

DEAR FRIEND HUDDLESTON: In the matter of the recommendation or approval of the bill for an act of Congress regulating or prohibiting dealing in spurious rituals, etc., will state that I submitted the matter to Grand Secretary Goodwin as to what action the sovereign grand lodge had taken, and I inclose copy of his reply. I have written him as per the inclosed carbon. I am very anxious to have this bill pushed and passed, if possible, and I know we can all count on you doing the best you can, and I believe you will succeed.

In so far as the action of the sovereign grand lodge is concerned, you are at liberty to treat their action as public property in so far as your committee meetings are concerned, as that probably is the way it was intended, but through some misapprehension it was kept on the secret journal.

With all good wishes, I am, fraternally, yours,

FRANK C. GOUDY, *Grand Sire.*

P. S.: Would it be of assistance if I had the grand masters and the various American grand lodges write you a letter urging action?

F. C. G.

The bill was referred to the Committee on the Post Office and Post Roads. I have asked for no hearings on it, as the attention of Congress has been completely absorbed in matters relating to

the war, and I felt that it was incumbent upon those at whose instance I had introduced the bill to push it.

My bill to forbid the advertisement through the mails of spurious rituals and exposures of Odd Fellows, Masons, and other fraternal orders was introduced in good faith and for the purpose apparent on its face. Whether it shall become a law or not is for the people's representatives in Congress to say. That there is a need for protection against those who would injure the great fraternal orders in order to put a little money in their own pockets is clear to those who are familiar with the facts.

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 28, 1918.

Mr. TILSON. Mr. Speaker, in accordance with leave granted, I submit for publication in the RECORD the following remarks made by me at New Haven, in my district, on June 24, 1918, in accepting the Republican nomination for Congress:

"Mr. Chairman and delegates to the Republican convention of the third congressional district of Connecticut: Nearly four years ago, in this hall, I was nominated for Representative in Congress from this district and the nomination was duly ratified by the voters at the polls. Two years later, while absent with my regiment at the Mexican border, I was again nominated, and at the succeeding election returned to Congress.

"This is the first opportunity since my election to represent the district to speak to the delegates of the party that named me as its candidate. It is therefore fitting that I render to you an account in some measure of my stewardship during my four years as representative of the district. As much of my work has been in connection with military matters, I shall begin with this.

"During my four years as Congressman at large I had served as a member of the House Committee on Military Affairs and thus came naturally to a study of military problems.

"My first lessons in preparation for being a 'war Congressman,' however, date back more than 20 years, when I joined the New Haven Grays. Next, I went to the Spanish War. When that was over I returned to my old company and continued the lessons in one position or another in the old Second Regiment for over 18 years, including a special course of nearly five months at the Mexican border. I refer to this because it laid the foundations of my education in military affairs and of my preparation for becoming a really useful 'war Congressman.'

"When I entered upon my congressional duties in 1915 the great war in Europe was going on. We were not yet embroiled, but farseeing men, even though not students of history or international law, could not fail to see the very great danger of our being drawn into it. It was then that I became intensely interested in the question of our national defense. Five years earlier I had urged in Congress increased preparations against war, and especially emphasized the need of more artillery, in which we are even now all too weak.

"In the first session of the Sixty-fourth Congress I began urging that we begin at once the preliminary preparation for the production of the essentials of war, and I described in detail at that time what was necessary to be done. If my advice had been followed, many lives and much treasure would have been saved.

"Neither Congress nor the country was ready for my message, even in 1916. I repeated it and reiterated it up to the very end of the Sixty-fourth Congress in March, 1917, but mine was a 'voice of one crying in the wilderness.'

"In April, 1917, the war came to us. At any rate, that is when we recognized the fact that it had come. The Sixty-fifth Congress convened on April 2 and war was declared on April 6. The Committee on Military Affairs, of which I was a member, began at once consideration of the question of raising, arming, and equipping an army. In cooperation with 4 other Republicans and 3 out of the 12 Democrats on the committee, I took an active part in framing and finally passing through the House the selective-draft act which insures adequate man power to win the war.

"Men without arms and ammunition are ineffective in war, and yet these prime essentials are the most difficult of all war materials to procure. I resumed my labors on the subject of munitions, and in that work have found my great opportunity. In seizing and improving this opportunity I have been able to

render what will probably prove to be the greatest service of my life to my country.

"My colleagues on the Military Committee gave me the affectionate name of 'Jigs TILSON,' because I showed them just how munitions are made in mass production. In the House I was sometimes called the 'Gun Man,' because I frequently brought on the floor a miniature arsenal containing military rifles of the several warring countries, and pistols of many types and kinds, machine guns galore, and ammunition from the smallest cartridge to 6-inch shells, and at one time a real torpedo.

"Soon I began to be spoken of as the 'ordnance expert in Congress,' and my opinions on such subjects began to be respected accordingly. It was no longer difficult for me to get a hearing. Time after time I was requested to explain war materials of various kinds in the House and was always yielded time very freely by both sides of the House. Inventions of all kinds in the ordnance line were brought to me for examination and my presence requested at many official tests of weapons.

"My field widened as I made a study of the newer weapons of warfare. I was called upon to explain hand grenades, rifle grenades, trench-mortar shells, aerial bombs, airplanes, tanks, gas masks, and all the rest of the horrible paraphernalia of war.

"All these things have brought me to the favorable attention of my colleagues in the House and of the War Department and at the same time kept me extremely busy. It is a work that I have found most interesting, and in doing it I feel that I have rendered the highest possible service that any man in my position could possibly render. It is a most important work for the country, because we are spending billions of dollars for the things I have mentioned. Members of Congress who must appropriate for these things should know about them, and it has been my privilege and duty to teach them.

"Above all, the precious lives of our men 'over there' depend upon our furnishing them with an adequate supply of these things, and the final victory itself depends upon them. It seemed to me to be important that at least one Member know about these things thoroughly, and I am very glad that I made it your Member. I feel that in this way I can best reflect honor upon the people who elect me as well as best serve our common country.

"I have made this reference to the special work of national scope and importance that I have taken up and carried on because I wish you to know what I have been doing, especially since the war began. In addition to this, however, I have done all the usual work falling to the lot of a Congressman.

"Those who have served in the present 'war Congress' have had experience unique in the history of the American Congress. It is not possible for anyone who has not served in it to fully realize what that experience has been. A thousand people have come into vital contact with the Federal Government where there was one before. New and strange questions have arisen in regard to which people knew not which way to turn. Naturally and properly they turn for information and assistance to the one representative of the Government at Washington whom they know, and that is the Congressman. Without seeing my correspondence and being in my office you can scarcely imagine what this means. Scores of complicated questions are pending all the while and new ones continually arising. One of the many entirely new things since the war began—the matter of allotments and insurance—is sufficient to require an immense amount of work in a Congressman's office, and yet it is the kind of service he most gladly renders, as it is for the loved ones of our boys 'over there.' Then there are the questions concerning the dead, the wounded, and the missing.

"Questions in connection with service in the Army and Navy, such as classifications, enlistments, commissions, promotions, transfers, furloughs, discharges, and scores of others, are arising almost daily. Then business comes in for its share of troubles, involving the food and fuel administrations, transportation, materials, priorities, Government orders, and all the rest; and it is a pleasure to help in these things.

"Oh, it is a liberal education to be in Congress in war times, and the curriculum is cumulative, being added to every day.

"I speak of these things as a small part of the individual work a Congressman gladly does for the people of his own district, and which it requires time and vital energy to do, as well as to learn to do well. It is not boasting, but a simple statement of the plain truth, to say that no one without the experience I have had, especially in military matters, could do this work as well.

"In this great crisis, when the blood of our choicest young men is being spilled like water, when those of their comrades who live are enduring untold hardships, when even here at home we are beginning to feel the burdens, it is no time to consider personal ambitions or political advantage. The supreme problem of the hour is the winning of the war. The man who can best serve this supreme purpose should be chosen in every contest throughout the country.

"I wish to say to you, gentlemen, in all sincerity, that if I did not feel that I can render more effective service in Congress during the next two years than any other man who could be sent from this district, I should not accept the nomination you have so graciously tendered me. Feeling as I do, that during the war I can serve my country more effectively in the position I now occupy than any other, and more effectively than any other who may offer to occupy the position, I accept the nomination you have tendered with such unanimity and good will.

"In doing so I pledge myself to continue, if elected, to give the best that is in me, regardless of any sacrifice however great, and without regard to personal or party advantage, to serve my country with all faithfulness and to the best of my ability in its hour of greatest need."

Resolutions were passed as follows:

THE RESOLUTIONS.

"We, the duly elected delegates to the Republican convention of the third congressional district of Connecticut, in convention assembled, again declare our loyal adherence to the time honored, tested, tried, and true principles of the Republican Party, and to the highest ideals and best traditions of the party.

"The Republican Party from its birth has been the party of liberty, patriotism, and progress, and it will maintain that high standard throughout the crisis through which we are now passing.

"We believe that in the midst of the world-wide war in which our country is now a participant the thought uppermost in all minds should be how we may best fulfill our part in the struggle. Our sons, our brothers, our friends, our loved ones have gone forth to war, to bare their breasts to the missiles of the enemy; to give their lives if need be, as some of them have done already, in order to preserve our liberties and our national honor.

"At such a time and in such a crisis it is fitting that patriotic men of all political parties should lay aside partisanship in all matters connected with the conduct of the war, to the end that the war may be prosecuted as vigorously as possible to an early and successful conclusion.

"The Republican Party cheerfully submits the record of its representatives in the public service, both State and National, to this test and takes pride in the fact that they have maintained the party's proud record for patriotism and loyalty to the flag.

"Connecticut's part in the war thus far is one of which every citizen of the State may be justly proud. The administration at Hartford has been vigorous and effective in all matters connected with the war, while our Senators and Representatives in Congress have taken a most active, loyal, and influential part in all war legislation.

"The third congressional district of Connecticut is especially proud of the record of its Representative in Congress, the Hon. JOHN Q. TILSON, whose unusually able and effective work in connection with military and other matters has placed him in the very front rank of the men now serving in Congress.

"To a practical schooling of nearly 20 years in active military experience, including service in the Spanish War and at the Mexican border, Congressman TILSON has added nearly eight years as a member of the Committee on Military Affairs in Congress, making him the most experienced man in military matters now serving in either branch of Congress.

"In addition to his practical experience, Congressman TILSON has made an intensive study of arms, ammunition, airplanes, and other materials used in the present war, so that he has become the recognized authority and expert in Congress on subjects connected with war preparations, and his advice in these matters is eagerly sought not only by the Military Committee, but also by Congress itself.

"Congressman TILSON has the unique distinction of being the first Member of Congress not only to call attention to our lack of preparedness for national defense, but also to point out the practical way of solving the problem. It is also now admitted that if his far-sighted and timely advice had been followed much valuable time, billions of money, and many priceless lives would have been saved.

"In view of the unusual qualifications possessed and the effective and valuable public service now being rendered by Congressman TILSON, we believe it would be a public misfortune if the people of this district failed to return him to Congress during the period of the war.

"We therefore present the Hon. JOHN Q. TILSON as a candidate for reelection to the office of Representative in Congress from the third congressional district of Connecticut and call upon all the voters of the district to disregard previous party affiliations, just as he at Washington has disregarded partisanship, and vote for his reelection to Congress."

The Training of Soldiers.

SPEECH

OF

HON. EDWARD C. LITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 4, 1918.

Mr. LITTLE. Mr. Speaker, I ask unanimous consent to address the House for not less than 10 minutes.

The SPEAKER. The gentleman from Kansas asks unanimous consent that he be permitted to address the House for not to exceed 10 minutes. Is there objection?

Mr. FLOOD. Mr. Speaker, reserving the right to object, I just want to state that I am not going to object in this instance, but there is a very important bill that is a special order for to-day, and it ought to be passed without delay, and after the gentleman from Kansas gets through I shall insist upon taking that bill up.

The SPEAKER. Is there objection?

Mr. LITTLE. Mr. Speaker, men learn best by experience and better remember what they acquire in that manner. That is as true of us as it is of the departments, and as true of the departments as it is of us. When this war began for America we were told that the General Staff thought no troops should be sent to Europe until the 1st of next July, 1918. If that theory had been fully followed, judge where we would be! Marshal Joffre's interview knocked that in the head, though the staff tried to censor that interview. At the time the staff's theory was advanced it was my judgment that that was the greatest mistake ever made in the annals of war. I am still of that opinion. We were told then that it required a year to train troops for the battle field. I ventured as a Member of the House to take exception to that in the first speech I made on the floor a little over a year ago. I then said 60 days' hard work would go a long way to make a soldier; that any officer who could not make soldiers in six months never could make a soldier. With satisfaction I read in the Washington Herald of yesterday, May 3, the following, discussing the utterance of the Acting Chief of Staff, Maj. Gen. Peyton March, before the Military Committee. The Herald says:

Gen. March said that it was no longer necessary for a soldier, especially a soldier as intelligent as the average American, to be trained a year, or even six months. He declared that after they were hardened the tricks of the trade could be taught them very quickly, and that it would be an actual advantage for them to receive much of this abroad, where the latest practices become known much quicker than is possible in America. March told the English experience, where the time supposed to be necessary to fit a soldier for the light duties at first expected of him has been reduced.

Mr. CALDWELL. Mr. Speaker, will the gentleman yield?

Mr. LITTLE. Certainly.

Mr. CALDWELL. Do I understand that that was supposed to have been stated to the Military Committee?

Mr. LITTLE. Yes; and since the gentleman has mentioned that, I will say that the gentleman who asked the question which brought it out assured me that it was a correct report, and also several other members of the committee.

Mr. CALDWELL. I will say that I have been a very regular attendant upon the meetings of the Committee on Military Affairs, and I did not hear that kind of statement.

Mr. LITTLE. I am very sorry that the gentleman is acquiring any difficulty with his hearing. The gentleman from Kansas [Mr. ANTHONY] told me in effect that he asked the question, and got the answer, and the gentleman from Iowa [Mr. HULL] said that it was a correct statement, and it is so in accord with the experience of men who have been at war and with the rules of common sense that I am very glad to think that they are correct. I ventured to make the suggestion on April 27, 1917, which is now on page 8016 of the Record, that "I would

rather have 30 days in a training camp and 30 days on the firing line, for that is where they make soldiers, than a year in a training camp, and so would anyone else who had ever been to war." Gen. March had command of the Astor Battery, just across the street in Camp Merritt, San Francisco, 20 years ago, from the regiment that I had the honor to command at that time. Our colonel, Funston, then, and during most of the first two months, was with the staff at Tampa. So I had 1,000 raw men and soon 1,300 to be drilled into shape, and Capt. Peyton March had a raw battery. In all our list of officers only one had ever attended a military school, only two had ever been in the Regular Army. The Twentieth Kansas was not a militia, but was purely a regiment of volunteers, as typical untrained citizen soldiers as ever served. Capt. March's battery was, I presume, very similar.

So we started about even studying untrained men, and practically we have reached about the same result of opinion. I do not speak of this, gentlemen, with any petty pride in any confirmation of my judgment or announcement. God knows I would rather that every theory advanced and every plan advocated by the War Department proved to be correct and of advantage to my country if it disproved everything I ever attempted to suggest, but I find that this department has acquired by experience from Gen. March—just returned from Europe, where he was drilling troops, I understand—has acquired a conception of the necessities of the case that occurs by development of things that come to a man from experience.

Mr. HULL of Iowa. Will the gentleman yield?

Mr. LITTLE. I will.

Mr. HULL of Iowa. I understand the gentleman has just quoted me.

Mr. LITTLE. I did, and the gentleman from Kansas [Mr. ANTHONY].

Mr. HULL of Iowa. I would like to know just exactly how I am quoted.

Mr. LITTLE. I quoted the gentleman as having been asked with reference to the statement in the Herald from Gen. March as to whether it was correct or not, and the gentleman stated it was.

Mr. HULL of Iowa. I did not understand that I was being asked about any newspaper article, but simply about a statement of Gen. March.

Mr. LITTLE. What did the gentleman say, then?

Mr. HULL of Iowa. I did not remember saying anything in regard to a newspaper article.

Mr. LITTLE. I stopped the gentleman in the hall as I went to Mr. ANTHONY's office—and, by the way, Mr. ANTHONY notified me he would be here to confirm the statement—and called the gentleman's attention to this, and he said that was right. If the gentleman likes he may tell the House what Gen. March said, but I do not want all of my time taken up.

Mr. HULL of Iowa. I do not remember having said anything in regard to a newspaper article.

Mr. LITTLE. As to what Gen. March said, let me refer to the newspaper article. The statement in the newspaper article is:

Gen. March said that it was no longer necessary for a soldier, especially a soldier as intelligent as the average American, to be trained a year, or even six months. He declared that after they were hardened the tricks of the trade could be taught them very quickly, and that it would be an actual advantage for them to receive much of this abroad, where the latest practices become known much quicker than is possible in America. March told the English experience, where the time supposed to be necessary to fit a soldier for the light duties at first expected of him has been reduced.

Mr. HULL of Iowa. I heard Gen. March's statement I think that refers to, and so far as I know he did not make the statement that six months' training was enough.

Mr. LITTLE. Which statement?

Mr. HULL of Iowa. That it did not take six months to train a soldier.

Mr. LITTLE. How about the rest of the statement?

Mr. HULL of Iowa. As far as I know, he did not say anything about six months.

Mr. LITTLE. I stopped the gentleman and called his attention to the matter and I asked him about it, and he said at the time it was correct. I am sorry his recollection is confused, and I shall ask the gentleman from Kansas [Mr. ANTHONY] to make a statement on the floor about it. I will not yield any more time at the present. I shall believe Gen. March said this, because that is what any soldier of experience naturally would say, and because it is so in accord with the necessities of the situation. I notice March has never denied the statement made in the Herald.

There are two theories of war—the McClellan theory and the Grant theory. Although Lincoln absolutely ordered McClellan

to advance not later than February 22, 1862, it was March 17 he started, and Fair Oaks was not fought till May 31. On the 26th of February, 1863, Grant attacked and took Fort Donelson. Then began the end of the Civil War. Eventually he was called to take the place of Gen. McClellan, who put in most of his time getting ready. That is the difference between the two theories of going to war—the one who wants to fight and the one who wants to get ready—and that is the difference between the opinion of Gen. March and the opinion advanced by the War Department before. Our then little Republic had 500,000 well-organized men under arms—all volunteers—nine months after Fort Sumter fell, and the South nearly as many more. In this war we accomplished no more in the first nine months. On March 9, 1862, the *Monitor* fought the *Merrimac*. I will ask the gentleman from Kansas [Mr. ANTHONY] to glance at this.

Mr. LAZARO. Will the gentleman yield for a question?

The SPEAKER. Does the gentleman yield?

Mr. LITTLE. If the House will allow me another five minutes—Mr. Speaker, I ask unanimous consent to have another five minutes.

Mr. SMITH of Michigan. Mr. Speaker, I make the request that the gentleman have five minutes.

The SPEAKER. The gentleman asks unanimous consent that the time be extended five minutes. Is there objection?

Mr. FLOOD. Mr. Speaker, I will have to object to that.

Mr. LITTLE. Then, with much regret, I decline to yield to the gentleman from Louisiana. I wish to ask the gentleman from Kansas if he did not assure me yesterday that the Herald's statement contained the essence of the answer which Gen. March made to a question which he propounded?

Mr. ANTHONY. I think the gentleman is correct; that is, in substance, his statement.

Mr. LITTLE. That is what the gentleman from Iowa [Mr. HULL] told me yesterday, too. [Laughter.]

Mr. LAZARO. Will the gentleman yield?

Mr. LITTLE. I am sorry to say I have not the time.

The SPEAKER. The time of the gentleman has expired.

TWENTIETH KANSAS RECORD.

Mr. LITTLE. Mr. Speaker, this morning before the debate on the bill, by unanimous consent, I secured 10 minutes to discuss the elimination from the present Army of so many officers of the National Guard, and especially of Lieut. Col. Charles Flanders, formerly a captain in the Twentieth Kansas Volunteers, and up till now Lieutenant colonel of the One hundred and thirty-seventh Infantry, I believe. A reference to the fact that the present Chief of Staff, Gen. March, had reached a conclusion with regard to the time required to prepare troops for Europe quite different from that heretofore expressed by the "experts" involved me in a discussion which exhausted my time before I reached the point I rose to discuss, and I have secured another 10 minutes in this general debate for my original purpose. A dispatch announcing the serious illness in Kansas City of my father, who is 88 years old this month, compels my absence from the floor for a few days and makes it necessary that I complete now or never the purpose for which I first rose.

Pausing for a moment to finish the discussion which interrupted my speech, I may say that I presume the idea Peyton March expressed regarding the length of time essential to put a fighting soldier on the firing line, and that it could be done in six months or less, is because in 1898 he raised the Astor Battery and sailed from San Francisco to Manila within 60 days after it was assembled.

As he was camped next to me in San Francisco, possibly I unconsciously got the idea that on a pinch, under good officers, men could be ventured near the firing line in 60 days, from observation of March's experience. Within less than four months of his men's enlistment he was on the firing line with artillery in front of what was supposed to be one of the strongest fortified cities in the world, and that was done within four months after he got the troops together; and I think Gen. March figures other men could do it if he could do it. I believe that is the same March who commanded the battery, and I presume all the information he has to equip him for this war was acquired in that war. I may say further in that connection, since this matter has been brought up, that I am familiar with an infantry regiment—

Mr. McKENZIE. Will the gentleman yield?

Mr. LITTLE. I would rather not. I am afraid I may be interrupted again, and I may not get an extension.

I know a volunteer infantry regiment that only trained six months. If its Colonel were living now, I think everybody in this House would concede that Fred Funston would be in command of the forces in Europe. The experience he had in getting ready

for war was secured in six months. That regiment of volunteers was assembled in Topeka, Kans., taken to San Francisco, equipped, drilled, trained, and shipped to the Orient in six months. For nearly the first two months the Colonel was absent. When sworn in neither the Colonel nor the Lieutenant Colonel could give one single military command. Only one officer in the regiment had ever attended a military school. It was a regiment of raw volunteers, as typical as was ever assembled. During the Spanish and Filipino Wars their death roll in battle was the maximum attained by any regiment—34 per cent in five months of practically continuous fighting. Three of them—Edward White, William B. Trembly, and Frederick Funston—were given gold medals of honor by the Congress of the United States for valor in battle, and several others should have received them. From that regiment of raw volunteers there has been by this time furnished to the Army of the United States 1 major general, 3 brigadier generals, 7 colonels, 12 lieutenant colonels, 16 majors, and this list is not complete. I have assembled a partial list of those now in the service and I find at least 42 men from that regiment now in the service of the American Army and most of them now in France. Here is a list now in the service as far as I have been able to locate them:

Brigadier generals (2): Charles I. Martin (F.), Fort Scott (K. U.); W. S. Metcalf (F. & S.), Lawrence (K. U.).

Colonels (5): Dan F. Craig (E.), Garnett; Edward L. Glasgow (A.), Salina (K. U.); Fred E. Buchan (B.), Kansas City (K. U.); Clad Hamilton (A.), Topeka; Edgar Fry (L.), Abilene.

Lieutenant colonels (10): Adna Clarke (H.), Lawrence (K. U.); Ernest Agnew (M.), Minneapolis (K. U.); Arthur Ferguson (E.), Burlingame; Collin Ball (E.), Ottawa; Ben H. Kerfoot (B.), Kansas City, Mo. (K. U.); George Winterburn (G.), San Francisco; Clarence Cole (H.), Lawrence (K. U.); Norman Ramsay (E.), Topeka; Otto Reithorst (H.), Wellington; Charles Flanders (L.), Paola.

Majors (11): Charles Sampson (M.), Salina; Walter Drysdale (H.), Lawrence; John Craig (E.), Garnett; Emory Adams (M.), Manhattan; R. H. Leavitt (C.), Leavenworth; A. H. Krause (H.), Lawrence; Phil Fox (L.), Manhattan (K. S. A.); William Greene (F.), Fort Scott; Jerry Springstead (A.), Topeka; Clay Anderson (H.), Stanton (K. U.); Seth Hammel (F. & S.), Topeka.

Captains (7): Robert Lewis (G.), Independence; John F. Hall (K.), Pleasanton (K. U.); George Watson (L.), Abilene; Joseph Murray (L.), Abilene (K. U.); Jerome Johnston (A.), Wamego (Washburn); Charles Hetrick (A.), Topeka; Roy Haynes (H.), Leocompton (K. U.).

First lieutenants (2): William Trembly (B.), Kansas City; Terence Montgomery (A.), Topeka.

First sergeant: Donald Thorne (K.), La Cygne.

Sergeants (2): Harry Brown (F.), Fort Scott; John Deeming (A.), Topeka.

Stable sergeant: Derwood Ouackenbush (H.), Media.

Private: Ed Barrett (A.), Topeka.

In the Army or out, in Congress or out, every member of the Twentieth Kansas realizes better than any but a soldier can that the real issue is how to win this great war. For the accomplishment of that gigantic task they are ready to mobilize every energy, sacrifice every profit, and, if necessary, dedicate their lives on the field of battle, as they were 20 years ago.

As a member of a regiment that on the other side of the world participated in freeing 10,000,000 of Cubans, Porto Ricans, and Filipinos from Spanish slavery, I am proud to think that I came to Congress soon enough to sit on the floor with the hero of 43 battles, of 123 days under fire, the last great soldier of the Civil War in public life, Gen. ISAAC R. SHERWOOD, who was mustered in as a private in 1861, six times complimented in special orders for gallant conduct, and mustered out as a brigadier in 1895. As he felt it his duty to risk his life on 43 battle fields for the Republic, as he felt it his duty under the instructions of his constituents and with his knowledge of the frightfulness of war and the total unpreparedness of the Nation, to vote against a declaration of war last year in this House (like many other soldiers here and like the House leader, CLAUDE KITCHEN, who has probably done more for the success of the war than any one man), so he felt it his duty when war was once begun to stake the lives and fortunes of America's citizens on the wager of battle and throw into the struggle for liberty around the world all that Congress could give by his vote and its vote. Puny politicians seeking to realize their selfish ambitions may criticize the conduct of this patriarch of the Grand Army whose shoe strings they are not worthy to unloose. But every thoughtful patriot who looks to the success of America in this conflict will thank God that this Nestor of the Nation has come down to us from a former generation to serve and sustain the Congress of the United States,

with a profound contempt for the "political patriot" of the rostrum who—

Mocks the counsel of the wise and the valor of the brave.

One officer of that regiment who volunteered when this war began, but who is considered too old to be useful, I presume, on the firing line, has been a Member of Congress since this war began and has voted for every measure without exception to make the war a success, to uphold the hands of the administration, and to enable the Army of the United States to maintain on the battle fields of Europe the standard of glory and honor attained by their ancestors from Concord to Guiguinto. Not yet has the finger of criticism been directed to any vote he actually cast since war began. His highest aspiration is that when his duties here are concluded he may receive the certificate with which he was discharged 19 years ago: "Services honest and faithful."

We are told we should offer constructive criticism, and in spite of the fact that everybody is denounced who ever says anything to disagree with anything that others advance here, I am going to offer a little constructive criticism.

The United States has within a very recent period, or, rather, the War Department has, discharged more than 5,000 officers from the American Army under the charge of inefficiency or something of that nature. They are largely members of the National Guard. This Army, as now raised, consists of 657,000 drafted men, raised since the war began, and has within its ranks something like 860,000 more men who entered the Army as volunteers in the National Guard or the Regular Army, 200,000 more volunteers than drafts in the Army now. The 5,000 men who have been discharged for alleged inefficiency have caused the expenditure of more than \$10,000,000 by the Government, and yet they are discharged upon the charge of inefficiency by men who never were in war themselves, as a rule.

My contention is that an unwise policy has been adopted, and that these men should receive more consideration. I know of a gentleman who fought in the Twentieth Kansas Regiment in every battle, commanded a company in every battle and sometimes a battalion, and he was conceded by Gen. Funston and everybody else to be a splendid, gallant, efficient, and capable soldier. They tell me he has been eliminated as a lieutenant colonel. After a year and a half of actual warfare, of real experience in preparing men to fight, and leading them in battle—he was a carpenter at home—he was put to studying books, and he missed passing the average proper grade, I think, by a third of one-tenth of 1 per cent. I am here to say there is no better soldier in the American Army for efficiency on the firing line than Charlie Flanders, and I defy any man or officer in the country to contradict me. The resources useful in danger in battle, the power to command the confidence of men under fire, are acquired under fire, not by reading books. Neither Fred Funston, Nathan Forrest, Andrew Jackson, George Washington, nor Napoleon Bonaparte could have passed the examination at which Charley Flanders failed one-thirtieth of 1 per cent, for which reason he was eliminated from the Army which is preparing to fight in the trenches of Europe.

I say that he is as brave and as gallant and efficient a man as we can send to Europe, and that the men here safe at home who threw him out of the Army were inefficient themselves and are injurious to the Army of the Republic. What do they want, college professors or fighting men? There is a question many of these efficiency-board members that discharge fighting men could not answer, and that is whether they themselves could stand fire. [Laughter.]

I know another man who has spent two years in the Philippines in a fighting regiment and who raised a company and took it himself two or three hundred miles and worked for months making an army, and who was discharged from the captaincy because one of his sergeants left a ham sandwich lying around and an inspector came along and found it. The men who do this inspecting are not men who have had service in war.

My contention is that the department is making a great mistake in removing, before they send them to the firing line, these 5,000 men. The only proposition that seems comparable with it is the fact that we are spending millions for air machines without getting any yet. You can tell, gentlemen, when a man has been under fire once or twice whether he is an efficient captain or not. Not what does he know about war, but what does he know about his boots being shined or a ham sandwich being lost or not; and that is what the 5,000 men are being discharged for.

I want to say that the National Guard of this country are worthy of better consideration than they are now getting from the staff officers. I hope the department, since Gen. March himself is evidently an understanding officer, will be able to stop this. I do not say this, gentlemen, in any attempt to offer a mere criticism. I am offering constructive criticism.

My suggestion is that they quit discharging men on whom they have spent millions of dollars, because they lose a biscuit or misplace a button, and wait until they put them on the firing line and find out whether they can fight or not. We can tell better after one fight which are the inefficient. The fact of the business is that the men who are discharged are largely men who have fought in wars or volunteered to fight, and instead of making trouble about that and annoying them constantly they should say, as the British soldiers said to Gunga Din—

Though I have belted you and flayed you,
By the living God that made you,
You are a better man than I am,
Gunga Din!

[Applause.]

The Work of the Department of Agriculture in the Past Five Years.

EXTENSION OF REMARKS

OF

HON. ASBURY F. LEVER,

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 29, 1918.

Mr. LEVER. Mr. Speaker, it is hardly too much to say that the Department of Agriculture has been of more real service to both producers and consumers during the last five years than during any preceding decade. This is due in some degree to the orderly method and development of the department and to the increasing confidence which it has deserved by reason of its accomplishments in scientific agriculture, but in particular it is due to the policies inaugurated and intelligently developed since 1913. The Secretary of Agriculture at that time asked and obtained the consent of the Congress to reorganize the Department of Agriculture by establishing a more logical and effective grouping of its activities. By this means the various groupings and offices of the department were rendered more effective from the standpoint of administration and progress. During this period Congress passed several acts which are administered by the Department of Agriculture and which constitute a greater sum of legislation for rural welfare than had been enacted previously in the whole history of the Republic or in the history of any nation. These are the cooperative agriculture-extension act, the cotton-futures act, the United States grain-standards act, the United States warehouse act, and the Federal aid road act. The Federal reserve act, the Federal farm-loan act, and the vocational education act also constitute an important part of the constructive legislative program for rural betterment which has been placed on the statute books within the last five years.

THE COOPERATIVE AGRICULTURE-EXTENSION ACT.

The effect of this act to mobilize the whole body of proved agricultural science in the department and in the agricultural colleges with the researches of all laboratories and experiment stations and with the practical tests of field demonstrations, and to carry this information directly to the farmers by the personal contact of men and women county agents. The work is conducted under simple, specific, and flexible cooperative agreements between the department and the land-grant college of each State, and the maintenance is provided jointly by the Federal Government and the States. The Department of Agriculture under this act has worked out a status of mutuality that may well be called a marvel of cooperative force and institutional or State individuality.

There are 2,957 counties in the United States which may be classed as agricultural, but at least 100 of these have so little agricultural land or population that they do not warrant the employment of an extension agent. Of the more than 2,800 important agricultural counties, 2,450 now have the full or part services of a county agent, and there are employed altogether in the cooperative extension service 2,600 county agents and assistants. It is expected that by the 1st of July next 2,800 counties will have the services of an agent.

Under this act and under its administration by the Department of Agriculture the rural home is recognized as an integral part of the farm establishment, and the comforts and economies of life within the home are rated as of equal importance with the progress and profit upon the farm. Home economics is coupled with agriculture; the farmer's wife takes a status with the farmer; hence, in addition to county agents for serving the farmer there are home demonstration agents for serving the

home. At present 1,675 counties have the services of home demonstration agents, of whom there are 1,200. The department recognizes also the responsibility of the Government to the Negro race, and there are 170 counties having the services of negro agents and of negro home demonstration agents. Under the provisions of the food-production act the home-economics work of the department has been extended to the principal cities, and there are now 190 urban home demonstration agents. Altogether there are approximately 5,650 men and women co-operatively employed by the Department of Agriculture and the State agricultural colleges, and to this great force of men and women, moving daily among the farmers, on their farms and in their homes, bringing to them by demonstration in the field or in the house, by group organization and otherwise, the scientific and practical information accumulated by the department and the colleges, is due in large part the comparative prosperity which now marks our agricultural life. It is through this group of men and women that the Government is able to reach in these war times practically every agricultural neighborhood in the United States with its messages of information, advice, and appeal delivered in person by a man or a woman in the joint employ of the department, the college, and the community.

The results of extension work will appear more convincing by the recital of a few concrete facts and figures. During 1917 the total number of farms directly touched and bettered by the work of county agents was 2,475,000, and the acres under demonstration, on which superior methods of farming were put to the acid test on the farmer's own land, with his own tools and with his own labor, were 4,553,114, and these acres were observed by other farmers of the neighborhood, who received beneficial instruction, and who were thereby induced to practice improved methods. The results of demonstration work may be gathered from the fact that in the year 1916 the average yield of corn on farms in the South under demonstration was 34.5 bushels, while for the same year and in the same States the average yield of all farms was 19.2 bushels. In the same States during the same year the comparison on oats was 34 bushels under demonstration methods and 20.3 bushels the average for all farms. For seed cotton the comparison was 896 pounds under demonstration and 468 pounds average on all farms. By way of further illustration of the service of the county agent, assistance was given in the North and West last year to 132,205 farmers in securing or locating 2,606,296 bushels of seed grain, seed potatoes, and beans; as the direct result of crop-production campaigns, increased crop production of 32,767,991 bushels and 272,746 tons of forage resulted. In the same region the county agents placed 66,036 farm laborers. In the South in 1917, as the culmination of a campaign of education conducted by the extension forces for several years, there was a marked increase in the production of corn, hay, peanuts, soy beans, velvet beans, and home gardens, to the end that the South is increasingly becoming self-sustaining from a food standpoint, is greatly increasing its live stock, and yet is producing the normal supply of cotton. The extension agents in the South last year rendered especially valuable service in the movement of some 300,000 head of cattle from the drought regions of Texas to Louisiana, Arkansas, Mississippi, Alabama, Georgia, and Florida, and in the securing an adequate supply of feed and seed for these same regions. During 1917, 5,638 farmers or community clubs or groups were organized and are now in operation for cooperative action in crop and live-stock production or marketing, or both, and these groups have a total membership of 320,093. This figure represents the activity of only one year. The total number of farmers who have learned under the extension service how to co-operate is many times that figure. Boys and girls engaged in club work for production or conservation effort number at least 1,200,000. Last year 1,900,000 women and girls, under the instruction of the extension service, engaged successfully in gardening and canning. The girls canned over 15,000,000 containers of fruits and vegetables, and women under instruction canned over 37,000,000. At the minimum value of 15 cents each, these products aggregated the gross amount of \$8,000,000. This figure represents only the recorded work of the women and girls under direct instruction. It does not include a large number of other women and girls in the cities as well as in the country who produced and preserved vegetables and fruits under the department's instruction by lecture and public demonstration and by the circulation of literature. It is not too much to say that more than twice as much, or a total of perhaps \$15,000,000 worth of vegetables and fruits that otherwise would have been wasted, was saved last year by the women and girls of the United States, directly or indirectly, under the instruction of the Department of Agriculture. The recorded financial operations of marketing groups last year showed a saving of \$4,259,811.

The economies in distribution, which benefit the consumer as well as the producer as a result of these cooperative marketing undertakings, are incalculable.

FINANCIAL LEGISLATION.

While the Department of Agriculture has no administrative relation to the Federal reserve act or to the farm loan act, the Secretary of Agriculture and the economists of the department rendered valuable service in the perfection of the legislation. In the Federal reserve act provision is wisely made for the accommodation of agricultural paper of six months' duration, and the effect has been to furnish much agricultural operating credit, heretofore impossible except at oppressive rates of interest. The Federal farm loan act, by creating a system of land credit, has greatly relieved the farmer, has especially promoted the acquirement of farm homes, and has released and mobilized financial resources for agricultural operation. The effect of both acts has been greatly to facilitate the business of farming as distinguished from the science of production. These acts further apply the policy of Federal and local co-operation under systems decentralized and yet unified and federally supervised. In the farm loan act credit cooperation is practically developed without the sacrifice of individualism. As a consequence the farmers of the United States are not only enabled to obtain relatively cheap credit for land purchase and farm improvement, but they are practicing efficient cooperation, which from time to time increasingly becomes the method of their other business operations.

FEDERAL AID ROAD ACT.

The Federal aid road act has been in operation considerably less than two years, and yet within that time 580 road projects within 48 States have been submitted, of which 485 have been approved, 6 disapproved, 22 canceled or withdrawn. Plans, specifications, and estimates have been approved to the number of 110. The total mileage covered by these projects is 5,747.25 and the total estimated cost is \$35,249,392.57, of which the Federal Government assumes the payment of \$13,470,240.41. In order to share in the benefits of this act the States participating have established highway commissions conformable to the requirements of the Federal statute, and the whole enterprise of rural highway construction has been lifted to a plane of the most intelligent engineering and most economical construction and maintenance. It is impossible to measure in dollars the advantages of good roads. They not only reduce the cost of rural transportation, which heretofore has been a heavy tax upon the producer, but they enhance the comforts of rural life. Moreover, they invite more intimate intercourse between rural and urban people, and thus they tend in a peculiar way to promote better feeling and mutual appreciation.

STANDARDS AND WAREHOUSES.

Until the passage of the cotton-futures act there was no law requiring the use of definite standards or grades, and there was distressful and wasteful, not to say scandalous, unreliability of quotations on contracts for future delivery, which affected in a very large degree the prices of spot cotton. The differences in the relative prices of the various grades of cotton were arbitrarily fixed by groups of traders, cotton of undesirable character was often tendered for delivery, and other evil conditions and practices prevailed generally in the marketing of the country's greatest export product. After the passage of the act, and even before it became operative, the exchanges in this country adopted the form of contract prescribed, and since, with negligible exceptions, they have traded exclusively under this form. Careful observation shows that the statute has accomplished and is accomplishing the chief economic objects anticipated by its framers. Future quotations now represent spot values more accurately; sharp and sudden fluctuations such as commonly occurred under the old practices have become much less frequent, except in these hysterical war times, and prices have been increasingly stabilized. The conclusion is unavoidable that these results are due mainly to the operation of the act.

Primarily these changes help the producer to secure more equitable prices. They also benefit the cotton manufacturer by giving him a truer index of the advance value of raw material. Likewise, they afford to all concerned in financing the crop and moving it to market a safer and more practicable hedge. In addition, the exchanges themselves have been somewhat relieved from the suspicion, which formerly justly attached in considerable measure, that exchange transactions were not always fairly conducted.

One of the greatest benefits the farmers have derived from the enforcement of this act is the establishment of uniform standards for cotton by which its quality or value may be

determined. These standards are now being used in practically every market of importance in the United States. Quotations are no longer meaningless, as they were under the old system, which involved the use of a multiplicity of standards. It is needless to say that quotations based upon a single set of well-known and official standards are of great advantage to those who deal in any commodity.

The establishment of a permissive warehouse system and of standards for grain and cotton has for its object, in common with the establishment of a rural credit system, the general systematizing of the processes of distribution and the development of more effective cooperation and better business methods, not only in these activities, but throughout the farming units of the country.

Standards for grain as well as for cotton are particularly important in order that the quality and intrinsic value of these agricultural products may have the same designations at all of the markets throughout the United States. Excepting the differences due to cost of transportation, this insures equal prices for equal values, even in widely separated markets, and further assures the producer a fair reward for his labors and an honest value for the product which he sells, while the consumer knows exactly what he is buying.

Without such standards there is no incentive for the grower to improve the quality of his crops, while on the part of the consumer purchasing becomes a speculation rather than a matter of sound business. In the absence of standards for corn, for example, it has been the common practice to pay the same price for all corn delivered at country stations. This system has prevented the payment of a fair price for corn of high quality. With the adoption of standards for corn, the way is open for real progress in the production of more corn of high quality.

Farmers can expect a premium for good corn, for the shipper in paying premiums will have the assurance that, regardless of the market in which he ships, the same system of grading will apply.

Under the United States grain standards act, enacted in 1916, the Secretary of Agriculture has established official grain standards applicable to corn and wheat shipped in interstate or foreign commerce. Standards for other grains are in process of formulation. The use of these grades is required in interstate transactions whenever grain is sold by grade. The act, however, does not prevent the free sale of grain by sample, nor does it hinder transactions between points where there are no official licensed inspectors. The grain standards act, put into effect for the first time last year, is rapidly accomplishing for the grain grower and the grain trade what the cotton futures act is accomplishing for the cotton grower and the cotton trade. As the Secretary of Agriculture said in his annual report for 1915:

Grades for grain, if generally adopted and uniformly applied throughout the country, will simplify the relations between producers, dealers, and consumers. Under these grades, fairly used, the grower or shipper of a superior quality of grain will be in a position to demand from the buyer the fair value to which the quality of his product entitles him. The beneficial influences upon agriculture of a uniform system of grading staple-crop products will be very great through the financial incentive afforded the farmer to improve the quality of his product by careful selection of varieties, skillful culture, and adequate and effective methods of harvesting, handling, and protecting it while in his hands.

Absolutely necessary in any system of trade of farm products is a dependable warehouse receipt, which may serve as collateral for loans in order that the farmers may not be compelled to throw the entire product on the country at the same time and in order that there may be safe and economical storage and an even distribution of the products over a considerable period. The United States warehouse act provides for the establishment of a system of licensed warehouses and licensed weighers and graders for cotton, corn, wool, tobacco, and flaxseed stores for interstate or foreign shipment. It establishes a form of warehouse receipt which can be issued only by licensed, bonded warehouses, and so makes these receipts reliable proof of the condition, quality, quantity, and ownership of the products stored. Such receipts are easily and widely negotiable as delivery orders or as collateral for loans. The act is permissive in character, and no warehouseman is required to obtain a license. In due course, as the benefits of this act are understood and appreciated, the licensed warehouse and the warehouse receipt are certain to become the accepted instruments for the marketing and financing of our chief agricultural products.

MARKETING.

Perhaps the greatest single accomplishment of the Department of Agriculture under the present administration is the establishment and development of the Bureau of Markets, which began with an appropriation of \$50,000 in the spring of 1913. As the Secretary said in an address on this subject:

Up to a comparatively recent time the attention of those interested in agriculture was centered mainly on problems of production. The slogan was "Make two blades of grass grow where one grew before." Matters of soil fertility, plant and animal breeding, diseases of plants and animals, methods of cultivation, and many other pressing problems of production occupied almost exclusive attention. There were and continue to be production problems of tremendous importance, and they must receive not less but more attention even than in the past; but it has come to be recognized that agriculture is tremendously complex and that problems of distribution are not less important and are perhaps even more complex and difficult than problems of production. We have been brought face to face with the fact that in many directions further production waits on better distribution and that problems of marketing or distribution and of rural business and finance involve in very grave ways the simple issue of justice. That there is tremendous waste in distribution no intelligent man doubts; that in many instances the farmer does not get what he should for his product is undeniable; that frequently the consumer either has to purchase an unsatisfactory product or to pay an unduly high price; and that unnecessary burdens are imposed upon all under the present system of distribution there seems to be no question.

It is clear that too little attention has heretofore been given to the matter of injecting business into agriculture or to the economics of rural life. Obviously, all agricultural enterprises and the work of all agricultural establishments are economic in their character. There is no man in the country who needs more to be a good business man and to have a wider knowledge of business activities than the farmer. He has a bewildering variety of problems confronting him and many possible avenues of approach to them. He has to decide what he can produce, how much he can afford to produce to the acre, how he shall apportion his investment as between plants and live stock, how he can best arrange his activities so as to utilize his labor throughout the year steadily and economically, what size farm will give him the best results considering his capital, his environment, and his capacity, what cultural methods will be most helpful, and, above all things from the outset, what he is to do with his product when he gets it; that is, how and where he is to market it and how he shall cooperate with his neighbors in the community to this end.

From the modest beginning of the Office of Markets, with an appropriation of \$50,000, the service has expanded into a full-sized bureau, with a large trained and experienced personnel and a budget, including emergency funds, of approximately \$4,250,000. This bureau now serves to give to producers and consumers information immediately needed for the intelligent movement of farm products and practical advice in all matters affecting packing, grading, and transportation, as well as suggestions with reference to cooperation in marketing. It has branches in 53 cities and thousands of sources of trade information, from which it gathers daily and hourly by telegraph the precise facts which are assembled and furnished by telegraph or mail, as the case may be, to large numbers of individuals in practically every State in the Union. The market news services of this bureau have come to be an integral and highly essential part of the marketing machinery of the Nation. Through this means accurate, dependable, and important information is furnished to the producer who is enabled to direct his product to the market where it is most needed, and the glutting of markets on one hand and the scarcity of products in the markets on the other hand are measurably prevented in the interest of both the producer and the consumer. The Bureau of Markets not only makes note of the movement of perishable products, but surveys and reports the supplies of staple products in storage, and the movements of live stock and meats, fresh and cured. Especially valuable is the information it disseminates in regard to products in cold storage. Recently the bureau has established a new project for the inspection of perishable products on arrival in the principal markets. This service now extends to 34 cities. The bureau's inspectors make reports of the condition of the shipments as they arrive, and thus not only serve the producer by giving him precise information, but observe and report the causes of deterioration in perishable products, whether the deterioration be due to plant diseases or to improper packing or to inefficient transportation. The consequence is a far-reaching inquiry into the substantial facts instead of a continued repetition of bad practices without attempt to cure them.

The largest single task recently undertaken by the bureau is the emergency food survey under the food-production act. A preliminary food survey was made last August and a more comprehensive survey last December. This was the first time the United States had ever taken stock of its food resources, including stocks on farms and manufactured and other products in trade channels. The survey covered 86 items of food and food materials on which returns were received from 350,000 commercial establishments. An intensive personal canvass of small retail concerns in 41 representative counties and a household survey, in which 40,000 schedules were distributed, were made by representative families in selected counties. As a result of this work we know for the first time in all our history precisely what our food supplies are and where they are, and the country is enabled, by reason of this knowledge, to reach accurate conclusions and to direct its activities the more intelligently for maintenance and increment. It is impossible in this review to recite all the activities of the Bureau of Markets, but

the project of cooperative purchasing and marketing deserves special mention.

In the Pacific Northwest the fruit interests of Washington, Oregon, Idaho, and Montana were in a most unprofitable condition, partly due to their chaotic marketing methods. To bring about more systematic distributing practices and to correct other fundamental weaknesses the Bureau of Markets was instrumental in organizing the Fruit Growers' Agency (Inc.). This agency now includes in its membership practically every fruit-shipping organization in the four States named, representing an industry with an investment of not less than \$50,000,000. Since its organization the agency has been the means of saving the growers over \$1,500,000 in transportation charges; has secured recognition of its products, which gave it better car service; has greatly assisted in the solution of labor difficulties; and has brought the whole Pacific Northwest into a strong unit to develop the fruit business along sound lines and protect its many interests. The Fruit Growers' Agency (Inc.) is the most pretentious and successful piece of organization—federation—work ever accomplished among American farmers.

A large section in the vicinity of Trenton and Ridge Springs, S. C., is devoted to the growing of asparagus, but under the former plan of individual shipments by express to unknown markets the growers were so discouraged that many commenced plowing up their fields. Members of the Bureau of Markets project prepared and presented to the growers plans for a cooperative shipping association, which were adopted. This association has now been operating two seasons and failure has been changed to success, so that practically every asparagus grower in that district is a full participating member. Attracted by this financial success, asparagus growers across the line in Georgia have applied for membership.

Previous to this organization the growers were generally operating at a loss and much of their product was wasted. Under this organization plan the growers have been financially successful and their product is furnished to more markets, well graded, in a better condition, and at reasonable prices to the consumer.

A few counties north and south of Miami, Fla., produce about 6,000 carloads of early tomatoes, as well as thousands of carloads of other vegetables. These have been shipped by various individuals in a more or less ungraded condition without any coordinated plan of distribution. The results were disastrous, not only to the growers but to the distributors and consumers as well. The bureau experts were called in and they perfected a growers' cooperative shipping association, which has established grades, assembled car-lot shipments, and built up a fine trade through the efforts of experienced and competent management. The members also save thousands of dollars through the cooperative purchase of supplies—seeds, fertilizers, packages, paper, etc.

Bean growing in Michigan has been at a low state, as the growers felt that there was too great a "spread" between their price and the prices paid by consumers for this staple food. The Bureau of Markets answered the growers' request for assistance by developing an informal association, which furnished information as to cost of production, crop, and market conditions, from which a fair price could be determined. Since the organization has been at work the growers have been able to greatly reduce the "spread" between producing and retail prices. Colorado has recently adopted the Michigan plan with great success, and the bureau is now about to extend this work to Texas, New Mexico, Idaho, and New York.

The honey producers of Colorado, Utah, Idaho, and portions of other adjoining States have been organized by the bureau for grading, assembling, and selling their honey, and even during the first year they have been able to effect a large saving by being able to fill large orders with well-graded honey.

These are merely a few instances where definite service has been rendered. Assistance in the organization of cooperative marketing associations or in the reorganization and strengthening of such associations already in operation has been given in practically every State in the Union during the past four years. Among such work may be mentioned the assistance given to cooperative potato marketing associations in Idaho, Montana, Nebraska, Maryland, New York, Maine, New Jersey, and Pennsylvania; fruit-shipping associations in Michigan, Maryland, New York, West Virginia, the New England States, Florida, Alabama, Louisiana, Utah, Montana, Idaho, Washington, and Oregon; vegetable associations in Rhode Island, New Jersey, Maryland, and Texas; cotton-marketing associations in North Carolina and California; tobacco associations in Virginia and Connecticut; grain organizations in North Dakota, South Dakota, Nebraska, and Kansas; broom-corn associations in Illinois, Oklahoma, Colorado, and Texas; dairy-marketing associa-

tions in Rhode Island and Maryland; nut associations in Georgia; and purchasing associations in Massachusetts, Maine, Virginia, and Kansas.

In addition to the personal assistance rendered to organizations, advice and assistance have been given by correspondence in organization matters in several thousand instances. Plans of organization and operation for cooperative marketing and purchasing associations have been explained at farmers' short courses, institutes, and similar conferences, and it is believed that these discussions have been of considerable value in the development of farmers' organizations.

CONTROL OF ANIMAL DISEASES.

In the maintenance of the meat supply and in the development of the live-stock industry the department is not content merely to increase and improve breeding and to teach economical feeding and management, but attacks animal diseases as the causes of great waste and loss. Among the notable achievements of the department in this respect is the progress made in the control of hog cholera through discoveries made and methods developed by the scientists of the department. The death rate in swine from all diseases for the year ending March, 1918, 42.1 per 1,000, is the lowest in 35 years, according to the records kept during that period.

This unprecedented low rate of mortality presents a wonderful contrast to that of earlier periods, particularly with the losses of 133.8 per 1,000 in 1887; 144 per 1,000 in 1897; and 118 per 1,000 in 1914—years marked by severe outbreaks of cholera. This is even a remarkable reduction from the normal low rate of losses, which has remained slightly above 50 per 1,000 when the disease was least prevalent.

The approximate number of hogs on hand January 1, 1918, was 71,374,000. The loss of 42.1 per 1,000 for the year ending March, 1918, represented approximately 3,000,000 of these animals, or equivalent to the national consumption of this class of meat-food products for five-sixths of a month.

These recent losses should be compared with that of 7,000,000 hogs in 1914, which curtailed the production of pork and pork products to the extent of 900,000,000 pounds, or a sufficient amount of this class of food to sustain the entire population of the United States for one and one-fourth months.

The marked reduction in the losses of swine in 1918 over preceding periods, in view of the fact that 90 per cent of these losses are due to hog cholera, indicate clearly the benefit accruing to the industry from the combined efforts of State and Federal agencies instituted in 1913 to protect the farmers against the ravages of this exceedingly fatal disease.

The department is now engaged in hog cholera work in 33 States in cooperation with educational and regulatory agencies. The force at present consists of 168 trained veterinarians. It is the aim of the department to further reduce losses in swine and furnish the necessary protection and stimulation for needed increased production.

Another great accomplishment is the department's attack on the cattle tick through the discoveries of the scientists of the department and collaborators in the land-grant colleges. The eradication of the cattle tick adds \$8 to \$10 to the value of every beef animal and \$20 to \$50 to the butter-fat yield of every first-class milk cow. The estimated number and value of cattle on January 1, 1917, in the 12 States subject to the tick was 16,985,000 cattle, worth \$559,905,000, or \$32.96 a head. Fifty-two per cent of the area of the originally quarantined in 1916 has been released up to December 1, 1917, so that about one-half of the number of cattle have been placed in nontick territory, and their value has been increased by the figures given.

Some time ago the Bureau of Animal Industry published an estimate, derived from cattle owners in the South, of the increased value of cattle following release from quarantine. This was calculated to be on the average \$9.76 per head. On this basis the increased value of the total number of cattle under nontick as compared with tick conditions would be over \$165,000,000. Since a part of this increase, however, was probably due to other causes than tick eradication, it may be well to reduce the estimate to \$125,000,000 in order to be conservative. On the other hand, this estimate, based on information collected in the winter of 1913-14, appears too low for present conditions, as shown by the following figures, which state the matter in another way:

The average weight of cattle from tick-infested areas of Georgia, Florida, Alabama, and Mississippi, compiled from receipts and sales on the St. Louis stockyards from January 1, 1917, to October 1, 1917, including steers, cows, and calves, was 407 pounds. These cattle sold at an average price of \$7.02 per hundredweight, or \$28.57 per head. During the same period, tick-free cattle sold for an average price of about \$9.13 per hundredweight. At this price and at their same weight the

former cattle would have been worth \$37.16 per head, making a difference in value of \$8.59, or on the total number of beef cattle in the South this would have amounted to \$102,581,780, not taking into consideration the 19.14 per cent increase in weight of tick-free cattle over ticky cattle. With this increase in weight, the free cattle would have weighed 486 pounds per head, selling for \$44.37, and showing a difference of \$15.80 per head, or \$188,683,600 for the total number of southern beef cattle.

The Dairy Division estimates that the average value of dairy cows in the South under tick conditions is \$40 and under tick-free conditions \$50 a head. On this basis the total value of all the dairy cows in the South would be, respectively, \$201,720,000 and \$252,150,000, an advantage of \$50,430,000 in favor of tick eradication.

Adding together the figures for beef and dairy cattle we have \$239,113,600 as the total increased value of cattle in the South under tick-free as compared with ticky conditions.

These calculations are based on the total numbers of cattle—beef, dairy, and combined—in the States mentioned. If it is desired to eliminate from consideration the cattle in territory free from ticks and to include only cattle in territory still under quarantine, that can be done approximately by cutting the amounts in half.

An average well-bred cow may be expected to produce about 6,000 pounds of milk and 300 pounds of butter fat per year. With butter fat at 40 cents a pound the gross income from such a cow would be \$120. If this cow were to become slightly infested with ticks, her production would be decreased 18.6 per cent and she would then produce only 4,920 pounds of milk and 246 pounds of butter fat, equal in value to \$98.40; should the same cow become heavily infested her production would decline 42.4 per cent and she would then be producing only 3,444 pounds of milk and 172 pounds of butter fat, valued at \$68.80.

The 12 Southern States contain an area of 514,782,780 acres. There is one beef animal to 43.1 acres, or 0.0232 beef animal per acre at the present time. The seven corn-belt States contain an area of 265,060,720 acres. In the corn belt there is one beef animal to 22.7 acres. At the rate of one beef animal to 22.7 acres, the Southern States should contain 22,677,655 head of beef cattle, instead of 11,942,000, as at present, in order to equal the corn-belt States in the number of beef animals per acre; or, in other words, there should be an increase of 10,735,655 head, or about 90 per cent over the present number.

There would be 30,752,653 dairy cows in the 12 Southern States instead of only 5,043,000 if they were as numerous per acre as in Wisconsin. The approximate average value of dairy cattle in the tick-free area of the South is \$50 a head. The valuation of dairy cows in the South at this rate would be \$1,285,482,650 more than at present if they were as numerous per acre as in Wisconsin.

It will not be forgotten that the Department of Agriculture in 1916 totally eradicated the most serious and extensive outbreak of foot-and-mouth disease that ever occurred in the United States. In no other country in the world where this disease obtained such a foothold has it been successfully eradicated. The department's endeavors are not confined to the diseases discussed, but include animal tuberculosis and all the other common diseases of live stock and poultry.

PLANT PESTS AND DISEASES.

With plants as with animals the department renders a service of vast value in eradication or control of pests and diseases. There are 810 specialists actively engaged in plant-disease prevention at this time, which includes the various lines of work conducted by the officers in charge of citrus-canker eradication, forest pathology, cotton, truck, and forage-crop disease investigations, cereal pathology, fruit-disease investigations, plant pathology, and plant-disease survey. In addition to determining the methods of controlling the common diseases and insect pests and advising planters of the most satisfactory ways for combating them, during the past few years several distinct campaigns have been undertaken for the eradication or control of some new or particularly destructive disease or insect pest. For example, the campaign for the eradication of the disease of citrus fruits introduced from Japan is now nearing completion and has averted a great calamity from the citrus industry of the South. The department's activities in attempting to prevent the spread and eventually to eradicate the pink bollworm are progressing very favorably, and there is every reason to suppose that this cotton pest, although probably more destructive than the boll weevil, will, if not entirely eradicated, be reduced to a minimum. In order to reduce the annual heavy loss from smut diseases of cereals, especially wheat and oats, the department has undertaken a very active demonstration of the most recent

methods of seed treatments for the prevention of these diseases, and while the crops, of course, are not yet harvested, there is every reason to believe that this work will result in a gain of several millions of bushels of grain to the country. Similarly, for the protection of wheat in the spring-wheat areas against the destructive epidemics of black rust, a well-organized campaign in cooperation with the States interested for the eradication of the common barberry plants, which aid in spreading black rust, was launched early this winter.

In the interests of the growers of white-pine timber, a well-organized plan for preventing the spread of the white-pine blister rust, introduced into this country from Europe in 1909, is under way, and it appears certain that the western spread of this destructive disease has been checked.

Special attention is given under the insecticide and fungicide act to preventing the shipment in interstate commerce of worthless and adulterated insecticides and fungicides. As a result of many examinations and prosecutions, farmers are able to rely, as never before, on the statements made by manufacturers regarding the strength and efficacy of insecticides and fungicides.

In New England the spread of the gypsy and brown-tail moths has been greatly retarded and much progress made in eradicating these pests in infested territory.

The grasshopper campaign of 1913 has saved hundreds of thousands of dollars to farmers of this country. It led to the control of this destructive pest in the Merrimac and Connecticut Valleys of New England, in the newly drained Everglade region of Florida, in the fertile San Joaquin Valley of California, and in the cattle-grazing and dry-farming regions of New Mexico and the Salt River Valley of Arizona.

Onion growers in Indiana alone state that the work done by the Department of Agriculture in connection with onion thrips has been the means of saving \$1,000,000 on that crop.

THE NATIONAL FORESTS.

The national forests represent the Nation's largest single conservation undertaking. During the last five years this great constructive project has been carried forward with notable achievements, both in administration and in legislation. It is not enough to set aside the forests as permanent public properties. It is not enough merely to protect them from fire and depredations. They must be efficiently administered so as to make their resources available for use to serve in building up stable industries, to sustain communities and homes. The national-forest enterprise is succeeding because the public properties are being used at the same time as they are being protected, and because they are serving as a great factor in local development. With over 11,000 drawing upon the forests each year for timber; with over 10,000,000 head of cattle, sheep, horses, goats, and swine utilizing the forest ranges; with a million and a half people using the forests each year for recreation; with 1,200 towns and cities drawing their water supplies from the protected forest areas; with water-power sites being used under permit effecting upward of a million horsepower; with about 40,000 settlers getting free their domestic wood supply, range for their milch cattle, and other privileges, it is clear that the national forests are becoming very useful properties.

Within recent years a very great advance has been made in solving the vexatious problem of agricultural classification. A careful classification of all of the lands within the boundaries of the national forests is nearly completed. This has resulted in the opening up of such agricultural lands as exist within the mountain regions where the national forests are located and in the establishment of permanent boundaries. This work has been very effective in stabilizing the national-forest work.

By efficient management grazing fees have increased from \$1,002,348 in 1914 to \$1,549,794 in 1917. The number of cattle have increased from 1,508,639 to 1,953,198. For the 1918 grazing season additional available pasture has been found, as a result of the special range inspections, for 240,000 head of cattle and 500,000 head of sheep, which the Forest Service believes can be safely placed in order to provide the maximum during the period of war emergency.

Steady progress has been made toward the increase of financial returns to the Government from the use of the national-forest lands for various purposes. The total receipts from the national forests have increased from 1914 to 1917 from \$2,437,710.21 to \$3,457,028.41, or 41.81 per cent. The national forests constitute a public enterprise whose purposes are the general public welfare. Many expenditures are essential for the improvement of the property, opening up the resources, and protection against fire, which are essential even if there were no financial return at all. Nevertheless the Forest Service is showing already a large financial return, which goes far to reduce the burden on the Government.

PURE FOOD AND DRUGS.

The food and drugs act, prohibiting the adulteration and misbranding of these products in interstate commerce; the Sherley amendment, prohibiting manufacturers from making false and fraudulent claims as to the efficacy of patent medicines; and the net-weight amendment, requiring an accurate statement of the quantity of the contents of food in packages, have been vigorously enforced with full protection to the health of the consumer, and have prevented swindling without unnecessary interference with the food industry. Through improved systems of inspection and analysis, and by means of effective prosecutions and warnings, those charged with the enforcement of this law have done much to reduce the interstate traffic in unwholesome foods and adulterated or misbranded drugs. Through the publication of the new service and regulatory announcements and through widespread communication to the public of decisions, rulings, and results of prosecution the department has greatly increased the deterrent effect of this act on unscrupulous dealers and has done much to relieve honest products from the unfair competition of adulterated foods and drugs. The department has been particularly active in combating the adulteration of certain imported drugs, the high price of which offered peculiar temptation to the substitutor.

The misleading guaranty legend, which long has given consumers the false idea that the Government in some way had examined and certified to the excellence of the food or drugs so labeled, has been abolished.

Close and effective cooperation has been established between the department and the State food, dairy, and drug officials. This has resulted in the more harmonious and effective enforcement of Federal and State food laws and has made possible effective joint campaigns to lessen the interstate traffic in bad milk and eggs, adulterated stock foods, and oysters and meat unfit for human consumption.

To increase the supply and lessen the cost of pure food, active assistance and cooperation have been given to manufacturers and handlers of food by helping them to avoid waste and spoilage, save valuable by-products, and ship certain perishable foods longer distances. Many manufacturers thereby have been enabled to make important savings and produce desirable foods at lower prices. Some of these measures included the development of sanitary and satisfactory means of freezing and drying eggs during the period of surplus production, lessening breakage and spoilage of eggs in transit and in storage, precooling and shipping fish and poultry, preventing spoilage of corn meal, making valuable fish meal for stock food from wastes of the sardine and salmon packeries, making concentrated cider and cider table sirup from waste apples, and the development of a method for making citric acid and valuable essential oils, juices, and vinegars from citric fruits.

The naval-stores industry has been greatly assisted through the development of permanent and standard type samples. These samples have been widely adopted for the naval-stores industry and have resulted in putting naval stores on a stable and active basis.

It would be impossible within brief limits to indicate all the various ways in which the Department of Agriculture has assisted the farmers of the Nation during the past five years. I have merely attempted to outline some of the particular lines of effort to show that the department has been and is dealing with agricultural problems in a very constructive and helpful fashion. I have not dealt specifically with the war-emergency activities of the department because these matters have been very effectively presented by my colleague on the committee from Mississippi, Mr. CANDLER, in connection with the discussion of the food-production act for 1919. I desire to point out, however, that the entry of the United States into the war found the Nation with large and effective agencies dealing with agriculture and rural life. As the Secretary of Agriculture said in his annual report for 1917:

The prompt and effective handling of the situation was made possible by reason of the fact that the American people, generations before, had wisely laid the foundations of many agricultural institutions and had increasingly liberally supported their agricultural agencies. The Nation was fortunate in having had in existence for many years, for the purpose of promoting scientific and practical agriculture, its Federal Department of Agriculture, and a department of agriculture and a land-grant college in each State, as well as great farmers' organizations. It is interesting to note that two of these agencies, the Federal department and the land-grant colleges, had their national official recognition and their real origin in another period of stress—in 1862—in two acts of Congress approved by Abraham Lincoln.

National and State agricultural agencies, therefore, were ready immediately to assume the burdens devolved by war upon the Nation in the field of agriculture. The task was largely one of further coordination and expansion of existing organizations. The conference of agricultural leaders at St. Louis, called by

the Secretary of Agriculture shortly after the war was declared, formulated in two days a definite program for further organization, legislation, and action with reference to production, conservation, and food control, the essential parts of which have since been enacted into law or put into effect without substantial change. As farmers were already in the field or had made their plans for the season, the department and the State agencies speeded up their work along most promising lines with the forces and funds at their command, and special campaigns were made to stimulate the production of foods, feeds, and live stock, and to promote the fuller conservation of foods along the lines indicated in the St. Louis program. The existing activities of the department were redirected, as far as possible, to meet war conditions, and on August 10, 1917, the Congress passed the food-production act making available to the department an additional appropriation of over \$11,000,000 to extend and develop the most vital projects. The cooperative agricultural extension work, which was given great impetus by the passage of the cooperative extension act on May 8, 1914, has been rapidly expanded, and, as already indicated, there are now approximately 5,400 county agents, home-demonstration agents, boys' and girls' club leaders, specialists, and others employed in this great educational system.

Special efforts have been made to reduce the losses resulting from animal and plant diseases, insect pests, predatory animals, and rodents. The marketing activities of the department have been greatly extended, including especially the market news service for fruits, vegetables, and live stock. The planting of home gardens was greatly stimulated, with the result that the number last year, it is estimated, increased from 200 to 300 per cent, and there was the largest production of perishables on record. An intensive campaign was conducted to insure the preservation of surplus perishable products for future use, and, notwithstanding the unusually large output, the difficulties of marketing were no greater than in normal times. In cooperation with the Department of Labor special attention was given to the farm-labor supply, and agents were stationed in most States of the Union to devote their entire energies to the solution of this important problem. Under the authority contained in the food-production and food-control acts the department has purchased large quantities of seeds and nitrate of soda and is selling these products to farmers for cash at cost. The informational activities of the department also have been greatly extended and developed and large numbers of publications dealing with emergency agricultural problems have been issued.

Active cooperation was established not only with the Food Administration but also with the War and Navy Departments. The department has rendered very valuable service to the latter branches in safeguarding the supplies of meats and dairy products for the Army and Navy, in the organization of the Army veterinary service, in the utilization of forest products for the construction of airplanes, Army vehicles, and other purposes, in the organization of the Army aerological work and of forestry and gas-and-flame regiments, and in many other directions.

Last August plans were developed for the fall planting of wheat and rye and tentative suggestions were made regarding the food needs for 1918. Since that time separate recommendations have been made regarding various phases of the agricultural situation, and, early in the year, a more detailed program giving suggestions for the spring activities was issued. An active campaign is now under way to bring these suggestions to the attention of farmers and to secure their adoption as far as it is possible to do so. Early in March the Secretary of Agriculture and the Food Administrator appointed a committee of 24 representative producers of farm products and live stock.

It seemed advisable—

The Secretary of Agriculture said in addressing the members of the committee which assembled in Washington on March 28 and continued in session until April 4—

to select a group of producers, a representative group of producers, who could come here from time to time for conference and furnish advice not only in person but also through letter or in any other manner. Such a body, composed of men coming fresh from the various sections of the Union, men who are in intimate touch with the various communities and with the producers, can present in responsible and helpful ways the problems confronting the producers in various sections, giving us such light as we might not otherwise get, and such advice or suggestions as it may see fit to offer.

The results of the efforts last year speak for themselves. The farmers of the Nation, with the aid of the Department of Agriculture, the State agricultural colleges, the State departments of agriculture, and farmers' organizations, and in spite of difficulties, greatly enlarged their operations and planted the largest acreages in the history of the country, produced and harvested record crops of most products, and increased the number of all kinds of live stock. They planted 23,038,000

acres more, and produced 1,204,659,000 bushels more, of the leading food crops than they did in 1916. From all indications it seems clear that they will again overcome obstacles this year and produce a generous supply of foods, feed stuffs, and live stock, not only for our own population but for the nations of Europe with which we are cooperating in this war. With its largely increased personnel and facilities, the Department of Agriculture is in a better position to render effective aid to the farmers than ever before. It is constantly expanding its activities in many directions, and it is dealing effectively with the many emergency agricultural problems that are arising in these troublous times.

As the Secretary of Agriculture has well said:

I am optimistic about the future of American agriculture. We still have vast undeveloped resources. Our farmers are the most alert and capable in the world. They do not produce more per acre than any other farmers in the world, but they do produce from two to six times more per man, per unit of labor and capital. They use more and better machinery. They have the assistance of more powerful practical and scientific agencies. No other three nations in the world combined have as powerful forces aiding the farmers as this Nation has. The land-grant colleges and experiment stations are without parallel. They are 67 in number, have a total valuation of endowment, plant, and equipment of \$195,000,000; an income of more than 45 millions, with 5,900 teachers; a resident student body of over 75,000, and a vast number receiving extension instruction. Their great ally, the Department of Agriculture, is unquestionably the greatest practical and scientific agricultural organization in the world. It has a staff of more than 20,000 people, many of them highly trained experts and all of them of consequence, with three or four exceptions, in the classified service. The farmers have the benefit now of a number of long-needed and highly beneficent legislative enactments.

EXTENSION OF REMARKS

OF

HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 29, 1918.

Mr. GILLETT. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a petition to the House of the National Liberty Congress Colored Americans that has been sitting here this week.

The petition is as follows:

PETITION.

To the House of Representatives of the United States of America:

Honorable Speaker and Representatives, hear and receive, we pray, the petition of the National Liberty Congress, composed of delegates from all sections of this country in behalf of all colored Americans, those of African extraction, 12,000,000 strong, loyal citizens desiring liberty and the rights of democracy, we petition you to hear our grievances, to wit, that—

First. We are the victims of civil proscription, solely because of race and color, in three-fourths of the States and in the National Capital (Federal territory), barred from places of public accommodation, recreation, and resort; yes, from such places within Government buildings.

Second. We are the victims of class distinction, based solely on our race and color, in public carriers in one-third of the States, segregated even when passengers in interstate travel and with the railroads under the control of the Federal Government.

Third. We are the victims of caste and race prejudice in Government military and naval schools and in officer schools with other citizens solely on the basis of race and color, and in the Navy itself, except as to the service below deck.

Fourth. We are the victims of prospective discrimination, based on our race and color, in the executive departments of the Federal Government, refused employment in many after appointment through the civil service, segregated at work, in the appointments of health and comfort.

Fifth. We are the victims of political proscription in one-third of the States, even in the election of Federal officials, in violation of the Federal Constitution, both indirectly by congressional representation based on disfranchisement and directly through intimidation, trickery, or State statutes and constitutions.

Sixth. We are the victims in many States, as a consequence of the foregoing civil and political proscriptions, of imposition, robbery, ravishing, mob violence, murder, and massacre, because of our race and color, denied protection of police, of sheriffs; denied trial by court or jury, rendered impotent to protect our daughters, wives, or mothers from violation by white men or murder by the mob.

Inasmuch as our country is now engaged in the most gigantic war in recorded history, going to Europe to fight, our President, Woodrow Wilson, now the moral leader and spokesman of the allied nations which are resisting Germanic aggression, having officially declared that our country has entered the fight for the purpose of democratizing the nations of the world and liberating the free people everywhere, that we are embarked upon "an enterprise which is to release the spirits of the world from bondage," that we are "fighting for the rights of those who submit to authority to have a voice in their own government," to "make the world at last free" for security for life and liberty, to "make the world safe for democracy," which, meaning rule of all people, necessarily carries the presumption of the same public rights for all without difference or distinction because of the accidents of race or creed, thereby not creating class privilege, which means autocracy.

Inasmuch as American citizens irrespective of race or color are subject to draft, or are drafted into fighting, while all citizens regardless of race are expected to aid the Government by moral support, by propaganda, by sacrifice at home to help the Government, all of which

our racial element is now doing with a loyalty unsurpassed by citizens of any race or color in every war, and, even now, under present treatment, morally greater than that of others because the only vicious loyalty;

In order that our country may not be weakened in moral position, prestige, and power by violations here of the noble pronouncements of its President;

In order that the morale and esprit de corps in this war, both of the soldier and of the civilian part of an element of the American nearly one-eighth, may not be weakened by the consciousness of the present denial to it at home of those conditions and ideals which they are sacrificing or are risking life to secure for others, with their soldiers witnessing the continuance of indignities, oppressions, and the killing of their kin ere they leave for the battle front abroad, and without assurance of protection of their family, their sisters, wives, mothers from the lynching mob;

In order that, when this awful world war is over and victory comes to the entente allies, the condition of life of 12,000,000 human beings in the United States of America may not prevent the awful sacrifice from accomplishing the war's moral purpose—democratizing of the nations of the world—and that our own Republic may not be a part of the world not safe for democracy;

We do now petition you, the Congress of the United States of America, as an act of justice, of moral consistency, and to help win the war for world democracy:

First. To abolish and forbid all distinctions, segregations, and discriminations based upon race or color in places of public accommodations, recreation, and resort in Federal buildings and in Federal territory.

Second. To abolish and forbid all distinctions, segregations, and discriminations based upon our race and color or upon prejudice of race or color in the emoluments, the rating, the promotions, the placement of employees in the facilities provided by the Government for eating, rest, recreating, health for Government employees, or for others in Federal Government buildings or in Federal hospitals.

Third. To abolish and forbid any distinction, separation, or discrimination based on race or color in any coach of any public carrier operated by the Federal Government.

Fourth. To open the doors of all schools of the Federal Government and all branches of the Army and Navy to citizens on the same basis, without distinction or discrimination based on race or color.

Fifth. To exercise the mandatory powers of the thirteenth, fourteenth, and fifteenth articles of the Federal Constitution, to the end that there shall be no involuntary servitude, no denial of the equal protection of law, no denial of the exercise of suffrage because of race, color, or previous condition.

Sixth. To pass legislation extending the protection of the Federal Government to all citizens of the United States of America at home by enacting that mob murders shall be a crime against the Federal Government, subject to the jurisdiction of the Federal courts, for, in the words of President Wilson, "Democracy means, first of all, that we can govern ourselves."

Herewith endeth the petition of the colored Americans asking that the words of the President of the United States of America be applied to all at home:

"As July 4, 1776, was the dawn of democracy for this Nation, let us on July 4, 1918, celebrate the birth of a new and greater spirit of democracy, by whose influence we hope and believe that what the signers of the Declaration of Independence dreamed of for themselves and their fellow countrymen shall be fulfilled for all mankind."

EXTENSION OF REMARKS

OF

HON. FRANK L. GREENE,
OF VERMONT,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 29, 1918.

Mr. GREENE of Vermont. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include certain correspondence with Col. Myron M. Parker, of Washington, in regard to certain statements made in debate on the floor here.

The matter referred to is as follows:

WASHINGTON, D. C., June 21, 1918.

HON. FRANK L. GREENE,
House of Representatives, Washington, D. C.

MY DEAR SIR: Last week Mr. JOHNSON, chairman of the District Committee, while discussing the profiteering bill in the House, attempted to blacken my character by making the statement that I had attempted to sell ground to the Government for an addition to the Walter Reed Hospital at \$4,000 an acre which I finally sold at \$3,000. I can not answer this from the floor of the House, but I will appreciate it very much if you will offer the inclosed letter as part of the proceedings of the House, so it may go in the CONGRESSIONAL RECORD.

Thanking you in advance, I am,
Very sincerely, yours,

MYRON M. PARKER.

WASHINGTON, D. C., June 21, 1918.

HON. FRANK L. GREENE,
House of Representatives, Washington, D. C.

DEAR MR. GREENE: I find in the CONGRESSIONAL RECORD of June 14, when the House was considering the Johnson profiteering bill, Mr. Johnson stated that I had recently attempted to sell to the Government 19.76 acres of ground for an addition to the Walter Reed Hospital at \$4,000 an acre. The facts are these: The officials of the Walter Reed Hospital, knowing that I represented Senator Cameron, asked me to negotiate for this ground. I did so, and was told by Mr. Cameron that the ground was worth, in his opinion, \$5,000 an acre. I advised him to sell it at \$4,000. At the request of the Secretary of War, Mr. Beal, one of the assessors of the District, reported the property to be worth \$3,000 an acre. Having this report, the Secretary of War did not feel justified in paying a higher price.

Gen. Gorgas, the Surgeon General, asked me to appeal to Mr. Cameron to mingle patriotism with price. I visited Mr. Cameron at Harrisburg, Pa., and laid before him the suggestion of the Surgeon General. I told Mr. Cameron this ground was to be used for the purpose of erecting a reconstruction hospital, a place where maimed soldiers returning from France could receive proper attention. Mr. Cameron replied that, looking at it from that point, he would accept \$3,000, and this was all there was to it.

I had no interest in the ground, either directly or indirectly. I did, however, obtain a statement from the most prominent and conservative real estate men in Washington as to values, and they certified as set forth by Mr. Johnson. This ground was richly worth, at the time of selling, \$5,000 an acre; it is worth that to-day. This statement of Mr. Johnson is, as usual, misleading, and on a par with most of his statements.

Yours, very truly,

MYRON M. PARKER.

Mr. JOHNSON of Kentucky. Mr. Speaker, the gentleman from Vermont [Mr. GREENE] spoke to me in advance about getting leave to print a statement from Col. Myron M. Parker relative to some remarks made by me on the floor of the House concerning the sale of about 19 acres of ground made by him to the Government for the purpose of making an addition to the grounds of the Walter Reed Hospital.

Col. Parker complains not only by the letter which he has addressed to the gentleman from Vermont [Mr. GREENE], but he has also made a similar complaint through a card which he caused to be published in the Washington Star of June 21, 1918. In both the newspaper article and in the letter referred to Col. Parker said, "I had no interest in the ground, either directly or indirectly."

It is unfortunate for Col. Parker that the records in the office of the Recorder of Deeds in the District of Columbia contradict those statements. Those records show that by deed of conveyance, dated March 25, 1918, Myron M. Parker et ux, Nellie F., conveyed 19.76 acres to the United States of America for and in consideration of the sum of \$59,280. On April 4 last that deed of conveyance was recorded in Deed Book 4057, page 173. Therefore, Col. Parker and his wife were the immediate grantors of this land to the United States. The records of the recorder of deeds show that title to this particular piece of property was secured by Col. Parker through a deed of conveyance from Eliza C. Bradley et al.

In my opinion, if Col. Parker had any dispute with anybody about the matter it should have been with Commissioner Brownlow and not with me, because the CONGRESSIONAL RECORD containing my remarks shows that I made the statements upon the authority of Commissioner Brownlow. Since making those statements I have verified them by consulting the records in the office of the recorder of deeds, as hereinbefore stated.

With those records staring Col. Parker in the face, I certainly should not be expected to have further issue with him about it.

Col. Parker stated in his newspaper card: "This statement of Mr. JOHNSON is, as usual, misleading and on a par with most of his statements." In reply to that I have only to say that I congratulate myself because my statements are not on a par with his.

I also file as a part of this statement a communication addressed to me by Hon. Louis Brownlow, chairman of the Board of Commissioners of the District of Columbia:

COMMISSIONERS OF THE DISTRICT OF COLUMBIA,
Washington, June 6, 1918.

HON. BEN JOHNSON,
House of Representatives, Washington, D. C.

MY DEAR MR. JOHNSON:

The Walter Reed Hospital is located on Georgia Avenue, about one-half mile from the Maryland line and on 43 acres of ground purchased in April, 1905.

At the beginning of this year the hospital authorities sought to enlarge the grounds by the purchase of land to the west and north of the original holding.

An offer was submitted by Mr. Myron M. Parker of parcel 89/7, containing 19.76 acres, at \$4,000 per acre. When this proposal reached the Secretary of War he requested me to have an appraisal made by some one familiar with real estate values in the District of Columbia.

The property was then appraised by one of the assistant assessors, who made a careful study of the sales in the locality, and an examination of the contour of the ground, and concluded that the basis of the assessment on the property, namely, \$2,550 per acre, was about right when made, but that giving due allowance to any increase in value brought about by the new opening of Sixteenth Street extended, it was worth at most not over \$3,000 per acre.

In an effort to show that the valuation of the assistant assessor was too low Mr. Parker submitted appraisals made by several well-known local real-estate dealers who valued the property at \$4,000 per acre, \$4,500 per acre, and one as high as \$5,000 per acre. Mr. Parker also submitted a report from the appraisal committee of the Washington Real Estate Brokers' Association, in which this property was valued at \$4,500 per acre.

The property was finally purchased by the Government at \$2,000 per acre, as will be shown by deed dated March 25, 1918, by which Myron M. Parker et ux Nellie L. conveyed 19.76 acres to the United States of America for \$59,280.

Yours, very truly,

LOUIS BROWNLOW.

EXTENSION OF REMARKS

OF

HON. EDWARD C. LITTLE,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 3, 1918.

Mr. LITTLE. Mr. Speaker, I ask leave to extend my remarks in the RECORD with regard to the attacks on the integrity of the legislative branch of the Government.

This attack on the personal integrity of the entire Kansas delegation in Congress is circulated by the thousands in an alleged newspaper that bears the name of no editor and the title of no publisher, as cowardly and anonymous as it is false and malicious. Old enough to go to war in 1898, young enough to go now, he charges me with opposing the President's plan because I voted for four divisions of volunteers, that Theodore Roosevelt might have a chance to go to war, and shows himself to be the personal enemy of the most famous Republican in the land. The loyal Republicans of Wisconsin who elected Mr. LENROO were subjected to the same assaults this anonymous "newspaper," that does not circulate through the mails, sends broadcast against me by a campaign fund that comes from somebody that has money and is willing to spend it. That is the reason he can so widely circulate his false statement about the tax he says "the Congressman escapes."

A man can have "ambitions" to hold office, but in time of war there is no place for mere office seekers, men who deliberately say they seek to "realize ambition," as this one does. This is a time for sacrificing ambition, wealth, and life till we win this war. On May 31, 1917, Chairman WEBB submitted the conference report on the espionage bill (CONGRESSIONAL RECORD, pages 3124 to 3130) containing a section that provided for the punishment of editors who willfully printed information useful to the enemy after a jury had specifically decided that the information was useful to the enemy and willfully printed, and read a letter, which is found on page 3144 of the CONGRESSIONAL RECORD, from Woodrow Wilson, President of the United States, requesting us to vote for that proposition. Because I responded to the President's request and made on this floor a speech which has been circulated in our district, this objector to the President's

plan said in this anonymous sheet that LITTLE endeavored to muzzle the press. No brave and loyal man would make such an attack upon the President and the men who responded to his request read on this floor.

I voted to let Roosevelt volunteer and to have a chance to volunteer myself, and this slacker in two wars said I opposed the President's plan. I voted to punish treason at the President's personal request read on the floor, and this office-seeking character assassin charged that I tried to muzzle the press. I begin to think that the judgment of history which gave Ananias the credit of being the foremost fabricator in the annals of time was hasty and ill advised. Ananias rocks on his throne. His rival has found a campaign fund this time that has no bottom. Watch the profiteers and their money-making friends back a frightened slacker in two wars against a soldier who fought on the field of battle to free Cuba and the Philippines simply because he fights now for the conscription of wealth. This is no time to "realize" personal political "ambitions." Gentlemen, he who seeks to arouse dissension now over things open to discussion before war began is an enemy to his country. We must close the ranks and fight shoulder to shoulder against the common foe of humanity until our flags are planted in victory on the ramparts of the Rhine.

EXTENSION OF REMARKS

OF

HON. EDWARD J. KING,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 29, 1918.

Mr. KING. Mr. Speaker, under the leave granted me to extend my remarks in the Record I include a letter written by me to Hon. John C. Work, of Rushville, Ill.

The letter is as follows:

HOUSE OF REPRESENTATIVES,
WASHINGTON, D. C.

MY DEAR JUDGE: Believing that you would be glad to have a correct statement in regard to my action on the measures which have passed the House of Representatives since the beginning of war between the United States and Germany, I am sending you a list of all the important war measures.

I opposed but one of these. I voted against the substitution of the selective-draft law for the volunteer system.

Limited space forbids me to discuss, except briefly, a few of the most important measures on the list. One of these was the expenditure of \$640,000,000 for the construction of airships and to provide men to operate them. This is a most vital piece of legislation, and, in the judgment of Congress, will be the means, with additional appropriations for this branch of the service yet to come, of delivering the final blow with which to win the war.

The revenue bill is raising to this date enough money to conduct the war on an effective basis. I voted for amendments to put a higher tax on great incomes, but the majority was against it. This revenue law does, however, increase considerably the tax on such incomes, and I supported it as being, on the whole, an improvement.

The bills providing money to care for the soldiers and properly equip them seem to me, as to everyone else, very necessary.

The soldiers and sailors' insurance bill is one of the greatest pieces of work of the war Congress. The bill controlling the railroads during the war has already demonstrated its advantages, and the bill providing for industrial credits by assisting those engaged in furnishing necessary war materials to the Government also, in my judgment, was absolutely necessary to carry on the war in its proper magnitude.

We have passed many bills appropriating and authorizing the expenditure of huge sums of money, amounting to more than \$22,000,000,000. The sinews of war had to be supplied. I supported all these, believing that the welfare of our soldiers and the Nation depended upon it.

It is my suggestion that you keep this list at hand for ready reference in order to have exact information which will enable you from time to time to correct any misstatements which may be made.

With kind personal regards, I am,

Very truly, yours,
EDWARD J. KING,
Representative in Congress, Fifteenth Illinois District.

Win-the-war bonds—seven billions—authority to issue.
Giving the President one hundred millions for national defense.
Increase age limit for officers, Naval Reserve.
Authority to our allies to enlist their volunteer subjects in United States.

Authority for additional officers, Hydrographic Office, Navy.
For extension of minority enlistments, naval service.
Increase of midshipmen at Annapolis.
For Army and Navy—war expense—urgent deficiency appropriation nearly \$4,000,000,000.

Sustaining the President in his request asking retention of section 4 in espionage bill.

Legislation enabling President to suppress spies.
Amending the Federal reserve act to meet the war situation.
Authorizing the President to take over for use of United States the ships of any nation at war with us.

To relieve car shortage—essential to transportation during the war.
In support of the President on conference report on Military Establishment as per his letter to Mr. DENT, chairman of the Committee on Military Affairs.

Enlisted men and officers in Army—raise in compensation.

Food-survey bill.
Food-control bill.
Red Cross buildings in Washington.
Soldiers and sailors' insurance.
Bill to provide revenue to defray war expenses and other purposes.
In support of the President per his request in letter to Chairman WEBB (Cong. Rec., p. 3343, May 31, 1917) on a motion to recommit espionage bill.
Promotion of export trade.
Condemnation of land for military purposes authorized.
Providing for additional captains for Medical Corps.
Military and naval service—relief of homestead entrymen.
War with Austria—resolution.
Congressmen—chargeable with income and excess-profits tax.
Aviation sites for Army—authorization of.
The Coast Guard—fixing status of officers of Public Health Service when serving with same.
Military or naval service—relief of desert-land entrants.
The shipping act—amendments increasing efficiency in war.
Regulating trading with the enemy.
Rifles to Home Guards—authority to issue.
France—investigation of small arms and ammunition sent.
Chaplains at large for the Army.
Artillery from Cavalry regiments—authorizing President to organize.
Liberty bonds—H. R. 5901, authorizing additional issue of bonds to meet expense national security and defense and assist in prosecution of the war, etc.
To encourage the production of potash necessary in war.
Creating an Aircraft Board.
Substituting a selective draft for the volunteer system.
Coastwise trade—permitting foreign nations to engage in, during war.
The Army—provisions for allotment of pay to dependents.
Longevity pay—Army and Navy officers.
Civil rights law for soldiers and sailors.
Extending effective date of section 10, Clayton antitrust law.
Arm forces of the Philippine Islands—calling into service.
Farm-loan bonds—authorizing Treasurer to purchase \$2,000,000 worth.
Soldiers and sailors' insurance—extending time to file applications thereunder.
Shipyards—authorizing construction of housing for employees.
War buildings—authorizing erection of.
Allen slacker bill.
Railroad control bill.
Enlisted men discharged to accept commissions—authorization of.
Restoration for enlisted men discharged for trivial matters.
Punishing acts of interference with neutrality, foreign commerce, etc.
H. R. 9504—amending section 4067 revenue act (asked for by President as a war-emergency measure).
Secretary of War—authorized to grant furloughs to enlisted men to engage in civil pursuits.
Excepting Alsations, Bohemians, Croatians, etc., from classification as alien enemies.
Industrial enterprises—authorizing credits for; to enable same to carry on work necessary or contributory to the prosecution of war.
War material—to punish for destruction of.
Sale of seed grain to farmers.
For additional Secretary of War.
Third liberty loan.
Homing pigeons—protection of.
Industrial credits—providing for national security in assisting industries engaged in necessary war enterprises.
Mine planting service—establishing same in Coast Artillery.
Gun pointers and gun captains—payment of.
Reimbursement of expenses of enlisted men in reserve officers' training camp.
Reserve Officers' Training Corps.
To drop from the rolls certain naval and marine officers.
Indemnity for damages caused by American troops abroad.
Commutation to commissioned officers.
War mineral products—Appropriation for.
Silver-coinage law.
Smoot-Sherwood pension law.
Agriculture—Appropriation for.
National defense—More effective provision for.
Reducing instruction period Naval Academy to three years.
War measure with reference to coal lands.
Providing six months' gratuity to dependents of deceased sailors in the Navy.
Commissioned Army officers—Quarters for.
Providing disposal of effects of deceased sailors.
Urgent-deficiency appropriation bill.
Authority for marines to serve under Dominican Republic.
Relating to Medical and Dental Corps.
Allowing applications for insurance by soldiers' relatives.
Appropriating \$1,000,000 for ordnance testing in Navy.
Providing military and naval insurance.
Aircraft—Appropriating \$640,000,000 for same.
Against profiteering.

APPROVED BY THE PRESIDENT.

OCTOBER 6, 1917.

The Sixty-fifth Congress, now adjourning, deserves the gratitude and appreciation of a people whose will and purpose, I believe, it has faithfully expressed. One can not examine the record of its action without being impressed by its completeness, its courage, and its full comprehension of a great task. The needs of the Army and Navy have been met in a way that assures the effectiveness of the American arms, and the war-making branch of the Government has been abundantly equipped with the powers that were necessary to make the action of the Nation effective.

I believe that it has also in equal degree, and as far as possible in the face of war, safeguarded the rights of the people and kept in mind the considerations of social justice so often obscured in the hasty readjustments of such a crisis.

It seems to me that the work of this remarkable session has not only been done thoroughly but that it has also been done with the utmost dispatch possible in the circumstances or consistent with a full consideration of the exceedingly critical matters dealt with. Best of all, it has left no doubt as to the spirit and determination of the country, but has affirmed them as loyally and as emphatically as our fine soldiers will affirm them on the firing line.

WOODROW WILSON.

EXTENSION OF REMARKS
OF
HON. S. HUBERT DENT, JR.,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, July 3, 1918.

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the Record I submit the following correspondence:

JUNE 27, 1918.

HON. NEWTON D. BAKER,
Secretary of War, Washington, D. C.

DEAR MR. SECRETARY: As it has been just a little more than a year since the first American troops were landed in France and less than 15 months since Congress declared war against the Imperial German Government, and in view of a prospective brief recess of Congress, I have thought it not amiss that you should furnish the Committee on Military Affairs of the House, in a general way, with the development of the Military Establishment.

I should be pleased, therefore, if you would have furnished me for the information of the committee the status of the Army when war was declared and what it is now, including the number of men in France, or expected to be in France, by July 1. I should be glad to have a general statement as to the supplies, health, hospital accommodations, and transportation of our troops.

The figures up to the latest date on the production of aircraft, rifles and ammunition, and ordnance supplies, together with port facilities in France, would prove very interesting.

I am sure the committee also would be very glad indeed to have your views after visiting different camps in this country and the western front as to the morale of the Army.

Your attention to this matter at your earliest convenience would be appreciated, I am sure, by the committee as well as myself.

With kindest regards, I am,
Yours, very respectfully,

S. H. DENT, JR.

WAR DEPARTMENT,
Washington, June 28, 1918.

HON. S. HUBERT DENT, JR.,
Chairman Committee on Military Affairs,
House of Representatives.

MY DEAR MR. DENT: I have received your letter of June 27 reminding me that just a year had elapsed since the first American troops were landed in France and suggesting that I furnish the Committee on Military Affairs of the House a summary of the development of the Military Establishment in the 15 months since Congress declared war against the Imperial German Government. Any such report might go into unlimited detail. I am happy, however, to have an opportunity to comply with your request, and will do so as fully as the compass of a letter will permit.

1. Since April 6, 1917, the Regular Army has increased from 5,791 officers and 121,797 enlisted men to 11,365 officers and 514,376 enlisted men; the National Guard in Federal service, from 3,733 officers and 76,713 enlisted men to 17,070 officers and 417,441 enlisted men; the Reserve Corps in actual service has increased from 4,000 enlisted men to 131,968 officers and 78,560 enlisted men; the National Army has been created, with an enlisted force of approximately 1,000,000 men.

The Army has increased in 14 months from 9,524 officers and 202,510 enlisted men to approximately 160,400 officers and 2,010,000 enlisted men.

The number of men in France or en route to France, including combatants, medical service, service for supply, and all the units which go to make up an entire army, is on July 1 practically 1,000,000 men.

2. Supplies for soldiers: The size of this undertaking may best be seen by these typical purchases made by the Quartermaster Corps from the beginning of the war to June 15, 1918:

Hardware and metals.		Quantity.
Articles:		
Hammers	-----	2,567,000
Axes	-----	5,121,729
Files	-----	10,870,000
Vehicles and harness.		
Articles:		
Halters	-----	1,700,000
Escort wagons	-----	129,000
Combat wagons	-----	26,000
Animals.		
Articles:		
Horses and mules	-----	339,593
Clothing and material for clothing.		
Articles:		
Shoes	-----pairs-----	27,249,000
Boots, rubber, hip	-----do-----	2,340,000
Overshoes, arctic	-----do-----	4,010,000
Cotton undershirts	-----	43,922,000
Denim cloth	-----yards-----	103,028,000
Stockings, wool	-----pairs-----	104,333,000

3. Health of men in cantonments: The deaths per thousand, from all causes, in the Regular Army of the United States has been as follows:

1898	20.14
1900	7.78
1901	6.90
1916	5.13

The death rate per thousand among all troops—Regulars, National Army, and National Guard—in the United States for the week ending May 31 was 4.89, and for the week ending June 7, 4.14. The death rate for disease only among all troops in the United States for the week ending June 7 was 3.16, which is still lower than that of the preceding week (3.2), which was then the record low rate since that of November 2, 1917.

HOSPITAL ACCOMMODATIONS IN FRANCE AND UNITED STATES, AND
SUPPLIES THEREFOR.

The bed capacity on June 5 in all department hospitals in the United States was 72,667. New construction now under way will provide for a total of 87,344 beds. The number of base and general hospitals in this country has increased from 7 to 72, and will be further increased. Vast hospital facilities have been organized and are being organized in France, providing beds numbering from 5 per cent to 10 per cent of the number of men in the American expeditionary force.

Psychological examinations, of which more than 500,000 have been made, result in the weeding out of about one-fourth of 1 per cent of the men examined.

Nutritional surveys in 270 messes in 50 camps have resulted in a readjustment of rations and a conservation of food.

The number of officers in the Medical Corps has increased from 900 to 24,000; the number of enlisted men from 8,000 to 148,000. These figures, of course, are exclusive of the Sanitary Corps and of the Army nurses.

4. Transportation in France: With the completion of the organization of 5 new regiments and 19 battalions of railway engineers there will be over 45,000 Americans engaged in railroad construction and operation in France. Nine regiments of railway engineers have been in France since last August.

There have been produced for the railroad operations of the War Department in France more than 22,000 standard gauge and 60 C. M. freight cars and more than 1,600 standard gauge and 60 C. M. locomotives. In addition to this, purchases of both cars and locomotives have been made abroad.

A double line of railroad communication has been secured from the French by Army Engineers, extending from the coast of France to the battle front, including the construction of hundreds of miles of trackage for yards and the necessary sidings, switches, etc.

5. Aircraft production (training planes, bombing planes, combat planes, and guns therefor, and production of Liberty engines):

Deliveries of elementary training planes to June 8	4,495
Deliveries of advanced training planes to June 8	820

The average weekly production of advanced-training planes during April was 22; during May was 45½; week ending June 8 was 78.

To June 8, 286 combat planes were delivered. The weekly average of this type of machine in April was 5; in May, 38; and for the week ending June 8 was 80.

Six thousand eight hundred and eighty elementary-training engines were delivered to June 8; 2,133 advanced-training engines were delivered to same date.

More than 2,000 Liberty engines have now been delivered to the Army and the Navy. The average weekly production in April was 96, in May 143, and in the first week of June 115.

Thirty-seven thousand two hundred and fifty machine guns were delivered for use on aeroplanes before June 8.

6. Rifles and ammunition: More than 1,300,000 rifles were produced in America and delivered between the declaration of war and June 1 of this year.

Deliveries of new United States model 1917, the so-called modified Enfield, have passed the million mark. In the two weeks preceding June 1 more than 66,000 rifles were delivered. Sufficient rifles are being received now to equip an Army division every three days.

7. Ordnance supplies, artillery, Browning guns, etc.: As to machine guns, heavy Browning guns for instruction purposes are in every National Guard camp and National Army cantonment in this country where troops are in training. During May more than 900 of these heavy machine guns were delivered.

More than 1,800 light Browning machine guns were delivered in May.

Probably the most difficult undertaking in the outfitting of an army is the manufacture of heavy artillery. Not only are the forging and machining processes extremely difficult, but it has been necessary to create manufacturing facilities for a vast proportion of the program. Sixteen plants had to be provided for the manufacture of mobile artillery cannon. In practically all cases these plants had to be retrofitted, and in some cases they were built from the ground up. The same difficulty is met in the design and manufacture of artillery carriages, but the artillery program is now approaching a point where quantity production is beginning.

The first of four Government-owned shell-fitting plants has been completed and is beginning to produce. In addition, a number of private plants are at work loading shells.

Vast as were the privately owned facilities for the manufacture of powder and high explosives, the Government has provided additional facilities which are very much larger than those which private enterprise had created.

Ordnance engineers, it seems, are well on the way to a solution of the problem of the motorization of field artillery. The problem of motorization of light artillery has been a constant factor in slowing up the advance of troops to await the bringing forward of their supporting guns. Tractors have been used by all nations, of course, to haul heavy pieces along good roads, but they have been unable to develop tractors for hauling light pieces over shell-shattered ground. On June 3 the Ordnance Department demonstrated a 5-ton armored artillery tractor which proved capable of negotiating the most difficult terrain, hauling a 4.7 howitzer which weighed approximately 9,000 pounds.

Approximately \$90,000,000 are being spent to provide for the manufacture of nitrates, which are essential in the manufacture of explosives, but which have heretofore had to be procured from Chile. The building of these plants will add to our powder output, will save large amounts of cargo space, and it is supposed after the war will produce nitrate for fertilizing American farms.

8. Port facilities in France: Among the most dramatic stories of the war is that of the development by American engineers and American enterprises of port facilities on the French coast. It is not permissible to say where this development has taken place, but the scope of it may be judged by the fact that it would be possible to handle during the month of July a maximum of 750,000 tons at the ports of the American Army in France.

It was necessary, before troops of the American Expeditionary Force could be landed, to send an organization of foresters into the woods of France, to send knocked-down sawmills after them, to cut down trees, to shape them into timbers, and to build them into docks in order that our troops might leave their ships. Vast as this work was and large as the flow of troops has been accelerated, the facilities for dockage have kept pace with the shipments of troops and supplies.

9. Morale of the Army: Consensus of opinion is that drunkenness in the Army is completely under control, both in the United States and in France. Gen. Pershing states:

"As there is little beer sold in France, men who drink are thus limited to the light native wines used by all French people. Even this is discouraged among our troops in every possible way."

You may travel for weeks in France without seeing an intoxicated American soldier. In the CONGRESSIONAL RECORD on or about March 31 there is reprinted the statement of a journalist in France, beginning: "Everyone is on the water wagon at the American front. During the past month I have been at the front daily and often twice a day, seeing thousands of American soldiers. In that time I saw exactly one man drunk and one other who was under the influence of liquor."

The Third Assistant Secretary of War, in 10 days at a National Army camp adjacent to Chicago, saw two men intoxicated.

There is no permanent military camp in the United States with a red-light district in its vicinity.

The Commission on Classification of Personnel reports that a surprisingly large proportion of recruits ask to be placed in the most hazardous branches of the military service. If a reply is needed to those who say that the men of the National Army are in camp because they have to be, it is this, that those same men are going over the top because they want to go.

The desire among men in the military service to get to France and to the front is universal. The Secretary of War stated before the Senate Military Affairs Committee that he had seen grizzled men of the Army turn away from his desk to hide their tears when they were asked to do organization work in America rather than go to France where the glory of their profession lies. When the Secretary of War started for Europe and was on the ocean he was approached in a number of instances by seamen, requesting transfers to the Army in order that they might see service which seemed more active and closer to the front.

In France it was necessary to change the name of the zone behind the armies from the "Service of the rear" to "Service of supply," because of the difficulty in getting men to serve in a region having the shell proof connotation of the word "rear." Even at the actual front there is something of a tradition against the use of the term "No Man's Land." Our men prefer to call it—and make it—"Yankee Land."

I have written the above in a somewhat intimate and free way, both because I know that as to many of these statements full and ample details are in the hands of the committee, and also because I am so deeply grateful to the committee for its sympathy and cooperation during all these months, and I wish to express to them in some degree my own happiness and satisfaction at the results which the War Department has been able to achieve with the cordial support it has received from Congress.

Cordially, yours,

NEWTON D. BAKER,
Secretary of War.

JULY 3, 1918.

Hon. NEWTON D. BAKER,

Secretary of War, Washington, D. C.

DEAR MR. SECRETARY: Your letter, in response to one from me requesting a summary of military achievements since the declaration of war, and particularly during the past 12 months, was read to the Committee on Military Affairs at a meeting this week.

At this meeting there were 19, out of a total membership of 21, present.

Upon motion of Mr. KAHN, of California, I was unanimously instructed, as chairman of the committee, to extend to you and your department our hearty congratulations upon the remarkable accomplishments as disclosed by your very interesting letter.

I was further instructed to place these facts in the CONGRESSIONAL RECORD.

I take great personal pleasure in communicating to you this action of the committee.

With highest regards, I am,

Yours, very sincerely,

S. H. DENT, Jr., Chairman.

EXTENSION OF REMARKS

OF

HON. J. THOMAS HEFLIN,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 1 (legislative day of Saturday, June 29), 1918.

Mr. HEFLIN. Mr. Speaker, under leave to extend my remarks in the RECORD I desire to print a portion of a speech delivered by me on May 15 at the laying of the corner stone of the new Federal building at Birmingham, Ala. In accordance with the invitation extended to me, this speech is, in the main, a discussion of the war.

I have received so many requests for copies that I decided to print it in the CONGRESSIONAL RECORD, so that I could circulate it in pamphlet form.

ADDRESS DELIVERED BY THE HON. J. THOMAS HEFLIN AT THE LAYING OF THE CORNER STONE OF THE NEW FEDERAL BUILDING, BIRMINGHAM, ALA., MAY 15, 1918.

Mr. Chairman, grand master, brethren, and ladies and gentlemen: I am glad to have the pleasure of witnessing the very interesting and impressive ceremonies of this day. I think it very fitting and appropriate, Grand Master, that these ceremonies should be held under the auspices of the Masonic fraternity, the oldest fraternity in all the world. [Applause.] Not only is the Masonic fraternity the oldest fraternity in all the world, but it is the first organized effort to dignify labor and exalt the laboring man [applause], first secret society to minister

to the poor and needy, first to worship at the shrine of truth, and first to champion the cause of liberty. [Applause.]

Fellow citizens, opposition to the union of church and state was in existence before Jefferson wrote the first statute of religious freedom that ever adorned the history of the world. Freemasonry has combated the creeds of popes and potentates who have favored the union of church and state, and to-day, on the dividing line between church and state, Freemasonry stands, with flaming sword, sublime and immovable. [Applause.]

From the cabin on the hillside and the mansion on the mountain top, from every walk of life, men have come to swell the ranks of the order. From the private in the ranks of the Colonial Army to Washington, the commander in chief, they have worn the square and compass. [Applause.] Washington, a Master Mason, was the first President of the United States, and under Masonic ceremonies he laid the corner stone of our Nation's Capitol, and Masons were his pallbearers and performed the last sad rites at his funeral. To-day, without noise or notoriety, Freemasonry is accomplishing the work whereunto it was appointed. No bad man has any business in the order and no infidel can become a member. [Applause.] Brethren, let us strive, as the years come and go, to live closer and closer to the Master, and let us study to show ourselves approved unto God, a workman that needeth not to be ashamed, rightly dividing the truth. [Applause.]

This new and spacious building whose corner stone we lay to-day is evidence of the mighty growth and development of the great city of Birmingham and should stand here as a testimonial to the growing thought and increasing worth of her people. Let us build up the waste places, develop our material resources, and make the South to blossom as the rose. But let us remember that wealth of farm and forest, factory, and mine should all be used not to degrade and drag man down to the level of a mere money-making animal but to produce a happy race of people, highly intelligent and morally strong, contributing to the nobler things of life as each rises higher and higher in the scale of being. [Applause.]

Fellow citizens, we are living at a very critical time in the history of the human race, and we are called upon to protect and preserve the principles and policies that make for the safety and well-being of mankind. Our fathers fought to secure the liberty that we enjoy to-day and now we are compelled to fight to preserve that liberty. The people of each generation are the guardians of American ideals and institutions, and it has fallen to our lot to protect and defend them in the most critical time in our history. Are we ready to take up the cross of our country, and follow our great leader, Woodrow Wilson, as he leads our Army against the enemies of America and the enemies of mankind? [Applause.]

A war-mad monarch, dreaming of world power, violating with impunity his treaty obligations to us and trampling under foot the principles of international law, has interfered with our trade, destroyed our commerce, and denied to our citizens the right to travel upon the free seas. While we were neutral and striving to remain at peace with Germany, Germany denied us the right to remain neutral and without just cause made war upon the people of the United States. The President and the Congress did everything in their power to avoid war, and not until Germany had broken the last promise that she had made to respect our rights and had destroyed our commerce and murdered our citizens did we take up arms against the German Government. [Applause.] We had to fight then to protect our rights and liberties or cowardly refuse to fight and disgracefully surrender them. [Applause.] We chose the road of national honor and drew the sword to defend the life of our Nation from the dangers that threatened it. [Applause.] The Nation that would not fight when attacked as we were attacked by Germany is not entitled to the love and loyalty of its citizens. [Applause.] Germany, forced us to put aside the dove of peace and the olive branch, and now in the name of a hundred million of people and with faith and courage undaunted we present to her the lion's paw and the eagle's claw. [Applause.]

After Germany had infested our country with spies who fomented industrial disturbances, destroyed munition plants, and murdered our citizens working in these establishments she announced her purpose to conquer our country, and Zimmerman, the secretary of German foreign affairs, admitted that Germany had requested Japan and Mexico to join her in making war upon the United States; and then after breaking every promise that she had made to our Government, Germany made war upon us. Our desire to remain at peace and our persistent efforts to avoid war were not understood or appreciated by Germany. Germany construed our very patient conduct to mean that we were for peace at any price, and that we just would not fight. The Kaiser's oldest son, the Crown Prince, told Mr. Gerard, the

American ambassador to Germany, that Germany had 500,000 reservists in the United States and that Germany would call them to the colors and strike the United States Government down before we could get ready to fight, and Ambassador Gerard replied that we had 500,000 telegraph posts in the United States to which we would hang every German reservist in the country. [Applause.] The Kaiser said we were a soft, money-loving people and that our flag had dollar marks on it. Well, fellow citizens, the Kaiser has already learned on the battle front in France something of the metal of the American soldier, and before this war is over our flag will be close enough for him to see the stars and feel the stripes. [Applause.]

Fellow citizens, while all of the other nations were talking disarmament and urging the settlement of all international disputes by arbitration, Germany was secretly preparing for a war of world conquest. When Germany commenced this awful conflict she was the only nation in the world prepared for war, and she intended to conquer the world before the world could raise and equip an army. One of the things that will always be remembered and cherished by the lovers of liberty everywhere is that immortal 10 days' stand of the brave Belgians against the barbarian hordes of Germany. [Applause.] Heroic Belgium, lone and tragic sentinel of civilization, bleeding and dying, but holding back the murderous Hun until France could prepare for the battle of the Marne. [Applause.]

Belgium made it possible for the French soldiers at the battle of the Marne to defeat the German Army and save the civilization of the world. [Applause.] It was the intention of the German Kaiser to go through Belgium the first day and to be in Paris before the end of the week. When his soldiers first invaded Belgium he said to them, "On to Paris and world dominion." He then disclosed the German plan and purpose to conquer the world, and, fellow citizens, if he had succeeded in reaching Paris, as he had planned, God, and God only, knows what he would have accomplished by now toward the conquering of the world. All praise to the brave and heroic people of France! [Applause.] The world owes to France a debt of gratitude that the children of men can never pay. [Applause.] Hope on, trust on, fight on, brave France! We are comrades again in the cause of liberty; and just as you fought with us to achieve our liberty, we will fight with you to preserve it and to save to the people of France the Republic that you love. [Applause.]

The Kaiser did not believe that we would fight. He now finds that he was mistaken. [Applause.] Old Uncle Rufus used to say, "De rooster never could get no sense in de fox's hade until he looked way off yander and craned his neck. And den de fox say, 'What are you lookin' at?' and de rooster says, 'I ain't looking at nothing but a pack of dogs.' 'Which way is dey goin', said de fox, and de rooster said, 'Dey ain't er goin', dey are comin'.'" [Laughter.] So it was with the Kaiser. We could not get any sense in his head until one day he said, "At what are the British soldiers looking? They are gazing intently at the west." And the answer came, "It is the United States in arms." [Applause.] And then the Kaiser said, "What means this renewed activity on the battle front in France and this great enthusiasm among the French soldiers, and what is it that causes them to look so eagerly to the west?" Then with united voices the French soldiers said, "It is the United States in arms." [Applause.] "Which way are they going?" said the Kaiser, and then the soldiers, descended from the men who fought with Washington at Valley Forge in achieving American liberty, said, "They are not going, thank God; they are coming." [Applause.]

Those charged under the Constitution with the responsibility of providing for the national defense have performed their duty and the Government is engaged on a mighty scale in the great work of war preparation. We are actually engaged in war with a dangerous and skillful enemy. All that we hold dear is involved in the outcome of this war and free government everywhere is at stake. [Applause.] No man worthy the name of American citizen will do anything now to embarrass his country and no man worthy to share the blessings of this great and free Government will do or say anything now that will hinder or delay the Government in the prosecution of the war. [Applause.] When the country is at war, it is the duty of every citizen to get squarely behind the Government, but if he will not do that it then becomes the duty of the Government to get squarely behind the citizen. [Applause.] One enemy on the inside is more dangerous than a dozen enemies on the outside, and we owe it to the boys at the front who are fighting and dying for our country to close up the ranks at home and silence every enemy found here in the household of America. [Applause.] Our boys are shedding their blood and giving their lives as they kill the Hun, the deadly enemy of our country; then why should we, the

home guards and watchmen left in charge of the temple of liberty, permit the sneaking agents of Germany, alien or native born, to raise a hand or lift a voice against the Government of the United States? [Applause.]

This splendid industrial city is contributing greatly to the war work of our country, and spies have dared to come here to destroy property, to blow up plants, in the effort to weaken the arm of the Government. They have been arrested and their evil purpose prevented. [Applause.] The Government's secret-service men have taken charge of hundreds of German spies in the various sections of the country. You can help the Government in this great work. Report every person who does or says a suspicious thing. You are on duty keeping vigil over here while our boys are fighting and dying for us over there. [Applause.] Take no chances. If you have any doubt about the suspicious person's guilt, give the boys at the front the benefit of the doubt and arrest him. [Applause.] Make slack-erism and pro-Germanism so hated and despised here that the desire for self-preservation will prompt the enemy to move on to a more congenial climate. [Applause.] The person who goes about our country now spreading the poison of sedition and treason, trying to defeat the war plans and purposes of our Government, is a dangerous enemy, and he ought to either be driven out of the country or executed in it. [Applause.] There are only two classes of people in our country now—the loyal and the disloyal, the patriot and the traitor. [Applause.]

What manner of man is he who will withhold from America now his enthusiastic and whole-hearted support? The freest and best Government in all the world is attacked by the demons of military despotism in Germany, and every man and woman worthy to live beneath the flag is supporting our country in this hour of its danger. [Applause.]

Fellow citizens, when this awful war is over and the forces of justice and liberty have prevailed, how miserable and contemptible will be the position of the wretch who proved to be unworthy and unfaithful at a time when the country needed him most. [Applause.] How unfortunate and heart-rending for the boy or girl of a father whose patriotism is now questioned and doubted to have some one embarrass and humiliate them by saying, "When the country was at war with Germany and our liberty was at stake your father was a traitor." God forbid that this unhappy and humiliating experience shall ever come to any boy or girl in Alabama. [Applause.] Let the careless and thoughtless citizen take heed, lest by his lukewarmness and indifference to his country he shall be guilty of placing upon his children a stigma that they can not remove in a lifetime. [Applause.]

The principles of right, justice, truth, and liberty are the principles for which we battle at this hour. [Applause.] In more than a million American homes fathers and mothers have seen their boys put on the uniform of their country and go forth to battle for the rights and liberties of our people. All praise to the patriotic fathers and mothers of America. They have contributed to their country's cause the dearest and best-loved treasures of the heart and home. [Applause.] What of the brave boy in uniform at training camp and battle front? There he is with the flag that we love, defying danger and death, and he stands between us and the overthrow of our Government and the loss of our liberty. [Applause.] All praise to the American soldier! There is no braver soldier than the Belgian, the French, or the English soldier, but the one possessing more of the individual initiative and the one most dangerous and daring of them all is the United States soldier as he battles for the flag that he loves. [Applause.] The crusader never fought in a cause more holy. He fought to rescue the tomb of Christ from the hands of infidels, while our soldiers are fighting to foster and preserve the principles that Jesus taught to the children of men. [Applause.]

Fellow citizens, the battle is on between right and wrong, between truth and falsehood, between justice and injustice, between democracy and autocracy, between liberty and military despotism. [Applause.] God has permitted us to become a rich and mighty people, and now He is demanding heroic service at our hands. The clock has struck in the tower of our destiny. Make bare thine arm, mighty Giant of the West, and strike for God and humanity. [Applause.]

The German soldiers have violated every rule of civilized warfare. They have committed the most brutal and heinous crimes that were ever perpetrated upon human beings. They burned homes and churches, destroyed fruit trees, and poisoned springs and wells in France and Belgium. They murdered old men and women and outraged the flower of their womanhood, and they murdered babes in their mothers' arms. The woe and the want, the suffering and the sorrow, the crimes and cruelties that lie in the wake of the German Army are enough to call

down from God Himself a consuming curse upon the German cause. [Applause.] But some thoughtless people tell us that we should wait till they come over here. My God, the suggestion of such a thing! Here are our mothers and wives, our sisters, and our daughters. "Wait till they come over here?" No, no! God give us the courage and the strength to whip them over there. [Applause.] We are going to whip them over there. [Applause.] Our cause is just; right and liberty are on our side; God is with us and we are bound to win. [Applause.]

I believe that God raised up David to preserve the Hebrew religion and to save from defeat the army of the Lord. I believe that He raised up Moses to be the leader of his people in his day, and I believe that He raised up Woodrow Wilson to be our leader at this trying time in the history of the world. [Applause.] Fortunate indeed are we to have him for leader at a time like this. [Applause.] He is the foremost statesman of his time, the greatest intellect in the world, and the master spirit of the age. [Applause.] To-day, as our boys are battling at the front, the country demands of us unity of purpose and concerted action [applause], and our great President, the Commander in Chief, expects of us all whole-hearted support. [Applause.]

Look upon this flag and thank God that you are an American citizen. [Applause.] It represents the thought and purpose, the hopes and aspirations, of the greatest Nation of people on the globe. [Applause.] It stands for principles without which no republic can last and in the loss of which human liberty can not endure. [Applause.] It follows the American citizen around the world, whispering to him ever and always, "Lo, I am with you, be not afraid." [Applause.] It represents the soul of the American people, and all the brave spirits that have loved and cherished it encircle it now with a halo of light. [Applause.]

Born in the cause of liberty,
More than a hundred years ago,
In that same cause we unfurl it now
With every star aglow.

[Applause.]

It's the flag that Washington loved dearly,
It's the banner that Jackson bore,
In their battles for American rights
In the trying days of yore.

[Applause.]

I can hear our soldiers marching,
I can see that flag unfurled,
And President Woodrow Wilson
Still waves it to the world.

[Prolonged applause.]

Some Aspects of the War and International Law.

EXTENSION OF REMARKS

OF

HON. ADDISON T. SMITH,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 1 (legislative day of Saturday, June 29), 1918.

Mr. SMITH of Idaho. Mr. Speaker, under the authority granted by the House to extend my remarks in the RECORD I submit a patriotic address delivered by my colleague, Hon. BURTON L. FRENCH, to the soldiers at Camp Meigs, in this city, on June 23, as follows:

ADDRESS BY HON. BURTON L. FRENCH TO THE SOLDIERS AT CAMP MEIGS, JUNE 23, 1918.

Mr. Chairman and soldiers, the subject that it has been suggested I discuss this evening, "Some aspects of the war and international law," is one that will not cease to be discussed so long as our civilization continues an unbroken course. I am being asked over and over many questions touching the course of conduct of the respective nations involved in the world war and the application of international-law principles to the same. We shall only have time for the consideration, very briefly, of a few of these questions this evening.

If I were to ask you, What is law? you would define it as the course of conduct prescribed by a superior to be followed by the inferior and which the latter is under obligation to obey, the superior in the absolute monarchy being the emperor and in the republic the people as a whole, and the inferior in every instance being the citizen or subject less than the one intrusted with the larger responsibility. Nor does this definition preclude a rule of conduct from being law notwithstanding the

fact that there are violations of that rule of conduct. We have law against murder notwithstanding the fact that the crime is committed every day, and that at times masses of people from a given community violate it when they organize themselves into a mob and take human life.

Is international law so easily defined? We have no definitely constituted lawmaking body, no definitely constituted administrator of law, no definitely established legal tribunals. In fact, there are some who say that there is no such thing as international law. For my part, I have no difficulty in sustaining the theory that there is international law and that it embraces the code of rules of conduct that has been prescribed by the superior, which we may take to be the consensus of opinion of civilized nations, and which the inferior, which we may consider to be the States themselves or their subjects, are bound to obey.

For the most part, international law is built up through custom. It is defined to some extent by writers, by States in private law, by treaties, which, after all, largely affirm the most generally accepted ideas of what should be international conduct. The dividing up of the territory of Jordan and Canaan by Abraham and Lot nearly 2,000 years before the time of Christ was prompted by the same principles as the apportioning of Africa among the States of Europe within the last century. The appointment of the commissions as told in the Book of Joshua, made up of three members from each of various Tribes of Israel, to work out the boundary lines of the lands claimed by the respective tribes was not different from the defining of the boundary line between the United States and Canada. The visit of the Queen of Sheba to Solomon and the mutual exchange of rich presents may have been more garish, but, if so, certainly not otherwise out of harmony with the custom of modern nations, as witnessed by the frequent exchange of commissions by the nations of the world to-day, and even by the exchange of presents. You will find tokens of good will from other nations in recent years in the White House in Washington; others you will find down at Mount Vernon, and one, at least, you will find in the National Museum that has been placed there within the last few months rather than be melted up into bullets and returned to the original donor.

The pirates that infested the Mediterranean Sea very early suggested the advisability of the merchants of Genoa and Versailles and Naples and Rome entering into a common understanding for the extermination of this enemy of all mankind, and other problems led long ago to the establishment of rules touching navigation. The same is true of cities around the Baltic and the North Sea. Turn to the history that tells of knighthood, and though no knight could be found who could define international law or who possibly was conscious that there was such a thing, nevertheless a thousand years ago a knight in armor would have refused to have buried his spear in the breast of his bitterest enemy if he had found him asleep by the side of the road.

We have no time to go into this subject; but some 300 years ago Grotius embodied in a publication that he gave to the world the rules of conduct, the customs, such as I have indicated, that the civilized nations had come to believe in and stamp their approval upon—a codification that he termed the "rules of international law." Since that time civilized peoples, generally speaking, have been glad to admit that there is an international law or course of conduct calculated to define the course of actions of nations and their subjects.

International law varies from time to time. International law is modified by discoveries and by the conveniences of peoples, and at other times by the weakening or the ennobling of the consciences of people touching human suffering or human rights. Privateering existed until past the middle of the last century, and most nations agreed to do away with it in the treaty of Paris in 1856. The United States did not adhere to that treaty, but when the war broke out between the United States and Spain, President McKinley issued a proclamation to the world which indicated that the United States no longer held to the theory of privateering, but that privateering during the War with Spain would not be countenanced. The balloonist and the aeronaut 40 years ago were possibly to be regarded as spies. To-day they have every courtesy that is accorded to the soldier when they fall into the hands of the enemy. The doctor and the nurse 100 years ago were not, by international law, accorded any privileges other than were accorded soldiers when they were captured, though to-day, under international law, it is accepted that these agencies of mankind are enemies of none, but are friends of all, and that they occupy a status that entitles them not to be held as prisoners of war but to be surrendered back to the nation in whose service they have been engaged that they may continue to carry forward their mission of mercy for poor humanity.

With this preface, let us consider some of the aspects of international law and the present war. In selecting the particular points to consider, I am going to pass over a multitude of subjects that are of interest and yet as to which there is so little diversity of opinion that I need not discuss them. I need hardly say that Red Cross hospitals under international law are immune from attack; that Red Cross ships are to be sunk under no conditions so long as they are engaged in their lawful mission; that a Red Cross insignia shall not be used for the purpose of concealing a spy or leading an offensive or defensive movement; that the flag of truce shall not be used for other than the purpose for which it has been established; that churches not used for military purposes shall be regarded as immune from attack; that civilian men, women, and children shall not be ruthlessly murdered nor women violated and abused; that the people of communities shall not be held responsible for acts of individuals; that art galleries and statues and works of art in general shall not be destroyed; and that no license shall be given to pillaging and plundering the homes and edifices of enemy nations.

THE GENERAL CAUSE OF THE WORLD WAR.

Yet there are some problems that are of tremendous importance that people have debated and some of these we shall notice. If I were to ask, What is the cause of the present war? I probably would receive no one answer that would be clear-cut and limited to one single reason. The cause of the war does not lie in the assassination of the Archduke Francis Ferdinand and his wife at Serajevo on June 28, 1914, though this may have been the immediate match that was hurled into the arsenals of Europe. We must look further than that. I shall not discuss but merely refer to what I think we are practically all agreed upon.

A world war has been feared by thoughtful people, notwithstanding their prayers and their hopes for many decades. National jealousies have separated the Teutonic people from the Slavic people to the east of them. The Teutonic people have looked with apprehension upon the development of Slavic power in southeastern Europe; the Slavic people in turn have been apprehensive of what they felt to be the policy of the central powers to crowd and crush through the southeast.

The German people had come to feel that they by some means were a superior people; that they deserved to succeed politically, but that they had been abused by the world in general, and that in the division of the world during the last century they had been left out, while Great Britain, especially, had obtained rich colonies, and to a less extent had Belgium and France, and that Russia was already in possession of a vast territory whose development can hardly be said to have been begun. Germany had come to feel that there was a place that she could attain in the sun politically and racially, and that it was her duty to fight for that place and to win that place by blood and iron. Germany had come to feel that economically she was under a handicap. She had succeeded against France in the Franco-Prussian War, but from the German standpoint she had made the mistake of not taking as much territory in the region of Alsace-Lorraine as would have given her the ample coal and iron deposits that after peace had been signed were found to exist. Any pretext for war that would enable her to seize these regions and attain advantages elsewhere would have been welcome on the part of the military rulers of Germany.

France was conscious of this feeling on the part of Germany; Great Britain was conscious of the feeling along all these lines. More than that, the feeling in Germany was not limited to the political leaders. It was comprehended by professors in colleges; it was advised by the ministers from the pulpits; it was emphasized by the publicists throughout the land; it was urged by statesmen and by commoner and it had come to be a common doctrine that was subscribed to by the German people. You may go further than that, and in planning for "der Tag" it had become a part of the doctrine of the German Government that through ruthlessness and savagery in warfare and the stamping upon the arms of Germany the characteristic of relentlessness, the ends that they desired would be speedily attained.

THE IMMEDIATE CAUSE OF THE WAR.

With this statement let us turn to the immediate cause of war. I have said that it was not the assassination of the Archduke Francis Ferdinand and his wife in 1914. In 1908, in violation of the treaty governing the integrity of Bosnia and Herzegovina, these States came under the political control of Austria-Hungary. This movement was looked upon by Slavic people, including the people of Russia and Serbia, as a vital step by the Teutonic people in extending their dominion to the southeast and possessing the territory that through centuries had belonged to another race. The feeling ran high in Serbia, and undoubtedly between racial ambition and racial pride there was bitter resentment against the course of the central powers,

Serbia was helpless; and probably reflecting the national resentment and probably impelled by the sense of helplessness, a subject of Serbia came to feel that he would be doing an act of great service by striking down the heir to the throne of Austria.

Now, a nation has in international law the absolute right to regard whatever it pleases as a cause for war. World opinion will approve or condemn, and the nation must be ready to bide the result. The assassination, then, of the archduke by a private individual could have been seized upon by Austria as a cause for war. However, this was not done. With remarkable promptness and severity the Austrian Government made severe demands upon Serbia. Her demands were not at all in harmony with the demands that a nation in good conscience has the undoubted right to make upon another nation, but they were far in excess of that.

There were 10 demands in all, and I shall omit 8 of them. These eight probably may be regarded as capable of being defended under all the circumstances, but what shall we say of demands No. 5 and No. 6? These demands were as follows:

No. 5. To accept the cooperation in Serbia of the representatives of the Austria-Hungarian Government in the suppression of the subversive movement directed against the territorial integrity of the monarchy.

No. 6. To take judicial proceedings against the accomplices in the plot of the 28th of June who are on Serbian territory. Delegates of the Austria-Hungarian Government will take part in the investigation relating thereto.

The demand of Austria was made upon July 23 at 6 p. m., and a reply was called for not later than 48 hours thereafter.

Some years ago when Italians were killed in New Orleans, the Italian Government was very prompt to demand that the United States take drastic action in the matter. But what would we have said if the Italian Government had insisted upon sending to the United States her own officers of justice and here within our own territory participate with our officers in arresting and bringing to trial, and, in fact, trying those suspected of the crime? Do you think for a moment that the United States would have acquiesced? When Chinamen were murdered in San Francisco some years ago, do you think the United States would have listened for a moment to the proposition that Chinese officers be permitted to come to the United States and help administer not what the United States but what China and the United States would believe as justice to those who might be found guilty, not by the United States again but by the officers of China and the United States?

Why, you say, not for a moment would such a proposition have been tolerated.

Well, now let us consider where the parallel is and what Austria demanded of Serbia.

A subject of Serbia assassinated the Archduke Francis Ferdinand of Austria. Austria could have made demands upon Serbia looking to the hunting down and punishment of the criminal. She could have demanded that Serbia take steps immediately to put an end to an organization that she alleged to exist in Serbia looking to the fomenting of trouble in Austria or satisfy her on this point. These demands would have been proper and just demands, and Italy and China could have made and did make demands upon the United States which the United States was glad to give assurances upon. But Austria did not stop here. Austria went further and demanded that Austrian officers be intrusted with the responsibility of crushing the alleged organization in Serbia and hunting down and punishing the Serbian or Serbians involved in the particular crime. Right here the parallel departs from the parallel that I have suggested in comparing the difference between Austria and Serbia with the troubles between Italy and the United States and China and ourselves. When Austria demanded that her courts be permitted to try the criminal, that her judges and administrative officers be permitted to enter Serbian territory and there administer justice, Austria was demanding a surrender upon the part of Serbia of the privileges that belonged to Serbia as an independent nation.

Is it any wonder that Serbia should have refused to acquiesce in the demands of Austria? It was this refusal that was the immediate cause for war. The world will judge whether or not Austria had a sufficient cause.

The crime committed that led up to this affair was on June 28. Austria's declaration of war was on July 28, only 30 days after the crime itself had been committed. Least of all, it was the part, it would seem, of Austria to have seen whether or not Serbia proposed in good faith to punish those responsible for the death of the heir apparent to the Austrian throne, and history will undoubtedly say that there was no justification for the rapidly driven demands upon the part of Austria and the ultimatum leading to the declaration of war.

Austria in her position had the backing of Germany. Serbia, in maintaining her ground, had the support of Russia. France was the ally of Russia, and if Austria must insist that upon

the refusal of Serbia to adhere to the proposals that Austria made, war would be inevitable, that would involve not only Germany and Austria upon the one side, but Serbia, Russia, and France upon the other.

Now, the nations to be involved in the war, unless Turkey should feel herself compelled to join with Germany and Austria, would reasonably have been limited to the few that I have mentioned had not Germany pursued the course that she did on the western front.

WHY GREAT BRITAIN BECAME INVOLVED.

The reason that Great Britain became involved in this war was because of the action of Germany toward Belgium. Now, what are the circumstances? Germany asked Belgium for permission to go through her territory with an army to invade France. Belgium refused. Germany sent her army into Belgium, and upon Belgium resisting declared war.

This action raises the question of the right that Germany had to invade a free and neutral nation. Let us for a moment omit to consider the question other than as it would have been considered were no treaties in existence that involved Belgium's neutrality. What is the doctrine of international law on the subject of the rights of neutral States to be free from the intrusion of an army of a friendly nation when the latter nation is at war with another friendly and neutral nation and the one belligerent seeks to use the territory of the common neutral State through which to send its forces in a drive against the other belligerent? Why, in international law, no belligerent has the right to invade the neutral territory. Upon this basis Germany, regardless of treaty, had not the slightest right to send her army through Belgium or let a soldier plant his foot upon Luxemburg. France would have been bound by the same rule. The early doctrine, as it was gathered by Grotius, was that it was the privilege of a neutral State—in fact, it was the duty—to permit a belligerent if engaged in a just war to send her armies across the neutral territory. This made the neutral State the judge of whether the cause was just. It was soon apparent that such a rule as this could not be sustained and it would have been surprising if the nations had not long ago abandoned the doctrine for the more reasonable doctrine that the neutral State, to maintain her neutrality, must deny to all belligerents access to her territories.

It is true this rule of international law has been violated. It was violated by the United States toward Spain when we sent our Army under Andrew Jackson into Florida in the Seminole War. It was violated by Great Britain during the Boer War in South Africa. It was violated by Japan during her war with Russia when she sent her armies into Korea, but in all of these cases the offense was mild by comparison, and there was no such wanton ruthlessness as the German Government has been guilty of.

Now, let us consider the question upon the basis of particular conditions that existed toward the invaded country. Belgium not only had the right to be immune from invasion from either Germany or France under principles of international law, but she had special right to be immune. Both France and Germany were bound by solemn treaties to respect the neutrality and independence—the sovereignty, if you please—of Belgium. In 1831, when Belgium attained her independence from the Netherlands, a treaty was entered into, signed by Prussia, France, and Great Britain, recognizing and guaranteeing the independence of Belgium. The Netherlands Government did not recognize the independence of Belgium at that time, notwithstanding the fact that Belgium continued as an independent State. However, in 1839 another treaty was ratified in which Belgium's independence and neutrality were guaranteed. This treaty was ratified by the Netherlands. It was ratified by the German States. It had the approval of Great Britain and of France. In 1870, when the war broke out between Prussia and France, Great Britain propounded to both of these nations the question as to their attitude under the treaty guaranteeing the neutrality of Belgium. Both nations indicated unequivocally that they proposed to abide by the terms of the treaty and respect that neutrality, and both nations abided by their promises.

When the war broke out between Austria and Serbia in 1914 and when Germany took up the cause of Austria and began war on Russia and France, Great Britain again propounded the question to both France and Germany that she had propounded in 1870. She asked both nations what they would do in the matter of Belgium. From France the reply was prompt and straightforward that the neutrality and independence of Belgium would be respected. From Germany there was no satisfactory response. There was an attempt to avoid and delay, and finally, after the territory of Belgium was invaded by German armies, the foreign secretary of the German Government informed the British ambassador that Germany could not respect the inde-

pendence and neutrality of Belgium and that her treaty so to do was a mere "scrap of paper."

There are some who have argued that there was still another obligation that Germany broke in entering Belgium. In the second Hague convention of 1907 there were proposed a number of general propositions touching matters of international law. One of the general propositions had to do with the rights of a neutral State and affirmed its immunity from invasion from a friendly belligerent State. Germany adhered to the terms of this convention in 1909, and so did Great Britain and France. There was one provision in the convention of 1907, however, to the effect that the convention would be binding, as it involved the nations adhering to the same only so long as no nation was involved that would not adhere to the terms of the convention. Now, what is the situation here? Nearly all the nations that were involved in the war at the time Germany invaded Belgium were parties to the convention. Serbia, however, was not, and so under the strict interpretation of this provision of the convention of 1907 Germany could say that by that pact she was not bound. Suppose, then, that she was not bound by the terms of The Hague convention. That convention merely attempted for the most part to restate already established principles of international law. It in no way superseded or relieved Germany, and Germany, when she invaded Belgium and without regard to The Hague convention, violated first the well-established principle of international law touching the immunity of a neutral State. Again she violated her treaty, reaffirmed more than once, bearing specifically upon this subject. This the German Government well knew, and after the invasion was made, the German chancellor, in his address to the Reichstag, admitted the violation of Belgium's rights and said that when the war should be over Germany would make right the wrong that she had committed.

Now, what I have said with regard to Belgium applies with a modification of the historical facts to Luxemburg. You will recall that Luxemburg was an independent State, that Napoleon the Third demanded Luxemburg as the price of his neutrality in 1866 in the war between Prussia and Austria. His demand was followed by the convention of London, in which Great Britain, Austria, Belgium, France, Italy, the Netherlands, Prussia, and Russia united in recognizing the neutrality of Belgium, and all of these nations, with the exception of Belgium, whose independence was itself guaranteed by other powers, entered into a solemn guarantee of the independence of Luxemburg.

It was upon the violation, then, of treaties and principles long established in international law that Great Britain found herself compelled to engage in the world war.

THE QUESTION OF BLOCKADES.

There is another question that I can not fail to refer to, and that is the question that arises out of the law touching blockades. I am asked why the people of the United States were permitted to send ammunition to the allies before the United States became involved in war and were prohibited by the same powers from sending food and clothing to Germany. I am asked why the United States objected to the attempt of Germany to blockade Great Britain and France and treated with so little indifference the blockade of Great Britain toward Germany, and even neutral countries trading with Germany.

In attempting to answer these questions, I shall not venture to discuss the international-law problems touching blockades. This is an intensely interesting subject and one upon which books may be written. Let me say this, however, that a blockade in order to be legal and recognized as such in international law must be effective. That is, while in order that a blockade shall be legal, it does not follow that the nation establishing the blockade shall be able to prevent a violation of the same; it does mean that, generally speaking, the nation establishing the blockade shall be able to enforce its order.

In times of stress of weather ships may be able to run a blockade, but this does not invalidate the legality of the blockade itself. The blockade to be effective, however, must under normal conditions be able to be carried into effect.

Now the question arises, By what right had the people of the United States the privilege of sending munitions of war, as well as food supplies and clothing, to the allies and were denied the right of sending even food and clothing to Germany? The answer goes back to the matter of the blockade.

It is well established in international law that citizens of a neutral nation have the right to sell all kinds of commodities, whether food supplies or war munitions, to any belligerents without in doing so giving the slightest offense to any other nation at war.

So we had the right as a people to sell to France and Great Britain upon the one hand and to Germany and Austria upon

the other. We could sell aircraft to Germany with which to make attacks upon Great Britain and France, and we could sell antiaircraft supplies to France and Great Britain to destroy the aircraft supplies that we were furnishing Germany.

And right here let me say parenthetically that my personal judgment is, it means for the greatest general good for this open policy to be maintained in international law. Unless this policy shall be supported, then no nation would be justified in following a course that would not mean that its arsenals and warehouses would be filled at all times with all war commodities not obtainable within its own territory. Each nation would need to do this, for in event of war any other course would mean that it would be helpless, because it could not produce war materials within its own land and would be denied, under international law, the opportunity of purchasing war materials elsewhere. Then, what would this lead to? It would mean that all nations would be possessed of warehouses and arsenals stored to overflowing with war materials. The question of peaceable adjudication of international problems would be largely a myth, upon the same theory that a man with a stout stick in his hand will defend himself far more promptly against offensive words than if he possessed no ready physical means of sustaining his position. This is a principle to which the nations of the world have acquiesced through time immemorial.

There are problems of international law that have been debated that have been followed adversely in one generation to what was the established custom in another. Not so with this question, and it should be stated here that during the war between the United States and Spain the people of Germany upon the one side and Great Britain and France upon the other, alike, sold not only foodstuffs and clothing but munitions of war to the United States and to our enemy, Spain.

Now, let us consider the question further. What I have said answers the question of right on the part of people of the United States in international law to sell munitions and foods to the allies and to the central powers. If the people of this country, as a matter of fact, sold practically no food supplies and clothing to the central powers and sold not only food supplies and clothing but munitions of war as well to the allies, we must look elsewhere than within the United States for the reason. We must look to the blockade.

Let us first consider the blockade that Great Britain maintained toward Germany. Great Britain declared a blockade that comprehended the waters of the North Sea along the coast of Belgium and the Netherlands and the waters leading through the Skager Rak around Denmark.

I am aware that this blockade was begun without Great Britain calling it a blockade. The reason was because Great Britain desired to accommodate the neutral powers as much as possible and to avoid applying to our ships the severest rules applicable to the ships of neutral countries that might seek to violate the blockade. I need not discuss this feature of the case, however. As a matter of fact, the strictures of Great Britain upon the shipping headed for Germany or ports that could serve as the doorway to Germany would constitute a blockade upon the part of Great Britain, and it was a blockade that she was maintaining with great consideration toward the shipping of neutral nations.

I shall not argue the question of how near the blockading force must be to the ports blockaded; I shall merely ask you to take my bare statement of fact that in international law there is no question but that Great Britain was acting wholly within her rights in maintaining the blockade so far as proximity of blockade was concerned to the points of Germany that were available for the entrance of commodities. This is true, provided the blockade itself was maintained in an effective manner. Frankly, with the immense fleet of Great Britain and with the promptness with which the German fleet was swept from the seas after the war began and the German ships were sunk, interned in neutral countries, or captured or assembled by Germany in her own harbors; in fact, with the promptness with which, after the very early stages of the war, Germany was swept from the seas, there never was a time when any nation probably more effectually blockaded the ports of another nation than Great Britain and France were able to blockade the ports of Germany from near the beginning of the war. The effectiveness of the blockade was the very reason why the central powers complained. The way that the blockade was effected was by means of the fleets of Great Britain and France, aided by mines that were placed in the North Sea and water adjacent thereto. In international law mines may be used within certain limitations, and the evidence is not at hand or clear cut so that we may know definitely at this time how closely all the nations involved adhered to the rules of international law in the question of mines. My own judgment is that the blockade

maintained by France and Great Britain could have been maintained effectively without even the use of mines—and by effectively I mean so that the blockade would have been regarded a legal blockade in international law. If so, then Germany or the central powers have no complaint upon this head.

CONTINUOUS-VOYAGE DOCTRINE.

Before leaving the subject of the blockade against Germany, I can not fail to refer to one feature of the matter upon which many questions have been asked. We are told that during the time we were a neutral Nation Great Britain not only maintained a blockade against German ports, but against the ports of Holland and Scandinavian countries as well, and required that no goods should be shipped into those countries unless under an arrangement by which they would be denied entrance to Germany. This brings up the whole question of the continuous-voyage doctrine that for 50 years has occupied a prominent place in international law.

During the Civil War the United States maintained a blockade of the southern ports. We tried to starve out the South. We tried to prevent the South from receiving munitions from the outside, just as Great Britain was trying to do with Germany. In international law we had the right to do this provided we maintained an effective blockade. We did maintain an effective blockade. It was legal, notwithstanding the fact that now and then blockade runners were able to get by. During that time there were persons in Great Britain who in defiance of the blockade shipped goods consigned to Nassau or other ports in the West Indies. These goods would reach their destination, be unloaded, be placed on board blockade runners, and would with little loss of time find their way into the South. Maybe the ship itself, after reaching its apparent port of destination in the West Indies, would be able to shoot into a southern port, or maybe it would dodge into one without even reaching its ostensible point of destination.

And right here the United States made use of what is known as the doctrine of the continuous voyage. The United States said that the ultimate destination of the goods should control, and that notwithstanding the fact that goods might be destined for some one of the West India Islands, if it were apparent that the goods were as a matter of fact destined for the South, the ostensible destination would have to fall beneath the real destination and intent on the part of those shipping the goods. That is, if a half million rifles were being sent to a small island that had not to exceed 2,000 inhabitants and was not involved in war, and that obviously had no use for these guns, and if the island was in comparatively close proximity to the South, it would be very apparent that the ultimate destination of the rifles was not the little island at all, but was the South. Our ships were instructed to capture as good prizes ships laden with contraband even before they had reached their apparent destination, and our courts held that they were good prizes, and Great Britain acquiesced in our application of this principle of international law, a principle which she herself had applied a hundred years before.

Now, if it was a good and correct doctrine at the time of the Civil War, as I think it was, why was it not a correct doctrine for Great Britain to apply and to say to the shippers from the United States, whether they were shipping food supplies or clothing or munitions, if they were sending the same to Holland, and if it was apparent to Great Britain that these supplies were going into Holland by the front way and going over the rear fence into Germany, that the ultimate destination of the goods should control, and that unless those engaged in this traffic from the United States could assure Great Britain that the goods were to be used in Holland and not in Germany she would have to apply the doctrine of the "continuous voyage" and prevent these goods from reaching their ultimate destination? To the extent that we in this country attempted to defend those who were endeavoring in this way to violate the blockade that the allies were maintaining against the central powers, we were violating the very principle that the United States more than any other nation had profited by and helped to write into international law; and, for my part, I believe that the attitude of Great Britain was in line with international law on the doctrine of the "continuous voyage."

THE ATTEMPTED BLOCKADE BY GERMANY OF GREAT BRITAIN AND FRANCE.

Now, let us turn to the attempted blockade by Germany against her enemies. I said a little while ago that by the established rule of international law a blockade to be legal must be effective. The blockade of France and England against Germany was effective. The attempted blockade of Germany against Great Britain and France and the allies was and is anything but effective. The way to judge of the effectiveness of a blockade is to ascertain whether or not the pretended

blockade limits for the most part the entrance of ships bearing goods into the ports blockaded.

Measured by that test, the attempted blockade of Germany against Great Britain and France is a dismal failure. Great as has been the loss of ships and tonnage when considered individually, the percentage or rate of loss in tonnage of ships attempting to go through the forbidden zone, in comparison with the tonnage that has actually gone through the zone, was and is so small as to constitute the proclaimed blockade of Germany merely a paper blockade.

Furthermore, in maintaining the pretended blockade there has been no pretense on the part of Germany in directing her submarines to bring the vessels violating her proclaimed blockade into courts, where they could be condemned as prizes if they should be found such under the rules of international law.

The navies of the central powers for the most part had been swept from the seas, with the exception of the submarines and mine layers, and now and then a craft of another kind that darted out on some special mission. Germany had declared a blockade, but was helpless in enforcing it by adhering to the rules of international law.

MINES.

Practically speaking, Germany was utterly unable to maintain the ambitious blockade that she had begun off the coasts of the allied nations by means of mines. She could not do so within the bounds of international law, for she did not have the vessels on the seas to lay the mines. She did not have the means of looking after the mines after they had been laid, or laying them from day to day in order to have fresh mines to take the place of those that had become dead by the limit of time placed upon the mine in international law. For the most part, then, the strewing of the seas with mines, as it was done by Germany, was in open derogation of international law.

SUBMARINES.

But the mine was only one of the methods relied upon by Germany to enforce her blockade. The other agency relied upon was the submarine. Now the question arises, Was the use of the submarine justifiable as it was made use of by the central powers? In international law there is nothing that may be regarded as a definite policy expressly applying to submarines, and so we must look at this question from the standpoint of analogy. To what is the submarine analogous?

It may be analogous to nothing heretofore used in warfare and therefore entitled to a new code or set of principles applicable to itself and hitherto unknown to international law, or else it may be analogous to mines or to battle craft.

If we shall say that it shall be analogous to nothing known before but that it shall have a new code in international law, that its importance justifies and demands this code, the code, I submit, must be established subject to the general laws of warfare. Included within those general laws would be the obligations of humanity, the obligation on the part of a belligerent not to cause unnecessary suffering, the obligation not to destroy certain classes of property, including hospital ships, that even in war times must be respected by belligerents, the obligation not to destroy ruthlessly the lives of unfortunates whether subjects of neutral or enemy countries. These are some of the obligations that it would seem, if a new code entirely is to be proposed for the submarine, would need to be considered and adhered to.

Then if you were to adopt a new code, the use of the submarine as exemplified by the central powers would fly in the face of all the well-known rules of international law touching legitimate warfare that I have suggested.

But consider the analogy of the submarine to the mine. This analogy, it would seem, must be pushed aside almost upon being suggested. The mine must be fixed; its location must be known to at least those who are laying the mines, and in international law the mine must be fixed to be effective only for a very limited time. All this is necessary because the mine after it has been laid is not further subject to human guidance in the sense that is the battleship. The mine, again, must be laid within restricted areas, and these restricted areas must be known to the world's traffic. No nation has the right to strew mines right and left upon the high seas for the destruction of friend and foe alike, for the destruction of battleships and ships carrying their loads of innocent men, women, and children.

The submarine is deserving of wider latitude and use. To apply the rules governing the laying and placing of mines would be too restrictive. The submarine is attended by human intelligence; therefore it should have larger scope within which to operate, it being taken for granted that discretion will be used. The submarine is not analogous to the mine; and even

if it were, its use upon the high seas has been such as to violate all legitimate use of the mine.

Consider next the question of applying rules of conduct that attach to the battleship. The submarine is in fact a ship. It is manned; it is equipped as is a ship; it is under the direction, as is a ship, of competent officers and is obeying human intelligence. Why should it not be accorded the privileges as well as the obligations of ships of war, and these privileges and obligations are large?

A ship of war may ride the high seas, and it may attack without warning an enemy ship of war; it may sink the ship in the darkness of night without a soul being able to know from whence the shell came, and every member on board the enemy ship may perish. It may assault and bombard a defended city; it may arrest and return to a port for adjudication prize ships that are suspected of carrying contraband of war. In fact it has vast powers not possessed by a ship engaged in commerce.

A battleship, however, has no right to sink a merchant vessel or a passenger ship without warning. A battleship may call upon a ship laden with freight or with passengers to stop and may place a crew upon board to take the ship, under the convoy of the arresting battleship, a captive into a port, where it will be turned over to the jurisdiction of a prize court. More than that, suppose it is impossible for the battleship to take the ship carrying its merchandise or passengers to a port, as I have indicated. It may sink the ship with all its cargo. But—and here is an essential consideration—there is imperatively resting upon the captor ship the responsibility of saving the lives not only of the men, women, and children who are passengers upon the ship but of the crew itself, and, indeed, of the soldiers of the opposing nation who might happen to be in transit. If the battleship can not do that then in international law it is the duty of the commander to detach himself from the ship that he has tried to detain and to go upon his way.

So, then, while we have seen that battleships have large privileges they also have heavy responsibilities. A submarine has all of these privileges. Why should it not have all of the responsibilities? True, a submarine is not large enough to accommodate one or two thousand passengers taken from a *Lusitania*, and in that way it may be limited physically, but it is limited no more physically than is a small craft that is armed and equipped with guns that is not able to sail beneath the sea. As against that, however, the submarine has many opportunities that even the dreadnaught does not have. The submarine may sink out of sight in the midst of its foes and escape by sailing beneath them. The submarine may enter the harbor of the enemy and sink the ships lying within the harbor. It may perform innumerable feats denied to the ship that must remain an open target upon the seas. But there are limitations beyond which the submarine may not go in international law if it be treated as a ship of war, as I believe it should be treated. While the submarine may sink without slightest warning the battle craft of the enemy nation, it has no right to sink a freighter; it has no right to sink a passenger ship; it has no right to sink fishing craft; it has no right to sink, without saving the lives of the people on board, any craft that is not a part at the time of the military arm in active service of the enemy nation.

The central powers made no claim in their handling of the submarine to having complied with any of the rules that I have suggested. On the other hand, the central powers have sent out the submarines instructed to sink the ships of friend or foe; to sink these ships without warning; to sink these ships regardless of whether they were conveying munitions of war, soldiers to engage in enemy service, or conveying innocent women and children of nations in no way involved in the world conflict.

From whatever standpoint you are a mind to consider the question in the conduct of the submarines, this craft has been violating the laws of nations, which are the laws of humanity.

GERMANY'S DEFENSE.

Germany has sought to defend her submarine policy:

First. She justifies her acts as retaliatory measures against the allies. She overlooks the fact that the acts themselves are in violation of international law and that the retaliation is inflicted upon neutrals as well as enemies.

Second. Germany justifies her acts because Great Britain and France have interfered with the commerce of Germany and neutral countries. She overlooks the fact that the allies had the perfect right in international law to maintain a blockade.

Third. Germany justifies her acts as a means of preventing neutrals from shipping munitions of war to her enemies which the neutral governments have failed to prevent. She forgets that in international law the neutral countries have a right to ship munitions of war to belligerents.

Fourth. Germany justifies her acts because she had given notice of the war zone and her plans in the same. She overlooks the fact that a blockade to be legal must be effective; that this attempted blockade was in no wise effective and does not disturb but a small percentage of shipping. She overlooks the further fact that the waters in question are the high seas and that all nations have the right of use subject to the laws of blockade.

Fifth. Germany justifies her act because enemy ships displayed neutral flags and she could not always be sure of enemy ships. She overlooks the fact that in maintaining a blockade the right of search and seizure exists and exists for the very purpose of enabling a belligerent to determine an enemy ship sailing under false colors.

RETORTION.

There is one other question that I shall only refer to. You say that in international law poisonous gases may not be used, and yet they are being used and are being used by the allies. You say that in international law undefended cities may not be bombed, and yet the airplanes of the allies have hurled their bombs upon them in the interior of Germany and Austria.

True, these acts have followed similar and grossly diabolic acts upon the part of the central powers, and yet the query is raised, May the allies resort to such tactics within the rules of the law of nations?

My friends, in civil life there is such a thing as the violation of contracts and thereby a release placed upon the persons against whom the violation has been directed in the first instance. This principle applied in international law is known as retaliation or retortion.

War itself is in violation of the orderly relationships that ought to exist between nations, and retortion is the carrying of the principle of war to the point of using the methods against the enemy that the enemy has himself originated.

The central powers have followed an unspeakable course in their conduct of the war against the allies. The central powers have extended the limitations placed upon nations by the nations themselves in their more thoughtful moments. The central powers have grossly violated all sense of decency and humanity, and, to a certain extent, undoubtedly the allies will feel compelled to bring home to the offenders something of the warfare that they themselves have started. Then, if the central powers attack and destroy undefended cities in the territories of the allies, it may be that the military authorities of the allied powers will feel it the part of wisdom to carry this same kind of warfare into the heart of Germany and Austria.

The central powers in violation of the solemn principles of international law resorted to the use of gas against the forces of the allies, and the allies were compelled to reply in kind. These are merely illustrations of retortion that, no matter how much we may lament, the future will approve under all the circumstances.

But the central powers have engaged in practices against which there will be no retortion. The central powers have engaged in practices that to the future will stand out to invite condemnation upon a course of conduct utterly hideous and out of harmony with the dictates of humanity and civilization. The armies of the central powers, as they have pushed their forces into the territory of the allies, have sunk to unspeakable depths of infamy in the punishment that they have inflicted upon the innocent. They have apparently directed drivers of their airplanes to use Red Cross insignia as targets, and to treat hospitals, where the sick and the wounded were receiving the tender ministrations of kindly hands, as though they were citadels and arsenals of the enemy. There will be no retortion here. The soldiers of the central powers have violated women, have gouged out the eyes of children, have cut off the limbs and otherwise horribly mutilated the bodies of babes, but there will be no retortion here.

International law does not define the ends to which nations may go by way of retortion or retaliation. It is a subject that had better not be defined. I have mentioned outstanding elements that suggest retortion that the future will pronounce as fair, and I have mentioned other crimes that have been committed by the central powers that future years will pronounce as unthinkable, and the people of future years will approve and applaud the generosity and the humanity of the allied powers in omitting to respond in kind.

IN CONCLUSION.

Mr. Chairman and soldiers, in what I have said I have attempted merely the barest outline consistent with something of an explanation of a few of the points in which the world is interested in connection with the world war and international law.

I have omitted, other than to mention some of them categorically, the most obvious intrusions upon the rules of conduct prescribed by the laws of nations.

I have pointed out the unreasonable course upon the part of Austria toward Serbia in making demands that went to the foundation of Serbian sovereignty. I have pointed out flagrant violation not only of international law but of treaties, more than once repeated, upon the part of Germany involving Belgium and Luxemburg. I have discussed the question of blockades as it has involved Great Britain in her blockade of Germany, and in this connection have considered the question of the continuous voyage; and I have considered, upon the other hand, the attempted blockade by Germany of the coasts surrounding Great Britain and France. I have pointed out the utter weakness of the blockade as such and the crimes against humanity and the violations of international law that Germany has committed through her mines and her submarines. I have referred to the doctrine of retortion and have shown how it is being applied.

Finally, with the world torn and with international law trampled under foot in large measure, we ask ourselves again, Is there such a thing as international law, and will there be in the future?

Aside from merely leaving with you a review of some of the questions arising under this great subject, may I leave with you this injunction, that as citizens of a nation that stands firmly for orderly conduct among world peoples, even in the midst of war, we teach a better international law, and let us upon the ashes of the conflagration that is now raging build a new, a still greater, structure that will embody a more perfect code of conduct among the world's peoples. This code of conduct, let us hope and pray, will have most relation to the intercourse of nations in days of peace; but let us also more firmly write into the hearts and souls of men, even though they have been temporarily torn away, let us again write into the hearts and souls of men principles of humanity that will guide and modify the course of nations should ever again our world be rent by war.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 21, 1918.

Mr. AUSTIN. Mr. Speaker, the measure under consideration, entitled "A bill to exclude and expel from the United States aliens who are members of the anarchistic and similar classes," well deserves the support of every Member of the House. In my judgment, a faithful compliance with the oath we take on becoming Members of Congress means support for this bill, which is intended for and directed at those in America who do not know the meaning of the words "loyalty to our flag" and all the priceless blessings it represents. The alien anarchist, the man or men who do not love and respect our flag, who secretly or publicly advocate, teach, or advise opposition to our Government, should be placed in the same class with the savage, cruel foe our brave boys are now heroically facing on the battle fields of France. The records of the Secret Service of our Government, the columns of the press, and the criminal calendars of our courts half tell the story of the army of disloyal vipers who are members of various organizations with creeds and teachings and so-called principles which are dangerous to our free and enlightened Republic.

Since we entered the war the list of plots and crimes, involving the destruction of life and property, is amazing—one hundred and thirty-four separate cases, the killing of hundreds, the destruction of public and private property to the value of over \$40,000,000. This criminal record is not to be charged up in full to German spies, but embraces many, many unlawful acts of a miserable element in this country who have no respect for our laws, despise our Government, and hate our public officials. When this bill becomes a law it will adequately meet the situation, will remove the dangerous element, and its honest and thorough enforcement will stop the soap-box street orators in our cities preaching sedition, will prevent the circulation of treasonable pamphlets, and exclude and exile the criminal and disloyal plotters from our fair land.

It is well for us to take this serious subject in hand, to handle it without gloves, and to pass a law with teeth in it.

The American Congress has been remiss in not passing legislation of this character years and years ago. It has been postponed until we have allowed the disloyal plotters to gather here in such force, from all the world, that they have become a real menace. This is a free country, but freedom does not mean license for those who have no regard for law and order, no respect for organized government, no love for the flag of the Republic.

The true and patriotic interests of the American people are properly cared for in the passage of the pending bill, and the Congress is fortunate in having at the head of the committee reporting it the gentleman from Alabama [Mr. BURNETT], the author of that great law which bears his name, the Burnett immigration bill.

Mr. Speaker, I have served here nine and a half years, and during that time no Member has rendered greater legislative service for his country than the present chairman of the Committee on Immigration and Naturalization [Mr. BURNETT]. His district, the State of Alabama, and the Nation are under lasting obligations to him for the successful fights he has made against strong and powerful influences in the passage of laws for the abolition of our immigration abuses, for checking sedition, for scourging our land of the enemies of orderly government, for safeguarding the rights and freedom of our people from the plots and crimes of anarchists and other undesirables who have flocked to our shores.

From the beginning the gentleman from Alabama has had in his great fights the loyal and enthusiastic support of many organizations, but the three which stand out above all others and deserve the thanks of all patriots are the Junior Order of United American Mechanics, Patriotic Sons of America, and the American Federation of Labor.

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 26, 1918.

Mr. FREAR. Mr. Speaker, in my speech of June 12, made in the House, on Wisconsin partisan politics, I described a so-called "loyalist" gathering composed of candidates for Congress now seeking to defeat my colleague Mr. COOPER, who is rounding out over a quarter of a century of continuous, honorable service in this House. In that speech I disclosed the methods of Milwaukee interests, as announced through the Milwaukee Journal, working under cover of patriotic societies to defeat Republican Members of the Wisconsin delegation for reelection. These Milwaukee interests were further shown to have assumed the selection of candidates for Congress who would be in harmony with their own purposes and interests. The active advice and efforts of Mr. L. W. Nieman, editor Milwaukee Journal and Democratic State leader, were briefly shown.

In that speech I further presented evidence showing that Mr. Nieman and the Journal instigated the bitter partisan fight made on Senator LENROO; that shortly after war was declared Mr. Nieman told President Wilson and the press of the country of "an organized plot existing in Wisconsin to overthrow the entire military program of the Nation." This libel of the State was further shown to be false and unfounded as disclosed by his own Milwaukee Journal files and by the official records of the United States Attorney General's office. Full-page advertisements in his Milwaukee Journal before the war were also set forth, wherein demands were made that everybody write and wire his Congressman to oppose war, although he now abuses them for so voting. Repeated libels against the State and Republican officials coming from the same source were shown to be untrue. Mr. Nieman's political connection with Bloodgood was also disclosed, and Bloodgood's demand for a "firing squad for Wisconsin" was connected by himself with Mr. Nieman's "activities."

The joint attempt now to control both Democratic and Republican Parties in Wisconsin on the false issue of "Americanism" was also exposed. Mr. Nieman, through his Milwaukee Journal, continues to libel officials at Madison and Washington and has his agents traveling the State, until the Democrats of Wisconsin and all others in our State are now asking why Nieman, who opposes President Wilson on Ford, and Bloodgood, who opposes the President on "firing squads," should not be compelled to furnish acceptable certificates of their own "Americanism."

According to Government reports, in 1913 the Milwaukee Journal made profits of \$35,945. In 1916 the Journal made

profits of \$89,855—nearly 200 per cent increase. What is Mr. Nieman's contribution to the war? In May, 1918, the Journal says Mr. Bloodgood put over a \$10,000,000 Harvester Co. deal for \$5,000,000, or profits of \$5,000,000 for Bloodgood and his Milwaukee associates. What is Bloodgood's contribution to the war? What are the ancestry and record, before and since the war, of men who notoriously oppose the President, seek to run the politics of the State, and who recklessly place black spots on Wisconsin? What have they done for our country?

The progress of the Bloodgood-Nieman Milwaukee movement in my own district—the tenth—is also entitled to brief mention here because of methods pursued by these self-appointed political autocrats to control all offices. A handful of defeated, disappointed, and ambitious candidates, with a few scattering supporters out of 213,000 people living in the district I represent, met in hand-picked conference at Eau Claire, dubbed themselves "loyalists," resolved by condemning me, and then adjourned.

A candidate of many years' standing from among the array of Barkises present captured this unique gathering of malcontents, aided by a veteran political manager who within the past dozen years or so has managed to ditch several presidential, senatorial, and gubernatorial booms of men whose campaigns he managed. This is a remarkably uniform record of mismanagement by a manager whom I defeated some years ago and whose managing record I trust will not be broken this year. According to press announcements, the resolutions of condemnation of myself read at the gathering were drawn by another disappointed candidate whom I defeated for Congress several years ago, and were read by still another disappointed candidate for Congress whom I also defeated in the same primary after they had jointly apportioned the tenth district of the State so as to make it their own joint exclusive political property.

This unique gathering of political "has beens" selected a man of reputed large wealth, or he selected himself, on a platform of "Americanism," although like the other Barkises present he has never seen military service for his country nor given anyone to fight for his country. His only recorded fight was that waged in Eau Claire against his fellow political patriots, whom he met, captured, and took into camp. Incidentally my own "Americanism," which was criticized, by comparison includes a great-grandfather killed in the Revolutionary War, a grandfather serving in the War of 1812, a father who served three and one-half years in the Second Wisconsin Cavalry during the Civil War, and a son now on the battle line in France. That includes practically all wars since the Declaration of Independence, excepting the Spanish-American War, and although I had previously served five years in the Regular United States Army and was then in civil life I raised a company in my home city in Wisconsin and tendered its services to Gov. Scofield in that war. To this personal record of Americanism may be added that I organized Company C, Third Regiment Wisconsin National Guard, a Hudson company, now fighting in France, and after 11 years' service in the military branch of the State resigned as judge advocate of Wisconsin. If my old comrades with whom I served so many years, many of whom are now in France, could have read the Eau Claire resolutions on "Americanism," with a bird's-eye glimpse of the gathering that dubbed themselves "loyalists," I am sure they would have been amused to see the brand of recruits which selfish politics had brought to "Americanism."

To believe that such a gathering can win public support is to believe political and big-business autocracy down in Milwaukee that pulls the strings in every district can control the affairs of a Government which my own family, from the Revolution down to the present time, fought to preserve.

After war was declared, notwithstanding any statement to the contrary, I voted for every war measure passed by Congress, some 100 in number. No man has done more. If I am to be criticized for any vote prior to the war, then Washington, who opposed severance from England, Lincoln, who opposed the Mexican War, and Wilson, who waited two years and a half before deciding for this war, all recognized patriots, are subject to that same criticism. This doctrine the American people repudiate. Leader KITCHIN, brave Gen. SHERWOOD, hero of many battles, and many other Democrats who voted against war now have no opposition from either party. Henry Ford, leader of the pacifists, now carries the President's indorsement for Democratic Senator. These men are all loyal and infinitely more valuable to their country now than many of their critics. Yet Nieman, Bloodgood, and other superpatriots question their Americanism.

Who are those that criticize? Has their loyalty been tested more than SHERWOOD's, Ford's, or KITCHIN's? If so, how? Are they giving to this war? If so, what? What right have they to

claim superloyalty? If no right, then are they not disloyal to themselves and to their State and country, which their unwarranted criticism tends to divide? We need unity of purpose and action in this war. The war may have just begun; and any man who needlessly prevents that unity, that singleness of purpose, is obstructing the efforts of those who are doing their utmost to aid the Government in this great national crisis.

Every slander, every libel, every effort to poison minds and carry groundless suspicion against officials or neighbors should be condemned by the people of our State, who have been foully slandered by these same self-appointed superpatriots in the past.

It may seem novel to Milwaukee interests now undertaking to defeat Wisconsin's Congressmen that under the State law the people of my district, including 40,000 or more voters, can legally determine nominations instead of having this service performed by a hand-picked body of self-anointed men who dub themselves "loyalists," and that people should question why they need get behind such candidates in order to receive political absolution from new "100 per cent brand of Americans" of the State and district. Incidentally, these Milwaukee "100 per cent Americans" have slandered Wisconsin, Wisconsin's officials, and the congressional delegation more unjustly than all other interests combined, as I disclosed in my speech of June 12. Instead of seeking to pass judgment on others they should approach the sacred altar of patriotism in sackcloth and ashes in recognition of their own manifold shortcomings.

I am not especially interested in the Eau Claire meeting and will not discuss those who publicly slandered me and my son, now fighting in France. Neither do I think the people of Wisconsin or the tenth district are particularly interested in that meeting, because approximately 3,000 names already received pledge support from every county and include many of the ablest and strongest men in the district.

Regarding the wealthy banker-lawyer from Mondovi and the caucus that slandered me, a prominent business man, highly regarded throughout the district, writes: "When the Ingrams of Durand, Harts, Fullers, Al. Andersons, and Van Meters have to teach the people of this district what real loyalty is, I begin to wonder if I myself am a real American." Another writer who was present described them as the "finest bunch of retired political patriots that ever came down the pike." To be abused by such men and others of their kind, however disagreeable, is a compliment, because their praise or abuse is prompted by self-interest. They reason in no other terms. I have no other criticism to offer and am content to leave results with the 40,000 voters who decide at the primary and election.

WISCONSIN'S CORRUPT-PRACTICES LAW.

I am concerned in a Wisconsin law which requires corporations and individuals in Milwaukee and elsewhere to make full returns of political contributions and expenditures, and to say that information is received that organizations in Milwaukee have been expending approximately \$100 per day in advertising for the purpose of defeating Congressmen of the State, also that railroad attorneys have been sent from Milwaukee to my district, a distance of 600 miles round trip, to poison the minds of my home people against me, and that large contributions must be somewhere in view to excite the interest of certain "patriots" conspicuous in the Eau Claire gathering, who highly respect such arguments. I expect to introduce a resolution of investigation in Congress after the coming election, naming specifically all those in Milwaukee and elsewhere whose names can be ascertained who have failed to report their contributions and expenditures and to ask for their attendance before a congressional committee in order to ascertain the facts.

By no other means will the Wisconsin statute be observed by these interests, and as I helped draw that particular law when in the State senate, prohibiting corporations from contributing funds or services of employees, and also helped draw the primary law and corrupt-practices act now on the statute books of our State, I desire, so far as I am able, to maintain the integrity of those laws. If they have been violated in an effort to control congressional elections, as I believe can be shown, it is an offense against the dignity and rights of this House and of the State, and the facts when once ascertained can serve as a basis for such proceedings as are provided in our State laws.

This is all I care to offer at this time, except to say that in common with every other American citizen I am proud of the patriotism and loyalty of the people of Wisconsin and of America who are now doing their part in the great world war and are going through the fire that chasteneth. Their loyalty needs no certificate of character from the political and business autocrats of Milwaukee or the miscellaneous bunch of politicians that met at Eau Claire. Wisconsin will repudiate such intolerant and arrogant efforts, even as Minnesota gave KUTSON and DAVIS,

Republicans, and VAN DYKE, Democrat, who voted against war, unparalleled majorities, and as North Carolina returns KITCHIN, Illinois returns MASON, and Nebraska returns REAVIS and others without opposition on that same issue, not to express sentiment on the war declaration, but because every sensible man detects the difference between those who quietly love and serve their country and those who loudly shout to convince others and themselves of their own patriotism.

I believe in the splendid patriotic organizations, including the Loyalty League, that are doing a fine work throughout the land; but when political patriots seek to capitalize their membership in such leagues or their patriotism or their religion, or use that machine for political ends, the people know that such patriotism is as sounding brass and tinkling cymbal.

In conclusion permit me to say that the people of Wisconsin and of this country are loyal and are sensible and do not patiently accept questionings as to their loyalty by men who are not fit to latch their shoes. This is brought forcibly to mind by the action of the Republicans in the largest county of my district, who, without suggestion from me but because of righteous indignation, called together a large meeting of leading citizens of the county, headed by W. H. Bridgman, Louis I. Roe, C. B. Culbertson, Anson Green, Thomas Sugars, and others, not candidates for office but strong, high-class men, known throughout Wisconsin as such. These men passed resolutions of confidence in me, and thereafter bearded the super-loyalty dubs in the exclusive hand-picked gathering. Their approval and their generous words have been seconded in hundreds of letters received from equally high-class men throughout the district and, as stated, by a great many petitions that I believe represent the will of the people as a whole.

The sentiments unanimously adopted by Chippewa County on the war are the sentiments of the country, and the generous words addressed to myself are greatly prized because of the high character of those who uttered the resolution, which is as follows:

We declare our unswerving loyalty to the national administration in its prosecution of the war, and declare ourselves in favor of the policy of no peace except by victory over all the enemies of the allied powers.

We wish to indorse the record of our Representative in Congress, Hon. JAMES A. FREAR, because of the distinguished service which he has performed, not alone for the people of his district and the State of Wisconsin, but for the Nation as well, in his opposition to the time-honored steal known as the rivers and harbors bill, otherwise known as "pork-barrel" legislation. Due to his untiring energy and studious research he has been able to arouse public sentiment regarding this waste of the people's money to an extent that has resulted in the saving of many millions of dollars to the taxpayers of the country.

We also wish to approve his patriotism and loyalty in support of the Government's war measures since the declaration of war against Germany. We especially commend his utterances on the floor of Congress in defense of loyalty of Wisconsin, and we believe that he has earned the lasting gratitude of the people of this State by placing the true record before the Nation. For this and other reasons we commend Mr. FREAR to the support of the Republicans of the tenth congressional district.

The Crime of the Profiteers.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 3, 1918.

Mr. HUDDLESTON. Mr. Speaker, in his recent address to Congress, in which he urged that heavy taxes be laid upon profiteers, the President of the United States said:

The profiteering that can not be got at by the restraints of conscience and love of country can be got at by taxation. There is such profiteering now, and the information with regard to it is available and indisputable.

The President's charge that avaricious persons are growing rich out of the war and taking advantage of the Nation's peril to exact extortionate profits from our Government and its people was received in surprise by many of our citizens who had not investigated the subject. The profiteers have been diligent in their efforts to conceal their rapacity. They have usually wrapped themselves in the American flag and boasted loudly of their patriotism. They have been loud in lip service and have been prominent in the dailies in connection with war work. They have pretended to be the most active supporters of our Government and, though wholly selfish themselves, have been most diligent in criticizing others for lack of patriotism.

But while these base creatures have deceived a large part of our people, there have been ample evidences for months of the

nefarious work in which they are engaged. As early as July, 1917, I called the attention of the House to the enormous profits being amassed by the Aluminum Trust.

PATRIOTS AND PROFITEERS.

On December 7 last, in my speech, which I distributed under the title of "Patriots and Profiteers," I said:

Many of our great captains of industry have been loud in lip service, but it would seem that in their hearts they have scarcely realized the awful undertaking to which our country is committed. They have continued to think in terms of profits. They have acted on the precept "Business as usual." They have taken advantage of the Nation's peril to profiteer, to exact from Government and people alike extortionate profits on war material and on the necessities of life. They have given themselves to a wild orgy of greed and exploitation such as the world never saw before.

I also said:

It was recently stated that it costs the United States more than ten times as much as Germany for each soldier maintained in the field. In other words, for every dollar that Germany spends on one of her soldiers the United States spends \$10. This shocking difference is occasioned in a large measure by the extortionate prices exacted from our Government for war material and supplies. The difference is due only in a slight degree to the better pay and better equipment of American soldiers. Our Government is being overcharged all along the line for the things required for war. The worst offenders are the metal producers and manufacturers of war material. It is established beyond doubt that in many cases the Government is being required to pay enormous profits, sometimes reaching 100 per cent and yielding annual dividends to profiteers of 100 per cent, 500 per cent, and 1,000 per cent on their investments. Such a situation is a threat to the financial strength of our country and must be abated without delay.

Not only is extortion being practiced on our Government but the people of the country are being bled white by profiteers taking advantage of the world-war situation. Producers of great basic commodities, metals, and manufactures have arbitrarily jacked up their prices. Pig iron, which three years ago in my home city, Birmingham, was selling for \$9.50 a ton, was increased to above \$50 a ton until recently reduced by governmental order to \$33. This is merely an illustration. Coal, copper, and many other commodities were dealt with in the same way. The prices were increased not because of an increase in cost of production but merely because the profiteers could "get the money." They charged all the traffic would bear and gave labor as small a share of the increase as it could be made content with. The arbitrary increase in the price of the great basic commodities soon reacted upon all other prices, and they began to soar, with the result that the cost of living has become almost unbearable. Necessaries of life are rapidly going beyond the reach of the people, and the poor man's dollar has less purchasing power than ever before in the history of our country.

The situation in its aspect both toward Government and people is most dangerous. It must be corrected at once if we are to carry on efficient war. Should it remain unchecked our country's financial strength will be speedily sapped and the patience and the patriotism of the people ground out of them in the struggle against extortion and high prices for food and clothing. The Government must enter upon a thoroughgoing process of price fixing. Prices of commodities must be arbitrarily forced down, even as they have been arbitrarily forced up. Only in this way can a reasonable relation and equilibrium between prewar conditions, values when normal conditions have again been restored, and the present war situation be maintained.

And, again:

As a matter of principle as well as of good public policy we should not require all the sacrifices war entails to be made by our soldiers and their dear ones left behind. We should also require the corpulent Knight of the Swivel Chair to make his sacrifices. While our soldiers shed their blood he should shed his profits for our Nation's preservation. No man should be allowed to come out of this war richer than he went into it. We should see to it that by proper price fixing and the levy of income taxes, if it would be a shame if at the end of the war when our soldiers come back to us, we should be compelled to confess that while they were fighting and shedding their blood for us we permitted their loved ones to be sweated and overcharged for food and clothes, and greedy profiteers to practice extortion upon the Government, and thereby create a grievous public debt to burden the shoulders of many generations of their descendants.

In the same speech I advocated heavier taxes upon profits, and in that connection said:

A thoroughgoing system of profits taxation which will absorb practically all profits in excess of legal interest will act as a salutary curb upon business and industrial activities. Unnecessary businesses will be eliminated so that our commercial and industrial activities may be centered upon war production. It will tend to organize this country upon a war basis and greatly simplify the situation. It will release labor and transportation for military use and make our Nation more efficient for war. It will at the same time have effect to reduce prices of the necessities of life so as to free our people from a pressure which is rapidly becoming unbearable.

Recently I exposed upon the floor of the House the immense profits made during 1917 by the Steel Trust and showed that according to its own admission, after making all deductions for taxes, replacements, and other items charged off and paying 7 per cent on its preferred stock and the interest on its bonded indebtedness, this corporation made for 1917 alone net profits of 49 per cent upon its common stock.

Of course, my exposure of the profiteers gained for me the bitter hatred of the guilty and their parasites. They set their newspapers on me and have hounded me with criticism, fault-finding, and misrepresentation to the point of persecution. The exposure of one of these plunderers is taken as a personal affront by all of his kind. They seem to belong to a sort of "plunder band," each with one hand in the public pocket and ready to

smite with the other anyone who may dare to criticize any member of the gang. Being incapable of patriotism themselves, their first play is, of course, to charge a lack of it to others. It is of such as they that Dr. Johnson said: "Patriotism is the last refuge of the scoundrel."

REPORT OF FEDERAL TRADE COMMISSION.

In support of the President's charge against the profiteers we now have the report of the Federal Trade Commission, dated June 20, 1918, which is a shocking revelation of the avarice of the profiteers. The report covers in chief the great basic products of mining and industry, the commodities upon which practically all other prices are based. I will not attempt more than a hasty analysis of the report.

STEEL.

The Steel Trust made 24.9 per cent in 1917 upon the total amount invested in its business as against 4.7 per cent in 1912, 5.7 per cent in 1913, and 2.8 per cent in 1914. Even these enormous figures are small in comparison with the profits of Follansbee Bros. Co., 112.48 per cent; West Leechburg Steel Co., 109.05 per cent; West Penn Steel Co., 159.01 per cent; and dwindle into modesty as compared with the profits of Nagle Steel Co., which reach the murderous figure of 319.67 per cent.

COPPER, NICKEL, AND ZINC.

The average profits of 21 leading copper companies were found by the commission to average 24.4 per cent. Some of the concerns earned as high as 107 per cent on their investments. These figures show profits left after paying all Federal taxes and show the net amounts applied to dividends.

The New Jersey Zinc Co., which has a practical monopoly of zinc production, shows 95.9 per cent profits.

The International Nickel Co., which also has a monopoly, made 30 per cent on its investment.

SULPHUR.

Two corporations together enjoy a practical monopoly in sulphur production. They made for 11 months, ending October 31 last, 236 per cent on their investments. It costs about \$6 per ton to produce sulphur. These concerns charged from \$18 to \$35 per ton for their product.

LUMBER.

The lumber industry has been comparatively lenient. On an average the mills made net profits of 20 per cent during 1917, though some mills ran up to 121 per cent. The average for 1916 was 5.2 per cent.

COAL.

Coal producers seem to have been guilty of the most shameless profiteering of all, not that their profits were greater than other profiteers but because they dealt in a necessary of life—coal—which must be used by rich and poor alike, so that much of their extortion was practiced upon the poor and oppressed. The soft-coal producers of central Pennsylvania in 1916 made an average profit of only 20 cents per ton. In 1917 their profit was 96 cents per ton. Coal producers in the Middle States made 54 cents per ton profit as against 10 to 15 cents for the prewar period. So that the commission's report shows that coal operators had increased their profits from 300 to 500 per cent. The commission's investigation did not extend to the Alabama fields, so that I have no accurate information as to the profits made. I do know that coal which was sold f. o. b. mines at from 90 cents to \$1.35 per ton in 1912, 1913, and 1914 was sold during 1917 at from \$2.25 to \$2.90 per ton after Government prices had been fixed and that prior to price fixing the price in some cases reached \$4 per ton.

OIL AND GASOLINE.

The war emergency has given a golden opportunity to Standard Oil and its subsidiaries. They have earned from 24 to 63 per cent upon their investments.

MEAT AND LEATHER.

The big packers have proven themselves the robbers that they were believed to be. The big four—Armour, Swift, Morris, and Cudahy—had averaged prewar profits—1912, 1913, and 1914—of \$19,000,000; in 1917 they earned \$86,000,000. They did well in 1915 and 1916, for their profits for the last three years have reached \$142,000,000. Morris & Co. for 1917 earned 263.7 per cent on capital stock. Armour in 1916 increased its capital stock from \$20,000,000 to \$100,000,000, not a dollar of new money being paid for the new stock.

The packers are also interested directly and indirectly in the hide and leather business. A tremendous advance in prices of leather was made in 1917 and enormous profits realized. The Eastern Leather Co. paid 53 per cent dividends on its common stock after transferring 10 per cent to its surplus. The people paid this when they bought their shoes.

FLOUR AND MILK.

Flour millers increased their profits during 1917, 400 per cent, but the increase was distributed so that only a little was paid by each individual. Millers had been content with an average of 13 cents per barrel profit, but with the war they increased their average to 52 cents a barrel and paid profits of 38 per cent on their investments.

The canned-milk business is monopolized by a few concerns. One of these made 65 per cent on its investments and the others something less. Even little babies depending for nourishment upon a can of condensed milk are required to yield something to the war profiteers.

THEY BETRAY OUR SOLDIERS.

I can not take time to further notice the details of the commission's report. It is a sickening situation. The Nation is confronted with a powerful and unscrupulous adversary. Engaged in a stupendous war, it is sending its soldiers across the seas to fight the battles of mankind. Our brave soldiers are pouring out their lifeblood upon the battle fields of France and performing deeds of deathless heroism. Our armies are winning imperishable glory for American arms. Over the seas they are showing all that is splendid, magnanimous, and fine in our civilization, and here at home millions of patriotic citizens are watching and praying for the winning of the war. In millions of American homes the anxious mother prays for the absent son and feels a holy and solemn pride in his sacrifice, and humble citizens toll through the long hours that our country may be saved. Patriots are denying themselves of food and clothes so as to give their strength and substance to our armies. Yet into this awful and sacred situation slinks the ghoulish profiteer, who would turn his country's extremity to his own advantage.

The winning of the war is the chief and almost only concern of every good citizen; yet, and I say it with all deliberation, the greatest obstacle to American success is the men who are seeking to make fortunes in war profits.

As was said in a recent article in the Washington Star:

War profiteering on a large or small scale is in its effect disloyalty to the United States. It weakens the resources of the people, laying upon them a burden they should not be compelled to bear, and causing them to feel aggrieved and resentful. It weakens the war energies of the Nation. It should be punished as severely as the seditious speech of individuals and the treasonable acts of those hostile to our cause.

But to add insult to the grievous injury he is doing, the profiteer is not content merely to pocket his ill-gotten gains. Swollen with insolence and egotism, he seeks to dominate the life of the community. He gives of his spoils to war charities enough to make himself respectable to his own dull conscience and to that of others of his class and then seizes, if possible, some conspicuous position in connection with war work and assumes to be an authority on public duty. He hectors labor, bullies the timid, and "strong arms" such modest citizens as he can intimidate, and woe be to all those who may expose him or seek to tax the proceeds of his extortion. He affects to be an expert in patriotism. He stands with his right hand in the public pocket and with his left hand flings mud at anybody interfering with his game.

TAX THE PROFITEERS.

We must tax the profiteers, tax their ill-gotten millions out of their pockets and into the Public Treasury—tax them until they no longer find advantage in grinding the life out of the people by extortionate prices. The public welfare demands an end to profiteering and that it be ended now.

The profiteers through their press have tried to make it appear that Congress is unwilling to heed the President's wishes to increase taxes on profits. They have pictured Congress as slothful and indifferent. They deride Congressmen as politicians and as being chiefly concerned with reelection. They say that we want to go home for the primaries. I deny their charges. Speaking for myself and, I believe, a vast majority of Members, I am willing that Congress remain in session all summer if required in order to pass a proper tax measure. I am willing to stay on in Washington clear through the dog days if need be to do something to curb the rapacity of the unpatriotic but powerful few.

I am rejoiced that the President has shown his spirit in this matter. The hypocrites who were loudest in shouting "Stand by the President" are now silent or are trying to intimidate their Representatives into opposing heavier taxes. I warn these creatures that I do not look upon war as calling for sacrifices only from our soldiers. It calls for sacrifice from every citizen. No man has the right to come out of this war richer than he went into it. Profiteers should be held up to execration. They are public enemies and unworthy of the respect of honest men.

EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES,
OF SOUTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 29, 1918.

Mr. BYRNES of South Carolina. Mr. Speaker, the gentleman from Maryland [Mr. LINTHICUM] has asked whether the committee will at the next session appropriate for the purchase of the quarantine station at Baltimore. We can not now answer that question. The attitude of the committee in this matter, and in the purchase of the quarantine station at New York City, will doubtless be determined, in great measure, by the condition of the Treasury and the importance of the purchase during the war.

The gentleman has been exceedingly active and persistent in his efforts in this matter, but I do not think that he and his colleagues can claim any discrimination against Maryland in the location of governmental activities at this time.

I have roughly sketched some of the activities which I know have gone to Maryland, aggregating a very large sum. I mention the following:

Camp Meade (approximately)-----	\$10,000,000
Aberdeen proving ground (approximately)-----	20,000,000
Nitrate plant, Indianhead (approximately)-----	9,000,000
Housing for shipyard workers (approximately)-----	7,000,000
Shipping station (approximately)-----	15,000,000
Ordnance storage warehouse (approximately)-----	6,000,000
Quartermaster repair depot (approximately)-----	3,000,000
Marine hospital (approximately)-----	325,000
Immigration station (approximately)-----	550,000
Harbor improvements (approximately)-----	1,200,000
	72,075,000

In addition to this, large contracts have been made with the munition factories of Baltimore. Government contracts for ships, contracts for all kinds of supplies, and many other indirect benefits have been given Baltimore city and the State, aggregating, I should say, more than \$200,000,000. So the gentleman and his associates have no ground for complaint.

EXTENSION OF REMARKS

OF

HON. EDWARD E. ROBBINS,
OF PENNSYLVANIA.

Friday, July 5, 1918.

Mr. ROBBINS. Mr. Speaker and gentlemen of the House, the conference report on H. R. 10069, Calendar No. 391, known as the "Annual River and Harbor Appropriation Bill," has just been released from conference, with the report that a complete agreement has been arrived at, with the exception of the item of Mobile Harbor. This bill has been in conference for over a month. When the bill was introduced in the House it contained a provision that was very objectionable to the bituminous-coal interests of Pennsylvania with reference to prohibiting the flow of water from the coal mines charged with the impurities from the coal, chiefly sulphur, lime, and iron, into navigable streams and the tributaries thereof. This provision was highly penal and reads as follows:

PENAL CLAUSE IN ORIGINAL BILL.

Sec. 5. That, within limits to be prescribed by the Secretary of War, it shall not be lawful to throw, discharge, or deposit, or cause, suffer, or procure to be thrown, discharged, or deposited from any source whatever any free acid or acid waste in any form, either directly or indirectly, into any navigable water of the United States or into any tributary of any navigable water above tide-water; and every person and every corporation that shall violate, or that shall knowingly aid, abet, authorize, or instigate a violation of the foregoing provisions of this section shall be guilty of a misdemeanor, and on conviction thereof shall be punished by a fine not exceeding \$2,500 nor less than \$500, or by imprisonment (in the case of a natural person) for not less than 30 days nor more than 1 year, or by both such fine and imprisonment, in the discretion of the court: *Provided*, That this section may be enforced as provided in section 17 of the river and harbor act of March 3, 1899, the provisions whereof are hereby made applicable thereto.

During the debate in the House great objection was made to this provision on the ground that it referred to water from coal mines charged with sulphur and other impurities, and a substitute was offered, which, while removing the penal clause, provided for an investigation, which was intended to lay the groundwork for an act of Congress next winter, which would exclude the water referred to in these two amendments as water charged with "acid and acid waste in any form." This

amendment, which was then proposed to the bill in the House and offered by the committee, is as follows:

Committee amendment. Strike out all of section 5 and in lieu thereof insert the following:

"Sec. 5. That the Secretary of War shall cause an investigation to be made regarding the discharge or deposit into any of the navigable waters of the United States, or into any tributaries of same, of free acid or acid waste in any form, and the extent of same, together with any injurious results affecting the navigability of such waters, or any works of improvement made thereon by the United States or upon any vessels navigating the same, and submit a report, with any recommendation it may deem appropriate, and any necessary expenses connected therewith shall be paid out of the available funds herein or heretofore appropriated for examinations, surveys, and contingencies."

Objection was also raised to this proposed amendment as simply being a scheme to defer hostile action against the coal interests and secure a report from an unfriendly source as the basis for oppressive legislation.

The wording of these amendments does not disclose their true purpose. The ugly words "acid and acid waste" are put forward only to conceal the true purpose of these proposed amendments. This proposed action is founded on a letter of the Government engineers, in which it is disclosed that the words "acid and acid waste" referred to do not mean what the words ordinarily imply at all, but refer to the water from "coal mines, coal washers, and mills" that are located along the Monongahela, Allegheny, and Ohio Rivers and is discharged from such industries into these streams or their immediate tributaries. The part of this letter upon which the action of the committee was based in proposing this legislation is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, January 30, 1918.

The discharge of acid and acid waste into the navigable waters of the United States by the numerous mines and manufacturing establishments operating near such waters has been the subject of complaint for many years.

It has been generally recognized and admitted for a long time that such discharge pollutes the streams, destroys fish and fish life, and renders the waters insanitary and unfit for ordinary domestic purposes; but as these are matters peculiarly of local concern, and subject to corrective regulation and control under State and municipal laws, they did not seem to call for any Federal action.

Studies and investigations in recent years, however, have demonstrated beyond question that the practice has increased to such an extent as to cause very serious injury to commerce and navigation, as well as direct damage to the Government, especially on such important rivers as the Monongahela, Allegheny, and Ohio. Careful tests made in the pools above the navigation dams in the Pittsburgh district show that the quantity of free acid discharged from mines, coal washers, and mills into these rivers aggregates about 6,500 tons per day.

The presence of acid and acid salts in the water results in deterioration to the boilers and hulls of steamboats, and damage to the submerged metal parts of the Government locks and dams.

For use in boilers the water has to be subjected to a special treatment, the expense of which is considerable, and in spite of the treatment experience has shown that the life of the boilers is only about half what it should be. Formerly the boilers of vessels using these waters lasted, with average annual repairs, 20 years; with similar repairs they now last only 10 years. In other words, the boilers in boats employed in commerce, and those in the boats belonging to the Government and used for purposes of improvement, must be wholly renewed once in 10 years, instead of once in 20 years. It is estimated that the annual loss to these vessels in this district alone, due to acid, is nearly \$25,000.

The House on due consideration refused to adopt either the provision as to the fine and imprisonment of these mine owners, or the proposition proposing an investigation, and the bill was sent to the Senate without either of these provisions being in it.

The Senate, however, reinserted the provision as a new section in the bill providing for an investigation, thereby giving notice to the bituminous-coal interests that an investigation would be made and that Congress would probably pass a law next winter to exclude mine water and waste water from the iron mills and other industries from flowing into the Ohio, Monongahela, and Allegheny Rivers and their tributaries, the Youghiogheny, Conemaugh, and Kiskiminetas. This was such a threat against the bituminous coal-mining industry in Pennsylvania, especially in the counties of Westmoreland and Butler, composing the twenty-second district of Pennsylvania, which I have the honor to represent on the floor of this House, and also to those industries located in Allegheny, Washington, Fayette, and Cambria Counties and other counties adjoining my district, that I appeal to the Senate and House conferees urging the elimination of this clause entirely from the bill. I was advised by one of the Senate conferees that I should request the coal companies to dig holes in the ground into which the mine water should be run and kept out of the streams. By another of the Senate conferees I was advised that the mine water discharged into the streams killed all the fish and therefore must be excluded. These Senators, of course, do not understand the magnitude of mining operations and the great amount of water necessarily drained from these mines into the streams or that such water could not otherwise be disposed of. The Stand-

ard mine of the Frick Coke Co., which produces from 4,000 to 5,000 tons of coal per day, must pump 6 tons of water for each ton of coal produced, and the Jamison Coal & Coke Co. and the Keystone Coal Co., each located in my district, report that the discharge of mine water from their mines is equal to and in some instances greater than 6 tons of water for each ton of coal mined and removed. These are typical of the whole industry.

The charge is made that this mine water shortens the life of the boilers used on the boats on the rivers from 20 to 10 years and rusts out the hinges and metal work of the locks and dams. When the magnitude of the commerce on the Monongahela River alone is considered, this loss is trivial and inconsequential and should not receive even casual consideration. The traffic on the Monongahela River consists chiefly of coal and mill products. The lockmaster's report issued during April shows the following rapid increase in water-borne commerce on the Monongahela River:

RIVER TONNAGE BREAKS RECORDS DURING MARCH—20,000,000 TONS TOTAL DURING 1918 IS FORECASTED—COAL BUSINESS HUGE.

Transportation on the Monongahela River has broken all records during the past month. The end of the present year will see figures beyond the 20,000,000-ton mark.

During the last month Lock 3, at Elizabeth, Monongahela River, broke all records when 1,392,460 tons were locked through, as against 1,073,720 tons during the same period last year. The lockages during the last month at this point were 1,243,000 tons of coal, 43,500 tons of coke; sand and gravel, 69,460 tons; miscellaneous cargo, 36,500 tons; lockages, 1,260. During the same period last year the amount of coal shipped was 969,000 tons; miscellaneous cargo, 28,700 tons; sand and gravel, 75,000 tons; and 944 lockages. The lock was out of commission for two days during the month on account of high water.

More than 25,991,000 bushels of coal passed through Lock 4, Monongahela River, during March. During the same time 1,658,000 bushels of coke passed that lock. This tonnage established a record, as the lock was in operation only 29 days, on account of high water, while the mines were idle for a long period. One hundred and two thousand bushels of sand and gravel were locked through upstream during this period; also 47,000 cubic feet of lumber. The number of lockings both up and down stream during the month of March were 1,061.

It would therefore be unjust and unfair, and indeed disastrous, to interfere with this increasing commerce by enacting any legislation that would interfere with the mining of coal or the manufacturing interests along these rivers, as this proposed legislation, the object of which is to prevent the pumping or draining of mine water or water discharged from the industries into these rivers would do. I call attention to this matter with the hope that by a better understanding of this situation it may not be again brought up.

I am exceedingly glad, therefore, that the good judgment of the conferees on the part of the House led them to insist on the elimination of the proposed Senate amendment authorizing an investigation, which simply meant a threat to the bituminous-coal industry that now, above all other times, needs encouragement. This embarrassing situation removed, let us consider briefly another which is most critical.

THE BITUMINOUS-COAL SITUATION.

What, then, is the bituminous-coal situation in the United States at this time? In 1916 the mines of the United States produced 509,000,000 tons of bituminous coal; in 1917, 650,000,000 tons were produced; and for 1918, 735,000,000 tons will be required. This is an increase of 85,000,000 tons over last year's production, which was the record year.

These figures were given by J. D. A. Morrow, director general of distribution of fuel of the United States, at the meeting of the National Coal Operators' Association, embracing all the bituminous-coal producers of the United States, at Philadelphia May 29 last.

In speaking of the real needs of the United States, Mr. Morrow said:

Now, when we had those figures together, we found that to run the United States on a war basis this year we need 735,000,000 net tons of coal.

One single plant will require two and one-half million tons this year, another will require double this amount, and another group of war plants will require 18,000,000 tons.

All this is new tonnage for war purposes. He adds:

Four new Government war plants will this year consume more coal than all the manufacturing plants, ships, power plants, gas works, and street railways consumed last year of bituminous coal in the entire State of New Jersey.

With this increase in tonnage requirements the question arises, Where is the coal to come from, and what are the mines doing toward producing it?

With the five months ending June 1 the production of bituminous coal has lagged behind last year approximately six and one-half million tons per month, instead of gaining 7,000,000 tons a month, or a loss of approximately 13,000,000 tons per month of meeting the requirements.

This situation has already caused great alarm. On the 12th of June Director Garfield issued this statement:

A saving of 60,000,000 tons of bituminous coal is the only possible avenue of escape from national disaster. Necessities of war must be supplied and the coal deficit must inevitably come out of the necessary fuel for nonwar industries.

This, then, is Dr. Garfield's solution and policy reaffirmed and intensified. It requires that the industrial production and the creation of new wealth shall be curtailed in order to meet fuel shortage instead of being stimulated by increasing the coal supply.

On the 23d of June Dr. Garfield issued a further statement, in which he says:

Fifteen millions tons of coal must be saved by homes, apartment houses, schools, churches, and commercial buildings other than factories. The Coal Administration appeals to each householder to run his own furnace "instead of putting an ignorant, careless, underpaid man in charge of it."

These statements from the head of the Fuel Administration indicate clearly the policy by which we are expected to save coal and make up for lack of production and thereby escape national disaster. This policy requires that industrial production and the creation of new wealth shall be curtailed and that our homes, schoolhouses, and churches shall be closed in order to meet the fuel shortage next winter, instead of taking steps now, when coal can be mined and marketed, to stimulate and increase the coal supply, from the mines.

The policy last winter of the Fuel Administrator was in the dead of winter, with the country in the grip of zero weather, to issue an order, on the 27th of January, closing all the industries for seven successive days and eight successive Mondays. That arbitrary and unannounced order caused intense suffering and great hardship, besides incalculable loss of wages, to the workmen and financial distress to the business community.

Now the policy seems somewhat changed, but the change will cause great loss and inconvenience to our country and bring business termed "nonessential" to a standstill. It seems to me that the course that ought to be taken is to stimulate the production of coal and thereby relieve the distress of the people. Two courses are open to the administration. One is to restrict activity in all so-called nonessential industries or luxuries and put out of employment the workmen engaged in these industries; the other is to stimulate production and thereby create additional wealth, to encourage the employment of all available machinery for the purpose of transforming national resources and raw material into articles that are needed by the people and useful and necessary in our export trade with foreign countries, such as South America, in order that the emergency cost of the war may be met and new wealth immediately created. We are endeavoring to extend our trade with South America and the Tropics. These countries are demanding automobiles, music boxes, graphophones, all manner of musical instruments, and jewelry, in exchange for which we can procure bananas, coffee, manganese, nitrate, and other articles that are absolutely necessary for our national life and war activities. If we do not trade for these manufactured articles we must pay for them in gold, which we so urgently need at home to maintain our overextended credit and keep our increasing volume of paper currency at par with gold.

In my judgment, Mr. Speaker, every effort should be bent toward stimulating and encouraging our industrial life, and especially should every step be taken that will increase the production of bituminous coal, which is absolutely necessary in carrying forward our business and war activities.

On June 22 Dr. Garfield issued an appeal to the anthracite miners, whose production had fallen behind during the month of May 175,000 tons, and this appeal seems to apply with equal force to the bituminous industry, but not to the miners, who are now willing to do their best if given an opportunity.

The slogan "Coal will win the war" is no empty phrase, but a grim reality, which places you in the forefront of the soldiers of the industrial army. The efficiency of the Nation depends on your patriotism and fidelity.

From these sources of evidence, there is but one conclusion which can be reached by those who are interested, in the welfare of their country, and deeply concerned about its prosperity and the comfort of our people, and their ability, to carry forward our war preparation, during the coming winter, and that is; We must take some steps to encourage and increase the production of coal at once.

This can be done in two ways:

1. By increasing the transportation facilities; and
2. By increasing the price of coal at the mines.

There is no dissatisfaction among the employees as to wages. They never were so liberally paid for labor and service rendered in and about the mines as they now are, nor was the cost

of producing coal, based on the wages paid and the price of material used in and about the production, ever before so high.

UNFAIR TREATMENT OF THE COAL INDUSTRY.

For the five years preceding 1914 the coal industry was greatly depressed and few of those engaged in it received any return on their investment. By the beginning of 1915 the European war began to cause an increased demand for coal and prices advanced, and during 1916 and up to the 1st of July, 1917, the coal operators received large profits on the tonnage produced. The effect of this unusual demand for coal was to develop a large number of small operations known as "team, truck, and tramroad mines," the coal being hauled from these mines and loaded on cars at sidings.

In June, 1917, the bituminous-coal producers of the United States met in convention here at Washington. Secretary Lane, of the President's Cabinet, presided over this convention. Gov. Fort, of the Federal Trade Commission, addressed them, and an agreement was reached by which a price of \$3 per ton was fixed for bituminous coal in the States of Pennsylvania, West Virginia, and portions of Ohio; \$3.50 in other parts of the country, including Illinois, Indiana, and Tennessee, to become effective July 1. This convention was harmonious, and adjourned pledged to produce all the coal possible for carrying on the war activities and business of the country.

Shortly thereafter, without notice, the Secretary of War and the Secretary of the Navy repudiated this agreement and announced that the Government would not pay this price, but would buy its coal for a much less price, and the coal trade was thrown into a panic, and conditions that hitherto had been harmonious and settled were rendered chaotic and confused. Nothing apparently was done to reassure the coal people or to remedy the situation until the 21st of August, 1917, when the President, by an order over his own signature, reduced the price of coal to \$2 per ton in Pennsylvania, Maryland, West Virginia, Virginia, and parts of Ohio; \$2.15 in the New River district; \$2.35 in the thin-vein Ohio district, and so forth. This order was made without notice and became effective at once and had a most disastrous effect on the coal trade.

Between that date and the 1st of September, in my own county, 61 of these "small wagon mines," with an aggregate output of approximately 10,000 tons per day, closed, and before the 1st of December over 150 of these small mines in my district ceased operating, causing a tonnage loss of approximately 30,000 tons of coal per day, and this situation prevailed all over the United States in the bituminous coal producing districts. The result was a great shortage of coal. The system of preferential orders was then devised by the War Department and coal deflected from legitimate industries to Government use, causing confusion and distress to permeate the whole business world. On January 27, without notice, the Fuel Administrator issued a mandatory order suspending the operations of all industries for one week and eight successive Mondays. This arbitrary and drastic order paralyzed all of the manufacturing industries of the country, causing widespread suffering and enormous loss of wages. This distressing situation continued until in February, when the price of coal was advanced to \$2.45 per ton, with the hope of relieving the loss caused after, alas, it was too late. The result of this price-fixing policy has been to deter new developments in the mining regions and to restrict and prevent any increase in the production of coal. The attitude of the Fuel Administration is regarded as critical, distant, and arbitrary by all those engaged in the bituminous-coal industry, instead of friendly and encouraging. Now, when coal production should be at its greatest volume, it has fallen behind the actual tonnage of 1917. The wagon mines have not returned to work, the small operations have not been reopened, and the production of coal has not been stimulated. The present price will not permit it; such would mean only financial loss and sure bankruptcy for the great army of small operators.

Wages continue the highest they have ever been, and high wages must be maintained and continued, so that the workmen can live according to our American standards, clothe their families, and educate their children. The cost of the essential materials that enter into the production of coal has not been reduced either by price fixing or by business activity.

When the price of coal was reduced to \$2 per ton not an item that entered into the cost of production was reduced in price.

Steel rails, which usually sell at \$28, still sell for four times that price.

Lumber still sells at three times its normal price.

Mining machines can scarcely be bought at three times the usual price.

Corn, oats, and hay hold firm at double the accustomed cost.

Wheat is to be increased from \$2.20 to \$2.50 per bushel.

Cotton, usually selling at 15 cents per pound, now sells at 30 cents per pound, with the sky as the limit. No legislator even dare suggest to a Democratic administration or a Democratic Congress that the price of this staple product of the South shall be fixed or reduced.

While the price of copper and some forms of iron has been advanced, yet on May 24 bituminous coal was actually reduced 10 cents per ton in price to \$2.35 per ton.

Mr. Speaker, there is only one course to pursue in regard to the price of bituminous coal. This must be increased, and at once, if coal production is to be increased in sufficient quantities to enable this Nation to continue war preparations; to protect our people from actual suffering, for want of fuel to heat their homes next winter; and enable us to continue the business of the country and keep our working people employed.

If present conditions continue, I predict that next winter, we will witness more suffering for the want of coal in the homes of the poor; and more widespread financial disaster among the essential industries of the country, for want of fuel, than we have ever witnessed before. It can not be otherwise. July 1 coal production was 60,000,000 tons short of our actual requirements. Does this situation not startle those who are responsible for it?

We are at war and it is absolutely necessary that we have coal for our war industries. Without coal commerce must stop, our immense factories must cease to operate, our ships can not sail, and our brave and courageous boys in the trenches will be without arms and munitions, food, and clothing, which is a calamity too terrible even to be contemplated.

Mr. Speaker, I appeal to this House to take action to bring about an increase in the output of bituminous coal. It is the one weak place in our industrial situation and in all our preparations for war. What use to us is a million men in the trenches if they should ever be without ammunition, guns, or ordnance supplies, or food and clothing, and all this will fall them if coal fails us. The remedy is plain. Let the price of bituminous coal be advanced to \$3 per ton, and in the thin seams that are difficult to work to a greater price, so that all of our mines will be opened and every ton of coal be mined that human energy and enterprise and industry can produce.

I am immensely interested and in earnest in this appeal for fair treatment of the bituminous-coal industry. The district I have the honor to represent in this House, being the twenty-second district of Pennsylvania, composed of the counties of Westmoreland and Butler, during the year 1917 produced approximately 25,000,000 tons of bituminous coal. Thousands of patriotic men are engaged in these mines and earning their livelihood in this industry, and millions of dollars of taxes were paid into the Federal Treasury by the companies and individuals engaged in this great basic enterprise. It ought to be encouraged; it ought to be assisted; but above all it must not be depressed and discriminated against any longer.

Let \$3 be the standard price for Pittsburgh coal where the quality is excellent and mining conditions favorable. In thin-vein seams, where faults exist and grades are steep, \$3.50 and \$4 should be the price. Transportation facilities must be improved. With these two suggestions carried into effect at once, and they can be, the national disaster of a coal famine next winter will be averted.

We have coal for all our needs and enough to spare for our allies besides. There are miners willing and patriotically desiring to mine it. The only difficulty is the existing policies as to price regulation and transportation difficulties; when these are corrected all will go well in the coal industry once more and our industrial life can go forward normally and without interruption for want of coal.

The whole coal industry is permeated with patriotism. Those who control its activities have met every request of our Government for money by most liberal financial support. The miners and those who work about the mines have given renewed evidence of their patriotic devotion to our country by contributing to the Red Cross, Knights of Columbus, Y. M. C. A., and other charitable organizations. In addition to this, at mine after mine in my district, every man or boy on the pay roll has either bought war stamps or liberty bonds. These men, some of whom are of foreign birth, are all loyal and patriotic and doing their utmost to help our brave boys in the trenches win a complete and quick victory over Prussian militarism. Let us hope that this discussion will cause the immediate removal of the restrictions which prevent the increase of the output of our bituminous-coal mines.

The dash, bravery, and victory-winning spirit of the American troops now battling in France against the brutal Hun have at

the same time halted and stunned our enemies and filled with admiration and confidence our brave and faithful allies.

To the support and help of our brave and dauntless soldiers of freedom the whole American people have consecrated their undivided and determined effort.

This Army carrying the Stars and Stripes in pursuit of military despotism must march across the Rhine, capture Berlin, seize the very citadel of military tyranny and destroy it. Then, and not till then, can the oppressed peoples of Europe, who know not but long have prayed for government by the consent of the governed, gather about the table of diplomacy and settle their differences, assert their rights, and enter upon a lasting peace.

SPEECH

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 7, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 4557) to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes.

Mr. BURNETT. Mr. Chairman, as to the details of this bill I shall not attempt a discussion. That I shall leave to the gentlemen who have investigated it and who have no doubt worked it into proper shape. If there are any matters of doubtful meaning, they ought to be made clear before it becomes a law, because there is too much at stake for the men who are to be the beneficiaries to allow matters of this kind to be administered under the interpretation of those probably who do not know what was in the minds of the ones who reported the bill to the House and in the minds of the House that enacted it.

As to the purposes of the bill there can be only one mind, and that is that a grateful Nation owes it as a poor remuneration for what has been sacrificed by these men who are to be the beneficiaries of this law.

Fifty-three years ago this spring I saw the remnants of a little tattered, footsore, wounded army return to their homes. I was then a boy less than 12 years of age. They came not to a Government that was wanting to reward them for what they had suffered in the discharge of their duties, but to wrecked and ruined homes, with nothing left for their own maintenance and no Government to render them aid. I saw those men then, some of them young men, the youths of the country, come home maimed, lame, and halt. Some of them had left an arm or a leg upon a distant battle field. That is one reason why to-day in our Southern States we are laboring under the terrific cloud of illiteracy that hangs over our people. It is because those men came to an impoverished State. They came to a grateful and a willing people, but to a people financially unable to do anything like justice to those who had fought and sacrificed in behalf of what they thought was their duty.

We have now a great and powerful Nation, a rich Nation, and I believe it will emerge from this war not much poorer than when we went into it; but suppose it takes the last thing we have in order to make the sacrifice, it will be poor indemnity to those who have gone 3,000 miles from their homes, who have suffered in trenches, who have lost their health, their legs and arms, their eyes, perhaps, and who will have missed an opportunity to perfect themselves in a gainful vocational education, as they would had they remained at home. Let us not be parsimonious, let us not be niggardly in the amount necessary to restore the men just as far as we can to the condition where they would have been but for the war. We can not restore the arms that are gone, we can not restore the legs, we can not restore the sight, we can not restore the lost health, but let us show our great appreciation of the sacrifices which they have made by putting them just as near as possible into the condition where they may earn a livelihood for themselves. [Applause.]

Let us not send them into soldiers' homes. A grateful Nation would never permit them to suffer, but let us not humiliate them by saying that they have to be the objects of charity. As a matter of economy to the Government as well as justice to the soldier, let us place them, if possible, where they will feel the independence of a man who is earning his own living in whatever vocation he chooses to follow. [Applause.]

EXTENSION OF REMARKS

OF

HON. WILLIAM F. WALDOW,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 5, 1918.

Mr. WALDOW. Mr. Speaker, the urgent deficiency bill passed by this House July 1, 1918, carrying appropriations and authorizations for the expenditure of \$992,053,793, and the various other appropriation bills that this Congress has enacted into law since our declaration of war, provide for a total expenditure that is staggering.

I intend to compare our actual expenditures with those of Great Britain, but before doing so I wish to submit a few observations relative to the vast difference in our actual expenses and our estimated expenses for the first year during the period of our war.

I am not submitting these observations in a spirit of criticism of any of the departments or our Appropriation Committee, but rather with a desire to impress upon the minds of the Members of this Congress how utterly impossible it has been for the executive and administrative branches of our Government to submit even a fairly accurate estimate of their contemplated expenditures and activities.

Emergencies arise and new conditions have continuously presented themselves during the past 12 months, making it extremely difficult to look ahead and to estimate for the ever-changing conditions that far in advance. However, after 12 months of experience the administrative branches of the Government that are responsible for conducting the war should be able to be more accurate in their contemplated expenditures.

On May 10, 1917, this Congress received a bill from the Ways and Means Committee known as H. R. 4280, providing for the collection of \$1,800,000,000 by taxation. At that time the Secretary of the Treasury and the administration informed Congress that they would require for the remainder of that fiscal year and for the next fiscal year—July 1, 1917, to June 30, 1918—\$3,800,000,000 to meet our war expenses. Four months later the Senate returned H. R. 4280 to the House and had added \$600,000,000, stating that the administration would need \$5,000,000,000 additional to the sum that they had estimated four months previously.

Since then we have passed the Army appropriation bill, the naval appropriation bill, the sundry civil bill, and the fortifications bill, each one carrying appropriations plus their authorizations totaling a larger sum than the administration expected would be needed for all the expenses of all the departments for the entire first year of our war.

Many wild estimates and conjectures had been made by the administration, various Members of Congress, and by the people of this country relative to that subject.

The facts are our appropriations and authorizations have amounted to \$23,670,560,922.79; the first estimate submitted was \$3,800,000,000, or a difference of \$19,870,560,922.79 in the estimated and the actual expenses of the United States Government from July 1, 1917, to June 30, 1918. This sum was not spent entirely for war purposes, as \$6,000,000,000 was loaned to our allies during this same period and can not be considered as an expense, but must be considered as an investment. We must also take into consideration the fact that the ordinary expenses of our Government in times of peace would total about \$1,000,000,000.

Mr. Speaker, I realize that the expansion of our Army and Navy and all other governmental activities due to our war has been and will continue to be enormous, but I am of the opinion that our various departments should submit more accurate estimates in the future, so as to enable Congress to devise in a wiser and more efficient manner the ways and means of raising the necessary funds for the payment of our debts. This is of vital importance at this time, as the Secretary of the Treasury has estimated that our expenditures for the fiscal year ending June 30, 1919, will be \$24,000,000,000. This sum added to \$23,670,560,922.79 makes a total of almost \$48,000,000,000 that this Nation will have to raise by taxation or bonds during the first two years of our war. The raising of such a vast amount of money has never been attempted by any nation within a period of two years. In fact, the combined expenses of all the allied countries for any period of two years have not totaled this huge sum. This sum is greater than Great Britain has spent from April 1, 1915, including their estimated expenses to March 30, 1919.

If the estimate of expenditures for conducting the war for the coming year is correct, we will be collecting and disbursing as much money every month as it has taken to operate and conduct the business of the Government for any two years previous to our entrance into the war.

The contemplated raising of \$8,000,000,000 by taxation for the fiscal year 1918-19 is without precedence in the history of the world and is a larger sum than England spent during her entire second year of the war. It is a greater sum than the entire cost of the Civil War, which was \$6,190,000,000 (Union side). At the time of the Civil War, with all the tremendous taxes of that period, the largest amount of money that ever came into the Treasury was \$557,000,000. The largest amount that ever came into the Treasury during the Spanish War was \$515,000,000. (These two sums are exclusive of our postal receipts.)

Excluding the loans to our allies we will be paying about 44 per cent of our war bills by taxation. The percentage paid by the nations at war is as follows:

United States, 44 per cent of war bills by taxation.
England, 20 to 22 per cent of war bills by taxation.
France, 15 to 16 per cent of war bills by taxation.
Italy, 15 to 16 per cent of war bills by taxation.
Germany (estimate), 11 per cent of war bills by taxation.
Canada, 10 per cent of war bills by taxation.

Of the \$47,670,560,922.79 we will raise by bonds and taxation during the first two years of our war, \$12,000,000,000 is contemplated to be loaned to our allies.

The size of our Army during the first six months of the fiscal year of 1917 was about 1,000,000 men. To-day we have that same amount in France, and approximately 1,300,000 men stationed at our various training camps, while our appropriations for 1918 provide for an Army approximately of 3,000,000 men.

The following table of comparison is not only interesting but very astounding when we take into consideration the fact that England has had an Army averaging almost 4,000,000 men during the past three years, and was forced to pay exorbitant prices for a large part of her supplies previous to our entrance into this conflict:

Great Britain's war bill for four years, from Apr. 1, 1915, to Mar. 30, 1919.

Apr. 1, 1915, to Mar. 30, 1916	\$7,580,171,160
Apr. 1, 1916, to Mar. 30, 1917	9,682,829,180
Apr. 1, 1917, to Mar. 30, 1918	13,103,624,000
Apr. 1, 1918, to Mar. 30, 1919 (estimated)	14,700,000,000

Total (includes Great Britain's loans to her allies, estimated at \$4,000,000,000) 45,066,624,400

United States war bill for two years, from July 1, 1917, to June 30, 1919.

July 1, 1917, to June 30, 1918	\$23,670,560,922.79
July 1, 1918, to June 30, 1919	24,000,000,000.00

Total (includes the United States loans to the allies and those contemplated for the year ending June 30, 1919, amounting to \$12,000,000,000) 47,670,560,922.79

UNITED STATES PREWAR APPROPRIATIONS.

Mr. Speaker, Great Britain, with an expenditure far less than that of the United States, has been able to equip and maintain a larger army than that of the United States, and she has accomplished this at considerably less expense. I believe her success in achieving this result has been due entirely to her auditing committee, or, as it is known, the committee on accounts; and I do not hesitate to state that the Congress of the United States must follow her example by having a committee on accounts, composed of Members of the House and Senate, whose duty it will be to supervise the expenditures of these vast sums of money.

I believe it is impossible for the heads of any of the departments to give our vast expenditures of money the close scrutiny they deserve, and I believe an immense sum has been wasted in the purchasing of supplies that might have been saved. I believe but little, if any, of this waste has been intentional on the part of any of our officials, and I am frank to confess that but little real graft has been brought to light; but I again assert that these huge sums of money can not be spent wisely and with a minimum of waste unless a committee similar in purport to that I have mentioned is permitted to be organized, for there is no doubt that great waste is going on and some method must be devised for its elimination.

I am very much pleased to note that the chairman of the Appropriations Committee and other Members of this House approve of the budget system. If we adopt the budget system and a committee on expenditures or accounts, we will have a minimum of waste and extravagance, and will have reached the highest mark of efficiency in spending these vast sums during this war.

A condition that was cited when the fortifications bill was under consideration, showing that the Navy Department sold as junk 30 cannon for less than \$4,000 and then the Army desired to repurchase these identical cannon for \$450,000, would be impossible under a more comprehensive and cooperative system for the purchasing of supplies and the auditing of our bills.

Mr. Speaker and colleagues, our President and this administration should be willing to adopt the very best and the most efficient method in order to conserve the resources of this Nation. Our citizens are saving and economizing to be able to purchase liberty bonds and war-savings stamps, and as a matter of simple justice to them we must adopt any and every method that will assure our Government of receiving a hundred cents' worth of value for every dollar spent in the purchase of supplies and providing for the welfare of our boys in France.

EXTENSION OF REMARKS

OF

HON. NICHOLAS J. SINNOTT,
OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 5, 1918.

Mr. SINNOTT. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include an article by Secretary Lane, entitled "The Answer of the Foreign Born," a very beautiful thing.

The article is as follows:

THE ANSWER OF THE FOREIGN BORN.

[Written for the Four-Minute Men by Hon. Frank K. Lane, Secretary of the Interior.]

We came to America to help in the making of this new land—for our own good and for the good of our children.

The gate was open; we gave nothing to enter. The paths that other feet had beaten we followed. The lands others had found and fought for were given us if we would make them into homes.

In the old land, the motherland, we worked for a living; here we worked that we might really live. Hope filled our hearts. In the old land, the motherland, our boys could be no more than we had been.

Their way was barred by the man above, the man born to land and position and preference. Always there was the man above, to whom he must doff his hat in token of deference and subjection. Strive as he might, sacrifice as he would, there was always that man above—the man on the hill—whose place he could not reach.

For that man's sons there were schools and professions and places of honor. For our sons there was work, work without hope, the work of stalwart, steady oxen, work for a living, not for the full life of the boy's yearning and his capacity.

The girl of his heart he could not marry, for she lived on the hill, and the hill to him was a world apart, never to be scaled by his aspiring impulse. The way of public service was closed to him, save as the servitor of the man above. A soldier he could be; yea, he must be, under a captain who knew him only as a shield or a spear, under a king he had no part in choosing, under a flag that gave him bounty, not opportunity.

And we, the foreign born, are here now to do our part, our full part, in the making of America. All the thousands of years of upward struggle, the climb from serfdom up, has led to the land of equal chance.

We fled from the man above.

Here we have no master but ourselves. Our hats come off to genius, not to rank. The great house on the hill is the home of one who once was a section hand. His money gave wages till we had money to pay wages.

There was hope in our hearts and that hope has blossomed into bright-eyed boys and girls, into homes where pianos play, into schools and colleges and law courts and legislatures, where our boys work beside all other boys and win ahead, into honors which come with talent, leadership that comes with character, into fellowship that knows no circle besides a common taste, into a pride, a compelling pride, a spurring, life-giving pride that we are of, that we are for—this land of equal chance.

If justice fails in this land, ours is the fault. If the torch of liberty fades or fails, ours be the blame. If our flag falls, all the eager and struggling ones in other lands will lose heart; all those who painted its starry field in hopeful blue and drew its stripes in courageous red will reproach us forevermore.

We know that this freedom is at once our glory and our danger. For now there is no man above; we have no will to guide but our own. We have come to the time of test.

We will not falter; we will not weaken. The Old World shall not see us break and run when challenged.

What has been gained and given to us we hold for ourselves and our sons.

Obligations of Citizens.

EXTENSION OF REMARKS

OF

HON. WILLIAM GORDON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 11, 1918.

Mr. GORDON. Mr. Speaker, under the leave granted me by the House to extend my remarks in the Record I desire to make a few observations to my constituents, reminding them of their public obligation at this time to their Government and their imperative duty to participate, as citizens, in the primaries and elections.

There has never been a time in the history of the Nation which so imperatively demanded the active and intelligent participation in public affairs by all of its citizens as the present. Great and pressing problems are being constantly presented and considered as a result of this war and unprecedented sums of money are being expended which must all be ultimately taken from the people by taxation; and great as these problems are in war time, they will be followed by still greater problems of readjustment, rehabilitation, and reconstruction which will be necessary after the close of hostilities, and the solution of these grave problems will demand, as now, the highest degree of integrity, ability, and experience.

At a time like this when we are fighting a great war and at the same time trying to preserve those principles of liberty and democracy upon which this Nation was founded, every public-spirited citizen who loves liberty, justice, and a square deal ought to avail himself of the opportunity to express his judgment in the selection of candidates for public office, State and national, and he ought to look into the special qualifications of the men who are to represent him. In no other way can democratic government be preserved to all the people.

Only about one-fifth of the Democratic voters in my district participated in the primary election two years ago by availing themselves of the only opportunity afforded the people by the constitution and laws of our State to nominate candidates. By this lack of interest on the part of the voters they delegate their power to professional politicians and job holders and encourage the building up of a political machine operated by hand-picked committeemen, who attempt to force upon the people hand-picked candidates who have no special qualifications except their willingness to obey orders from the machine leaders.

Mr. Speaker, I desire to close my observations upon the duties of American citizens toward their Representatives in Congress at this time by reproducing the remarks made to this House on May 9, 1918, by the Hon. DENVER S. CHURCH, of California:

Mr. CHURCH. Mr. Speaker, following a determination reached before my last election, I shall voluntarily retire from this body with this Congress.

I deem it appropriate to place in the Record some observations concerning the relations of the Members of Congress to the country at this time.

In ordinary times, other things being equal, there are weighty reasons apparent to all why a district retain in Congress its Representatives of proven worth. As Speaker CLARK has said, "A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor. It is an unwise performance for any district to change Representatives at short intervals."

But there are now reasons of no ordinary importance why worthy Members of Congress should not only be retained, but also without serious opposition.

That narrow partisan purpose that now seeks to defeat all Representatives of other political affiliations, encourage political strife, force faithful Members of Congress to devote their time in a political campaign that could best be devoted to serving their Government, and in the hope of partisan advantage seek to deprive the country of the benefit of their war legislative experience for the continuation of the Nation's terrific struggle, can scarcely claim to be actuated by the best interests of our country in the hour of its transcendent need.

As especially appropriate at this time, I present the following excerpts from an article recently appearing in the Paris Mercury, of Paris, Mo.:

NO TIME FOR FEITY POLITICS.

"Come to think about it, is not it rather a reflection on our political system that, with the country at war to maintain its very existence and the thought and effort of the Nation focused on winning that war, we

must turn aside to engage in our biennial congressional wrangle, with its irritancies and aggravations? There is not a single question, partisan or personal, that should be allowed at this time to divide us or destroy our unanimity as a people. Our whole thought should be on fighting the war and winning it.

"As to loyalty, there can be no questioning that of the present Congress. Republicans and Democrats alike have shown patriotism and zeal. The alacrity with which they have put over a huge war program has astonished the world. No set of men the Nation could have gotten together could have acted more swiftly or more intelligently, certainly not in more thorough accord with the President and the lofty aims he has voiced.

"That for no other reasons than that the new and inexperienced men want the honor and the salary attached to the job we should enter upon a petty personal scramble for power and place is unthinkable. With outgoing ships daily carrying thousands of our boys to European battle fields to fight and die for human freedom, partisan and factional political wrangling here at home would at least seem to be out of keeping with the time and circumstances and certainly beneath our dignity as a people with events so tremendous in their significance to engage our attention.

"The present Congress has had its training on the job. Like soldiers who have been in the trenches it has seen service and is seasoned, has familiarized itself with a task, and is equipped as a new body could not be to deal with the yet greater problems of economic reconstruction awaiting us.

"England, to preserve the solidarity of its own people, keep down internal discord, and keep the public mind free from petty distractions, has held no election since the war began. That we can not do under our system, nor would it be advisable. Yet the people themselves can accomplish the same by frowning on personal ambitions at this time and by discouraging opposition to capable Congressmen. Every fit man should be returned to his seat. A change of any kind, with the unknown element to bother, would be fraught with certain peril, as Mr. Taft has already pointed out. To change Congress at this time would be like withdrawing seasoned troops from the trenches and replacing them with raw and untrained recruits. It would be almost as foolish as taking control of the war from the President, with whom the present Congress has cooperated at every step.

"By the time August arrives and the date for our popular primaries approaches the soil of Lorraine and Flanders will be soaked with American blood. Our bravest and best will be fighting and dying and the world will be vibrating amid the thunderings of the final and greatest conflict between right and wrong.

"Is not it all unthinkable that while viewing and being partakers in the great sacrament of freedom we should be called on to turn aside to listen to petty harangues and witness small rancors, with no possible issue at stake except jobs and personal ambitions—pie and post office? Do not you think that in indulging these petty discords at such a time we shall earn the everlasting contempt of that fine body of young men who are giving their bodies as a living sacrifice for us? Could anything furnish a more sardonic satisfaction to Germany's booted and sabered devils? We think not. Yet this is what will happen unless the people themselves protest."

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 5, 1918.

Mr. BURNETT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech which I made yesterday on the question of the new naturalization laws.

The speech is as follows:

SPEECH AT TRENTON, N. J., DELIVERED JULY 4, 1918, BY JOHN L. BURNETT, OF ALABAMA.

Mr. Chairman, ladies, and fellow citizens, one hundred and forty-two years ago the most memorable event in the recent history of the world occurred within a few miles of where we are now assembled. That event we are here to-day to celebrate. The tyranny and oppression of England had become so intolerable that the 13 young Colonies lying along the coast of the Atlantic, by their duly instructed delegates, passed resolutions which declared those Colonies forever free and independent of the mother country. Brave men and patriots constituted that little convention, and no doubt with heavy hearts they decided to take that final step. The sacred ties of blood and friendship which they were about to sever had long bound them to the chariot wheels of a despot, and with hesitation and trepidation they decided that, "sink or swim, live or die, survive or perish," they would dedicate their hearts, their hands, and their lives to that work. As Patrick Henry declared, they knew that they were weak; but they believed that 3,000,000 people armed in the holy cause of liberty were invincible by any force which their enemies could send against them.

A committee composed of Jefferson, Franklin, John Adams, Roger Sherman, and R. R. Livingston was appointed to draft the instrument which was to strike the shackles from their limbs and make America indeed "the land of the free and the home of the brave." When the liberty bell rang out on that Fourth of July, 1776, those who heard it little thought that its echoes would within less than a century be heard around the

world. Little did they dream that the 13 stars with which they were about to decorate the flag of an infant republic would ever become a constellation of 48 brilliant orbs. But so Providence and Caucasian intrepidity and courage decreed, and to-day we find that flag floating in triumph over every zone and in every clime. Westward the star of our great empire took its course, but not a single acre of land has been marked by the sword of conquest or stained by the bloody footprints of forceful aggression. We have moved with peaceful tread from where Atlantic billows lash the rock-ribbed coast of Maine to where Pacific waters kiss the Golden Gate—from where the aurora borealis spans Alaska's frozen shores to where glittering sunbeams warm the "land of flowers." But, my countrymen, the restless white man was not to stop even at the shores of the Pacific, but with a single leap he reached 1,700 miles from our western coast and embraced Hawaii, the beautiful pearl that graces the bosom of the Pacific. But we did not stop there.

It was but another step to the thousand islands of the brown man, and now our flag floats over millions of people who before it was raised knew nothing of the liberty which it extends to all beneath its ample folds. If we had followed the examples of other nations, we could have demanded and acquired all these by the sword. But none of this vast area was wrung by bloody hands from prostrate foes. We paid value received for every foot of land that we acquired. By the Louisiana Purchase we paid for the vast domain between the turgid Mississippi and the snow-capped mountains of what was then the trackless West. Texas wrung her independence from Mexico, and by her own volition added another star to our flag. After the war with Mexico we could have demanded Arizona, California, and those other great Southwestern States as part of an indemnity for war. But we would not take this advantage of a fallen foe, but paid her for every foot of land acquired. Alaska we bought and paid for with American gold, and little did we dream the vast hidden treasures that lay beneath her frozen soil. Hawaii came to us by her own sweet will, and for the Philippines we paid full value and were badly beaten in the trade. When the Boxer uprising was suppressed the other belligerent nations extorted indemnity from those prostrate people, and they offered it to us. But Uncle Sam said, "No; I want no sordid gold to repay me for the blood of heroes spilled in a righteous cause. Keep your money, and with it stop the cries of starving babes."

Mr. Chairman, I think it wise on this the birthday of American independence to call the attention of our people, and especially our new-made citizens, to the fact that while our country has ever been "the land of the free and the home of the brave," it has also ever been the land of justice, hope, and peace. It has always been the land where all men are equal before the law, and where no sect or class can ever crush the hopes of those who aspire to better things. The humblest peasant from Bohemia's crowded cities may here enjoy all the rights of those to the manner born. No kings nor queens nor titled heads can ever lord it over his fellow man, but justice and equity sit supreme. A young American school-teacher, while spending a vacation in Europe, was twitted with the fact that in America we have no kings and queens. Rising to the full dignity of her American womanhood, she said, "Yes; we have. In free America every man is a king and every woman a queen who does right." So it is, my countrymen, and those who come from foreign soil may well bear testimony to the difference between the land of their adoption and the land of their birth. This brings me to speak of one prominent purpose of this meeting. Our great President in anticipation of the celebration of this day asked that all the people who loved liberty should come together throughout our land and join in these ceremonies. This was a happy thought.

We know that most people who come from other lands to free America do so to better their material or political or religious conditions. No man who comes within our gates should come with the idea that liberty means anarchy or that freedom means license to break the law. Only within the last few days I introduced and pressed through the House a bill to summarily expel those who advocate or teach the awful doctrines of the anarchist, regardless of how long they had been within our gates. This was right. We have no place for the man who holds aloft the red flag of anarchy, with the emblem, "No God, no law, no master." Let all such know that they must leave, and leave at once. On the other hand, we passed another bill which liberalizes our naturalization laws for those on our shores who have put on the uniform of the American soldier and are following the "Red, White, and Blue." I also had an humble part in pressing that legislation through Congress. America, as you know, has long been the melting pot of the world. We are so liberal in our policies to other people that those who come

from other lands may live and die under the protection of our flag without ever binding themselves to follow its lead or to defend that for which it stands. Since we entered the war many thousands of aliens without even first papers have enlisted to follow the lead of Old Glory. Some of them have families that were born on the other side. Should an alien soldier die without being naturalized, his wife and children not born here would not be citizens of the very country for whose flag he gave up his life.

Therefore Congress, without a dissent, passed the law which gives to thousands of these brave aliens the right to become American citizens without delay. It does not force a man to become a citizen, whether he wants to or not. That would not be right. We do not force citizenship on any alien soldier who does not desire it, but merely permit him to become one by his own voluntary action. Thousands have already availed themselves of this privilege and thousands more will yet do so. But, my friends, when you accept citizenship under our laws you take the most solemn obligation that can be made. What is it? You swear that you not only renounce and abjure all allegiance to any foreign prince, potentate, state, or sovereignty, and particularly by name to the one to whom you owed allegiance before you took the oath of an American citizen; but you swear to support and defend the Constitution and laws of the United States against all enemies, foreign and domestic, and to bear true faith and allegiance to the same. This is a serious obligation, and should not be taken in any half-hearted way. It is easy enough for those to follow who are fighting with us in a common cause. But, my Italian or English or French brother, it means that if this country should ever become embroiled in war with your own native land, you have sworn to follow our flag, even when carried against the one under which you were born. This oath is right, and, having taken it, you are a perjurer if you ever break it. I do not call attention to this fact to deter anyone from becoming an American citizen, but to impress upon you, one and all, the importance of fulfilling every duty that you thereby assume. You give your head, your heart, your very life, if need be, to your adopted land. So help you God.

America has acted most liberally toward her foreign born. Under the new law even those who by accident of birth are designated as alien enemies may make application to the President to have their loyalty investigated. The President can then refer the case to the Attorney General, and on investigation by his department if the alien is found loyal he may apply for citizenship just like a neutral or a cobelligent. What country has ever been so just and fair to aliens? My countrymen, we are in a titanic struggle, one in which the very foundations of our Government are involved. When a majority of the Congress voted for war it became the duty of all patriotic Americans to do everything within their power to insure victory for our flag and for the principles which it represents. We are going to win. Victory will as surely perch on our standard as God and Justice live. When did the American flag ever trail in the dust of defeat? Back in the early sixties we of the South tried to tear it down and to erect another in its place.

The God of battles decreed that that should not be done. I was a boy of 7 years old when the first gun was fired at Sumter, and less than 12 when the flag of the Confederacy was furled forever at Appomattox. I was not old enough to be on the firing line, but was with the women and children of the South back home on the starving line. I know what war means. Those were awful times. Brethren from the North met brethren from the South in the death grapple. If we had known each other then as we know each other now, the blood of brave men from the North and brave men from the South would not have bedewed our Southland. But I thank God that we are now back in our Father's house together and back to stay. I thank God that one flag now floats over an indissoluble union of indestructible States; that the grandsons of the men who wore the blue and the grandsons of the men who wore the gray are now marching with locked shields and martial step to the mingled strains of Dixie and the Star Spangled Banner. When victory at last perches on our standard, and the world is made safe for democracy and democracy safe for the world, the boys who return, whether born in the North, in the East, in the West, or in the South, will join in one grand hallelujah to the God who has given us the victory, and in one mighty chorus will sing

The Star-Spangled Banner in triumph shall wave,
O'er the land of the free and the home of the brave.

But, my countrymen, the victory can not be won by the boys in the trenches alone. We who remain back here must do our duty and must shirk no responsibility. The man who stays at home and merely prays for victory is as much a slacker as the man who evades the draft. It takes money, food and clothing,

guns, and equipment to win the war. We must supply these without stint. Liberty bonds, war-savings stamps, and money will supply the needs of the war. The Red Cross, the Y. M. C. A., and other great war organizations must have our material as well as our moral support. Let every man, woman, and child in America do his bit. Work, work, work; lend, lend, lend; give, give, give, are our duty, and let us meet it like patriots and men. Let the fires of patriotism be guarded and kept burning on every hearth and in every heart.

Act, act in the living present,
Heart within and God o'erhead.

Then in after years, when we look back over these days of sorrow and of sacrifice, we will have the consciousness of duty done, and can sing with Scotland's bard—

Still o'er those scenes my mem'ry wakes
And fondly broods with miser care;
Time but the impression deeper makes,
As streams their channels deeper wear.

"Profiteering."

EXTENSION OF REMARKS

OF

HON. ROBERT CROSSER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 3, 1918.

Mr. CROSSER. Mr. Speaker, it is indeed surprising that we should find anyone in this House who does not favor meeting the constantly increasing demand for money to carry on the war by the increase of the tax on large incomes.

A year ago I urged that as much as possible of the money needed to pay the expense of the war be raised by taxation, and as little as necessary by the sale of bonds. When the question first came up it was generally understood that we would adopt the plan of paying at least half of the expenses of the war by taxation. Thus far the amount of taxes that we have collected has fallen very much below one-half of the total amount required by the Government.

The Secretary of the Treasury, in a speech delivered in Philadelphia on April 7, said:

I think that a fair equipoise between taxation and bond issues is the proper way of financing this war. I do not believe, frankly, that we have that equipoise now. I do not think that we have applied taxation strongly enough.

The Ways and Means Committee is at present framing a new tax bill, and I wish to urge as earnestly as I can the wisdom of greatly increasing the rate of taxation on large incomes. No one should be allowed to make great fortunes by taking advantage of the necessities of the Nation arising out of this war.

Contemptible and outrageous as it may seem, however, the profiteer has been busily satisfying his greed from the pockets of the people.

In the report of the Federal Trade Commission, dated June 20, 1918, we find astounding proof of the greed of the profiteers. Let me call attention to just a few of the facts shown by this report.

During the year 1917 the Steel Trust made 24.9 per cent upon the total amount invested in its business, while in the year 1912 they made 4.7 per cent; in 1913 they made 5.7 per cent; and in 1914 they made 2.8 per cent. In other words, the Steel Trust made during 1917 more than five times its average profit during the years 1912, 1913, and 1914.

The Follansbee Bros.' Co. during 1917 showed a profit of a little over 112 per cent; West Leechburg Steel Co., 109.05 per cent; West Penn Steel Co., 159 per cent; and the Nagle Steel Co., 319 per cent.

The commission found that the 21 leading copper companies had made an average profit of 24.4 per cent.

The people have been indignant about the prohibitive prices of meats. The commission's report throws some light upon that subject. It is plain that the big meat packers have been reaping a harvest of gold. The average profits of the Armour Co., the Swift Co., Morris & Co., and the Cudahy Co. during the years 1912, 1913, and 1914 was \$19,000,000. During the year 1917 they made a profit of \$86,000,000. Morris & Co. during 1917 showed a profit of 263.7 per cent on the capital stock. The packing companies are also interested in the leather business. The Eastern Leather Co., after first putting 10 per cent into its surplus fund, paid 53 per cent dividends on its common stock. Everyone knows that a great advance was made in the price of

leather during 1917, and, of course, the people who were compelled to buy shoes were gouged to pay these tremendous profits.

The flour manufacturers made three times the profit which they made before the war. Their profits were 38 per cent.

I have mentioned but a few of the many cases which might be discussed, but they are enough to show the nature of the profiteering which is now going on.

These profiteers belong to the class of people who, through their newspapers, misrepresent, villify, and criticize Members of Congress who protest against such infamous extortion. Such are the men who, with saintly faces, boast of their patriotism and try to monopolize the flag, while at the same time they rob the poor and defenseless. These are the men who bully labor and try to overawe the timid. This is the kind of man who stands with one hand in the pocket of the public and with the other throws mud at anybody who protests against the robbery.

The people should be on watch. These profiteers are making every possible effort, even to the point of resorting to slander, to defeat those Members of Congress who stand in the way of their greed for gold. I quote here from an editorial in the Washington Times concerning the efforts of the profiteers against Henry Ford merely as an illustration of what they are doing against other men who object to their methods:

[From the Washington Times, Saturday, June 29, 1918.]

WHY DO THEY ATTACK HENRY FORD?

Have you noticed the particular brand of profiteering, Government-robbery "patriotism" that talks so much about its own great love of country?

Just at present its agents are busy with Henry Ford, the automobile man of Detroit.

Ford thought he might do useful work in the United States Senate and ended to become a candidate.

Immediately there was a howl from the whole profiteering gang, reaching from the nice mahogany inside office in Wall Street, all through a choice collection of newspapers of doubtful ownership.

The attacks on Henry Ford have taken every form but the truth.

Some "patriots" say he shouldn't be sent to the Senate because he is a pacifist and "we want no pacifists in the Senate."

The truth is, of course, that he is building ships to destroy German submarines and tanks to override German regiments and working for the Government without profit.

Other profiteer patriots say Henry Ford shouldn't go to the Senate because he is "pro-German." Ford wisely hoped that the war would end with as little killing as possible; he spent his money in the noble effort to bring the war to a decent end. For such "reason" those who rob the Government with one hand and sling mud with the other accuse him of being pro-German.

Such is the man whom the profiteers denounce. The newspapers that they own lie about him as they do about others whom they fear.

You need not be told why they hate Henry Ford. He pays his men too well. He turns the accepted profiteering idea upside down.

The men that attack him believe that you should give your workmen as little as possible and charge the public as much as possible.

Ford's plan is to pay his men generously and sell the product of their labor to the public as cheaply as possible.

He has established himself beyond reach of all competition, not by criminal combination, keeping down men that work for him, and monopolizing a market, but by good service, marvelous economy based on organization, and on the enthusiastic cooperation of workmen well paid.

The profiteers of the Nation hate Ford and lie about him automatically. His treatment of his workmen, his building up of the idea that those who do the hard labor should get something, is not his worst crime in the eyes of the professional "patriots," who, as Johnson well said in his dictionary, choose "patriotism as the last resort of scoundrels."

Henry Ford's unforgivable crime is the fact that he advocates Government ownership of railroads and other natural monopolies.

Their fight, however, will be in vain. Patriotism is not the monopoly of gentlemen who are serving their Government on a basis of 500 per cent or 1,000 per cent profit.

Wall Street gamblers and profiteers will not blacken the character of Henry Ford, who worked for peace while there was hope of peace and who works only for his Nation's victory now.

You readers of the Times, especially those of you that have read this column regularly, need no explanation of these attacks on Ford by men who call themselves patriots.

You know the brand of patriotism that steals fifty millions from the Government and gives fifty thousand to the Red Cross.

You know the brand of patriotism that buys the workman's labor and sells the workman his food and always arranges it so that the amount he gets paid for his work is barely enough to pay for what he must eat in order to work again the next day.

For to-day think over the case of Henry Ford. Don't forget that what applies to Henry Ford applies equally to every other man who has ever said a good word for the workman, who ever opposed the theory that a few private individuals should exploit the people of this country and own the public properties of the country.

The profiteering monopolists' day is soon to end; lucky if they escape in possession of what they have already stolen. And they know it—much to their bitterness.

Mr. Speaker, that is the statement of a newspaper published in this city of Washington, the capital of the Nation. We must face these plunderers of the people; we must defy the profiteer and his political henchmen. Let us tax these ghouls; let us tax their ill-gotten gain, their millions, until we take from them all their excess profits, and thus make it no longer a temptation to them to gouge the people.

EXTENSION OF REMARKS

OF

HON. MARVIN JONES,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 6, 1918,

On the conference report, Army appropriation bill (H. R. 12281).

Mr. JONES. Mr. Speaker, the conference report brings this measure before the House in substantially the same form in which it originally passed the House several weeks ago.

It is one of the most important measures that we have enacted, inasmuch as it authorizes the President to raise an army without limit for overseas duty. For this purpose it carries the largest appropriation ever made by a legislative body as a means of equipping that army.

And the objects to be attained fully justify the law. We are fighting an organized force that has destroyed the peace of the world and that is seeking to destroy the liberties of its peoples; a force that has tried to justify pillage, murder, and destruction; a force that has recognized neither justice nor law when they came at cross purposes with its desire.

With those responsible for such a creed and its consequent outrages there can be no compromise or halfway agreement. We must have a victory unquestioned. Anything else would be temporizing. The arrogant rulers who are responsible for this tragedy that is shaking the world must be made to know and to acknowledge defeat. As our great President has so tersely expressed the matter, "this will require force, force to the uttermost, force without stint or limit," but that force is not only fully justified but is made necessary by the wrongs that have been deliberately planned and perpetrated by the military masters of the countries with which we are fighting. I heartily indorse this measure. I unreservedly indorse the statement and plans of our President. I fully believe in the necessity of an army without limit for overseas duty and in the use of the policy of "force without limit" in the accomplishment of the great purposes of this country.

The President is the world's leading statesman in the greatest crisis in history. He is our leader, our commander in chief. To him the oppressed people of earth are looking with confident expressions of hope. The times call for action, not long discussion. The conference report should be adopted and the bill passed.

"Dry-Weather Grains for Food."

SPEECH

OF

HON. JAMES V. McCLINTIC,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 28, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the substitute for the bill (H. R. 7795) to provide for the national security and defense and further to assure an adequate supply of food, by authorizing the Secretary of Agriculture to contract with farmers in certain areas for the production of grain through advances, loans, and otherwise, and by providing for the voluntary mobilization of farm labor, and for other purposes.

Mr. McCLINTIC. Mr. Chairman, at the beginning of the war no one dreamed that a condition would be brought about where it would be necessary to curtail the use of grains in the manufacture of flour and food products. The citizens of the United States have always enjoyed the utmost freedom along every line, and when rules and regulations were put into effect regulating the amount of wheat flour that could be used in the manufacture of bread it caused a few to complain. However, the majority, realizing the situation that was confronting the citizenship of the United States, immediately acquiesced in this new regulation, and the same has been lived up to in such a way as to cause the citizens of this country to receive the commendation of everyone.

Prior to the time the United States entered into the war Mr. Herbert C. Hoover, who has charge of the Food Control Department, was in Europe performing this kind of service for Belgium. He had made a survey of the situation that existed over there, and he sent a cablegram to one of the leading New York papers which contained the information that unless cer-

tain conservations were made England and France would be out of certain kinds of food by the following September. Very soon thereafter the President urged that legislation be enacted into law creating a department that would have jurisdiction over all the products used in the manufacture of food. When this department was established plans were made to find out the exact condition that existed in every State of the Union and in all of the countries that are furnishing food to the United States and the allies. When this information was obtained it was found that unless some rules and regulations were put into effect governing the use of certain articles it would be impossible for the allies to receive a sufficient amount of necessities to properly provide for their soldiers, and for this reason the citizens of the United States were called on to make sacrifices by obeying the regulations which caused meatless and wheatless days to be observed in each week.

The object of this legislation is to encourage the farmer to plant certain kinds of grain which can be grown profitably on land where wheat has failed or in sections of the country where wheat can not be raised to an advantage. The United States from a wheat-growing standpoint does not produce an excessively large yield. Many of the European countries by proper fertilization have caused the land to produce a very much larger average yield than is obtained from the land in the United States. The chief reason for this is that we have so much territory in this country that no modern methods to speak of are used in the cultivation of wheat, consequently our people have never been made to realize what it means to make sacrifices along this line. When the Food Department first put into effect rules and regulations the amount of substitutes used in the manufacture of flour was a very small factor; however, as the conditions grew worse it became necessary to increase the amount of substitutes until to-day we are using bread that contains only about 75 or 80 per cent wheat.

The object of the legislation now being considered is to bring about the greatest amount of assistance possible to those who are in need of help from the Government and, at the same time, to cause a greater amount of acreage to be planted in grains. The substitute flours now being used have demonstrated to the people that they can get along very well without the use of wheat; also that there are certain other grains which can be used in the manufacture of flour which when baked into bread makes a very palatable dish. Many of the citizens of this country are for the first time eating bread made from potato flour, Kafir corn, milo maize, and feterita. The bakers of the country have learned to mix these flours with such a degree of skill that excellent pastry and other products are being made in such a way as to meet the demands of their trade. It is true that some people have been disappointed because of the necessity of using substitutes. However, from a general standpoint there is no dissatisfaction and the people as a whole are willing to continue using substitutes as long as will be necessary. This legislation should not be enacted into law unless it can take care of every situation and section of the country where it is needed. I am specially interested in having sufficient provisions contained in the act so as to encourage those who are engaged in raising dry-weather crops, such as milo maize, feterita, and Kafir corn, for it has been demonstrated that all of these sorghums when used in the manufacture of flour make good bread. These substitutes are now being used by many of the people living in the countries where they are grown, and if the farmers could be properly encouraged it would cause certain portions of Oklahoma, Texas, Arizona, New Mexico, Colorado, and Kansas to be planted with crops of this kind and, in my opinion, increase the production of these kinds of grains many thousand per cent. The chairman of the Committee on Agriculture has said it would not be long until this country would be issuing bread cards. If his prediction is true then the quicker we can stimulate those sections of the country into planting larger crops the better it will be for the Nation at large.

There are thousands of people in this country who never tasted bread made of Kafir corn, milo maize, or feterita. Many of them do not know what they have missed. Some time ago one of my friends from Oklahoma sent me a small sack of flour made from Kafir corn. I had a portion of it made into bread and the balance into a currant cake. All of those who tasted this pronounced it a splendid substitute for wheat bread, and if there are any in the country who are troubled with indigestion it would not be amiss for them to try some of this excellent flour made from grain grown in a country where the altitude is high and the climate is dry.

Most of the people of this country were raised on corn bread; however, prior to the war the eating of this wholesome food had become practically a lost art. The curtailing of the use of

wheat flour has again brought corn bread back into general use and for my part I am very glad that this result has been accomplished. It is said a bushel of corn will make as much bread as a bushel of wheat and for this reason corn has brought a high price. Supply and demand, as a rule, are the governing factors that relate to every commodity. The abnormal conditions caused by the war have forced many changes, and while the price of corn has been too high, yet the people can take advantage of this situation by planting large crops of other kinds of grains which can be grown profitably, as they all will bring a high price as long as war conditions prevail. I am informed that Kafir corn, milo maize, and feterita are bringing approximately \$2 per bushel. If this is true then the farmers living in semiarid sections can grow these crops with profit.

Every activity of the Government is going ahead at full speed in order to increase the efficiency of our Army and the industries which are furnishing supplies to the same. The morale of the American people was never better. The spies and traitors who ran rampant over this country at the beginning of the war have to a large extent been apprehended and interned. The profiteers are beginning to yell because of the exposures that have been made which relate to their inhuman attempts to squeeze the life-blood out of the citizenship of this country by charging excessive prices. In my opinion the greatest enemy we have is the individual who from within strikes at the very existence of our people, and the quicker we can make an example out of some of these money-mad, would-be kings the better it will be for the Nation.

Mr. Chairman, I am always glad of the opportunity to aid in the passage of legislation that will increase the efficiency and bring proper aid to the citizens of our country. To make a long story short, we have to furnish food for our armies and the armies of our allies. To do this, to a large extent we have to grow it in this country. The object of this bill is to make it possible for the farmers who are in need of various kinds of seed to obtain same from the Government. I am hoping that Congress will use good judgment and pass a bill that will take care of every section of the country, thereby encouraging and stimulating the production of every kind of grain that can be used in the manufacture of flour.

Pensions and the War.

EXTENSION OF REMARKS

OF

HON. HENRY A. BARNHART,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. BARNHART. Mr. Speaker, this bill to pension the widows of Spanish-American soldiers is just and helpful as far as it goes, and I can cheerfully vote for it; but I want to again protest that soldiers and soldiers' widows who have been frugal and provided an income should not be denied pensions while others less careful or less fortunate or less industrious are given Government compensation for misfortunes, directly or indirectly, incident to wars in which our country's honor and its people's welfare were involved.

I have always doubted the policy of our country paying its soldiers such a low wage that pensions for any but those disabled and for dependents should be necessary. But such seems to be the practice in all wars and so pensions are necessary; and if soldiers of one war and their dependents are entitled to pensions, soldiers of every other war they have helped to win for our country should be given equal reward by the Government. It is a great sacrifice for men to quit their peaceful and profitable vocations and risk their lives and their health as soldiers, and we who stay at home should be willing to pay most liberally for soldiers' services. That is why I always vote for liberal pensions, and why I worked and voted to increase the pay of our soldiers fighting Germany from \$15 to \$30 per month and 10 per cent extra if they go to a foreign country to fight. It also prompted me to vote for the war-risk insurance law, for the civil-rights bill, for the law providing that the Government shall help to support the soldiers' dependents, and numerous other acts of much helpfulness, financially and physically, to all soldiers now on duty.

Indeed, I am proud to be a Member of a Congress and of a party that has put into force so much legislation beneficial to

our soldiers of all wars and their families. Here is a synopsis of what has been done by this House and the Senate since the Democrats came into power:

Passed the Sherwood pension law giving soldiers of the Civil War or the War with Mexico a minimum pension of \$13 per month to a soldier who had reached the age of 62 years and served not less than 90 days, and a maximum pension of \$30 per month to the soldier who had reached the age of 75 years and who had served three or more years.

Passed an act giving every soldier or sailor who had a medal of honor an additional pension of \$10 per month for life.

Passed the Ashbrook widows' pension law, which increased the pensions of widows of soldiers and sailors of the Civil War, the War with Mexico, or the War of 1812, from \$12 to \$20 per month to all widows who had reached or should thereafter reach the age of 70 years. Also by this act a pension was given to any widow who married the soldier or sailor prior to June 27, 1905, if the soldier or sailor had the required service. Formerly such a pension was not given to any widow who had married the soldier or sailor subsequent to June 27, 1890. The act also again made pensionable the widow of a Civil War soldier who had been placed on the roll under existing law and whose name had been dropped from the roll by reason of her marriage to another person who had since died or from whom she had been divorced upon her own application.

Passed an act to pension the survivors of certain Indian wars and the widows of those engaged therein. This law gave a minimum pension of \$20 per month to the soldiers and \$12 per month to their widows.

Passed a law known as the war-risk insurance, soldiers' compensation and insurance law. Section 314 of this law provides that the widow of an officer or enlisted man of the Army, Navy, or Marine Corps of the United States who served in the Civil War, the War with Spain, or the Philippine insurrection now on the pension roll or hereafter to be placed on the pension roll under existing law shall be paid a pension of \$25 per month.

Passed a law known as the Sherwood bill amended, which increases the pensions of all soldiers and sailors of the Civil War and the War with Mexico, as follows:

That from and after the passage of this act the rate of pension for any person who served 90 days or more in the military or naval service of the United States during the Civil War, now on the roll or hereafter to be placed on the pension roll and entitled to receive a less rate than hereinafter provided, shall be \$30 per month. In case such person has reached the age of 72 years and served 6 months the rate shall be \$32 per month; 1 year, \$35 per month; 1½ years, \$38 per month; 2 years or over, \$40 per month: *Provided*, That this act shall not be so construed as to reduce any pension under any act, public or private.

Where is the man who will deny that the party in power has been more generously helpful to soldiers of all wars than any other in the history of our country?

And now I want to digress from the subject of pensions to make a few observations on the all-important matters now so seriously concerning our country. Every pensioner, every soldier, and every citizen must realize that our country and its institutions are being attacked by a foreign foe, and we are compelled to defend and ought to do it with every ounce of man power and every dollar we possess.

We are engaged in war with Germany not because we invited it or wanted it. We were compelled to fight in defense of our rights vouchsafed by international law, which Germany helped to establish only to murderously violate. In every honorable way we sought to be tolerant with the fighting nations, but Germany willfully blew up our ships and killed our people after having been warned not to do it, thereby clearly indicating that she meant to include our country in her onslaught for world power. Everybody with a fair sense of justice now admits that the sinking of the *Lusitania* was a willful act, notwithstanding Germany's denial, as the commander of the U-boat which fired the murderous bolt has been given the iron-cross reward by the Kaiser; and everybody knows that we were ready to sell our supplies to Germany the same as to the allies, for we did sell her two shiploads when the big subsea freighter was welcomed to trade at our ports. But Germany was secretly our enemy from the beginning and attacked us when she thought, by declaring that she would kill our people and sink our boats, she could terrorize us into abandoning trade relations with the allies. She seemingly forgot that she sold munitions to our enemies in every war the United States had ever fought. And Germany must reap the whirlwind of defeat, for our country will live on as "the land of the free and the home of the brave."

But while Germany has shown us her treachery and her design to first destroy and then grab our country for subversion into autocracy, and we were compelled to fight her, political designers in our own country are indirectly trying to embarrass

our efforts to hasten the war to a speedy victory. They complain that what we do is either wrong or not done as they would do it. They criticize mistakes or misfits of men in our hasty marshaling of millions of men as "fall-downs" in our management, and encourage Germany by giving out the impression that we are victims of administrative mismanagement which nullifies our force in the war. And as fast as one of their charges of mismanagement is proven to be untrue, they are out with another of equal fallaciousness and scattering it with seditious effect.

We have already accomplished vastly more in the first year of the war than the heads of our Army and Navy hoped for. This refers to marshaling men and means of fighting and getting them safely to France. But there are some things here at home which can be improved. The man who takes advantage of the present crisis to profiteer off of his Government or off of the buying public may not be a traitor, but he is a near one. He would cripple his country and its necessary prosperity for his own financial gain and thus aid the enemy. And the dollar-a-year men who came to Washington in answer to a patriotic help call from our President with the ulterior view of securing contracts for their firms at excessive prices are the elder brothers of the profiteers, for they keep but half an eye on the Government's business interests the while they have an eye and a half on the profits of their own business.

The swivel-chair officers who are within the draft age, able-bodied and holding "safety" positions here in Washington without ever taking any real military training, ought to be either sent out with the fighting forces or remove their uniforms, so the men who are to do the fighting will not have to salute them as superiors and also draw less pay.

And we who are not in the fighting lines must make sacrifices—lots of them—for the safety and comfort of our boys in the trenches. The Army and Navy need money, the Government needs money, our soldiers and allies need food and clothing, and we must deny ourselves of enough money and enough clothing to meet the emergency. Our boys must not be neglected, and they will not be if each and every man and woman interested in our country's preservation and future happiness and prosperity will do his duty as he can do it.

But over and above all of these observations is our duty to all get behind the administration to win the war. We can not do this if we are carping and faultfinding. We must all pull together, and one way to do this is by taking the best possible care of our soldiers and their dependent ones, as this bill seeks to do, for it is highly necessary to a vigorous prosecution of the war to a complete triumph for the permanency of liberty and enduring peace.

Recess of Second Session, Sixty-fifth Congress.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. JOHNSON of Washington. Mr. Speaker, answering the inquiry just made by my colleague, the gentleman from Oregon [Mr. McARTHUR], let me say that I have thought since a recess of this Congress for 30 or 40 days was first proposed that it was not a desirable step. There is plenty of legislative work to be done here, and if not done now it must be done later. In my opinion, the House should have gone on with the consideration of the water-power bill and then proceeded with the bills on the various calendars, some of which have been waiting a long time. But to-day, when the proposal was made for unanimous consent for an adjournment every third day for about a month, the Senate having already made such an agreement, I felt that nothing could be gained by personal objection.

There is not time for Pacific coast Members to make the round trip and have more than 10 days or 2 weeks in their districts. Therefore no one of the Pacific coast Members felt that he could make an objection without having his purpose misunderstood. As a matter of fact, while there is a legislative recess, the second session of the Sixty-fifth Congress has not adjourned. Bills can not be passed, but there is plenty of work to do. Private business of every kind is being directed from bureaus in Washington, D. C., as a war necessity. Mail, telegrams, and inquiries of all kinds are now more numerous than

ever, owing to war problems. All Members urge their constituents to write, and fathers and mothers of soldiers are particularly urged to write with regard to allotments, allowances, and insurance. The debate on the floor this very morning has shown that unscrupulous lawyers in Washington City are offering to collect for a 20 per cent fee the back pay of soldiers who die in the service. As I suggested in a colloquy a few moments ago with the gentleman from Minnesota [Mr. KNUTSON], a congressional committee should be appointed to look into these practices. Under the laws recently passed payments of soldiers' insurance are protected, and it is not the intent of the law that back payments due to dead soldiers shall go to scheming lawyers in the city of Washington. Local lawyers in every congressional district are freely helping the distressed parents of the soldier dead, and I shall move at the first opportunity for a complete investigation of the practices which have just been exposed here.

Sabotage and Espionage.

EXTENSION OF REMARKS OF HON. JOHN E. RAKER, OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 13, 1918.

Mr. RAKER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following:

DEPARTMENT OF JUSTICE,
OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., June 27, 1918.

HON. JOHN E. RAKER.

House of Representatives, Washington, D. C.

MY DEAR MR. CONGRESSMAN: I have your letter of June 22, 1918, on the question of whether the civil courts are adequately dealing with hostile sabotage and espionage, or whether there should be a law enacted transferring the jurisdiction of such offenses to courts-martial.

You did not raise the constitutional question involved in any such transfer of jurisdiction to courts-martial; but the subject can not be thoroughly discussed without some reference to this constitutional question. It is perfectly plain to me that in the absence of a declaration of martial law, placing the whole country under military control, Congress could not constitutionally provide for the trial by courts-martial of civilians charged with offenses committed outside of military camps or other military territory. Even, however, if there were no constitutional hindrance, I feel that there is absolutely no evidence of any need for any such change. The laws against disloyalty, sedition, and antiwar activities of all kinds are effectively enforced, and since the passage of the sabotage act and the amended espionage act these laws cover the whole field of antiwar activity. At least, up to the present, no defects or omissions in these laws have been disclosed.

The complaints about the inadequacy of the laws or the inadequacy of their enforcement arise from the fact that people, under the emotional stress of the war, easily magnify rumor into fact, or treat an accusation of disloyalty as though it were equal to proof of disloyalty. No reason, however, has as yet developed which would justify punishing men for crime without trying them in accordance with the time-honored American method of arriving at the truth.

You ask whether my office is fully equipped to cope with the situation. Naturally the war situation and the new war statutes have brought a stupendous increase in the work of my department, which has had to be transformed from a peace to a war strength. This transformation has been in process since the outbreak of the war, and will go on as the needs for an increased force develop.

You ask for the number of cases since the beginning of the war that have been handled and successfully prosecuted by my department, and the number of cases tried in which no conviction was had. Inclosed you will find statistics of war cases to June 8, 1918. The assistant whose duty it is to tabulate these statistics happens to be ill at this time, and I am not able to bring them fully up to date. Feeling that you would prefer a prompt answer, I am sending you these statistics up to June 8. They can not be considered complete even up to that date, as

they are a compilation of the reports received from United States attorneys, and in these busy times these officials are seldom up to date in their reports. Cases not yet reported to the department are not included in these tabulations. The figures given represent, generally, cases rather than number of defendants; so that the number of defendants who have been, respectively, charged, tried, convicted, acquitted, or dismissed is greater than the figures given in the inclosed report. These statistics relate exclusively to war cases. For instance, the cases mentioned under sections 37 and 332 of the Criminal Code relate to conspiracies to violate or bring about violations of the selective-service act or other war statutes.

The large number of cases dismissed under section 5 of the selective-service act may need a little explanation. These are cases of failure to register for the draft. Most men arrested for failure to register are inducted into the military service rather than prosecuted and punished; so that the dismissal of these cases means that, at the request of the military authorities, the defendants have been inducted into the military service.

Most of the cases dealing with sedition and disloyalty are those recorded under the espionage act and under sections 37 and 332 of the Criminal Code. Some of the cases under other sections of the Criminal Code and under section 6 of the selective-service act are also disloyalty and sedition cases. In most Federal courts the espionage act has been very broadly and liberally interpreted, and acquittals are very exceptional. That act has proven a very effective weapon against hostile propaganda, and the recent amendments will increase its effectiveness.

I feel that these statistics speak for themselves. My department has examined thousands of complaints similar to those to which you refer, and seldom, indeed, have we found cases which warranted prosecution and conviction but did not receive that treatment.

Respectfully, (Signed) T. W. GREGORY,
Attorney General.

DEPARTMENT OF JUSTICE,
Washington, D. C., June 8, 1918.

MEMORANDUM.

The statistics of war cases to date are as follows:
Selective-draft act.

Section 5:	
Plead guilty	1,827
Dismissed	779

DEPARTMENT OF JUSTICE,
Washington, D. C., June 11, 1918.

Hon. JOHN E. RAKER,
House of Representatives, Washington, D. C.

Sir: This department has the honor to acknowledge the receipt of your letter of June 5, 1918, respecting the arrest and preliminary examination by State and county magistrates of persons accused of crimes against the sabotage and espionage laws.

Section 1014 of the United States Revised Statutes provides, in part, as follows:

"For any crime or offense against the United States the offender may, by any justice or judge of the United States, or by any commissioner of a circuit court to take bail, or by any chancellor, judge of a supreme or superior court, chief or first judge of common pleas, mayor of a city, justice of the peace, or other magistrate, of any State where he may be found, and agreeable to the usual mode of process against offenders in such State, and at the expense of the United States, be arrested and imprisoned, or bailed, as the case may be, for trial before such court of the United States as by law has cognizance of the offense."

Under the foregoing provision of section 1014 of the Revised Statutes there would seem to be no doubt of the power of the State or county peace officers to arrest persons committing Federal crimes according to the practice of the State wherein the offender is apprehended and of the judicial officers described in the statute to hold such persons to answer for the crime of which they are accused for the proper Federal court.

Respectfully,
JOHN LORD O'BRIEN,
Special Assistant to the Attorney General.
(For the Attorney General.)

Spanish War Widows' Pensions.

EXTENSION OF REMARKS

OF

HON. HENRY ALLEN COOPER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. COOPER of Wisconsin. Mr. Speaker, the House has by the overwhelming vote of 228 to 7 indorsed the Senate bill providing pensions for the dependents of the men who served in the War with Spain. I regret that the bill did not provide a larger amount than \$12 a month, and I sincerely trust that the eloquent and forceful expressions of the acting chairman of the Committee on Pensions [Mr. KEATING] and of other gentlemen will in due time result in action by Congress which will place the widows of that war on the same pensionable basis as are the widows of all our other wars.

The unselfishness of these service men of 1898 in asking for relief only for dependents and nothing for themselves made a powerful appeal to the membership of the House, and we have in small measure rendered tardy justice in passing this bill.

It has sometimes been thoughtlessly, sneeringly said that the War with Spain was a "small affair," and yet there were 12,000 deaths among the 335,000 Volunteers and a large number among the 100,000 Regulars in the service during one year. Nor should it ever be forgotten that these soldiers met death in the service of their country during a war which in its consequences was one of the most important in recent generations, for it drove the last vestige of medieval despotism from the Western Hemisphere and from the far-off Philippines, and made this Republic, for the first time in its history, one of the really commanding figures in the arena of world politics. No; not a "small affair" was the war which so grandly advanced our country's prestige and influence and gave to millions of downtrodden, helpless people the priceless blessings of liberty.

The gentleman from Pennsylvania [Mr. CRAIG], a Republican, introduced the bill first in 1912 and succeeded in getting it through the House. The gentleman from Ohio [Mr. KEY], a Democrat, succeeded in getting similar bills through the House in two subsequent Congresses. The gentleman from Colorado [Mr. KEATING], in the absence, on account of illness, of Chairman KEY, of the Committee on Pensions, had charge of the present bill in the House. Much credit is due to these gentlemen for their persistent labors to secure this legislation.

I am informed that more than 40,000 of the men who served in the War with Spain are again serving with the colors "over there" in the present war, and that in response to a further offer of service by the veterans the President of the United States wrote the commander in chief of the veterans the following letter:

MAY 14, 1918.

MY DEAR MR. BUSCH: I have received your letter of May 6 and beg to express to you and through you to the United Spanish War Veterans my deep appreciation of the spirit which animates the offer of service contained in your letter. The Secretary of War advises me that early in the present emergency men who had received training in the Spanish-American War volunteered in great numbers; many of them had maintained a connection with the War Department and were on the lists of reserve officers subject to immediate call. Others came, and an inspection of their Spanish War records enabled the War Department quickly to secure from their ranks a great number of men who have been and are rendering valuable service, both active military service at the front and organization work at home.

Whether or not further use can be made of these veterans will be carefully inquired into by the Secretary of War, to whom I have communicated your offer. In the meantime I am happy to be able to say that the country is indebted already to a great number of members of the society for services of great value.

Cordially, yours,

WOODROW WILSON.

Recently an officer of the veterans of the War with Spain gave me some data respecting the patriotic activities of the organization, from which I find that the distinguished gentleman representing the fourth district of Minnesota [Mr. VAN DYKE], a veteran of the War with Spain, is the national patriotic instructor of the order. The data should interest every American citizen. The letters which he sent to all the camps of the order in the United States and to the governor of each State, urging strong patriotic programs for July 4 last have brought many reports from the veterans throughout the Nation and many appreciative letters from governors, which also will

be of interest to the House and to the country. I here insert a portion of the correspondence:

UNITED SPANISH WAR VETERANS,
Washington, D. C., June 20, 1918.

DEAR SIR AND COMRADE: At this grim period of our Nation's life, when the entire world is in the throes of the most gigantic struggle of history, it devolves upon the men who have followed the flag to instill and place patriotism at its highest point in the hearts of all Americans, and I earnestly urge that your camp see to it that the Spanish War veterans are represented on every program of exercises held in this country on the Fourth of July. Arrange to have a Spanish War veteran on the program to open the exercises by requesting the audience to rise and administer to the people assembled a pledge which was administered in the encampment of the Department of the District of Columbia, held in Washington June 15. This pledge, which appears on the inclosure, has the approval of the President of the United States, as will be noted from the letter following the pledge.

Also secure, if possible, prominent public men who are Spanish War veterans as orators for this occasion.

Send me as promptly as possible detailed account of the program as carried out in your vicinity, in order that I may give proper credit to the various camps in my annual report at the national encampment in September.

Address: House of Representatives, Washington, D. C.

Yours, in F., P., and H.,

CARL C. VAN DYKE,
National Patriotic Instructor.

PLEDGE TO BE ADMINISTERED TO ASSEMBLAGE AT THE OPENING OF
EXERCISES JULY 4, 1918.

In the presence of Almighty God I sincerely pledge myself to aid my Government with all the power I possess in the great world struggle now in progress for the democracy of the world, for the perpetual safety of the small nations as well as the larger ones.

I further pledge my life and all my worldly goods to aid the President of our Nation in directing the American forces with our allies to success in their grim and determined fight for freedom, patriotism, and humanity, following the example set by us 20 years ago in behalf of the Republic of Cuba.

THE WHITE HOUSE,
Washington, June 17, 1918.

COMMODORE JAMES E. MAYNARD,
3033 Sixteenth Street, Washington, D. C.

MY DEAR MR. MAYNARD: The President asks me to acknowledge the receipt of your letter of June 15 and to thank you warmly for your courtesy in letting him see the accompanying copy of the oath subscribed to by the officers and delegates of your annual convention. He has read it with deep appreciation of its heartening pledges.

Sincerely, yours,

J. P. TUMULTY,
Secretary to the President.

WAR DEPARTMENT,
Washington, June 18, 1918.

MR. JAMES E. MAYNARD,
Department Commander United Spanish War Veterans,
3033 Sixteenth Street NW., City.

MY DEAR MR. MAYNARD: I have received your letter of June 15, inclosing copy of the Spanish War Veterans' pledge modified to embrace present world conditions.

I wish to thank you for bringing to my attention this hearty and encouraging expression of loyalty and patriotism.

Cordially, yours,

NEWTON D. BAKER,
Secretary of War.

UNITED SPANISH WAR VETERANS,
Washington, D. C., June 21, 1918.

HON. FRANK L. HOFF,
Governor of Wyoming, Cheyenne, Wyo.

MY DEAR GOVERNOR: I am inclosing copy of a circular letter I have sent to the officers of the Spanish War Veterans' camps in every State in the Union.

As national patriotic instructor of the order, it is my desire to have the loyalty pledge contained therein, which you will note has the approval of the President of our Nation, administered by an ex-soldier or sailor of the Spanish War, or by the presiding officer of the day, at the opening of all programs of exercises held in the United States on the Fourth of July.

I suggest that, if it meet with your approval, you issue a proclamation or statement from the governor's office embodying the pledge to be administered, and requesting all citizens of the State to cooperate with the United Spanish War Veterans in this matter, to the end that Independence Day this year be made more intensely fervent than ever.

Will you please advise me of your action, so that I may embody it, along with the action of the governors of the various States, in my annual report to the twentieth annual convention to be held in Baltimore, Md., in September.

Very truly, yours,

CARL C. VAN DYKE,
National Patriotic Instructor,
United Spanish War Veterans.

Following are several of the replies received:

STATE OF KANSAS,
Topeka, June 28, 1918.

HON. CARL C. VAN DYKE,
House of Representatives, Washington, D. C.

DEAR MR. VAN DYKE: I have your letter of June 24 in regard to the pledge to be administered at Fourth of July celebrations. I am in hearty sympathy with this suggestion and will make an appeal to the people of Kansas, asking them to see that your request is observed throughout the State.

Very respectfully,

ARTHUR CAPPER, Governor.

STATE OF ILLINOIS,
OFFICE OF THE GOVERNOR,
Springfield, June 29, 1918.

MR. CARL C. VAN DYKE,
National Patriotic Instructor, Spanish War Veterans,
Washington, D. C.

MY DEAR MR. VAN DYKE: Prior to the receipt of your letter of June 24, I had already issued a proclamation on the observance of July 4th, a copy of which I inclose herewith. I regret that your inquiry came too late to make some reference to the pledge which you request should be taken in each assemblage at the opening of the exercises. I think your idea is excellent. I have given the pledge to the press with the suggestion that it be utilized in the Independence Day exercises wherever possible.

Yours, very truly,

FRANK O. LOWDEN.

STATE OF NEBRASKA,
EXECUTIVE OFFICE,
Lincoln, July 3, 1918.

MR. CARL C. VAN DYKE,
United Spanish War Veterans,
House of Representatives, Washington, D. C.

DEAR SIR: Your letter requesting the issuance of a proclamation came too late for me to comply with your request, as I would like to have done.

I am, however, handing your letter to the press representatives with the request that they carry a story in regard to this.

Yours, very truly,

KEITH NEVILLE.

EXECUTIVE OFFICE,
Phoenix, Ariz., July 3, 1918.

MR. CARL C. VAN DYKE,
Care of United Spanish War Veterans,
House of Representatives, Washington, D. C.

MY DEAR MR. VAN DYKE: I am in receipt of your communication of June 24, with copy of circular letter sent out to the officers of the Spanish War Veterans.

I regret exceedingly to advise that this was received too late to be included in my Fourth of July proclamation, but it so meets with my approval and my idea of what is fitting for a real celebration of this Independence Day that I am taking the liberty of bringing it to the attention of the committees in charge of local celebrations throughout this State.

Sincerely, yours,

GEO. W. P. HUNT,
Governor of Arizona.

STATE OF NEVADA,
EXECUTIVE CHAMBER,
Carson City, July 3, 1918.

HON. CARL C. VAN DYKE,
National Patriotic Instructor,
United Spanish War Veterans,
House of Representatives, Washington, D. C.

MY DEAR MR. VAN DYKE: I am in receipt of your letter of the 24th ultimo, which came to my attention on the 1st instant. Unfortunately this left no time in which to issue a proclamation along the lines suggested by you, since many sections of our State can not be reached within three or four days.

It may interest you to know, however, that I am to make an address to-morrow at a meeting of the Spanish War Veterans near Reno and that a very large gathering of these heroes of a former war will be on hand. I think it quite probable that the Spanish War Veterans will be represented in nearly every patriotic demonstration held in Nevada, even without proclamation from the executive office.

Thanking you for having called this matter to my attention and trusting that you will understand the reasons for my not complying with your suggestion, I remain,

Very truly, yours,

EMMET D. BOYLE, Governor.

STATE OF MICHIGAN,
EXECUTIVE OFFICE,
Lansing, June 26, 1918.

HON. CARL C. VAN DYKE,
House of Representatives, Washington, D. C.

MY DEAR MR. VAN DYKE: This is to acknowledge receipt of your letter to Gov. Sleeper, with inclosed copy of your circular letter to the officers of the Spanish War Veterans camps in every State in the Union.

I shall take up with the governor at the earliest opportunity the matter of issuing a Fourth of July proclamation, but the date is now so late that it would be hardly practicable for us to have a proclamation printed and issued in time to accomplish the end you have in view. The governor might give out a statement to the newspapers, which would practically cover the ground, however.

Very truly, yours,

ROLPH DUFF, Secretary.

STATE OF MAINE,
OFFICE OF THE GOVERNOR,
Augusta, June 28, 1918.

MR. CARL C. VAN DYKE,
National Patriotic Instructor,
United Spanish War Veterans, Washington, D. C.

DEAR MR. VAN DYKE: I have read with interest and approval the patriotic pledge suggested by your organization.

Yours, very truly,

CARL E. MILLIKEN.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
Indianapolis, June 28, 1918.

MR. CARL C. VAN DYKE,
National Patriotic Instructor,
House of Representatives, Washington, D. C.

DEAR SIR: I have your letter of June 24, inclosing your plan of having a loyalty pledge read by an ex-soldier or sailor of the Spanish War at the opening of all programs held in the United States on the Fourth of July, and I take pleasure in indorsing the same.

Very truly, yours,

J. P. GOODRICH, Governor.

THE STATE OF COLORADO,
EXECUTIVE CHAMBER,
Denver, June 27, 1918.

MR. CARL C. VAN DYKE,
National Patriotic Instructor,
United Spanish War Veterans,
House of Representatives, Washington, D. C.

DEAR SIR: On behalf of Gov. Gunter, I have the honor to acknowledge receipt of your letter of June 24, and beg leave to inform you that the governor issued his Fourth of July proclamations some time since. The governor was requested to issue the proclamation early in order that it might have wide publicity.

The patriotic exercises in Denver will be under the supervision of the Spanish-American War Veterans.

Respectfully, yours,

WENDELL STEPHENS,
Secretary to the Governor.

STATE OF NORTH DAKOTA,
OFFICE OF THE GOVERNOR,
Bismarck, June 29, 1918.

HON. CARL C. VAN DYKE,
House of Representatives, Washington, D. C.

DEAR SIR: This is to acknowledge receipt of your letter of June 24, and to say that the same will be called to the governor's attention immediately upon his return to the office.

Yours, very truly,

N. A. MASON,
Secretary to the Governor.

MISSISSIPPI,
EXECUTIVE DEPARTMENT,
Jackson, July 1, 1918.

HON. CARL C. VAN DYKE,
National Patriotic Instructor,
House of Representatives, Washington, D. C.

MY DEAR SIR: Your letter of the 24th ultimo received in the absence of the governor. I fear he will not return in time to issue the call or proclamation you suggest though I feel he would gladly do so. If he returns in time it will have his personal consideration and attention.

Yours, very truly,

W. J. BUCK, Private Secretary.

Credit for Volunteers.

SPEECH

OF

HON. EDWARD C. LITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 12, 1918.

The House had under consideration Senate joint resolution (S. J. Res. 123) providing for calling into military service certain classes of registered men; to change the quotas of States and districts from population to the basis of those placed in class 1.

MR. LITTLE. Mr. Speaker, I would like to say a few words in support of the attitude taken by the gentleman from South Carolina [Mr. NICHOLLS] in these three minutes. I had not really intended to speak on this resolution, but the discussion of yesterday rather attracted my attention, and the rumble of the guns over in France, I think, confirmed me in my interest. Under the volunteer system one community sent more than another sometimes. The draft was adopted to stop that. Yet here the department is at it again.

As I look at this resolution, we have already disposed of the volunteers, who have fought all the battles of this country for 125 or 130 years. By virtue of the old motion of the gentleman from California the volunteers of other years are "discharged without honor," as "inefficient," but not by my vote. They are practically no more, and the purpose of this resolution, as I understand it, is to see that the districts that send volunteers do not get any official credit for it. For example, if a district should send all its men from 16 to 60 to the war as volunteers and then should be assigned a certain number in the draft, it would receive no credit for the volunteers it had sent and would be still required to send people to supply the draft quota. I suppose we would have to adopt the policy that the gentleman from California suggested on the woman-suffrage question; and that is, call in all the women and kill them.

Under the terms of this provision a district might send to war every male over 16 and still be called on for a draft of thousands. There is in this resolution, therefore, a fallacy. Any measure that could permit such a condition as that is naturally fallacious somewhere. It seems to me that the ordinary principles of equity should suggest that each portion of this country should supply its proportion of the men who are to go to war; and if the districts should do that by volunteering, I do not know of any reason why those families should be called upon again to send men to the conflict. For example, if there are two brothers in a family, and the family decided that one of them is the proper person to go, and he goes as a volunteer, the draft may

come along in a few months and take the other one. That is liable to happen; and they receive no credit for the man who is gone. When you and I voted—on page 1557 of the RECORD—for equal service, we meant equal service. It was not our intention that 50 men should come from one 500 and 10 men from another 500. Out of nine counties in our district, three in the first draft furnished more than their quota. The other counties came within a very narrow margin of supplying by volunteers all that the draft called for. The three counties which I have mentioned did not have to send any. The district itself, if considered as a unit, would have been called on to furnish only 148 drafted men. I am told that they have had credit for them to date; but under the terms of this bill they will be deprived of that credit and will be called upon for the completion of their full quota, dating back to the first, and will have no credit for what they have already done. An American Army should be representative, equally drawn from each community. It is not to the best interest of the Nation to exhaust one community while another is but lightly touched. That is the very principle on which the draft is based. Yet you want to violate that principle and tax one village more men than another of the same population. We have from our district one volunteer regiment in France right now, and there is no reason why we should furnish more than our quota unless you give us credit for sending better soldiers and find ours a better district to get men from. [Applause.]

Pensions.

EXTENSION OF REMARKS

OF

HON. EDWARD E. ROBBINS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 9, 1918.

On the bill (S. 4444) to pension widows and minor children of officers and enlisted men who served in the War with Spain, Philippine insurrection, or in China.

MR. ROBBINS. Mr. Speaker, when this bill was taken up it obtained its place for consideration only by suspending the debate then running on the water-power bill, hence the time was limited, and for fear that amendments might be offered and thereby defeat its consideration, it was suggested that the friends of the measure refrain from occupying the time of the House in making addresses in favor of the passage of the bill, which was so important to those interested.

This bill has had a stormy career in Congress; as I am informed, the opposition has always been sufficiently effective to defeat it in the past.

On the 4th of December, 1912, in the Sixty-second Congress, the bill was passed by the House, only to die in the Senate. On the 1st of April, 1914, in the Sixty-third Congress, this bill in substantially the same form was again passed in the House with but 75 dissenting votes, but the Senate refused to consider it. On the 16th of February, 1916, the same bill, in substantially the same form, was again enacted in the Sixty-fourth Congress without a dissenting vote and without a roll call, and the Senate again refused to pass it, and now, in the Sixty-fifth Congress, this same bill was passed, but in a different form, and sent over to the Senate, and on the 3d of June the Senate passed the bill in the form we now have it here, and it is of vital importance that the House concur therein and enact the same bill without amendments if it is to become a law during this session. Hence amendments and speeches played no part in the consideration of this legislation. The friends of the measure demanded a vote, and that promptly and without delay. This bill is not identical with the House bill, but accomplishes the purpose in a general way, which will be dropped when this one is enacted into law.

The purpose of the bill is disclosed by its title. It proposes to give to the widows of the soldiers who served in the War with Spain, the Philippine insurrection, and the Boxer rebellion in China the sum of \$12 per month during widowhood and \$2 per month for each dependent child under the age of 16, and this pension shall be granted to every woman whose income, exclusive of her own labor, does not exceed \$250 per year. There is also a provision that the pension shall be extended to insane, idiotic, or helpless children during the lifetime of such.

This law is most just. Indeed, the first thought that comes into one's mind in considering its terms is, Should these pen-

sions not be as liberal as those we give the widows of the men who served in the War of the Rebellion, who under section 314 of the act of October 6, 1917, were placed on the pension roll at the rate of \$25 per month, with the same provision as to helpless children or children under the age of 16?

My first impression was to offer an amendment to increase this amount to \$25 a month, but upon reflection and after consultation with the friends of the measure in the House—there being quite a number of Spanish War veterans who are Members of the House—we agreed that we might thereby imperil the passage of the bill and might prevent any pensions at this time being granted to these deserving widows and orphans of our comrades; hence we all canvassed and worked vigorously for the passage of the bill in its present form, with the hope that in the near future these widows can be placed on a parity with other soldiers' widows.

It is true, widows of Spanish-American War veterans are young and can help themselves more than the widows of the Civil War veterans, but the fact that they are young in many instances entails upon them the additional burden of having a family of young children to support. Our hope is that in the near future they will receive their just and proper dues.

Moreover, the provisions of this bill have the indorsement of the Spanish-American War Veterans' Association and also the Veterans of Foreign Wars, and relying on these indorsements the friends of the bill on the floor of the House have done their very best to procure its prompt passage in its present form.

The liability the General Government will incur by the passage of this act will be to place on the pension roll not to exceed 4,000 very needy widows, together with such children of these as come within its provisions.

In the War with Spain there were engaged, from first to last, 443,000 soldiers and sailors. These were distributed about as follows: 100,000 Regulars, 335,000 Volunteers, and 8,000 sailors. During the War with Spain and the insurrection in the Philippines these were engaged in 826 battles and skirmishes, 515 were killed or wounded in action, and over 12,000 died from disease and exposure. This was the first war in which the American soldiers and sailors were called upon to serve in the Tropics under climatic and hygienic conditions entirely new and for which they were totally unprepared. These men were all volunteers; neither bounty nor substitute money stimulated or induced them to enlist, nor was there a draft law that compelled them to do so. These men, therefore, embraced our most patriotic citizens. They were willing to go, to leave all, and volunteered to serve, and a liberal financial provision should be made to care for them and their dependents in this hour of their necessity.

The percentage of losses in the Spanish War and in the Philippine insurrection was larger proportionately than it has been thus far in the present war, and the deaths from disease were larger than it is believed they have been or will be in this present war. This indicates clearly how rapidly medical science has advanced and how much greater care the Government of the United States and charitable organizations cooperating with it now have for our brave soldiers engaged in the present gigantic military struggle. What a consolation it is to all of us now, and what comfort it will be to those who have contributed to this great work of ameliorating the sufferings of this war in after years, to know that they have accomplished so much.

For the first 12 months of the present great war we have been able to send to Europe, fixing the date between April, 1917, and July, 1918, about 1,000,000 American soldiers, sailors, and marines. While it is true these have not all been engaged on the battle front, yet up to the 1st of July the reports show that the deaths from wounds and disease combined only aggregate 8,634. The fatalities of the Spanish-American War, of practically the same length of time, with less than half the men engaged, were 12,000. Therefore, judged by these melancholy figures, the Spanish-American War was more fatal to the men engaged in it than the present war has thus far been.

It is therefore with great satisfaction that I cast my vote in favor of this bill, even though it is 20 years, practically, since the Spanish-American War occurred. This bill will do tardy justice to these deserving widows and dependents of those brave and patriotic men who volunteered to fight, and die if need be, in defense of the great principles of liberty for which the American Republic then contended. That was a most unselfish contest. It was the submission to the arbitrament of arms of a most just cause—the expulsion of Spain from the Western Hemisphere, which was the plain duty of civilization. Spain had long maintained on the island of Cuba a cesspool infected with yellow fever and other contagious diseases which were constantly infecting our southern ports and, indeed, overrunning a large portion of our Southern States. Protests were in vain, and offers of assistance by medical and sanitary organizations

were indignantly repulsed; but finally, when the cruel butcher, Weyler, was placed in command as Captain General of Cuba and dug a trocha across that island and deliberately set about, after dividing the island in half, to carry out the cruel and relentless task of exterminating the entire population, Christian civilization could no longer remain passive, and the United States determined to put a stop to conditions that could no longer be tolerated. It was this character of warfare that these men, the husbands of these widows, volunteered to prosecute and did prosecute to a victorious conclusion.

The extraordinarily high death rate from disease among our troops during the War with Spain, considered in the light of the number of soldiers engaged therein and its duration, makes this without doubt our most disastrous war. The terrible death rate of this war has not generally been appreciated. It followed too closely our great Civil War, where about 2,700,000 men were engaged on the side of the North alone, and is now overshadowed by the present world war, into which we will send perhaps 5,000,000 men, to ever receive the consideration to which it is entitled. Speaking from my own experience as an officer in that war in charge of the transportation of the dead as well as of the living, I venture to state that more soldiers died from disease in the War with Spain, in proportion to the number engaged, than in the War of the Rebellion or will die from the same cause in the present gigantic struggle.

My observation covers conditions at Camp Thomas, Ga., Tampa, Fla., Cuba, and Porto Rico. These camps were plague spots of fever, tropical dysentery, and other diseases. So notorious did these conditions become that my own State of Pennsylvania, on information I in part furnished, rescued from these hospitals two Pullman trains loaded with these stricken heroes, and thereby saved nearly all of them from sure death.

Let us here and now accord without reserve or hesitation to these noble volunteer soldiers the honor and praise that is justly theirs and to their widows and orphans the gratuity of a grateful people, deferred already, alas, too long.

The effect of this victory was not to humiliate or to conquer Spain, for we fired not one shot against the integrity of the Spanish nation, we torpedoed not a single ship flying the Spanish flag, but we liberated Cuba and set up therein a republic and have sustained it ever since. The Philippine Islands were cast upon us by a merciful and all-wise Providence, and we are educating and training them to become either a self-governed colony of our own or an independent nation, as the natives of the Philippines themselves may determine. After completing this war of conquest we paid Spain \$20,000,000 for public improvements she had in the Philippines, and for the island of Porto Rico, which we were compelled to take to protect our Panama Canal, and \$12,000,000 to the friars for the title to lands which we have since vested in the government of the Philippine Islands. This liberal, fair, and righteous course of conduct upon the part of our Government is without precedent in the history of warfare between nations and has no parallel in the treatment given by a strong nation to a weak one in the hour of victory, and has even won for us the lasting friendship of Spain herself.

The widows of these noble men, inspired by such high and lofty ideals, have at last received a measure of the recognition due them by the enactment of this legislation and the granting to them of these just pensions.

Rehabilitation of Wounded Soldiers and Sailors.

SPEECH

OF

HON. HORACE M. TOWNER,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 7, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 4557) to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military and naval forces of the United States, and for other purposes.

Mr. BANKHEAD. Mr. Chairman, in accordance with the arrangements made with Judge Towner, who has charge of the bill on the Republican side of the House, and representing the Republican section of the committee, I shall make a very brief preliminary statement with reference to the bill and then yield to the gentleman from Iowa. * * * For the present I yield to the gentleman from Iowa [Mr. Towner].

Mr. TOWNER. Mr. Chairman, it is a matter of great pleasure to all of us that throughout the various preliminary steps in the preparation of this bill there has been the most cordial cooperation, not only between the majority and minority members of the House Committee on Education but also between the Senate and House committees. After consideration by these committees of the bill separately they held joint hearings and considered the provisions of the bill in the light of the information and testimony submitted in the most courteous and harmonious spirit, with the single purpose of providing for the consideration of Congress a measure that would most effectually secure the supremely important and beneficent objects of the legislation.

The vocational training of disabled soldiers and sailors by the Government on the general plan now proposed is a new idea conceived and put into operation during the present war. All the principal nations engaged have now adopted some form of vocational training as part of the rehabilitation of their soldiers disabled in the service.

France was perhaps the first to take up the work systematically. The mayor of Lyon founded the first training school for injured soldiers. This school has become famous and has served as a model for many others. France has now over a hundred such centers for reeducation.

In England the trade schools, which already were doing a large variety of vocational work, have been utilized in training disabled soldiers and sailors. Many other schools have added classes for the work, and manufactories and workshops aid both in training and providing employment for those who return from service disabled.

Early in the war a military hospital commission was organized in Canada which at once undertook this rehabilitation work. It has since been developed under Government direction and support, until it has become one of the most efficient systems known. It is from the Canadians we have derived most help in the planning of our own system.

Coming into the war after the other nations had developed their systems of rehabilitation, the United States has had the benefit of their experience, and in the formulation of the proposed legislation we have endeavored to avoid the mistakes and to adopt the approved methods experience has demonstrated best adapted to existing conditions and our industrial needs.

HOW THE BILL WAS FORMED.

The bill in its present form is the result of about six months' investigation and consideration. It is preeminently a war measure. The Council of National Defense called a meeting to consider the proposition, composed of representatives of the various branches of the Government and experts in vocational work. After consideration this conference selected a committee composed of representatives of the Army, the Navy, the War-Risk Insurance Bureau, the Interior Department, the Surgeon General's Office, the Federal Board of Vocational Education, and the Secretary of the Council of National Defense, to formulate plans for legislation. This committee reported to the Cabinet members of the Council of National Defense, which approved the plan outlined. Tentative bills were submitted to the committees of the Senate and the House. These committees after hearings and consideration adopted the principles of the bill which is now under consideration. Identical bills were introduced simultaneously in the Senate and the House. The Senate first considered their bill, and after three days of careful and critical debate passed it as it comes to us by a unanimous vote.

VOCATIONAL EDUCATION IN UNITED STATES.

The first attempt to provide for vocational training under national provisions was made in 1862 by the passage of the Morrill Act. This law gave to each State 30,000 acres of public land for each Senator and Representative in Congress for the support of at least one college in each State, the leading object of which should be to teach agriculture and the mechanic arts. Subsequent acts supplemented this legislation and direct appropriations from the Treasury were made.

A broad and comprehensive act was passed February 22, 1917. This act created a Federal Board for Vocational Education consisting of seven members—the Secretary of Agriculture, the Secretary of Labor, the Secretary of Commerce, the Commissioner of Education, and three citizen members representing respectively labor, agriculture, and manufacturing. The law provides for appropriations from the National Treasury contingent upon a like amount provided by the State or locality. All the States have accepted under the provisions of the law and the system is now fully organized and in operation. The system is meeting with general approval and the work of the board thus far has been universally commended.

Immediately upon its organization the Federal board undertook the establishment of a series of special war training classes,

and began an investigation to meet the demands for the vocational training of disabled soldiers as they were returned from service. So that they have anticipated as far as authorized the work now to be committed to them.

It is to this board, already created for vocational training and already in successful operation, that the execution of the present law is to be committed. We may consider ourselves fortunate that we have already in existence an operative commission so well adapted to carry into successful execution the provisions of the contemplated legislation.

WAR-RISK INSURANCE ACT.

The establishment of the Bureau of War-Risk Insurance was the commencement of a series of legislative enactments of very great importance. Already seven acts have been passed by Congress relating to the subject. The act of October 6, 1917, made provisions for allotments to the families of soldiers and sailors, and for insurance for the benefit of injured soldiers, and for benefits, in case of death, to their families. This is one of the most comprehensive and liberal acts ever passed by any nation for the protection of its soldiers and their families. One of the provisions of the act gives disability compensation to those injured in the service graduated upon the extent of the disability and the number of the soldier's family.

Soldiers or sailors accepting vocational training under the provisions of this proposed bill are not deprived of any of the benefits of such disability compensation. It continues both to the disabled soldier and to his family just the same as if he were not taking the training. Neither does the acceptance of a civil position after training, with wages or a salary, deprive him or his family of disability compensation. The Government continues to pay him what the law provides, in addition to what he earns on his own account. Neither does the acceptance of benefits under the proposed vocational-training legislation in any way affect the Government insurance taken out by the soldier. His family will receive its benefits just the same as if the soldier were not taking the training.

PROVISIONS OF THE PRESENT BILL.

Out of all this investigation and this legislation has come the bill now before us. It is based upon the idea of vocational training already established as a national policy. It is to be administered by the Federal board already in the active work of vocational training. It is a part of and supplementary to our already adopted plan for compensation for those injured in the service. It is a rounding out and completion of plans for the compensation and protection of the soldiers and sailors of the Nation, the most complete, the most humane, and the most generous ever adopted by any nation in time of war.

Under the provisions of the bill any person who has been injured while in the military or naval service, and who after discharge shall be unable to resume his former occupation or to carry on some other gainful occupation, shall be furnished such vocational training as the Federal Board for Vocational Education shall prescribe and provide. Compensation is continued during the time while such training is carried on both for the soldier and his family. A soldier is free to accept or reject such training; it is not made compulsory. At the conclusion of such course of training the Federal board, in cooperation with the Department of Labor, is to provide for the placement of such rehabilitated persons in civil employment. The sum of \$2,000,000 is appropriated for the support of the work.

Under the plan proposed this is what will happen to an American soldier wounded in battle in France: First, he will be sent to an American base hospital. There he will receive such surgical and medical attention as is required. If he can not be returned to the service, he is placed in a hospital ship and brought back to the United States. He is placed in one of our receiving hospitals and is there given such rest and attention as is required. If his condition will permit, he is then given a furlough for a visit to his home. After his vacation he is sent to the central hospital, of which there are 16, nearest his home, where his medical or surgical treatment is continued. During the period of his hospital treatment the question of his vocational training is considered. It is contemplated that three elements enter into this proposition: First, the desire of the injured man. As far as possible regard is given to this. Second, the opinion of the medical officers who have control and direction of his physical rehabilitation. Third, the advice of the vocational expert who, with knowledge of the individual and his capacities, must determine where in the industrial world he can be most advantageously placed.

In cases where it can be done the man will be returned to his previous occupation. Especially is that true with agricultural workers. Occupations must be selected, however, that do not require effort incompatible with the soldier's disability. As far as possible his past experience will be utilized. If a man has

worked in a factory at one part of the work for which he is not fitted because of his disability, another place in the factory may be found for him. A mechanic may become a designer or superintendent; a mason or carpenter, an inspector. Those who have lost arms or legs may become bookkeepers, stenographers, teachers, and so forth. Places may be found for the seriously disabled running news stands, small shops, lunch counters, and so forth.

The occupation determined, it may be that his vocational education will begin in the hospital as part of his therapeutical treatment. Functional rehabilitation is sometimes a slow and tedious process and must be carried on under medical supervision. All this time the soldier is still in the service. He is not discharged until he is physically well.

When discharged the soldier, if he elects to pursue a course for vocational training, is placed under the supervision of the board. The course varies in length from 3 months to 18 months. The average is probably about 6 months.

After the course is completed a position is found and the wounded soldier takes his place as a wage earner and a self-supporting independent member of society.

RESULTS.

The practical results of this work, as demonstrated by the experience of all the belligerent nations engaged in the present war, have been not only satisfactory but astonishing.

The experience of other nations, and especially Canada, whose relation to the war most nearly approximates our own, has shown that about 1 per cent each year of the enlisted men will be returned as proper subjects for vocational rehabilitation. That will mean that for every million men we send across 10,000 each year will be returned to us to receive the benefits of this legislation. If we have 3,000,000 men in service, 30,000 each year will return disabled; if 5,000,000, preparation must be made to care for 50,000. It will be seen from this statement that while the percentage seems small, the unprecedented numbers engaged make the task a tremendous one.

Out of those disabled who are proper subjects for vocational training, about 80 per cent voluntarily take the work. And out of those who take the work a like proportion complete the course and enter successfully into civil employment.

Mr. Kidner, secretary of the Canadian commission, who was sent here by the Canadian Government at the request of our Government to assist in the formulation of this legislation, in his testimony before the Senate and House committee said:

We have had no reluctance on the part of our men in Canada to undertake this training. They are eager to take it.

Dr. C. A. Prosser, director of the Federal Board for Vocational Education, who was sent to Canada to study their system, reports:

I have never seen in any schoolhouse in America such application and such uniformly good, earnest conduct as there was on the part of soldiers undergoing reeducation in the schools of the Canadian commission.

The success of those who have taken this vocational training and have found places in civil employment has been remarkable. Dr. Prosser, as a result of his observations in Canada, says:

I have seen men after man, who after the Civil War would have been dependent all his days on his meager pension, going out after a course of vocational rehabilitation to earn \$75, \$80, \$90, \$100, \$125, and \$150 per month. Such men are not only doing their work acceptably, but earning their wages, not as charity, but as productive workers, meeting the requirements of the tasks at which they are engaged.

Instances might be multiplied where men after such training secure much better positions and are receiving much higher wages than they did before the war.

Mr. Kidner told us of a man who had been a structural-steel worker who was injured in the knee, so that he could not continue his former employment. He took six months' training in shop mathematics and drafting and is now earning a good deal more than he ever before earned.

Farmers so injured as not to be able to do general farm work are given courses that enable them to run farm tractors. Many with some knowledge of motors become skilled mechanics in that line.

The majority of the vocational teachers in Canada are returned men. Out of 30 district vocational directors, 25 are returned disabled officers.

Mr. Holder, of the Federal Board, gave some interesting instances:

A bricklayer, after a course of training, was reemployed by his old employer as an estimator and cost accountant at 85 cents an hour.

A machinist who before the war ran a drill press qualified to take a position in the tool room at \$125 per month.

A boiler maker took a six-month course in mechanical drawing and secured a position at much better wages than he had ever received before.

A mechanic working for \$3 a day before the war, after training was appointed foreman in a machine shop at more than twice his former salary.

A driver of a milk wagon is now working at a good salary as a mechanical draftsman.

A Polish laborer working in a coal mine has now become a skilled carpenter.

Instances could be indefinitely increased. One of the most remarkable features of the work lies in the fact that no amount of injury seems to incapacitate a man from carrying on some gainful occupation. Places and work for the totally blind are easily found. Those with both legs gone can find work for their arms. The loss of arms seems a disability easily overcome. Many are working at farm labor with both arms gone.

An instance is given of a Canadian injured in a shell explosion. Both legs were blown off and one eye out. He was taken to a wholesale jewelry house and given a course in silver polishing, soldering, and gilding. He is now earning \$75 per month in addition to his total-disability allowance and is happy in his work.

A Canadian captain lost both eyes in the service. He was taught to run a typewriter and is now taking dictation direct from a dictaphone and is taking the trouble reports over the long-distance telephone all the way along the lines from Niagara to Toronto. He makes out his trouble reports on sheets of paper with 12 rulings, with the date, time of day, the trouble, the peak load, the low load, the number of minutes, to all of which he signs his name. This he does accurately and just as well as those who have eyesight.

WHAT IT DOES FOR THE MEN.

It is the report from all the countries at war that the first effect of a serious injury upon a soldier is a state of depression and extreme discouragement. The loss of his eyesight or of a leg or an arm seems an insuperable obstacle to future profitable activity. This must be quickly met and overcome. He must be shown that there is profitable work that he can do; that he can be so trained that his disability need not prove a serious handicap; that this training will be given him in addition to his disability allowance, and a place found for him at the completion of his training in profitable employment. Hope comes, ambition is awakened, the future brightens. Immediately plans for his training and future work are discussed, and a new interest in life is awakened.

It is not pity these injured men want; it is a chance. They do not want to be considered objects of charity. They desire to give to society as much as they take from it. They can not bear to be considered dependents and want their dependency to be removed as soon as possible. What they receive from the Government as disability allowance is but part of a soldier's pay under modern systems and can be received without hesitation or protest under provisions of the general law. If in addition to this, and still under provisions of the general law that apply to every other soldier as to himself, the injured man can receive a vocational training that will overcome his disability, he will be placed in a position where he can look the world in the face with courage and self-respect. It is the remaking of a man. The soldier won our admiration and praise when he gave all his splendid manhood to the service of his country in her hour of need. He will win it again when, with like courage and devotion, he takes his place once more in civil life as an independent, self-supporting member of society, the ideal American citizen.

THE NATION'S OBLIGATION.

A recognition of the Nation's obligation for the rehabilitation of its injured soldiers removes the feeling of dependency and increases the sense of self-respect in the soldier. To make him feel that the Government is generous and grateful but is under no legal or moral obligation to him after discharge, and that whatever is given or done is from purely philanthropic motives, makes the soldier consider himself an object of charity. That is neither just nor wise. The Government took the man sound and well. It put him in service where his life was jeopardized and where he was injured and incapacitated from pursuing a gainful occupation. It is the duty of the Government to return the man to his home and family just as nearly rehabilitated both physically and vocationally as can be done.

Besides, this is economically the better policy. No greater service can be rendered the Nation than to make every citizen a self-supporting unit of society. The waste involved in the complete support of thousands of dependents is doubly a loss. First, because of the direct outlay, and second, because the dependent is contributing nothing to the productive capacity of the country.

In the nations at war across the seas this fact was early made evident. Every able-bodied man was called to arms. The trades, and especially the war trades, had to be carried on largely by

women, old men, and children. The injured were being returned from the front by tens of thousands. They were eager to do something to help carry on the war. Their rehabilitation for industrial service became apparent and imperative. Their success has been wonderful. Many of the trades are using the returned soldiers, and some of them are carried on almost exclusively by them. The total amount of work accomplished is very large, exceeding all expectations. The soldiers themselves are happy because they are working, as are their comrades at the front, helping to win the war.

Thus from every possible standpoint, for the good of the soldier and for the good of the Nation, this legislation is justified. I am gratified to have a part in securing the passage of this legislation, which, I believe, will be considered as among the most beneficial we have passed in aid of the prosecution of the war. I hope and believe that the House will on careful consideration pass the bill, as did the Senate, by a unanimous vote.

As applied to this legislation and to that of like character which has preceded it, how appropriate are the words of Abraham Lincoln in his second inaugural:

Let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

Status of Alien Soldiers in the Different Armies of the World.

EXTENSION OF REMARKS

OF

HON. JACOB E. MEEKER,
OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 12, 1918.

Mr. MEEKER. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include the following:

SPEECH OF JACOB E. MEEKER, M. C., OF MISSOURI, IN THE HOUSE OF REPRESENTATIVES, MONDAY, JUNE 3, 1918.

Mr. MEEKER. Mr. Speaker, about a year ago, after we had entered the war, we discovered that some 40,000 or 50,000 American citizens had entered the armies of England, France, and Canada. We learned at that time that the men who had taken the oath of allegiance to the British Crown had decitizenized themselves. Steps were taken to repatriate those men. That legislation has already been enacted. However, at the time that bill was under discussion in the Committee on Immigration and Naturalization the question came up as to the status of alien soldiers in the different nations throughout the world. I took up the question with the representatives of the several countries throughout the world, requesting that they provide me with the oath which an alien desiring to enter the military or naval service must take. I also requested that they supply me with information on the following subjects:

First, as to how the taking of this oath affects the citizenship in the nation whose army the alien enters.

Second, does the taking of the oath make him a citizen in whole or in part in that country?

Third, how does it affect him as regards the right of franchise, devolution of property, marriage and divorce, and receiving a pension from the Government?

Fourth, should an alien who has taken the oath of allegiance and served in the military or naval forces and for that service has been granted a pension become a citizen of another nation, would he thereby forfeit his pension?

There is one thing about which we need to be thinking: Under our present laws, if an alien, leaving his family in the United States, has joined the forces of one of our cobelligerents, is wounded there, and comes back, he can not be admitted to the United States, because he might become a public charge.

One of the questions which we are going to have to think about and to discuss also, with our cobelligerents is this: Will these cobelligerents of ours permit the pensions to follow these wounded aliens who desire to return to the United States? If they do, then there is no danger whatever of their becoming public charges in the United States. The more you think on the status of soldiers in alien armies the more difficult and delicate you will see the situation will become as time goes on after the war.

The data which I have here this morning and which I am submitting is not complete. It is such a long task to get all the

information on the subject that I felt it might be better to put in now the data which we have and add to it as we may be able to get further light on the subject. I do not have here a report from China or from Russia, and, of course, not from Germany. A few of the smaller nations are yet to be heard from. I have not yet been able to obtain copies of the oaths taken by aliens entering the service of some of these nations, but the data which has been collected thus far is sufficient to show that practically no two nations in the world have the same system of taking aliens into their service or the same rules for providing for the men after they have finished their military service. This correspondence has convinced me that the United States has gone far ahead of any other nation in providing and caring for the aliens who enter her military service. There is much work yet to be done looking toward the final adjustment of the relations that should be maintained between our Government and the aliens who have served under the colors of our cobelligerents who are returning to this country in the hope of once more being with their families.

Mr. DENISON. Will the gentleman state the result of his investigation as to ascertaining what France has done and will do for those Americans who have been members of the Foreign Legion?

Mr. MEEKER. I can not offer any data on that subject. Of course, as I said, I think it will be absolutely necessary for us in a council of nations, which must inevitably come in the not far-distant future, to work out an entirely new system of caring for the alien soldiers who may pass from one country to another. At present we have not the data on the point the gentleman has raised.

The following information is compiled from reports received:

ARGENTINA.

Argentine military and naval forces are organized under the compulsory military law, therefore foreigners have nothing to do with that service and in peace times can not enter it.

There have been in other times what they called "foreign legions" fighting in time of war under the flag, but generally men serving in those legions have finished their services with the war without becoming citizens. If they have continued in the service, as has been the case several times, they have not been able to belong to the army or navy without being naturalized Argentines in accordance with the laws of Argentina.

A naturalized citizen who enjoys a pension from the Argentine Government loses his pension if he resigns his citizenship.

BOLIVIA.

The fact of an alien taking military service in Bolivia does not make him a citizen and does not in any way affect his rights concerning property or his marriage obligations.

If pension is granted an alien, the right is not lost unless he should go to a country actually at war with Bolivia.

BRAZIL.

In both corps of the navy—national marines and naval battalions—foreigners are not admitted. Foreigners may only be accepted in the corps as extra firemen; are under contract for a fixed period, subject to military law, not required to give allegiance. In other words, they are civilians under military status while in the service of the navy.

Enlisted men do not lose original nationality, as the enlistment is not equivalent to naturalization.

Foreigners are placed in same class as natives in all that concerns acquisition and enjoyment of rights. It is understood that foreigners serving as soldiers have, with slight restrictions peculiar to their occupations, all civil rights which they enjoyed before enlisting, as follows: Contractual rights, marriage, raising family, divorce, property, disposal of property, inter-vivos or testamento, enjoyment of prizes, pensions, life insurance. Foreigners once admitted to the ranks as sailors shall not be entitled to political or electoral rights.

A pensioner of the State loses his pension if he goes to any foreign country without permission of the Government, but pensioner does not suffer any restriction if, before he leaves for foreign country, he obtains an official permit, even though he is a naturalized citizen.

BULGARIA.

No alien can enter the military or naval service of Bulgaria unless he first becomes naturalized as a Bulgarian citizen, thereby acquiring all the rights and privileges of citizenship.

Alien civilians may be employed in offices which have no connection with active military service, such as clerks in the ministry of war, leaders of military bands, etc.

Should an alien who has taken the oath of allegiance and served in the military or naval forces, and for that service been granted a pension from the Bulgarian Government, become a citizen of another nation, he thereby forfeits his pension, and

should he return to Bulgaria he would be liable in case of a general mobilization to be drafted into service.

CHILE.

Foreigners are admitted to the Chilean Army only under contracts when their services are indispensable or as attachés at the request of some friendly government; this also applies to the navy.

COLOMBIA.

No one can be admitted to the army without taking an oath to support and defend the constitution and to comply with all the obligations it imposes. This oath of itself does not make a citizen of Colombia, and does not modify the statutes as to personal and real property of foreigners in Colombia, or to exercise the rights, natural and civil, that the laws of Colombia establish.

DENMARK.

Every man who is in possession of Danish citizenship is liable to military service, but only those aliens who have acquired a fixed residence in Denmark, and then only in so far as no treaty with a foreign State or the alien's duty toward such foreign State as a subject thereof would prevent the drafting of the alien into Danish military service. Neither the taking of the oath nor the military service would make an alien a Danish citizen nor affect his status in civil life.

All officials and officers appointed by the King are entitled to a pension under certain conditions, but otherwise pension must be granted by special act. As a rule a pension can not, without special permission, be paid to a pensioner living outside of Denmark, but a mere change of citizenship would not affect the title to a pension.

ENGLAND.

The law forbids the giving of a commission to an alien, and an enlisted alien is not capable of being promoted to a commission. As regards other aliens, if a soldier is a negro or a person of color, by enlisting in His Majesty's regular forces he becomes entitled to all the privileges of a natural-born British subject. This will not give him any right of franchise unless he has a franchise qualification in some other way; and as regards devolution of property, marriage, and divorce, these depend generally on domicile and not on nationality. As regards other aliens enlisting, they do not by so doing get any civil rights of British subjects. They, therefore, get no right of franchise, and as regards devolution of property, marriage, and divorce, that depends generally on domicile and not on nationality; but so far as it may in any case depend on nationality, they would not be treated as British subjects.

As regards the right to receive a pension, an enlisted alien is in exactly the same position as any other soldier. In case of war between his country and Great Britain, his pension would not be paid to him during the war, and his pension ceases to be payable, except in special cases, if he ceases to reside in British dominions. If an alien or any other soldier becomes the subject of another nation, there is no provision to deprive him of his pension. Pension rights are not the creation of statutes but of royal warrants or orders in councils, as the case may be, which provide for payment of pensions, if the money be provided by Parliament. There is no legal obligation on the State to pay any pension, but only an obligation of honor based on the fact that the State had pledged its credit. The above remarks apply generally to naval pensions.

The following oath is taken at the time of enlistment:

I, ———, do make oath that I will be faithful and bear true allegiance to His Majesty King George the Fifth, his heirs and successors, and that I will, as in duty bound, honestly and faithfully defend His Majesty, his heirs and successors, in person, crown, and dignity against all enemies, and will observe and obey all orders of His Majesty, his heirs and successors, and of all the generals and officers set over me. So help me God.

FRANCE.

An alien who desires to enter the military or naval service of France is not asked to take an oath. He has only, under the present circumstances, to sign a paper pledging himself to serve while the present war lasts.

GREECE.

As a rule, no one but a Greek subject is admitted to the military or naval service in Greece. Exception is made in special cases when foreigners are accepted as special instructors, in which case their status is determined in details by a special law. In such cases the foreigners do not acquire the Greek citizenship.

GUATEMALA.

The Government has, on occasions, employed aliens as instructors and professors for the Artillery and Military Academy, and they have been employed under a contract, but at present there are no aliens in the army. These aliens have been obliged, of course, to take the oath to observe the laws of the

country during their stay. All aliens take the oath on the constitution of the Republic. An alien who serves either in the army or any other position in the Government has to become a citizen, thereby losing any other citizenship.

HAITI.

No foreigner can be admitted to the Haitian Army or marine before declaring his intention to settle in Haiti and swearing that he renounces all other countries. This rule admits of exceptions and does not apply to American citizens who, conformable to the convention between the Republic of Haiti and the United States of America, are named by the President of Haiti of the proposal of the United States to organize and command the new organization of gendarmes of Haiti.

A naturalized foreigner who has obtained a military pension from the Government of Haiti can not be denationalized.

HONDURAS.

During the stay of an alien in military or naval service he must obey the laws and ordinances as well as any Honduran citizen. The taking of the oath does not make him a citizen.

If he has served in military or naval forces, and for that service is granted a pension from the Government, becomes a citizen of another nation, he thereby forfeits his pension.

HOLLAND.

No aliens are taken into the Dutch Home Army at any time, with the possible exception of surgeon officers. Aliens may enter the Dutch Colonial Army in peace times.

An enlisted man signs a promise that he will serve six years, or whatever the term may happen to be. An officer swears loyalty to the sovereign, obedience to the laws, and submission to military discipline. These obligations are not considered as expressing or implying renunciation of citizenship in any other country. To enter the Dutch home military service there must be naturalization before either obligation can be taken. Neither obligation affects devolution of property, marriage, or divorce.

A Dutch soldier receiving a pension will forfeit it if he becomes a citizen of another country.

A foreigner can enlist only in the colonial army of the Dutch East Indies; they can not enlist in the home army. By such enlistment and by the oath required therefor, he does not acquire the Dutch citizenship, but he is entitled to a pension according to the rules and regulations of the service.

ITALY.

Only Italian citizens have the privilege of serving in the Italian Army and Navy, and are therefore requested to take the oath.

Aliens may volunteer for service, and take the oath only if they were born in the Italian Kingdom, or if they were born from parents having resided there at least 10 years at the time of their birth. By so doing they acquire Italian citizenship. Italians who have lost their citizenship are admitted to serve and take the oath and thus resume the citizenship they had lost.

JAPAN.

There is no legal impediment against the entry of an alien into the service, provided the Government so desires or orders, but his foreign nationality will preclude him from enjoying or exercising rights and duties exclusively pertaining to a Japanese subject. However, were he so admitted, his citizenship would not be affected even partially, nor would he change his status at all in respect to the right of franchise, devolution of property, marriage, and divorce. The minister of home affairs may, with the sanction of the Emperor, permit the naturalization of an alien who has done specially meritorious service to Japan, without regard to ordinary requirements.

There is no statute covering the case of an alien in general in regard to pensions. It may be paid on the basis of the contract entered into between the Government and the party concerned, or, lacking that, by the special grant of the Government. The Japanese Government is actually paying pensions to a few German professors who used to be in its civil service.

NICARAGUA.

An alien may obtain employment in the militia, but he must previously resign the protection of his own Government. The taking of the oath does not affect the citizenship of an alien at all; either it affects him as regards the right of franchise, devolution of property, marriage and divorce, and receiving pension from the Government. In order that an alien may become a citizen of Nicaragua it is necessary that he reside in the country for at least two consecutive years, and after that that he make a declaration to the bureau of naturalization, or that he obtain the charta of naturalization in conformity with the law. Foreigners in Nicaragua enjoy the same civil rights as those conferred by the constitution to the Nicaraguans. In

very few cases the law establishes differences between a Nicaraguan and an alien.

An alien who has served in the army or navy of Nicaragua will enjoy the same privileges and pensions that a Nicaraguan would enjoy, and by the fact that he became a citizen of another nation he would not forfeit these privileges and pensions.

NORWAY.

With the exception of salaried officers, no soldier takes an oath. The conscription oath was abolished in 1891. Military duty has no effect upon citizenship in Norway. Persons other than native-born Norwegians may be taken for duty when they are domiciled in the land. The fact that a foreigner resides in Norway, however, does not mean that he must serve; neither does the law state that he shall have resided in Norway for a certain length of time, but his relations to Norway must be so firm that he must really be domiciled here. A foreigner who does military duty in Norway does not for that reason become a Norwegian subject.

Military duty has no influence upon the right to vote, nor upon the transfer of property, marriage, or divorce. Only subjects of Norway can vote, and foreigners may not acquire property lawfully except by permission of the King.

At present there are no fixed rules for pensions other than for salaried officers. A pensioner who resides out of Norway will not be paid his pension except by permission of the King, when drawing kroner 200 or over, and when drawing less, permission must be obtained from the department. These rules apply to both civil and military pensioners.

PANAMA.

Panama has no army or navy, the national police corps being the only corporation in charge of the custody of public order. There is no objection to foreigners joining the police corps, and the oath consists in swearing to defend the constitution and laws of the country.

An alien joining the police corps does not lose his citizenship, according to the Panama laws, and this loss depends only upon the laws of the country of which the alien is a citizen.

PERU.

No aliens are permitted to serve in the Peruvian Army. A few aliens are serving in the Peruvian Army as engineers and mechanics. Their condition is similar to that of individuals engaged by contract for a given period of time, and they do not thereby become Peruvian citizens. Citizenship is acquired after a residence in Peru of two years, without requiring an oath. Aliens in Peru possess the same rights affecting property and marriage as Peruvians. As regards divorce, their rights are governed by the laws of their country.

No pension has ever been granted by the Peruvian Government to any alien, and should a naturalized Peruvian citizen become a citizen of another country he would thereby forfeit his pension.

PORTUGAL.

There is no provision of law authorizing the enlistment of aliens in the Portuguese Army or Navy.

Naturalized citizens are subject to compulsory service.

SALVADOR.

The foreigner in Salvador who desires to enter the national army must swear loyalty to the country and absolute submission to the authorities.

When a foreigner joins the army simply as an instructor, he does not lose by that fact his citizenship nor acquire that of Salvador.

The soldier, as well as the civilian, who adopts another nationality, naturally loses rights that belonged to his former citizenship.

SERBIA.

An alien desiring to enter the Serbian Army must take an oath of fidelity to his superiors and of submission to the military laws. Service in the army does not affect his citizenship without his express wish to that effect. The taking of the oath does not make him a citizen of Serbia if he does not wish so. The Serbian citizenship is obtained only by the written request of the alien.

Aliens serving in the Serbian Army do not change their civil status in respect to the rights of franchise, property, marriage, or divorce. They are considered as volunteers.

SIAM.

Aliens entering the Siamese Army do not take an oath, but sign a contract, which varies according to the nature of the employment.

The only way in which Siamese citizenship may be acquired by an alien is through his naturalization by law or by special decree of the King.

SPAIN.

To enter the army of Spain one must be a Spanish subject or a naturalized Spaniard. The oath to the flag is sworn after having entered the army and after having received elementary instruction.

Spanish citizenship is obtained by acquiring a letter of naturalization or by acquiring residence in any municipality of the monarchy, the rights of Spanish citizens being acquired thereby.

If a person deriving a pension on account of services in the Spanish Army acquires foreign citizenship, he loses his pension.

The same laws apply to the navy.

SWEDEN.

No alien is admitted to the army or navy of Sweden.

An alien must have resided in the country for at least three years previous to his admission as a citizen and before entering either army or navy must have been naturalized and been admitted to Swedish citizenship.

SWITZERLAND.

The Swiss constitution provides for a universal military service.

Subject to all such service are all male citizens from 20 to 44 years of age.

Aliens are exempt from service and can under no circumstances serve in the Swiss armed forces.

No pensions are paid by the Swiss Government.

TURKEY.

No oath is required from Turkish subjects nor aliens who desire to enter the military or naval forces of Turkey.

The enlistment in the Turkish Army or Navy does not make an alien a subject of the Ottoman Empire either in whole or in part.

It does not affect him as regards the right of franchise, devolution of property, marriage, or divorce.

The soldier and his family are entitled to receive a pension from the Government.

If an alien takes the oath of allegiance to the Turkish Empire and serves in the military and naval forces, and for that service is granted a pension, becomes a citizen of another nation he forfeits his pension.

UNITED STATES.

The oath, when taken by an alien, does not affect his citizenship in the United States. It does not make him a citizen in whole or in part. It does not affect franchise, devolution of property, marriage and divorce, or a pension—except as to Indian wars.

In time of peace no person who is not a citizen of the United States or who has not made legal declaration of his intention to become a citizen, and so forth, shall be enlisted for the first enlistment in the Army.

Judge Advocate General E. H. Crowder says:

The statutes appear to contain no provision that a pension shall be forfeited by reason of becoming a citizen of another country. It seems improbable that an executive department would conceive itself to have the power to depart from the general theory of the pension laws, which is to the effect that when a person has become entitled to a pension he has become so by reason of service and not by reason of citizenship—whence it seems necessary to conclude that change of citizenship can not affect the pension.

At the time of his enlistment every soldier shall take the following oath or affirmation:

I, _____, do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America; that I will serve them honestly and faithfully against all their enemies whomsoever; and that I will obey the orders of the President of the United States and the orders of the officers appointed over me according to the Rules and Articles of War.

VENEZUELA.

According to the Military Code of Venezuela, only Venezuelans are permitted to serve in the army. Under the provisions of the Federal Constitution it is an attribute of Congress to permit or not the admission of foreigners to the service of the Republic.

The constitutional provision referred to indicates that a foreigner admitted to the service of the Republic does not lose his status as such, and that his services are considered as rendered under a mere contract.

The Venezuelan pension laws refer solely to Venezuelan citizens.

RELATIONSHIP OF THE AMERICAN CITIZEN OF FOREIGN EXTRACTION TO HIS NATIVE COUNTRY AND ITS MILITARY REGULATIONS.

[Memorandum prepared by the National Americanization Committee.]

The National Americanization Committee, of 29 West Thirty-ninth Street, New York City, recently made a careful study of the naturalization treaties between the United States and the European countries that have given us the bulk of our foreign population, which is directly related to my recent memorandum

on the "Status of alien soldiers in the different armies of the world."

Our military forces have enrolled many thousands of men of foreign extraction, a large number of whom are now fighting with the allied armies in European countries. Not only must we prepare for the economic protection of the alien who, leaving his family in the United States, has joined the forces of one of our cobelligerents, is wounded, and, though "likely to become a public charge," desires to reenter this country, but we must also insist that, once American citizenship is granted, it shall be so recognized the world over that it will assure the rights of American naturalized citizens in their native countries as well as in other countries.

The status of the naturalized citizen in his native country varies with the particular country, and if he be of military age he runs great risk in returning. The "Memorandum on the naturalization treaties of the United States," which follows, was prepared by the National Americanization Committee and presents a summary of the existing conditions.

The presence in the United States of over 13,000,000 foreign-born residents and of nearly 19,000,000 others of foreign descent makes the duty of safeguarding their interests one of the primary considerations of American statesmanship. Our naturalization policy affects, either directly or indirectly, the political future and possibly the economic welfare of over 30,000,000 persons.

At present the United States has naturalization treaties, or treaties regulating the status of naturalized American citizens with reference to the country of their origin, with Austria-Hungary, Belgium, Denmark, the German States, Great Britain, Haiti, Norway, Sweden, and Portugal. The text of the important sections of these treaties is given in the appendix. These treaties, often called "the Bancroft treaties," were passed mainly in the years between 1868 and 1872, and were due to the desire to adjust difficulties due to the heavy Teutonic emigration of that period, the changes of nationality after the Franco-Prussian War, and so on. The only treaty of later date than 1873 is the one with Haiti. In 1870 only about 5,500,000 of the inhabitants were foreign born.

The United States has no naturalization treaties with Bulgaria, France, Greece, Italy, the Netherlands, Persia, Roumania, Russia, Serbia, Switzerland, and Turkey.

A brief statement of the actual situation in which naturalized American citizens find themselves with reference to the country of their birth, both in the countries that have and in those that do not have naturalization treaties, is here given:

AUSTRIA-HUNGARY.

All male subjects of Austria-Hungary are liable to the performance of military service between January 1 of the calendar year in which they reach their twenty-first year and the 31st of December of the year in which they end their thirty-first year.

Under the terms of the treaty between the United States and Austria-Hungary a former subject of that country now a naturalized citizen of the United States is treated, upon his return, as a citizen of the United States. If he violated any of the criminal laws of Austria-Hungary before the date of emigration, he remains liable to trial and punishment, unless the right to punish has been lost by lapse of time as provided by law. A naturalized American citizen, formerly a subject of Austria-Hungary, may be arrested and punished under the military laws only in the following cases: (1) If he was accepted and enrolled as a recruit in the army before the date of emigration, although he had not been put in service; (2) if he was a soldier when he emigrated, either in active service or on leave of absence; (3) if he was summoned by notice or by proclamation before his emigration to serve in the reserve or militia and failed to obey the call; (4) if he emigrated after war broke out.

A naturalized American citizen of Austro-Hungarian origin on arriving in that country should at once show his passport to the American consul, or at least to the proper authorities, and if on inquiry it is found that his name is on the military list he should request that it be struck off, calling attention to the treaty of September 20, 1870 (17 Stat. L., 833), between this country and Austria-Hungary.

The laws of Austria-Hungary require every stranger to produce a passport on entering. This provision is not usually enforced, but may be at any time. Travelers are usually called upon to establish their identity and are advised to provide themselves with passports. They do not ordinarily require to be viséed.

BELGIUM.

Every male Belgian must register during the calendar year in which he reaches the age of 19 years to take part in the drawing of lots for the raising of the necessary military contingent for the following year.

Anyone who has drawn a number which designates him for military service, or, in case of his absence, has had a number drawn for him by the proper authorities, is punishable if he does not answer the call for service.

Under the terms of the convention between the United States and Belgium, a Belgian, naturalized as a citizen of the United States, is considered by Belgium as a citizen of the United States, but upon return to Belgium he may be prosecuted for crime or misdemeanor committed before naturalization, saving such limitations as are established by the laws of Belgium.

A naturalized American, formerly a Belgian, who has resided five years in this country can not be held to military service in Belgium or to incidental obligation resulting therefrom in the event of his return, except in cases of desertion from organized or embodied military or naval service.

Passports are not usually required in Belgium, but people who contemplate sojourning in that country are recommended to carry them in order to establish their identity. They do not require to be viséed or indorsed.

BULGARIA.

The Bulgarian Government does not recognize a change of nationality on the part of a former Bulgarian unless he has complied with all his military obligations or has obtained permission from the Bulgarian Government. American citizens of Bulgarian origin are advised, therefore, to find out before they return what their status will be.

There is no treaty on the subject of naturalization between the United States Government and Bulgaria.

DENMARK.

Military service becomes compulsory to a subject of Denmark during the calendar year in which he reaches the age of 21 years.

In November or December of the year in which he becomes 17 years old he is expected to report for enrollment on the conscription lists. If he neglects to do so, he may be fined from 2 to 40 kroner; but if his neglect arises from a design to evade service he may be imprisoned.

In case he fails to appear when the law requires that he be assigned to military service he is liable to imprisonment.

When one whose name has been or should have been entered on the conscription lists emigrates without reporting his intended departure to the local authorities, he is liable to a fine of from 25 to 100 kroner.

A person above the age of 20 years entered for military service must obtain a permit from the minister of justice to emigrate. Noncompliance with this regulation is punishable by a fine of from 20 to 200 kroner.

The treaty of naturalization between the United States and Denmark provides that a former subject of Denmark naturalized in the United States shall, upon his return to Denmark, be treated as a citizen of the United States; but he is not thereby exempted from penalties for offenses committed against the Danish law before his emigration. If he renews his residence with intent to remain he is held to have renounced his American citizenship.

A naturalized American, formerly a Danish subject, is not liable to perform military service on his return to Denmark, unless at the time of his emigration he was in the army and deserted, or being 20 years old at least, had been enrolled for duty and notified to report and failed to do so. He is not liable for service which he was not actually called upon to perform.

Passports are not required for admission to Denmark, but they are useful or necessary as means of identification or in proof of citizenship. They should be exhibited whenever evidence of citizenship is required.

FRANCE.

All Frenchmen who are not declared physically unfit or excused may be called upon for military duty between the ages of 20 and 50 years. They are obliged to serve 3 years in the active army, 11 in the reserve of the active army, 7 in the territorial army, and 7 in the reserve of the territorial army.

If released from all military obligations in France, or if the authorization of the French Government was obtained beforehand, naturalization of a former French citizen in the United States is accepted by the French Government; but a Frenchman naturalized abroad without the consent of his Government, and who at the time of his naturalization was still subject to military service in the active army, or in the reserve of the active army, is held to be amenable to the French military laws. Not having responded to the notice calling him to accomplish his military service, he is placed on the list of those charged with noncompliance with the military laws, and if he returns to France he is liable to arrest, trial, and upon conviction is turned over to

the army, active, reserve, or territorial, according to his age. Long absence from France and old age do not prevent this action.

A Frenchman naturalized abroad, after having passed the age of service in the active army and the reserve, nevertheless continues on the military list until he has had his name struck from the rolls, which may usually be done by his sending his naturalization certificate through the United States Embassy to the proper French authorities.

The French Government rarely gives consent to a Frenchman of military age to throw off his allegiance. Application on the subject may, however, be addressed to the minister of justice at Paris, accompanied by a full statement of the particulars and a fee of 675 francs. If the request is granted the name of the person concerned is erased from the military list, and he may return to France safely.

There is no treaty between the United States and France defining the status of former French citizens who have become naturalized American citizens.

Passports are not necessary to enter France, but are usually required from sojourners or travelers afterwards. They are recognized without being viséed or indorsed.

GERMANY.

A German subject is liable to military service from the time he has completed the seventeenth year of his age until his forty-fifth year, active service lasting from the beginning of his twentieth year to the end of his thirty-sixth year.

A German who emigrates before he is 17 years old, or before he has been actually called upon to appear before the military authorities, may after a residence of five years in the United States and after due naturalization return to Germany on a visit, but his right to remain in his former home is denied by Germany, and he may be expelled after a brief sojourn on the ground that he left Germany merely to evade military service. It is not safe for a person who has once been expelled to return to Germany without having obtained permission to do so in advance. A person who has completed his military service and has reached his thirty-first year and become an American citizen may safely return to Germany.

The treaties between the United States and the German States provide that German subjects who have become citizens of the United States shall be recognized as such upon their return to Germany if they resided in the United States five years. But a naturalized American of German birth is liable to trial and punishment upon return to Germany for an offense against German laws committed before emigration, saving always the limitations of the laws of Germany. If he emigrates after he was enrolled as a recruit in the standing army; if he emigrated while in service or while on a leave of absence for a limited time; if, having an unlimited leave or being in the reserve, he emigrated after receiving a call into service or after a public proclamation requiring his appearance, or after war broke out, he is liable to trial and punishment on return.

Alsace-Lorraine having become a part of Germany since our naturalization treaties with the other German States were negotiated, American citizens, natives of that Province, under existing circumstances, may be subjected to inconvenience and possible detention by the German authorities if they return without having sought and obtained permission to do so from the imperial governor at Strassburg.

The authorities at Wurttemberg require that the evidence of the American citizenship of a former subject of Wurttemberg which is furnished by a passport shall be supplemented by a duly authenticated certificate showing five years' residence in the United States in order that the fulfillment of the treaty conditions of five years' residence may appear separately as a fact of record.

A former German subject against whom there is an outstanding sentence, or who fears molestation upon his return for an offense against German law, may petition the sovereign of his native State for relief, but the United States Government can not act as intermediary in presenting the petition.

Travelers are not required to show passports on entering or leaving Germany, but they are likely to be called upon to establish their identity and citizenship at any time, and especially so if living in boarding houses or renting apartments. They are consequently recommended to provide themselves with passports. They do not usually require to be viséed or indorsed, but the local authorities sometimes demand a German translation.

GREECE.

The Greek Government does not, as a general statement, recognize a change of nationality on the part of a former Greek without the consent of the King, and a former Greek who has not completed his military service, and who is not exempt therefrom under the military code, may be arrested on his return to Greece. The practice of the Greek Government is not, however, uniform;

but American citizens of Greek origin are advised to find out before returning what status they may expect to enjoy. Information should be sought directly from the Greek Government, and the Department of State always refuses to act as intermediary in seeking the information.

There is no treaty on the subject of naturalized citizens between the United States and Greece.

Passports are not required in Greece, but may be useful in establishing American citizenship.

ITALY.

Italian subjects between the ages of 16 and 32 are liable for the performance of military duty under the Italian law, except in the case of an only son; or where two brothers are so nearly of the same age that both would be serving at the same time, in which event only one is drafted; or where there are two sons of a widow, when only one is taken.

Naturalization of an Italian subject in a foreign country without consent of the Italian Government is no bar to liability to military service.

A former Italian subject may visit Italy without fear of molestation when he is under the age of 16 years; but between the ages of 16 and 32 he is liable to arrest and forced military service, if he has not previously reported for such service. A former Italian subject who returns to Italy after the age of 32 is liable for service only in the territorial reserve army. However, his exemption from punishment for past failure to appear is contingent upon his having complied with certain formalities, which may be performed at an Italian consulate.

He may petition the Italian Government for pardon for the desertion or evasion of military duty, but the State Department will not act as the intermediary in presenting the petition.

There is no treaty between the United States and Italy defining the status of former Italian subjects who have become American citizens.

The Italian law does not require the production of passports by foreign travelers, but they are frequently called upon to establish their identity, and are accordingly recommended to provide themselves with passports. They are often useful in preventing an interference with departure from Italy. They do not require to be viséed or indorsed.

THE NETHERLANDS.

A subject of the Netherlands is liable to military service from his nineteenth to his fortieth year. He must register to take part in the drawing of lots for military service between January 1 and August 31 of the calendar year in which he reaches the age of 19. He is exempt, however, from service if he is an only son or is physically disabled; and in the case of a family, half of the brothers are exempt, or a majority if the number is seven.

No military service is required of one who became a citizen of the United States before the calendar year in which he became 19 years of age, and a Netherlands subject who becomes a citizen of the United States when he is 19 and between January 1 and August 31 may have his name removed from the register by applying to the Queen's commissioner of the Province in which he was registered. If he does not have his name removed from the register, or if he becomes a citizen of the United States after the register is closed (August 31), and his name is drawn for enlistment, his naturalization does not affect his military obligations to the Netherlands, and if he returns he is liable (1) to be treated as a deserter if he did not respond to the summons for service, or (2) to be enlisted if he is under 40.

Former Netherlands subjects are advised to ascertain by inquiry from the Netherlands authorities what status they may expect to enjoy if they return to the Netherlands. The Department of State, however, uniformly declines to act as the intermediary in the inquiry.

Passports are not required for admission to the Netherlands, but American citizens are advised to carry them for purpose of identification and in attestation of citizenship.

NORWAY.

Subjects of Norway are liable to performance of military duty in and after the calendar year in which they reach their twenty-second year.

Under the treaty between the United States and Sweden and Norway, a naturalized citizen of the United States, formerly a subject of Norway, is recognized as an American citizen upon his return to the country of his origin. He is liable, however, to punishment for an offense against the laws of Norway committed before his emigration, saving always the limitations and remissions established by those laws. Emigration itself is not an offense but nonfulfillment of military duty and desertion from a military force or ship are offenses.

A naturalized American who performed his military service or emigrated when he was not liable to it, and who infringed no law before emigrating, may safely return to Norway.

He must, however, report to the conscription officers and, on receiving a summons, present himself at the meeting of the conscripts in order to prove his American citizenship.

If he has remained as long as two years in Norway, he is obliged, without being summoned, to present himself for enrollment at the first session, since he is then deemed by Norway to have renounced his American citizenship.

If he renews his residence in the Kingdom without intent to return to America, he is held to have renounced his American citizenship.

Passports are not required from persons entering or traveling in the Kingdom, but they may be called upon to establish their citizenship, and are consequently advised to produce passports.

PERSIA.

Permission to be naturalized in a foreign country is not granted by the Persian Government to a Persian subject if he is under charge for a crime committed in Persia, or is a fugitive from justice, or a deserter from the Persian Army, or is in debt in Persia, or fled to avoid pecuniary obligations.

If a Persian subject becomes a citizen of another country without the permission of the Persian Government, he is forbidden to reenter Persian territory, and if he had any property in Persia he is ordered to sell or dispose of it.

There is no treaty between the United States and Persia defining the status of former Persian subjects who have become naturalized American citizens.

Passports are usually required of foreigners desiring to enter Persia, and they should, if possible, bear the visa or indorsement of a Persian consular officer.

PORTUGAL.

All physically able male Portuguese citizens are liable to military service from their twentieth until their thirty-fifth year, active service lasting three years, first reserve five, and second reserve seven years.

Enrollment as a recruit takes place in the January of the twentieth year of the citizen, who must appear for military service in the following November. Failure to do so is considered refractoriness, and the citizen must pay a fine of 300 milreis (if the citizen has property of that value it is seized) or if apprehended must serve a longer term in the active army.

The treaty of naturalization in force between the United States and Portugal provides that Portuguese citizens who have become citizens of the United States shall be recognized as such upon their return to Portugal if they resided in the United States five years. But a naturalized American of Portuguese birth is liable to trial and punishment upon return to Portugal's dominions for an offense against Portugal's laws committed before the emigration, but not for the emigration itself, saving always the limitations of the laws of Portugal. If he emigrated after he enrolled as a recruit either in the active or reserve army, he must pay a fine of 300 milreis, or if apprehended in Portuguese dominions he is subject to a long period of service in the active army.

ROUMANIA.

All male inhabitants of Roumania, except those under foreign protection, are liable to military duty between the ages of 19 and 47.

American citizens formerly Roumanian subjects are not molested upon their return to Roumania unless they infringed Roumanian law before emigrating.

There is no treaty between the United States and Roumania defining the status of naturalized Americans of Roumanian birth returning to Roumania.

An American who intends to remain in Roumania for a longer period than eight days must have his passport viséed by the United States consul at Bucharest and obtain a permit of residence, valid for one year, from the prefecture of police.

RUSSIA.

Under Russian law a Russian subject who becomes a citizen of another country without the consent of the Russian Government is deemed to have committed an offense for which he is liable to arrest and punishment if he returns without having previously obtained the permission from the Russian Government.

The United States Government dissents from this provision of Russian law, but an American citizen formerly a subject of Russia who returns to that country places himself within the jurisdiction of Russian law.

The Department of State holds that a naturalized American citizen of Russian origin who returns to his native land as a Russian subject, concealing the fact of his naturalization in

order to evade Russian law, thereby so far relinquishes the rights conferred upon him by his American naturalization as to absolve this Government from the obligation to protect him as a citizen while he remains in his native country.

No one is admitted to Russia unless his passport has been viséed, or indorsed, by a Russian diplomatic or consular representative.

SERBIA.

Ordinarily, all subjects of Serbia are expected to perform at least two years' military service after they attain manhood.

If a subject of Serbia emigrates before he has fulfilled his military obligations, the Serbian Government does not recognize a change of nationality made without the consent of the King, and upon his return he may be subject to molestation.

If, however, he performed his military service before emigration, his acquisition of naturalization in the United States is recognized by the Serbian Government.

There is no treaty between the United States and Serbia defining the status of naturalized Americans of Serbian birth returning to Serbia.

Passports are rigorously required of all persons who desire to enter Serbia.

SWEDEN.

Subjects of Sweden are liable to performance of military duty in and after the calendar year in which they reach their twenty-first year.

Under the treaty between the United States and Sweden and Norway (17 Stat. L., 809) a naturalized citizen of the United States, formerly a subject of Sweden, is recognized as a citizen of the United States upon his return to the country of his origin. He is liable, however, to punishment for an offense against the laws of Sweden committed before his emigration, saving, always, the limitations and remissions established by those laws. Emigration itself is not an offense, but nonfulfillment of military duty, and desertion from a military force or ship, are offenses.

A naturalized American who performed his military service or emigrated when he was not liable to it, and who infringed no laws before emigrating, may safely return to Sweden.

If he renews his residence in the kingdom without intent to return to America, he is held to have renounced his American citizenship, and he will be liable to performance of military duty.

Passports are not required from persons entering or traveling in the kingdom, but they may be called upon to establish their citizenship, and are consequently advised to procure passports.

SWITZERLAND.

Every Swiss citizen is liable, under Swiss law, to military service from the beginning of the year in which he becomes 20 years of age, until the end of the year when he becomes 44. Every Swiss of military age who does not perform military service is subject to an annual tax, whether he resides in the Confederation or not, or to punishment for nonpayment of the tax if he returns to Switzerland.

If a Swiss citizen renounces Swiss allegiance in the manner prescribed by the Swiss law of July 3, 1876, and his renunciation is accepted, his naturalization in another country is recognized, but without such acceptance it is not recognized, and is held to descend from generation to generation.

Before he returns to Switzerland an American citizen of Swiss origin should file with the cantonal authorities his written declaration of renunciation of his rights to communal, cantonal, and general Swiss citizenship, with documents showing that he has obtained foreign citizenship for himself, wife, and minor children and received the sealed document of release from Swiss citizenship through the direction of justice of the Canton of his origin. If he neglects this, he is liable to military tax or to arrest and punishment in case of nonpayment of the tax.

There is no treaty between the United States and Switzerland defining the status of former Swiss citizens who have become naturalized as American citizens.

Passports are not required for admission to Switzerland, but are usually demanded from persons sojourning in that country. They do not require to be viséed or indorsed to be valid.

TURKEY.

The Turkish Government denies the right of a subject of Turkey to become a citizen of any other country without the authority of the Turkish Government. Anyone who has been naturalized since 1869 is forbidden to return to Turkish territory under penalty of arrest and imprisonment or expulsion.

The Department of State holds that a naturalized American citizen of Turkish origin who returns to his native country as an Ottoman subject, concealing the fact of his naturalization in order to evade the Ottoman law mentioned, thereby so far

relinquishes the rights conferred upon him by his American naturalization as to absolve this Government from the obligation to protect him as a citizen while he remains in his native land.

The laws and regulations of Turkey relative to the acquisition of citizenship in other countries are dissented from by this Government, but in the absence of a treaty of naturalization with Turkey the Department of State can not assure former Turkish subjects that they will be permitted to enter and reside in Turkey as American citizens.

Passports properly viséed by a Turkish consular officer are required by Ottoman law of every person who enters Turkish dominions except Egypt.

The consent of the Turkish Government to the naturalization in another country of a former subject of Turkey is given only upon condition that the applicant shall stipulate either never to return or, returning, to regard himself as a Turkish subject. Therefore if a naturalized American citizen formerly a subject of Turkey returns to Turkey he may expect arrest and imprisonment or expulsion.

Jews are prohibited from colonizing in Turkish dominions.

There is no treaty between the United States and Turkey defining the status of naturalized Americans, formerly Turkish subjects, who return to Turkey.

The question of the status of naturalized American citizens is one that has caused difficulty for many years. Over and over again the question has come up for adjudication before the Department of State. At the outset it would be well to make one point clear: The term "dual citizenship" is frequently used in two senses. It is necessary to distinguish clearly between these two at the beginning. The first concerns the question of the citizenship of children born in the United States of foreign-born parents; the second concerns the status of naturalized American citizens.

In the first case the difficulty that gives birth to dual citizenship arises from what appears to be an inevitable conflict of laws. There are only two theories for determining the nationality, or rather the citizenship, of any given individual. The first of these laws is what is called the *jus soli*, or the law of the land; according to this a person takes the nationality of the land in which he is born. This is the American conception, the one that runs through our general theory of citizenship.

The other is called the *jus sanguinis*, or the law of blood. This is the law that is followed in ordinary European civil-law codes. According to this law a person's nationality or citizenship depends on the citizenship of his parents. The United States had adopted this rule in the one case of children born abroad of parents that are American citizens. Each law has its advantages. It is certainly better to consider that the child of an American business man residing in China at the time the child is born is an American citizen than it would be to consider that the child was a subject of the Chinese Empire. This law of blood, like many other rules of the civil law, goes back to such a fundamental human instinct that any other way of dealing with this situation than the one it suggests would seem wrong to us. The law of the land, on the other hand, has very distinct advantages as well, which can also be illustrated from our American situation. A Russian man and woman, let us say, succeed in escaping persecution at home and come to this country to live. We prefer to think that their children, born on American soil and brought up under American institutions, are American citizens, not Russian subjects, and we have made this the cardinal principle of American citizenship. It would be too late now to attempt to alter this law, even if we wished to do so, because it is firmly rooted both in statute law and in our fundamental conception of the meaning of America.

And yet we find it convenient and right to use the opposed law of nationality, the law of blood, in such a case as the illustration given of a child born in China of American parents. If we find it necessary to adopt into our own statutes a provision so contrary to our general citizenship law as this law of blood, we can not consistently object when another country adopts it as its thoroughgoing principle of citizenship. We consequently have in the case of the child born of American parents in China, or in France, for that matter, a true case of dual citizenship—that is, of the child who is at the same time subject to two opposed laws. By the law of locality, or of the land, the child in the last case is French; by the law of blood it is American. The difficulty has been met hitherto by allowing the child to choose which nationality it wished to keep when it became 21 or attained its majority, and by holding it subject until that time to the law of whichever country it happened to be in. This, at least, was the way the situation worked out, although there has never been any international ruling of law on the subject. If the child were in France, the French

authorities applied the French law; if it were in America, the American authorities applied the American law; and when the child became of age it made its election, and thereafter was held to be a citizen of whichever country it elected. It was considered so clear that this election was something that the child alone could do, that the fact that the father took the child from one country to the other has been held over and over again not to affect the child's right to choose when it became of age.

There does not appear to be any way to evade this kind of dual citizenship. It has been recognized for many years. For instance, the Citizenship Board, which was appointed during President Roosevelt's administration to inquire into the laws and practices regarding the citizenship of the United States, expatriation, and protection abroad, said:

Inasmuch as our Government declares that all persons born in the United States are citizens of the United States, and also recognizes, as well as adopts on its own part, the rule that children of citizens resident abroad are citizens of the country to which the parent owes allegiance, there arises, as will be seen, a conflict of citizenship spoken of usually as dual allegiance. (H. Doc. No. 326, 59th Cong., 2d sess.)

The other kind of dual citizenship, where the original sovereign refuses to recognize the transfer of allegiance, is, however, highly objectionable. Here the term is improperly used—improperly, because there is really no dual allegiance, and can be no dual allegiance on the part of a person legally competent to choose under which flag he wants to live and die. In the case of a Frenchman, let us say, who comes to this country and becomes a naturalized citizen of the United States, there is no incompetency. He is legally able to make his own decision, and is, as the legal phrase has it, "put to his election." He must determine whether he wishes to remain a citizen of France or become a citizen of the United States. He can not do both of these at the same time. He chooses, let us say, to become a citizen of the United States; but his native country maintains that the bond between it and its subject is one that can be dissolved only by its own consent.

The real question at issue, of course, is whether or not a nation has the right to control over its subjects as a thing of which it can refuse to divest itself. Our feeling is that the man is the arbiter of his own fate, entitled to renounce allegiance to the Sultan of Turkey, or the Czar of Russia, if he so chooses. The Sultan, however, refuses to look at it in that way. The Ottoman law is that no transfer of allegiance to which the consent of the Ottoman Government has not been previously obtained is binding; and the laws of France, and Greece, and Persia, and Russia are similar.

Suppose that after a man has been naturalized here his home government refuses to admit that his transfer of allegiance is valid. What line can the United States take with reference to it? Theoretically, whenever a question involving some aspect of naturalization comes up with reference to a former subject of a country with which we have a naturalization treaty, his rights and obligations are determined by the treaty. As a matter of fact, however, this is not always the case, for there is a treaty of naturalization with Germany, and this fact did not prevent the Germans from passing the law of nationality of June 1, 1914, which practically nullifies the treaty. And our naturalization treaty with Germany has not prevented Germany from asserting claims to military service upon former subjects or the children of former subjects. A long series of cases that have come up with various countries under these treaties are collected in the Digest of International Law (John Bassett Moore, vol. 3). In one case the last official note says that Germany evidently is not disposed to yield, and that there is no use in taking up the matter again.

The action the Department of State takes when a similar question comes up with a country with which we have no treaty may be illustrated by two cases that were brought to the attention of the department in 1915. In the first case one P. A. Le Long, of Louisiana, who was born in America of a French father who had never been naturalized, made inquiry of the State Department as to what his status would be in France if he were to return there during the war. The State Department advised him that while he was by the law of America an American citizen, by the law of France he was a French citizen, and therefore declined to encourage him to test the matter by returning to France while the war was in progress. The second case involved the interpretation of an Italian law. In June, 1915, a young man named Ugo da Prato, who was born in Boston in 1895 and had gone to Italy in 1912 to study architecture, was held by the Italian Government as liable to military duty because his father, Antonio da Prato, had been a native of Italy. He had emigrated to America and had been naturalized in Boston in 1892. Under our American law the son Ugo, born on American soil, was an American. The Italian law, however,

regards him as still liable to certain obligations. Article 2 of the Italian Civil Code says:

Citizenship is lost by the following persons:

1. " " " "
2. He who has acquired citizenship in a foreign country.

Article 12 states:

The loss of citizenship in the cases mentioned in the foregoing article does not work exemption from the obligations of military service, nor from the penalties imposed on those who bear arms against their country.

The comment of the Department of State on this law is as follows:

Under the provisions of the law mentioned the Italian Government recognizes the naturalization of Italians as citizens of other countries, but holds them liable for military service in Italy, unless they have been expressly excused therefrom.

Da Prato was afterwards released.

It is plain that this form of dual allegiance—which would more properly be stated as the attempt to hold that the change of allegiance either did not take place at all, or else was not thoroughgoing—bears in itself the possibility of very serious complications. Our naturalized citizens and the native-born children of foreign-born parents have a right to demand that the allegiance they have chosen to swear to the United States be protected. This is not the case at present. A circular issued by the Hon. William J. Bryan from the Department of State at Washington on August 14, 1914, states Mr. Bryan's conception of this country's obligations in the following terms:

The United States is not a party to any treaty under which persons of foreign origin residing in this country may be compelled to return to their country of origin for military service, nor is there any way in which persons may be forced into foreign armies against their will so long as they remain in the United States.

This meets the situation about as well as would the statement of the chief of police that the citizens of the city would be perfectly protected in the streets as long as they stayed in their own homes, or as the time-honored permission to the little girl to go to swim as long as she did not go near the water. It is not a question of whether persons can be forced into foreign armies as long as they remain in the United States; the question is whether, when their family or business obligations oblige them to go out of the United States, the long arm of the United States will protect them on account of the allegiance they have sworn to it.

The present Secretary of State in recent circulars on this same subject points out that dual allegiance of the first kind is no new thing and states that the department has never assented to dual allegiance of the second kind. Yet whether it has assented to it or not, it never has enforced anything else. Under Mr. Bryan's leadership the department declined to give authentic information either as to the general requirements of military service laws of foreign countries or as to the particular status of an individual under such laws.

At some time or other the United States will be obliged to declare itself firmly on this point. Senator LODGE, in writing to the Department of State in connection with the Da Prato case, said:

I can not assent for a moment to the proposition that such a thing as dual citizenship is possible. As you well know, we constituted ourselves as champions against the doctrine of indefeasible allegiance, and we have succeeded in compelling the acceptance of our view by all the nations with the exception, I think, of Russia and Turkey. The abandonment of indefeasible allegiance is in itself the establishment of the principle that there can be no such thing as dual citizenship, either in whole or in part, and to attempt to retain the right over a boy born in this country of parents not naturalized for military service in the country of origin of parents is absurd on its face and is something to which we should never assent for a moment.

Senator LODGE alludes to the German law of nationality of June 1, 1914, according to which Germans who were naturalized in other countries may under certain conditions retain their German nationality, and points out that any alien who endeavors to retain his original allegiance when he takes the oath of allegiance to the United States commits perjury. He then says:

We shall find ourselves in a very awkward position with our large body of naturalized citizens and their children if we do not take the strongest position against article 12 of the Italian civil code you quote.

It has never apparently been considered possible to enforce the American conception of naturalization or to make American citizenship really respected in countries that are slow to do so. It is an exceedingly difficult thing to arrange. When the point was brought to an issue with Russia the only effect was to leave us without any treaty with Russia at all.

Whether American citizenship can ever be brought to the state of the old Roman citizenship, when the fact of citizenship was a guard and a shield all over the known world, remains to be seen. The Romans brought it about by conquering the world. It may not be possible to do it in any other way. It is possible

that bringing the point to an issue with country after country would simply result as it did with Russia. One thing is sure, however, and that is that this country will never be in a better position than it is now and will be at the end of the war to enforce its conception of citizenship upon other nations and to insist that the ratification of this conception be made a preliminary condition to commercial or circular treaties of any kind.

As long as we are content to treat naturalization as an isolated matter, we will get no satisfaction, for in any attempt to bring things to a conclusion we would be met by the determination either to let things drop or else to let us abrogate the treaty if we chose to. But if we showed that we were determined to make naturalization an integral or basic part of our relations with any country, determined to maintain that the free-will oath of allegiance to our Government should be respected and ratified all over the world, we would find it much easier to reach a working basis. With the enormous number of naturalized citizens now in this country and of native-born children of foreign-born parents, which together constitute 40 per cent of our white population, it is necessary for this country to take upon itself the task of establishing once for all what their relations to their former land shall be.

Congressional Service.

EXTENSION OF REMARKS

OF

HON. JAMES V. McCLINTIC,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 6, 1918.

Mr. McCLINTIC. Mr. Speaker, it is very evident that there are many people who do not understand the character of service that Members of Congress are called on to perform. Congressional work is subdivided into subjects which are referred to the committees having jurisdiction, and the most important service a Member can render to the Nation is to attend these meetings and participate in the forming of such legislation as will bring about the desired results when enacted into law. Many of the people do not understand that practically all legislation affecting the various departments of the Government is referred to the departmental head for recommendation, and unless the report made on the same is favorable as a rule the bill will not be considered. It is true that speech making on the floor of the House brings about a great deal of good; however, those best posted on congressional duties say the most important service a Member can render is to be attentive to his duties as a member of the committee or committees he is assigned to, thereby giving to his comembers the benefit of his knowledge on the subjects that are considered.

At the beginning of my second term in Congress I was honored by being elected chairman of the Committee on Expenditures on Public Buildings, and also assigned to serve as a member of the Committee on the Public Lands, the Committee on Pensions, and the Committee on Patents. These have jurisdiction over a great many important subjects, among them being our public domain, oil lands, pensions, patents, and questions relating to public buildings. I have tried to be present at every meeting held by the committees I am a member of, and I am specially gratified that Chairman KEY has made the following statement relative to my service as a member of the Pension Committee:

At the beginning of Congress he entered actively, industriously, and conscientiously upon the discharge of his duties. Not only did he attend every meeting until prevented from doing so by personal illness, but at odd times, when his other congressional duties would permit, he would come to the committee room and put in an hour or two working on these claims.

I have served for nearly four years as a member of the Public Land Committee, and Chairman SCOTT FERRIS has paid me great honor in a letter he has sent to a resident of the State of Oklahoma, calling attention to the public hearings I have held and the other work I have performed while a member of his committee. I also wish to say that Chairman SMITH, of the Patent Committee, has expressed himself relative to the work accomplished while serving on his committee in the following language:

He is keen, energetic, reliable, and holds the fullest confidence of his associates. He has developed into an aggressive and valuable Member of the House of Representatives.

In addition to committee work Members of Congress are called on to handle a great many other matters with the various departments of our Government, and since the United States has been at war the duties along this line have increased manifold. When it is taken into consideration that we have more than 2,000,000 soldiers and sailors, and practically all of them have either bought liberty bonds, taken out insurance, or have dependents, one can easily realize the enormity of the task that has been successfully handled by our Government. Every Member of Congress is called on from time to time to look after many other matters, and this additional work, together with his congressional duties, keeps him very busy. My office has been kept open every working day since I have had the honor to represent the seventh congressional district of Oklahoma, and it pleased me very much when Supt. Cox, who has charge of the House Office Building, made the following statement relative to my work:

I have watched your work, and it is a great pleasure for me to say that out of the 435 Members of Congress there isn't one of them that has put in any more time than you have in looking after the affairs intrusted to your care.

If a person wants to find out something about the work of a Congressman he should visit the House Office Building, and especially at a time when others are taking recreation. Night or day when he enters the building he will hear the hum of the typewriters, as Members of Congress do not heed any eight-hour law, but stick to their post of duty until the work intrusted to their care is completed. During the past four years I have watched the various departments of our Government as they increased many thousand per cent. There are probably 40,000 more persons employed now than there were when the European war began. Lightning changes of policies have been made, it being necessary to take over many of the industries of the country in order to take care of the needs of the Government. All of this has taken some of the time of Members of Congress, and as a rule the people everywhere are pleased with the success that has been attained up to the present time. Nearly every day I am called to some of the departments in order to transact certain business which relates to the district that I represent, and I have tried to take care of every matter in the most efficient manner possible. One of the Government officials recently made the following statement concerning my record, and it is very gratifying to me to know that my work with the various departments has met the approbation of those in charge:

He is zealous, and, above all, he is faithful to his country and his party, and I think his retention in Congress is desirable.

Pensions for Spanish War Widows.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. AYRES,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 9, 1918.

Mr. AYRES. Mr. Speaker, when this measure was up for consideration in the House, during the Sixty-fourth Congress, I enthusiastically supported it and aided in its passage through the House. At that time I thought that the widows of the men who participated in the War with Spain and helped maintain the honor and dignity of the Stars and Stripes were fully entitled to consideration, and I took occasion to make mention of that fact on the 16th day of February, 1916.

We passed the bill at that time, and the other legislative branch of this Government has seen fit to pass it in this Congress, even though they have been somewhat tardy in giving this beneficial measure final consideration. It is a pleasure for us on this side of the Nation's Capitol to again show our appreciation of the services offered by our young boys at the outbreak of the Spanish-American War in 1898. It does not behoove us to argue economy in a matter that deals with a just reward to the widows and children of our volunteers of 1898, who offered themselves freely and without hesitancy. At this critical time, when we are calling upon another generation of young men to go forth to fight our battles that humanity may be saved, it would be poor policy to overlook the needs of the dependents of those who went out for us 20 years ago.

I wish to reiterate one statement I made in my remarks of the 16th of February, 1916, when this bill was brought to our attention in the House. At that time I said:

I am not ashamed of the record my own State—Kansas—made in that conflict. Kansas, before the call was cold upon our President's lips, furnished three of the best volunteer regiments that ever were recruited. Kansas was the first State to complete her muster and tender her quota of volunteers for service to our President, ready and anxious to go where duty called. Part of our volunteers were hurried across the sea and did loyal and effective service in the Philippines. Others waited patiently for the welcome call from Chickamauga and the Army posts in Virginia, which circumstances did not permit to come. Still others—a fourth regiment—were trained and equipped, awaiting orders from the War Department, ready to answer their country's call. Our men were efficient and brave, and there was developed in that short period of service military talent and skill that has found just recognition to promotion to the Regular Army. Men were developed in that conflict from the ranks of the Kansas volunteers who now have been promoted to high military positions, and who have but recently been recognized for their genius in handling the difficult and trying situation on our southern borders.

All patriotic citizens are glad to give their approval to the plan of caring for the defenders of the Nation and also for the dependents of such defenders.

This administration has been most liberal in granting this remedial legislation for our soldiers and in enacting beneficial laws in recognition of the services of the old veterans of '61 to '65, although they should have been considered long ago. Only a few days ago we passed a pension bill that materially increased all the pensions of our old Civil War veterans, and let me say, in this connection, that the Invalid Pensions Committee has been very liberal indeed, for the past four or five years, in granting increases by private pension acts; in other words, we have for the past four years shown our appreciation of the sacrifices made by those who struggled for the preservation of this great Union.

Not only have we in the past four or six years tried to compensate in a small measure our old veterans for their services in time of their country's need when they offered up their young lives at their country's shrine, but we have endeavored to show the good widows of these men that we appreciated their services and sacrifices as well, when they gave up their husbands and willingly and unhesitatingly remained at home, in many instances to care for a flock of little ones, while the husband was fighting for the preservation of the Union. In September, 1916, we passed a pension act restoring thousands of Civil War widows to the pension rolls, whose names had been dropped, because of subsequent marriage, and knowing that in such cases many had again become widows and were now aged and helpless, we felt that no such penalty should be attached to the widow of a soldier, even though she had remarried. We therefore again provided for her.

We have not only placed the remarried widows of our veterans on the pay rolls of the pension register, but we have taken care of those widows who have married our soldiers in later life and who helped make the happiness of their declining years complete. We felt that they should not go through life unrecognized for such a service, and we accordingly provided a measure that those who married veterans prior to 1905 should be entitled to all rights and privileges of the widow of a Civil War veteran.

On last October, realizing that the amount that had been granted to our widows was insufficient to provide for them comfortably during their later years, we passed a law that increased their pension rate to \$25 a month. Never in the history of this or any other nation have there been such liberal pension laws passed as have been enacted in the past three or four years.

Mr. Speaker, I am glad and proud of the fact that I was fortunate in being placed in the position where I could aid in a measure at least to pass such wholesome, meritorious, and just legislation. It should have been passed years ago instead of simply promised to our veterans and their widows, but for some reason it was left for the Sixty-fourth and Sixty-fifth Congresses to realize the urgent need of it, and they enacted ample legislation for the benefit of our war veterans.

Everyone will agree that this is the most critical and uncertain time in all our history; that Congress has the most stupendous and responsible propositions to solve; that new problems are looming up before us every day, requiring the closest attention of every branch of our Government, yet we have not failed to give every consideration to the claims of those who made their sacrifices years ago when they were called upon to respond.

When we enacted the measure known as the war-risk law we took the humanitarian view of the situation confronting us, and we not only provided for the defender of democracy, by allowing him to take out insurance with his own Government in favor of his dependents, but we also provided for his dependents at home while he is serving his country at the front. His "folks back home" will not have to be objects of charity, nor will it be necessary to pass any pension bills, private or general, to care for the loved ones at home in event of the death of one of the boys at the front, as we have already provided for all such emergencies, and it will not become necessary for a

Congress 50 years after the close of this world war to recognize the sacrifices made by our men of to-day.

Mr. Speaker, now that we have passed the bill to provide pensions for the widows of the soldiers of the Spanish War upon the death of such soldier without inquiry or question as to whether the cause of death was due to injuries received in line of duty, after all we have done in the way of beneficial legislation for our soldiers and their widows, I can not but help feel that the beneficiaries of such legislative acts will feel that we have at least done our duty, and I believe the country at large will heartily approve of our acts. The men and women who have performed noble and sacrificing deeds, whether in the Civil War, the Indian wars, the Spanish War, or the disturbances in the Philippines, will, I am sure, realize that we have tried to show our appreciation of their acts.

The Fortifications Bill.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. RANDALL. Mr. Speaker, I think the country ought to know that this Congress is doing its part in this war with a remarkable unity of purpose, for when this \$5,000,000,000 fortifications bill passed the House, as it did by a unanimous vote, we passed the bill at the rate of one and one-quarter billions an hour—something like \$18,000,000 per minute, which would be about \$300,000 per second. This has been only a repetition of the action of the House upon all the other great war measures. Not a single Member, whether he voted for war or against it, has offered obstruction of any kind.

Only one campaign is going on in this country just now—the campaign to win the war. The congressional candidates who would build themselves up by tearing down the character of another may be patriotic, but it is political patriotism. They are more anxious to win the election than the war.

No man should be elected to Congress unless he is 100 per cent American, and a political slanderer is not necessarily 100 per cent American, but probably is only a camouflaged American.

It is with much pride I have learned that the well-loved Speaker of this House recently sent a telegram to some one in California about my war record in Congress, reading as follows:

"WASHINGTON, D. C., July 8, 1918.

"I hope that no one in California will be deceived by opponents of Mr. RANDALL in the coming election who claim that he has voted against war measures. He has earnestly and consistently supported the war program of the administration ever since war was declared, and he has loyally stood by the present organization of the House of Representatives.

"CHAMP CLARK."

Even President Wilson does not criticize a man who opposed war, for he has asked Henry Ford to accept a seat in the United States Senate. The President has himself prescribed the acid test of the loyalty of a Congressman to be his vote, not on the war resolution but upon the McLemore resolution and the armed-neutrality bill. Upon these I voted with the President before war was declared, and I have voted for every military measure without exception, when recommended by the President, since war was declared.

To be historically correct, long after the *Lusitania* went down at the barbarous hand of Germany and poor little Belgium had been ravished by unspeakable German savagery, President Woodrow Wilson was reelected by the American people "because he kept us out of war." Would anyone dare to accuse him of disloyalty because he did not rush into war? I can not believe other than hysterical persons and ambitious candidates will condemn any Member of Congress who voted upon this momentous question according to the dictates of his judgment and conscience, no matter which way he voted.

I voted for conscription—the conscription of wealth and war profits. If I failed to vote for conscription of blood, I did vote for conscription of blood money. The conscienceless profiteers and war grafters are the monstrous criminals, the arch traitors to their country.

I have been accused of publicly contending that the Spanish-American War was a dishonorable war. I have never made

any statement which could be twisted into such meaning. I am myself an honorary member of Ensign Bagley Camp of Spanish War Veterans, and that camp ought to expel me if this is true. Furthermore, I have received from the late commander in chief of the United Spanish War Veterans of the United States the following letter:

"WASHINGTON, D. C., July 11, 1918.

"MY DEAR CONGRESSMAN: Allow me, on behalf of the United Spanish War Veterans and the widows and orphans of comrades of that war, to extend to you their heartfelt appreciation of your support of so worthy a measure as passed the House June 9, the widows and orphans' pension bill.

"D. V. CHISHOLM,

"Chairman National Legislative Committee."

I once said in my remarks, which were published in the CONGRESSIONAL RECORD, that "In 3,000 years of recorded history only 227 years had been free from war in some part of the world." I said also that "most wars have been dishonorable wars," and history will substantiate it. I quoted Abraham Lincoln's bitter denunciation, made in Congress, of the Mexican War of 1848, and I said that while the Spanish-American War was begun for a high and noble purpose the facts are disclosed in State Department records that Spain had already agreed to get out of Cuba. The *Maine* was blown up, as we thought, by the enemy, but now lies buried in deep water, where the mistake may not become too well known. While our own representative in Madrid was begging by cable for a day or two longer to complete the evacuation agreement a wild hysteria took possession of our people, inflamed by rabid war newspapers, and the result was the death of 16,000 noble young men in that war. We might as well keep the facts straight. Little enough of history is true, anyway. It has been said that "everything is true in fiction except the names, while in history everything is false except the names."

I hope that my tongue will cleave to the roof of my mouth if I ever become a worshiper of war.

SPEECH

OF

HON. JOSHUA W. ALEXANDER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 8, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 4557) to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes.

Mr. ALEXANDER. Mr. Chairman, I move to strike out the last word. I am very much in favor of the passage of this bill. I introduced the original bill creating the Bureau of War-Risk Insurance in the Treasury Department, giving the Government the power to insure vessels, their cargoes, and freight money against loss at sea. After the declaration of war against Germany, I also introduced a bill amending the law and extending the provisions of the war-risk insurance law, authorizing the bureau to insure the masters, watch officers, and crews on vessels against the perils of the sea.

It was my privilege also to introduce the soldiers' and sailors' insurance law, to my mind one of the greatest and most beneficent pieces of legislation enacted by the Congress. This bill repeals section 402 of that law and amplifies the provisions of that section and vests the jurisdiction in another department of the Government for the administration of the law. I am not going to detain the committee further than to say that I heartily approve this legislation. It proves that the administration and the Congress are doing everything in their power in the interests of our soldiers and sailors, and that we are going to make an effort to rehabilitate those who may come back disabled while in the service and fit men, as far as possible, to meet the duties and obligations of life and ameliorate conditions which may grow out of their being maimed and wounded, a service than which no greater will devolve upon the Congress of the United States.

The bill repeals section 304 of the act of October 6, 1918, known as the soldiers' and sailors' insurance law, said section being as follows:

That in cases of dismemberment, of injuries to sight or hearing, and of other injuries commonly causing permanent disability, the injured person shall follow such course or courses of rehabilitation, reeducation, and vocational training as the United States may provide or procure to be pro-

vided. Should such course prevent the injured person from following a substantially gainful occupation while taking same, a form of enlistment may be required which shall bring the injured person into the military or naval service. Such enlistment shall entitle the person to full pay as during the last month of his service and his family to family allowances and allotment as hereinbefore provided in lieu of all other compensation for the time being—

and treats the subject in a more comprehensive way and vests the administration of the law in a board entitled a Federal Board for Vocational Education.

The purpose of the bill is to provide for the vocational rehabilitation and return to civil employment of soldiers and sailors disabled in this war.

I have no doubt the bill will have the unanimous support of the Congress. I am sure it will have the approval of every patriotic citizen in the United States.

I count it a privilege to say a word in its support.

In this connection it may be of interest to give a résumé of the creation and activities of the Bureau of War-Risk Insurance, as the bill under consideration has its genesis in section 304 of the act of October 6, 1918, above referred to.

The preamble to the act of September 2, 1914, creating the Bureau of War-Risk Insurance in the Treasury Department recites as the causes prompting the legislation:

First. That by reason of the emergency created by the war in Europe, which began August 1, 1914, the foreign commerce of the United States became greatly impeded and endangered through inadequate facilities for the insurance of American vessels and their cargoes against the risks of war.

Second. That it was deemed necessary by the administration, in order to meet that emergency, that the United States should temporarily provide for the export trade of the United States adequate facilities for the insurance of its commerce against the risks of war.

So great was the emergency and so imperative was the need for marine war-risk insurance, and so utterly unable were our American marine insurance companies to meet the conditions growing out of the war and write adequate insurance on American ships and cargoes engaged in our overseas trade, particularly from our ports to European ports, that the Government was compelled to go into the insurance business or let our commerce suffer irreparable injury. Indeed, those who under ordinary circumstances would have been violently opposed to the Government engaging in the insurance business were the most interested and insistent that the Government should undertake the task.

The Governments of the belligerents had forbidden their domestic marine insurance companies to write war-risk insurance on the vessels or cargoes of any other nation. It became their policy to conserve their financial resources for the benefit of their own commerce. We had no other alternative than for the Government to step in and do that which private capital was either unwilling or unable to do only at a cost to the owners of vessels and cargoes that would cripple if not destroy our foreign commerce during the period of the war.

The act of September 2, 1914, established in the Treasury Department a Bureau of War-Risk Insurance, with a director at a salary of \$5,000 per annum.

Mr. William C. De Lanoy was appointed director, and he has filled the office with distinguished ability ever since.

It is made the duty of the Bureau of War-Risk Insurance, subject to the general direction of the Secretary of the Treasury, to make provision for the insurance by the United States of American vessels, their freight and passage moneys, and cargoes whenever it shall appear to the Secretary of the Treasury that American shippers or importers in American vessels are unable to secure war-risk insurance on reasonable terms.

An advisory board was created consisting of three members skilled in the practice of war-risk insurance to assist the bureau in fixing rates of premium and in adjustment of claims for losses and generally in carrying out the purposes of the act.

Mr. Arthur Hunter, Mr. A. W. Fraser, and Mr. James W. Glover were named as members of the advisory board, who are still serving in that capacity, and the record made by the bureau is convincing proof that the Secretary of the Treasury and the Director of the Bureau of War-Risk Insurance and the advisory board have exercised rare judgment and skill in the administration of the affairs of the bureau and in affording our shipping and commercial interests the best possible service and on the most reasonable terms.

For paying losses accruing under the act the sum of \$5,000,000 was appropriated. The further sum of \$100,000 was authorized to be expended in the payment of the expenses of the Bureau of War-Risk Insurance, including the payment of salaries and other personal expenses.

The life of the act was to terminate whenever the necessity for war-risk insurance ceased, and in any event in two years from September 2, 1914. By the act of August 11, 1916, the life of the act was extended until September 2, 1917, and by the act of March 3, 1917, the life of the act was extended until September 2, 1918, and the appropriation to pay losses was increased to \$15,000,000. On April 6, 1917, a state of war was declared to exist between the United States and the Imperial German Government. To meet the conditions growing out of our active participation in the war the act of June 12, 1917, was promptly passed amending the act of September 2, 1914, giving the Bureau of War-Risk Insurance power not only to insure vessels, their freight and passage moneys, and cargoes against loss or damage by the risks of war but also to include the insurance of masters, officers, and crews of American merchant vessels against loss of life or personal injury by the risks of war, and for compensation during detention if captured by the enemy. The insurance includes the personal effects of the masters, officers, and crews.

It is made the duty of the owner of the vessel to effect such insurance, and in the event of his failure to do so the Secretary is authorized to effect such insurance with the Bureau of War-Risk Insurance at the expense of the owner of the vessel. The premium, with interest, and penalty and costs are made a lien on the vessel.

It is made the duty of the owner of the vessel to effect the insurance, either with private insurance companies or the Bureau of War-Risk Insurance, and on terms satisfactory to the Secretary of the Treasury, and a failure to do so subjects the owner to a penalty of \$1,000.

The insurance shall provide, and the Bureau of War-Risk Insurance is authorized to write policies providing—

(a) In case of death, permanent disability which prevents the person injured from performing any and every kind of duty pertaining to his occupation or the loss of both hands, both arms, both feet, both legs, or both eyes, or any two thereof, for the payment of an amount equivalent to one year's earnings or to twelve times the monthly earnings of the insured, as fixed in the articles for the voyage (hereinafter referred to as the principal sum), but in no case shall such amount be more than \$5,000 or less than \$1,500.

(b) In case of any of the following losses, for the payment of the percentage of the principal sum indicated in the following tables:

One hand, 50 per cent.
One arm, 65 per cent.
One foot, 50 per cent.
One leg, 65 per cent.
One eye, 45 per cent.

Total destruction of hearing, 50 per cent.

That the Bureau of War-Risk Insurance may include in its policy undertakings to pay specified percentages of the principal for other losses or disabilities.

(c) In case of detention by an enemy of the United States, following capture, for the payment during the continuance of such detention of compensation at the same rate as the earnings of the insured immediately preceding such detention, to be determined in substantially the same manner as provided in subdivision (a) of this section.

The appropriation to carry out all the provisions of the war-risk insurance act is increased to \$50,000,000 and the appropriation to pay salaries and other expenses is increased to \$250,000, and the life of the act is extended one year from September 2, 1917, to September 2, 1918.

The following report of the operations of the marine section of the Bureau of War-Risk Insurance from the date of its creation, September 2, 1914, to June 25, 1918, is not only interesting but in the highest degree gratifying. It shows the number of policies written on vessels, their freight and passage moneys, and cargoes from September 2, 1914, to June 25, 1918. It will be noted that the premiums collected amount to \$43,056,858.58, while the total losses amount to \$28,894,848.20, and the expenses to and including April 30, 1918, of the marine section of the Bureau of War-Risk Insurance have been only \$121,623.68. This is indeed a very remarkable showing. This great service has been rendered to our merchant shipping and foreign commerce without a dollar being drawn from the Treasury, but, on the other hand, with a balance of more than \$14,000,000 on hand to meet future losses.

Not one dollar of the \$50,000,000 appropriated under the act has been required to pay losses.

TREASURY DEPARTMENT,
BUREAU OF WAR-RISK INSURANCE,
Washington, June 24, 1918.

MEMORANDUM FOR JUDGE ALEXANDER.

(16,857 policies issued, Sept. 2, 1914, to June 24, 1918.)

Total amount insured	\$1,227,878,005.00
Premium on same	43,056,858.58
Net amount at risk	103,034,042.00
Losses paid to June 7, 1918	21,375,642.80
Losses pending (including estimated)	7,519,205.40
Total losses to date	28,894,848.20
Expenses to and including Apr. 30, 1918	121,623.68

Equally gratifying is the showing made by the seamen's section of the Bureau of War-Risk Insurance, as shown by the following report furnished to me by Mr. Gilbert J. Murray, deputy commissioner, and covering the period from June 26, 1917, to and including April 30, 1918:

BUREAU OF WAR-RISK INSURANCE,
SEAMEN'S SECTION.

Your attention is respectfully invited to the below report showing the condition of the seamen's section of the Bureau of War-Risk Insurance from June 26, 1917, to and including April 30, 1918:

	Steamers.	Sailors and auxiliaries.	Total.
Number of policies.....	882	69	951
Number of individuals.....	65,569	725	66,295
Earnings of compensations.....	\$6,610,552.65	\$93,314.25	\$6,708,866.90
Gross amount insurance.....	111,069,740.82	1,443,144.16	112,512,884.98
Canceled insurance.....	1,742,742.44	117,842.09	1,860,584.44
Net amount of insurance.....	109,326,998.38	1,325,302.16	110,652,300.54
Gross premiums.....	637,231.79	118,105.25	755,337.05
Return premiums.....	9,083.87	11,784.20	20,868.07
Net amount of premiums.....	628,148.92	106,321.05	734,469.97
Paid losses.....	24,583.75	24,583.75
Unpaid losses.....	145,947.25	145,947.25
Unlocated losses.....	13,021.00	13,021.00
Total determined losses.....	183,551.00	183,551.00
Insurance at risk.....	4,912,188.63	4,912,188.63
Unearned premiums.....	13,040.70	13,040.70

Financial statement.

Total net premiums.....	\$734,469.98
Determined losses.....	\$183,551.00
Undetermined losses (estimate).....
Expenses (estimate).....	20,128.70
Unearned premiums.....	13,040.70
Balance.....	517,749.58
	734,469.98

Respectfully submitted,

GILBERT J. MURRAY,
Deputy Commissioner.

The act of October 6, 1917, amending the act of September 2, 1914, creating the Bureau of War-Risk Insurance, and known as the soldiers' and sailors' insurance law, is the most comprehensive and beneficial piece of legislation of the kind ever enacted by any nation.

Although the act of October 6, 1917, had been in force less than nine months when the following table was furnished to me by the Director of the Bureau of War-Risk Insurance, it is marvelous to note the growth of the business of the bureau and the immense sums paid to June 24, 1918:

Statement of payments on account of appropriation stated.

Appropriation.	Total payments to June 24, 1918.	Total award cards to disbursing clerks June 25, 1918.	Total.	
			Allotments.	Allowances.
Army:				
Allotments.....	\$57,328,641.08	\$615,331.28	\$57,943,972.36
Allowances.....	34,924,852.07	395,132.75	\$35,319,984.82
Navy:				
Allotments.....	6,792,096.53	12,214.91	6,804,311.44
Allowances.....	5,594,748.10	13,963.88	5,618,711.98
Marine Corps:				
Allotments.....	569,706.71	355.10	570,061.81
Allowances.....	451,953.67	310.17	452,263.84
Coast Guard:				
Allotments.....	423,693.90	1,475.32	425,169.22
Allowances.....	374,658.28	1,138.81	375,797.09
Total.....	106,367,351.34	1,039,922.22	65,740,514.63	41,666,757.73
Total of--				
Allotments.....	65,111,138.22	629,376.61	\$65,740,514.83
Allowances.....	41,256,212.12	410,545.61	\$41,666,757.73
Total.....	106,367,351.34	1,039,922.22	107,407,272.56
Military and naval insurance.....	839,395.01	839,395.01
Military and naval compensation.....	318,374.33	318,374.33
Total.....	1,157,769.34	1,157,769.34
Grand total.....	107,525,119.68	1,039,922.22	108,565,041.90

WM. H. HOLMES,
Head Bookkeeper.

The most significant, and it should be the most gratifying, feature of the above statement is the fact that of the grand total of \$108,565,041.90 disbursed the sum of \$65,740,514.83 is on account of allotments out of the pay of the enlisted men in the military and naval service of the United States.

It is equivalent to the saving of that sum out of the monthly pay of the enlisted men which has been disbursed by the bureau to their families and dependents, and is no charge on the Treas-

ury of the United States beyond the cost of administration which is very small as compared to the very great service rendered.

But for this wise provision of the law a very large part of this immense amount might have been spent improvidently and the Government would have been required to appropriate vastly larger sums for the support of the families of enlisted men in the Army and Navy. As it is, the sum of \$41,666,757.73 by way of family allowances has been added to the \$65,740,514.83 and paid out of the Treasury for the support of the wives and children and other dependents, making a total of \$107,407,272.56 paid out of the Bureau of War-Risk Insurance on account of allotments and family allowances. This is a splendid showing.

In the disbursement of the \$108,565,041.90 it was necessary to draw, sign, and mail out 3,639,000 checks.

The bureau sent out in June for May, 1918, allotments and allowances in the sum of \$900,000, and in July the bureau will send out for June allotments and allowances the sum of \$1,000,000. As of June 25, 1918, the insurance in force amounted to the stupendous sum of \$21,040,182,500, or an average of \$8,350 for every officer and enlisted man who has taken out a policy of life insurance with the Bureau of War-Risk Insurance.

When we contemplate these figures and the immense work necessary to be done by the Bureau of War-Risk Insurance in the administration of the law in all its provisions, it would be marvelous indeed if delays did not occur in the adjustment of claims and remittances to beneficiaries. Since October 6, 1917, the bureau has grown to 6,000, housed in buildings widely separated in the city of Washington, which greatly handicaps the work of the bureau.

The great difficulties under which the bureau is laboring and the many causes of delay are set out in a letter to Hon. JOHN A. STERLING by Mr. William C. De Lanoy, director of the bureau, which will be found in the Appendix to the CONGRESSIONAL RECORD.

The Secretary of the Treasury, the director, and commissioners in charge of the divisions of the bureau, together with the deputies, assistants, accountants, experts, clerks, and other employees, are entitled to and should receive the praise and commendation of the Congress and of the country for the very able and efficient manner in which they are performing their great task.

War Legislation.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. BROWNE. Mr. Speaker, I do not believe there has been a session of Congress in the history of the Nation where Members of Congress have been called upon to pass on so many important and intricate matters. Legislation has been enacted by this Congress that will affect generations yet unborn and the lives and destinies of the people for centuries to come.

WAR LEGISLATION.

This Congress has passed in all 100 bills which can appropriately be termed war measures. Among these war measures are bills appropriating and authorizing the expenditure during the past fiscal year of more than \$22,000,000,000—close to one-half the entire wealth of Great Britain and all her possessions. It has passed a war-risk insurance bill which provides for insurance for our soldiers and sailors. Under this bill 2,682,153 of our boys have been insured and the Government has written up to date \$22,581,196,000 of insurance.

Legislation providing for the War Finance Corporation, in which the United States practically goes into the banking business with \$100,000,000 capital; the railroad-control law, the taking over of the railroads of the United States, and also the telegraph and telephones; the laws providing for the various bond issues; Army and Navy appropriation bills amounting to billions of dollars. These measures that I have enumerated would probably be regarded as the most important war legislation. There are, however, many other war measures that have been passed by this Congress of almost equal importance.

I will attach as a part of my remarks a list of the war measures passed by the present Congress, so that my constituents may have exact information as to the war legislation passed by this Congress.

RECORD ON WAR MEASURES.

Mr. Speaker, since our entrance into the war I have supported all the legislation that can be termed war legislation, without exception, and have supported in every way possible those charged with the responsibility of prosecuting the war. Every one of my colleagues in the House knows this to be the fact; the record of a Congressman is an open book. The CONGRESSIONAL RECORD goes out to every village and hamlet in the United States, and anyone that will take pains to look up the record of a Member of Congress will find how he voted upon all of these questions.

IN FAVOR OF PREPAREDNESS.

I favored preparedness long before our entrance into the war.

In 1916, when the naval appropriation bill was before Congress, I made a speech in favor of a larger appropriation. I herewith give a brief quotation from my speech on that occasion:

I have no faith in treaties or international law when I see all the nations engaged in the war openly violating fundamental rules of international law, when half of the world is in a frenzy and a state of mind bordering insanity.

The responsibility of this Congress in representing 100,000,000 of people is tremendous. We have the responsibility of preserving and keeping alive free institutions, and, in addition to preserving our own institutions, we must stand as a guardian to protect republican institutions in the whole Western Hemisphere, and perhaps the world. We can not afford to take any chances when by a mere money consideration we can be absolutely safe. The chances that we take by not being fully prepared are attended with such grave consequences, while the risk of overpreparedness is only a matter of dollars and cents.

I have voted for the largest measure of preparedness on the naval bill that has been proposed since the introduction of this bill. I voted for the Browning amendment, which our Democratic friends claimed was hysterical, and yet all but a very few of the Democrats are now supporting the present bill which carries a heavier appropriation even than the Browning amendment. While I am on the subject of preparedness I wish to say that at all times I have supported the conference reports of the Senate and House and voted consistently for the most effective preparedness proposed.

I also voted for the greatest preparedness for the Army. I supported the bill which the Military Committee favored. Secretary of War Baker indorsed this bill, as follows:

WAR DEPARTMENT, May 24, 1916:

The bill recently agreed to is the most comprehensive measure looking to military preparedness that has ever been passed by Congress. The bill is very satisfactory to me, and the untiring efforts of the Senate and House to afford the people of this country adequate military protection are deeply appreciated.

NEWTON D. BAKER,
Secretary of War.

August 15, 1916, in a speech on the naval bill, I said:

I believe in preparedness, and I believe that we should have it with dispatch. If we can not build our vessels in the Government navy yards we ought to build them in private yards.

ALL SHOULD STAND BACK OF THE GOVERNMENT WITH UNITED FRONT.

Immediately after the declaration of war, when the selective-service bill was before the House for discussion, I began my speech on that bill as follows:

Mr. Chairman, upon the passage of the resolution declaring the existence of a state of war between the United States of America and the Imperial Government of Germany the discussion closed. The honest differences existing between the people as to the advisability of our entering the war are ended, and the people, one and all, I believe, stand back of their Government with united front, with but one spirit and purpose—the victorious achievement of the Government's will. [Applause.]

When the selective-service bill came before the House the majority of the Military Committee, including its chairman, reported in favor of allowing as many people as desired, who were physically qualified and within the age, to volunteer. They argued that we could get an Army quicker and a more efficient Army; that it would take some time to get the machinery for the selective draft ready, and in the meantime we might be raising a large army by the volunteer system. Our patriotic Speaker, CHAMP CLARK, ex-Speaker JOSEPH G. CANNON, and Gen. SHERWOOD, Civil War veteran, and many others favored the majority report of the Military Affairs Committee. These same distinguished legislators vigorously opposed the Senate bill placing the draft limit between the ages of 19 and 25. With over 100 other Representatives I supported the majority report of the Military Affairs Committee. When we were voted down upon this amendment I voted with the rest of these gentlemen in favor of the selective-draft bill.

LET THE RECORD SPEAK FOR ITSELF.

My vote will be found on page 1557 of the CONGRESSIONAL RECORD of April 28, 1917. My speech will be found in the CONGRESSIONAL RECORD of April 27, 1917, on page 1419. I quote from the speech as follows:

I believe that under the bill presented by the majority of the committee we will get an army quicker and a more efficient army than we will under the amendment proposed by the minority of the committee which is now before us for our consideration. [Applause.] However, if the amendment to the bill prevails, I will vote for the bill as amended, believing that at this time every Member can afford to waive

his own judgment to hasten this necessary and important legislation. The bill reported by the majority of the Military Committee provides for an immediate call for volunteers, but provides also for a census and all the preliminary steps that need be taken for selective conscription. The Secretary of War, in his testimony before the committee, stated that it would take at least three or four months to obtain a census preliminary to conscription.

Adj. Gen. Holway, who was at the head of our State troops, telegraphed me in favor of the majority report of the Military Committee as also did the governor of Wisconsin. Gen. Nelson A. Miles, the greatest and most distinguished soldier living, also favored this plan. Am I to be criticized for following such advice?

THE TRUTH COULD HAVE BEEN EASILY ASCERTAINED.

Notwithstanding my vote and speech upon the subject, certain partisan newspapers and designing politicians have misquoted me upon this measure the same as they have upon preparedness. The fact that I did not desire to wholly abolish the volunteer system, to overturn the traditions of the Saxon race for 500 years, the fact that I strongly opposed conscripting boys under 21 years of age who are too young to vote and taking them across the seas to be placed in the trenches of Europe and at the same time allowing strong, able-bodied unmarried men above 25 years of age to remain at home, as the Senate and General Staff bill provided, gave a pretense to certain newspapers to misrepresent my record. My speech on the floor of the House of Representatives and my vote should silence the repetition of such falsehoods.

WISCONSIN'S RECORD, SPEECH MARCH 1, 1918.

March 1, after the sinking of the *Tuscania*, I paid a tribute to the boys who were on the *Tuscania*. I closed my remarks by presenting the record of Wisconsin and paid the following tribute to my native State:

WISCONSIN'S PROUD RECORD.

In the present war no State in the Union has responded more loyally to every demand made by the President than Wisconsin. The United States Naval Institute proceedings of August, 1917, contain a table compiled by the Department of War. This table shows, first, the quota required from each State; second, the number of the National Guard on April 2, 1917; third, the enlistments in the National Guard from April 2 to June 30, 1917; fourth, the enlistments in the Regular Army during the same period; fifth, each State is credited with the total in service on April 2 and the enlistments up to June 30, 1917; sixth, the number of men to be drafted. These figures show the total of the National Army at the last-named date as 1,152,985. The total credits, including those in service on April 2 and those volunteering up to June 30, are 465,985; this left 687,000 to be drafted. The total credits form 40.4 per cent of the Army. Wisconsin's volunteers numbered over 54 per cent of her quota.

Wisconsin thus ranks first in the percentage of credits; in other words, more of her citizens volunteered in proportion to the quota assigned than any other State in the Union.

SPEECH ON LIBERTY LOAN, APRIL 13, 1918.

When the liberty-loan drive was on I spoke in favor of it, and among other things I said:

WAR.

The United States to-day is engaged in the greatest war in the history of the world, a war that will tax our resources to the limit, a war that will call for severe sacrifices on the part of every citizen.

America has thousands of boys already along that battle front, and additional thousands are arriving every day upon the scene of action. These boys are the forces of representative democracy, fighting that governments of the people and for the people shall not perish from the earth. Every one of our soldiers on the battle front in Europe now represents 343 Americans at home. If we visualize, we can see along those deadly trenches, facing the storm of molten lead, the poisonous gases, and the thrusts of bayonets, amid the lurid flames of battle, a strong-hearted manly soldier fighting for each one of us at home. He is offering his life for us. He is making the supreme sacrifice. "Greater love hath no man than this, that a man lay down his life for his friends." The highest insignia of honor that can come to any soldier is the little wooden cross on the field of battle.

THOSE AT HOME.

Those of us who remain at home are making very small sacrifices compared with the supreme sacrifice that those brave boys are making. They are fighting for us. The very best we can do is to supply our soldiers, regardless of cost, with ships, guns, ammunition, clothing, food, hospitals, and medicine, and, above all, we must give them our moral support. If we are worthy of the boys who represent us on the battle field, we will save for them, we will sacrifice for them, and give generously. If those boys can fight for us on the battle field, we can fight for them in the grain field and every other field of effort that will aid them.

As a Member of the House of Representatives I have done my full duty as I understood it, and have at all times supported those charged with the responsibility of prosecuting the war. No honest man who knows the facts will assert the contrary. My record is written on the printed pages of this Congress, and it is not within the power of man to conceal or distort it.

The duties of the individual Congressman have never been so trying and complex. I have been "on the job" at all times, early and late. Since the war began thousands of appeals for advice and assistance have come to me—appeals from fathers and mothers and from the boys themselves. In many cases I have been able to give them valuable assistance, and in every case the appeal has had my personal attention and best efforts.

If my experience gained as a Member of Congress for the last six years; if my acquaintance with the Members of Congress and the chiefs of various governmental departments; if my knowledge of the laws that I have helped to pass making future provision for our boys when they return from Europe is of value to the people of my district, I desire to assure them that this experience, information, and knowledge belongs to the people of my district. It is my ambition and aim to give the people the very best service that I am capable of rendering.

PRESIDENT WILSON COMMENDS CONGRESS.

President Wilson commends Congress in the following language:

It seems to me that the work of this remarkable session has not only been done thoroughly, but that it has also been done with the utmost dispatch possible in the circumstances or consistent with a full consideration of the exceedingly critical matters dealt with. I have admired the work of this session. The way in which the two Houses of Congress have cooperated with the Executive has been generous and admirable.

WAR MEASURES PASSED BY THE PRESENT CONGRESS.

War bonds, seven billions, authority to issue.
Assignment of Fleet Naval Reserve to active duty.
For extension of minority enlistments, naval service.
Increase of midshipmen at Annapolis.
Increase age limit for officers, Naval Reserve.
Relating to foreign enlistments in United States.
Army appropriations.
War Army bill, draft and selective service.
Relating to enlistments in Naval Reserve Corps.
Increase enlisted strength of Navy and Marine Corps.
Military Academy appropriations.
Car-service regulations.
War-risk insurance for seamen.
Sundry civil appropriations.
Issuance of rifles to State troops.
Army and Navy deficiency appropriations.
Suppression of espionage.
Condemnation of land for Army.
Aeronautics personnel and appropriations.
Relief of homesteaders in military or naval service.
Protection of desert-land entrymen in Army or Navy.
Increasing membership, Interstate Commerce Commission.
For priority of railroad shipments and control of train service.
Food-survey authorization.
Food-control authorization.
War bonds, authority for second liberty-loan issue.
Creating Aircraft Board.
Authority to explore for nitrates and potassium.
War-revenue measure.
Providing repatriation of citizens in armies of allies.
Urgent deficiency measure appropriating \$5,356,666,016.
Allowing dependents to receive pay while absent abroad.
Regulating use of explosives during war.
Providing for property loss by seamen.
Permission to take public-land affidavits before military authority.
Permitting coastwise trade by foreign vessels.
Providing six months' gratuity to dependents of deceased sailors in the Navy.
Providing commissions in Army Staff Corps and removing age limits of Reserve Corps officers requiring discharge.
Prescribing court-martial procedure in Navy.
Appointing chaplains at large in Army.
Preventing publication of military inventions.
Relating to Medical and Dental Corps.
Establishing new rating for enginemen, blacksmiths, etc., in Navy.
Distribution of Cavalry units in Army, providing for.
Providing military and naval insurance.
Regulating trading with enemy.
Appropriation to continue \$100,000,000 fund to be used by the President, and for other purposes.
Increasing Naval Academy enrollment.
Authority for absence of homesteaders during war for farm-labor requirements.
Authority to call Philippine forces into war service.
Authority for marines to serve under Dominican Republic.
Providing for housing and lands for shipyard and munition workers, \$50,000,000.
Civil-rights law for soldiers and sailors.
Authority to grant furloughs in Army for agricultural and other necessary pursuits.
Railroad-control law.
Urgent deficiency appropriations (second session) on account of war expenditures.
Providing disposal of effects of deceased sailors.
To pay gun pointers and captains in Navy while absent.

Authority to appoint as officers Philippine Scouts.
Restoring discharged enlisted men to former grades if discharged to accept commissions.
Authority to discharge recalcitrant Navy officers.
Reducing instruction period at Naval Academy to three years.
Third liberty-loan authorization.
War Finance Corporation law.
To appoint additional Assistant Secretaries of War.
Regulating pay of retired chief warrant officers, Navy.
To promote export trade.
Providing for quarters for officers in field or abroad.
Delegating powers for suppression of espionage among women enemy aliens.
Relating to military training in colleges and to reserve officers' training camps.
Allowing indemnities to France for damages caused by American forces.
Preventing interference with use of homing pigeons.
Sabotage law, preventing destruction of war materials, etc.
To pay traveling expenses in Army when "on duty under competent orders."
To promote officers temporarily when filling vacancies of officers to higher grades in Regular Army.
For transportation of shipyard employees.
Appropriating \$1,000,000 for ordnance testing in Navy.
Authorizing President to sell supplies, equipment, etc., acquired or manufactured by the United States incidental to the war.
Regulating the officering and manning of vessels subject to the inspection laws of the United States.
Authority to seize enemy vessels.
Authority to Red Cross to erect temporary building.
Permission to War Department to erect building on Smithsonian Grounds.
Relating to eligibility of retired Army engineer officers.
Extending time for Niagara water diversions.
Excusing soldiers and sailors from assessment work on mining claims.
Suspending labor requirements of owners of mining claims during war.
Authorizing land purchase by Ordnance Bureau, War Department.
Extending effective date of section 10, Clayton antitrust law.
Garabed energy-generator tests authorized.
Extending time for filing applications under soldiers' insurance act.
Permitting outside applicants to take civil-service examinations in the District of Columbia.
Allowing applications for war-risk insurance by soldiers' relatives.
Appropriations for the Army.
Rehabilitation of soldiers and sailors.
Government control of telegraph and telephone.

Revenue Bill.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,
OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 6, 1918.

Mr. BROWNE. Mr. Speaker, on the 6th day of October, 1917, I made some remarks on the revenue bill in which I advocated raising more revenue by taxation and less by bonds. I also advocated a higher rate of taxation for excessive profits.

OBJECTION TO BONDS.

The bonds issued must be paid several times over in interest payments. The simple interest on a 4 per cent bond issue equals the whole principal at the end of 25 years. Therefore at the end of 25 years the people will have paid for the bonds once in the form of interest, leaving the principal untouched, and so on indefinitely. When the bonded indebtedness amounts to thirty or forty billions of dollars, the repeated payments of the debt become a burden under which few nations could stand.

BONDS CAUSE INFLATION AND HIGH COST OF LIVING.

The issue of bonds inflates the circulating medium. The effect of inflating or increasing the circulating medium increases and always has increased the cost of living by raising prices without raising wages and salaries accordingly. If anyone will look at

the bank statements he will see that deposits do not grow less to any great extent in bond issues. Persons who buy bonds usually pay for them with checks or by some equivalent arrangement. The Government often leaves its balance untouched in the bank for a time, and the same bonds often come back to the bank as security for a bank loan. The currency which we use in our daily business is largely bank credit. Dr. Simon N. Patten, in the Yale Review of October, 1917, argues that the rise in current prices on account of bond inflation may equal the full amount of the bonds. In that case the consumer pays inflated prices for the necessities of life as much as he would have to pay in taxes to the Government had no bonds been issued. Sooner or later taxes must be levied to pay the bonds, and meantime the producer suffers the evils of heavy interest payments and high prices for the necessities of life. Thus the people pay for every bond issue in the form of inflated prices, which money goes to the people that control the necessities of life. Second, they pay for the bonds three or four times over in the form of interest.

WHO WILL EVENTUALLY HOLD THE BONDS?

Twenty-five years after the close of the war 2 per cent of the population of the United States will hold over 95 per cent of the Government bonds, and the 98 per cent of the people of the United States will pay tribute to this privileged class. Bonds, of course, are necessary, but to issue bonds for 75 per cent of the expenses of the war and only 25 per cent by taxation, as many are contending, can not be justified.

EXCESSIVE-PROFITS TAX.

The present revenue bill was a compromise. I voted for the Keating amendment and other amendments proposed raising the rate of taxation on excessive profits. England has an excessive-profits tax of 80 per cent. In a statement in the House of Commons on July 5, 1917, the chancellor of the exchequer, in illustrating the British excess-profits law in a typical case, said that a merchant whose prewar profit was \$12,500 and whose present profits were \$50,000 would pay an excess-profits tax of 80 per cent on \$37,500—that is, \$30,000—and in addition he pays about \$5,400 in income and super taxes, leaving him a balance of \$14,500. In an article in the Nation, March 28, 1918, on the excess-profits tax, E. R. A. Seligman states that Great Britain began by levying a 50 per cent tax on excess profits, and then 60 per cent, and now the rate has been raised to 80 per cent.

OUR PRESENT REVENUE BILL.

It has been variously estimated that the excess-profits tax of our recent revenue law would not exceed 30 per cent on any profit actually realized. (See article in the New Republican, Sept. 8, 1917.)

JUSTICE IN TAXATION.

Justice in taxation does not mean equality in the amount of money paid; it means equality coupled with an equal ability to pay. In times of war there should be equality of sacrifice. It may be a greater sacrifice for a man of small means to be taxed a few dollars, so that he has to forego all luxuries and many of the necessities, than for a man of wealth to be taxed 95 per cent of his total income. We must not overlook the fact that quite a large part of most every tax is shifted so that the ultimate consumer in his actual necessities of life pays a large indirect tax. The man with a salary of \$600 or \$1,000 per year, endeavoring to raise a family, can not stand a \$10 or \$20 tax as well as a man with an income of \$1,000,000 per year can stand a tax of \$990,000. The one means sacrifice and maybe want; the other means no sacrifice.

When Senator KENYON stated on the floor of the Senate that no man in these times should be allowed an annual income of over \$100,000 per year he was denounced as an anarchist. I very cheerfully take a position beside the able Senator from Iowa and would be willing to vote for an amendment to the revenue bill as a war measure much more drastic than making the maximum income allowed an individual \$100,000 per year.

CONSCRIPT WEALTH.

We have passed a law conscripting the boys of this country. We go into the homes of all alike. The humblest cottage in the land, if the iron fate of chance decrees that one, two, or three of the stalwart sons shall be offered to their country, is not exempt. Many parents would rather give over home, farm, all their worldly effects, than have their boy go, yet they bow to the voice of duty and their country. When we conscript boys we go to the people that have strong, healthy, intelligent boys. When we conscript wealth we must go where we can find wealth, to the wealthy, and we certainly should not be more tender about conscripting wealth than we are of conscripting boys, the flesh and blood of the land.

MOST OF THE PEOPLE ARE MAKING GREAT SACRIFICES ON ACCOUNT OF THE WAR.

The masses of the people are called upon, and will be more and more, to make great sacrifices during the continuance of the war. That sacrifice should be equally apportioned. The rank and file of the American people, who must do the fighting and produce the vast quantities of supplies, which are at this time as necessary as armies, are not making anything out of the war. They are growing poorer every day on account of the runaway prices of the necessities that the average family has to buy.

If we levied the same tax, to wit, 80 per cent, on excess profits that England does, we would receive from the United States Steel Co. over \$300,000,000 per year, and then leave them nearly \$100,000,000 profits per year, a sum very much larger than they ever made, and they have always made exorbitant profits.

INCREASES IN GREAT FORTUNES A MENACE TO OUR DEMOCRACY.

No thoughtful citizen can contemplate the income-tax returns recently published without alarm if he believes in a Government of, for, and by the people. In the first 140 years of the history of the United States we produced 14,771 millionaires. The last statistical year, 1916, we produced 7,925, or over 26 millionaires per day, which is certainly "going some." In 1914, 44 persons were taxed upon incomes exceeding \$1,000,000. In 1915 there were 60 persons who were taxed on incomes of over \$1,000,000 per year. In 1916 there were 120 persons taxed on incomes of more than \$1,000,000 per year. In 1917 there were 206 persons who received an income of over \$1,000,000 per year. I herewith place in the Record a letter from Daniel C. Roper, Commissioner of Internal Revenue:

TREASURY DEPARTMENT,
COMMISSIONER OF INTERNAL REVENUE,
Washington, June 18, 1918.

Hon. EDWARD E. BROWNE,
House of Representatives, Washington, D. C.

MY DEAR MR. BROWNE: In reply to your letter of June 4, the following statement is given, showing the number of individuals in the United States, by income classes, reporting net income for the calendar year 1916 of over \$100,000. These figures are taken from the annual report of the Commissioner of Internal Revenue for the fiscal year ended June 30, 1917, page 256:

Income class:	Number of returns.
\$100,000 to \$150,000	2,900
\$150,000 to \$200,000	1,284
\$200,000 to \$250,000	726
\$250,000 to \$300,000	427
\$300,000 to \$400,000	409
\$400,000 to \$500,000	245
\$500,000 to \$1,000,000	376
\$1,000,000 to \$1,500,000	97
\$1,500,000 to \$2,000,000	42
\$2,000,000 to \$3,000,000	34
\$3,000,000 to \$4,000,000	14
\$4,000,000 to \$5,000,000	9
\$5,000,000 and over	10

Six thousand four hundred and twenty-seven have incomes between \$100,000 and \$1,000,000 per year.

Two hundred and six have incomes from \$1,000,000 to \$5,000,000 per year.

This statement shows 206 people in the United States reporting net incomes of a million dollars and over.

Within the next few days an exhaustive analysis of the returns of net income filed for the calendar year 1916 will be issued, entitled "Statistics of Income." A copy of the same will be sent you.

Sincerely, yours,

DANIEL C. ROOPER, Commissioner.

FIVE MEN IN NEW YORK EACH RECEIVED NET PROFITS OF OVER \$1,000,000 PER MONTH.

The above table shows that there are 10 persons receiving incomes of over \$5,000,000 per year. Five of these persons reside in the State of New York, and are receiving incomes which aggregate \$61,639,532, or over \$12,000,000 for each of the five persons per year. Consider this for a moment: five men in one State, in war time, each receiving an income of over \$1,000,000 per month. An excess-profits tax of 80 or 90 per cent would certainly not compel these men to make a great sacrifice. The wolf would not scratch very hard at any of their front doors. These men are all arguing for bond issues instead of taxation. They contend that 75 per cent of the Government expenses should be raised by bond issues. If we take their advice and issue bonds for a greater portion of our war expenses, we will be paying interest to these people and their children for the next hundred years. In the Statistics of Income, official publication of the Treasury Department, page 79, will be found the figures quoted above.

Six other men in New York receive incomes which aggregate \$27,207,157, or over four and one-half million dollars per year for each of the six men.

Delaware is the home of one man who has an annual income of over \$5,000,000.

In war time, when we want money and are told that money is as necessary as men to win the war, why should we hesitate about taxing these large incomes?

If any Congressman raises his voice in favor of a high rate of taxation of excessive incomes he is immediately attacked by the metropolitan press. Some of the so-called patriotic societies that have their homes in New York get busy. The high-salaried secretaries of these societies sharpen their lead pencils and proceed to mark a Congressman on loyalty. If he is strong for high taxation of excessive profits, he does not get over 50 or 60 per cent on loyalty.

FEDERAL TRADE COMMISSION POINTS OUT PROFITEERS.

The Federal Trade Commission, in response to a Senate resolution on June 10, 1918, investigated the charges of profiteering. What was the verdict of these Government officials? Guilty. The corporations that control gasoline, coal, steel, meat, leather, lumber, copper, nickel, and other great natural monopolies were the offenders. Look up the work entitled "Directory of Directors" and you will find the group of financiers that control gasoline, oil, coal, steel, meat, lumber, copper, zinc, and nickel, and you will have the identical group of financiers that control the large city banks, the railroads, steam and electric, the telephone and telegraph, and a controlling interest in the greater part of the metropolitan press and the magazines of the country. (Send to the Senate Document Room for Document No. 248 on Profiteering, and they will send you this Government publication, which you will find interesting reading.)

MEAT TRUST CONVICTED OF PROFITEERING.

The Federal Trade Commission in its report speaks of the great "Meat Trust" as follows:

Five meat packers—Armour, Swift, Morris, Wilson, Cudahy, and their subsidiary and affiliated companies—have monopolistic control of the meat industry and are reaching for like domination in other products. Their manipulation of the market embraces every device that is useful to them, without regard to law. Their reward expressed in terms of profit reveals that four of these concerns have pocketed in 1915, 1916, and 1917, \$140,000,000. However delicate a definition is framed for profiteering, these packers have preyed upon the people unconscionably. (Page 7, Senate document.)

SAME INTERESTS ATTEMPTING TO PUT THE CREAMERY OUT OF BUSINESS.

Since the report of the Federal Trade Commission a complaint has been made by the Government against Armour & Co., of Chicago, charging them with concealing the ownership of a subsidiary company and attempting to put small competitors out of business through price discrimination and falsifying tests for butter fat in the purchase of cream. They have also been charged by the Federal Trade Commission with having attempted to keep secret their affiliation with Bayer Bros. Co., of Rochester, Ind., with the purpose and intention of stifling competition in the manufacture and sale of dairy products. Discrimination in price paid for milk and cream in certain local areas also is charged, higher prices being paid in territories where small competitors exist.

MEAT TRUST CONTROLS THE LEATHER INDUSTRY.

Leather and leather goods, the commission states in its report, were paying a profit of from 30 per cent to more than 100 per cent over that of 1914. A letter from the Eastern Leather Co. to Armour & Co., which was produced before the commission, read as follows:

We are inclosing our check on the National City Bank, New York City, payable to Mr. J. Ogden Armour, for \$915,787, same being a dividend of 53 per cent on the 17,279 shares of common stock standing in his name.

In addition a dividend amounting to 10 per cent of the common stock was set aside for surplus. Almost a million dollars per year profit to one man in one of the many corporations he controls! This is a time of war when the people are expected to make sacrifices. In a letter dated July 3, 1918, addressed to me from L. F. Swift, president of Swift & Co., Mr. Swift defends his large profits as follows:

The unusual economic conditions of the past three years have necessarily resulted in larger than normal profits in the packing industry, as in other industries; but this profit can hardly be considered excessive, because it has been just as essential as has been the largely increased income of the farmer and wage earner.

L. F. SWIFT.

STEEL.

The Federal Trade Commission further states as follows:

In 1917 the steel companies made abnormal profits. The figures as to the net income of the United States Steel Corporation are given as follows:

1914	\$46,520,407
1916	294,026,564
1917	478,204,343

After paying all their taxes in 1917 they had a net profit of \$244,738,908.

I herewith give a list of a number of steel companies and the profits they made in 1917, according to the United States Federal Trade Commission report of 1918, on page 9:

	Profits, per cent.
Alan Wood, Iron & Steel Co.	52.63
Allegheny Steel Co.	78.92
American Tube & Stamping Co.	40.63
Central Iron & Steel Co.	71.35
Eastern Steel Co.	30.24
Forged Steel Wheel Co.	105.40
Follansbee Bros. Co.	112.48
Nagle Steel Co.	319.67
West Penn Steel Co.	159.01
West Leechburg Steel Co.	109.05

OTHER METALS.

The commission further finds the average profit in the copper industry has more than doubled since the war; zinc, 95 per cent; nickel, 30 per cent; sulphur, as high as 200 per cent; lumber, the report states, the margin of profit per thousand board feet in 1917 was nearly double that in previous years. In regard to coal, the report states the profits in 1917 were often two or three times the normal return.

REVENUE BILL AND OLEOMARGARINE.

When the revenue bill was before Congress there was an attempt to take the tax off of oleomargarine. I vigorously opposed the oleomargarine amendment. I quote a few passages from my speech:

UNDERWOOD AMENDMENT AS A TAX MEASURE.

The Underwood amendment would increase the tax from one-fourth of a cent to 2 cents per pound on the 145,760,973 pounds, and would reduce the tax 8 cents a pound on only 3,403,287 pounds of the colored oleomargarine, which pays the 10-cent tax. This is an increase to the consumer on the uncolored product of \$2,550,817.93 annually in taxes alone, provided the output remains the same. Thus the people who are eating the uncolored oleomargarine and buying it as oleomargarine, who are the people who feel they can not afford butter, would be paying over \$2,500,000 annually if this proposed amendment becomes a law.

Thus the poor consumer would pay more than he does at the present time, and the only ones profiting would be the oleomargarine factories, the packing houses, and the cottonseed-oil people.

WHAT THIS AMENDMENT WOULD ACCOMPLISH.

The only purpose of coloring oleomargarine is to deceive the public and make them think they are eating butter, and thus raise the price of oleomargarine.

Ex-Gov. W. D. Hoard, March 5, 1917, wrote me, among other things, as follows:

You have discerned the true animus of the advocates of the Underwood amendment, and also the disastrous effects such a law would have on the dairy industry. Your speech is a splendid defense of the dairy farmer as against the packing house and cottonseed combine for his overthrow.

NEWSPAPER CRITICISM.

Certain newspapers that are the organs of the organized wealth of the country have attempted to discredit Congress and defeat Congressmen whom they could not intimidate or control. They have been aided by certain self-styled patriotic organizations having their offices close to Wall Street. Any Congressman that had the temerity to suggest that we raise a reasonable amount of the costs of the war by taxation instead of mortgaging the future by bond issues was not loyal; any Congressman that demanded that excess war profits should be taxed as high as Great Britain taxes them—80 per cent—was branded as a socialist and disloyal; any Congressman that proclaimed against the profiteers did so at the risk of having an avalanche of criticism brought down upon him by the press.

When Senator JOHNSON of California uncovered the Hog Island scandal and showed that men like Vanderlip and Ogden Armour, men holding high positions and being eulogized by the press for their unselfish patriotism, were in a corporation that was receiving \$6,000,000 from the Government for doing absolutely nothing, furnishing what they called the "know how," the press of the country, outside of Hearst's papers and a limited number of other papers, scarcely gave it a passing notice.

THREAT OF WALL STREET.

Leslie's Magazine in its "Forecast for 1918," issued December 29, 1917, on page 911, says:

The old year passes out amid the deepest gloom on Wall Street.

Once more the situation is up to Congress, the same Congress that has so signally failed thus far to meet the desperate problems of the war. Is it surprising that a feeling of hopelessness prevails in the financial circles as the New Year dawns, and the fear that until a new Congress is chosen little relief can be expected? A new House of Representatives will be chosen next fall, with every promise that its political complexion will be completely changed from that of the present Congress. If this hope should be justified, it would give a decided stimulus to the stock market.

Wall Street's correspondent certainly pays Congress a high tribute. I hope that the revenue bill that is now being drafted will produce much more of a gloom on Wall Street. The present Congress can content itself with the satisfaction of knowing that if it has not satisfied Wall Street it has satisfied President Wilson, who commends Congress in the following language:

It seems to me that the work of this remarkable session has not only been done thoroughly but that it has also been done with the utmost dispatch possible in the circumstance or consistent with a full consideration of the exceedingly critical matters dealt with. I have admired the work of this session. The way in which the two Houses of Congress have cooperated with the Executive has been generous and admirable.

Statement of Appropriations and Expenditures for Fiscal Year 1919, and Prior Years.

EXTENSION OF REMARKS
OF
HON. SWAGAR SHERLEY,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,
Monday, July 15, 1918.

Mr. SHERLEY. Mr. Speaker, under leave to extend my remarks I submit herewith a statement showing appropriations made during the second session of the Sixty-fifth Congress, including appropriations for the fiscal year 1919, and prior fiscal years.

It is impossible at this time to submit a classification of these appropriations other than as is indicated by the title of the acts carrying the specific sums. It should be borne in mind that while the statement submitted below shows appropriations and authorizations for expenditures in a sum little short of \$36,000,000,000, the amount of expenditures in the next fiscal year will not necessarily reach any such total. In point of fact

the probability is that such expenditures will be at least five or six billions of dollars less than that amount. In this connection perhaps it is interesting to consider appropriations made for the fiscal year 1918. I submit such a statement for that fiscal year subdivided between the amount for loans to allies and those for other purposes, which show a total for both purposes of approximately \$18,900,000,000. Of this amount there were actually expended for governmental purposes, including the payment in the form of loans to our allies, a little over thirteen and one-half billions of dollars, leaving approximately \$5,300,000,000 of balance under such appropriations not now expended.

There is also submitted a statement showing authorized bond issues to date of \$22,000,000,000, with actual bonds issued of \$9,978,000,000 in round figures, leaving remaining bonds authorized to be issued of \$12,021,000,000 in round figures.

In addition to this there has been authorized an issue of War-Saving Stamps of \$2,000,000,000, of which there have been in round figures \$307,000,000 issued.

It is estimated that under existing tax laws approximately \$4,100,000,000 will be raised exclusive of postal revenues, which should provide approximately \$350,000,000, making a total revenue from existing laws and loans authorized and not heretofore issued of approximately \$18,161,000,000.

Appropriations made during the second session, Sixty-fifth Congress, including appropriations for the fiscal year 1919 and deficiencies in appropriations for the fiscal year 1918 and prior years.

Act.	Cash.	Contracts to be met by subsequent appropriations.	Total.
Agricultural appropriation act.....	\$27,875,353.00		\$27,875,353.00
Army appropriation act.....	10,228,878,312.91	\$1,858,332,801.00	12,085,211,113.91
Diplomatic and Consular appropriation act.....	7,937,376.66		7,937,376.66
District of Columbia appropriation act.....	215,016,768.66		215,016,768.66
Fortification appropriation act.....	2,814,348,267.85	2,623,465,845.00	5,437,814,112.85
Indian appropriation act.....	11,021,910.00		11,021,910.00
Legislative, executive, and judicial appropriation act.....	69,937,863.25		69,937,863.25
Military Academy appropriation act.....	2,589,846.25		2,589,846.25
Naval appropriation act.....	1,573,485,415.84	34,000,000.00	1,607,485,415.84
Pension appropriation act.....	220,050,000.00		220,050,000.00
Post Office appropriation act.....	377,573,342.00		377,573,342.00
River and harbor appropriation act.....	23,771,900.00	82,700.00	23,854,600.00
Sundry civil appropriation act.....	2,019,654,470.07	945,549,000.00	2,965,203,470.07
Total regular acts.....	17,300,153,826.49	5,461,430,346.00	22,851,581,172.49

Increased compensation to certain postal employees during 1919.....	\$26,946,030.00		\$26,946,030.00
Increased compensation to certain other Government employees during 1919.....	\$25,000,000.00		\$25,000,000.00
Miscellaneous appropriations, including \$2,000,000 for vocational rehabilitation of soldiers and sailors.....	3,666,000.00		3,666,000.00
Total all other appropriations.....	5,100,319,398.36		5,100,319,398.36
Grand total.....	\$24,328,561,427.67	5,462,680,346.00	\$29,791,241,773.67

¹ Voted by the President. New bill not yet passed.

² Exclusive of the sum of \$3,820, still in disagreement between the two Houses.

³ Approximated as of date of May 11, 1918, for interest on public debt and expenses of loans.

⁴ The estimated cost of increased compensation to postal employees during 1919 is \$40,000,000, of which sum \$13,053,970 is definitely appropriated in Post Office appropriation act and the sum of \$26,946,030 is the approximate amount to be paid from the indefinite appropriation carried in the act for that purpose.

⁵ Approximated.

⁶ The bill to stimulate agriculture and to facilitate the distribution of agricultural products and the bill to encourage production and to regulate ores, metals, and minerals now pending in the Senate as passed by the House of Representatives require appropriations, respectively, of \$11,212,283 and \$10,500,000 in addition to the grand total stated herein.

Appropriations and expenditures, 1918.

	Appropriations for loans to allies.	All other appropriations.	Total appropriations.
Appropriations for fiscal year 1918.....	\$7,000,000,000.00	\$11,892,027,501.58	\$18,892,027,501.58
Expenditures under above appropriations for 1918.....	\$5,633,029,750.00	7,958,672,721.14	13,591,702,471.14
Approximate balances under above appropriations for 1918.....	1,376,970,250.00	3,933,344,780.44	5,310,325,030.44
Appropriations for fiscal year 1919.....	3,000,000,000.00	21,328,561,427.67	\$24,328,561,427.67

¹ Includes \$885,000,000 disbursed during the fiscal year 1917.

² In addition to this sum contracts are authorized to be entered into which aggregate \$5,462,680,346 and for which appropriations subsequently will have to be made.

Approximate receipts, 1919.

Total bonds authorized to be issued, inclusive of \$10,000,000,000 noted above for loans to allies	\$22,000,000,000.00
Bonds issued	9,978,785,802.00
Remaining to be issued	12,021,214,200.00
War-savings stamps:	
Authorized	\$2,000,000,000.00
Issued	307,042,341.00
	1,692,957,659.00
	13,714,171,859.00
Revenues under existing tax laws for 1919	4,077,715,000.00
Postal revenues for 1919	343,800,000.00
	18,161,643,859.00

I trust to be able at a later date to give more accurately figures as to the actual expenditures for the past fiscal year, as well as an approximation of the likely expenditures for the present fiscal year of 1919. The statement of appropriations for 1919 is believed to be accurate within a few thousand dollars. It should be noted that as to this statement that the supply bills relative to the Department of Agriculture and the District of Columbia and the bill to regulate the production of minerals have not yet become laws, and the statement is predicated upon their present status.

Revenues and Expenditures for the War.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 5, 1918.

Mr. MONDELL. Mr. Speaker, while we declared war against Germany on April 6, 1917, nearly three months before the expiration of the fiscal year 1917, our appropriations and expenditures on account of the war virtually began with the regular and deficiency appropriations charged against the fiscal year 1918.

These appropriations for the fiscal year ending June 30, 1918, amounted to approximately \$18,900,000,000, including \$7,000,000,000 for loans to our allies.

Of these sums there had been actually expended at the end of the fiscal year approximately \$13,500,000, including approximately \$5,600,000,000 in loans to our allies.

The appropriations for the fiscal year ending June 30, 1919, amount to approximately \$24,328,000,000. If we add to that the sum of \$5,462,000,000 of contract authorizations, we have a total of appropriations and authorizations for this fiscal year of approximately \$29,800,000,000.

If to the expenditures to July 1, as above stated, we add the appropriations for the fiscal year that began that day, we have a total of very nearly \$38,000,000,000 as the actual and anticipated expenditures for the first two years of war, not including the authorizations of nearly five and a half billions for this fiscal year. These figures in detail are as follows:

	Appropriations for loans to allies.	All other appropriations.	Total appropriations.
Appropriations for fiscal year 1918	\$7,000,000,000.00	\$11,892,027,501.58	\$18,892,027,501.58
Expenditures under above appropriations for 1918	5,623,029,750.00	7,958,672,721.14	13,581,702,471.14
Approximate balances under above appropriations for 1918	1,376,970,250.00	3,933,344,780.44	5,310,325,030.44
Appropriations for fiscal year 1919	3,000,000,000.00	21,328,561,427.67	24,328,561,427.67
Total expenditure 1918 and appropriation 1919			37,910,263,898.81

¹ Includes \$885,000,000 disbursed during the fiscal year 1917.

² In addition to this sum contracts are authorized to be entered into which aggregate \$5,462,680,346 and for which appropriations subsequently will have to be made.

REVENUES.

We have authorized the issuance of bonds in the sum of \$22,000,000,000, including ten billions for loans to our allies, and war savings stamps in the sum of \$2,000,000,000. We have issued bonds in the sum of approximately \$10,000,000,000.

Our revenues from all sources of taxation were, according to the latest figures obtainable, approximately \$4,500,000,000 for the fiscal year ending June 30, and would without change of law amount to approximately a similar sum the present fiscal year.

It is very evident that if we are to meet these enormous war costs, these expenditures so vast that they fairly stagger the

imagination, so tremendous as to make the outlay in other wars and in other times appear trifling and trivial, we must greatly increase our revenues from taxation, enormous as they now are.

The highest possible estimate of our income from taxation for the present year is less than \$5,000,000,000, or about 20 per cent of our appropriations, not a sufficient sum to safely depend upon to sustain the national credit under an expenditure of five times that sum.

SOURCES OF INCREASED REVENUES.

The Committee on Ways and Means of the House is now struggling with the momentous question, one of the most trying ever presented to a body of legislators, as to how much the tax burden shall be increased and the sources from which these increased revenues shall be derived.

It is no part of my duty to advise the members of the Ways and Means Committee, neither have I disposition to do so, having great confidence in their judgment and their patriotism; nevertheless I can not refrain from expressing the opinion that these gentlemen will find it very difficult to raise \$8,000,000,000 per annum by taxation, as has been suggested by the Treasury Department, without incurring great danger of impairing necessary productive capital, checking industry in important and essential lines, and unduly burdening the people of the country.

All signs point to at least another year of war, with probably increased expenditure, though it hardly seems possible that the greatest military establishment necessary, or possible to secure, could cost more than the appropriations for the fiscal year. Assuming, however, as we must, the probability of a continuance of the war, with an increased expenditure, it would be the height of folly to cripple development or discourage production at this critical period.

It is understood and agreed that the bulk of the increased revenues are to come from income, profits, and luxuries, but we all realize that it is not the simplest matter in the world to determine what constitutes luxuries. Furthermore, it is exceedingly difficult to lay down a rule that will assess the necessary heavy levy on profits without danger of impairing, in certain lines, the capital necessary for the continuation of business and the essential increase of production, in times of advancing costs in all lines.

There is a real danger of doing great injustice by impairing capital through income and profits taxes applying to classes of business of a hazardous character. The enterprises connected with oil development and production, so essential to the successful conduct of the war, are clearly in this category. Live-stock production, as carried on in the western ranch and range country, particularly the sheep and wool industry, are in this class of enterprises involving large risk and hazard. In laying a heavy burden on income and profits consideration should be given to these and other classes of essential productive enterprise involving unusual risks and hazards.

REVENUE FROM CUSTOMS.

In looking about for sources of revenue the Ways and Means Committee may well have in mind the customhouses of the country, which have been so markedly overlooked and passed by in the legislation which has financed the war this far. Even the majority of the Ways and Means Committee, touchy as they are on the subject of protection to American industries, may feel perfectly safe in availing themselves of the opportunities of securing revenues through customs duties under present conditions, for if there ever was a time when their own favorite doctrine of tariff for revenue urged and invited an increase of the tariff this is the time.

In spite of the war our imports are constantly increasing, totaling the enormous sum of \$2,946,022,363 for the last fiscal year, the largest in all our history. Notwithstanding these enormous importations our revenues from customs amounted to only \$179,998,383.049, or about 6 per cent ad valorem on the total value of imports.

Leaving aside all questions of protection and free trade, it is perfectly scandalous that in a time of war which is calling

for the most heroic sacrifices in men and money and compelling our people to conserve, economize, and sacrifice in every direction the foreigner should have the benefit of our markets free of all tax on many articles and with a ridiculously low tax on those on which customs duties are levied.

Whatever may be the merit in other times and under other conditions of the argument that the consumer pays the tariff tax, no one with the slightest regard for the judgment of their fellow men will seriously advance that argument at this time. Under present war conditions affecting prices a reasonably stiff tariff duty would have no appreciable effect on the price which the domestic consumer would pay. As matters now stand, the argument of the protectionist that in the main the foreigner pays the tariff tax will hardly be challenged by any intelligent student of the situation, whatever his views, opinions, and contentions may be under normal conditions.

Assuming importations in the coming fiscal year equal to those of the year just closed—and they will be larger beyond a doubt—and assessing against them the very moderate average rates of the last Republican tariff bill, and we should have an income from this source of nearly \$600,000,000, a sum which would go far toward making up the deficiencies in the tariff bill which otherwise might have to be met by consumption taxes.

When we made up the revenue bill of last year we were too near former tariff controversies, the Congress had not become sufficiently habituated to working on revenue bills and considering customs duties free from partisan predilections to successfully work out an increased tariff schedule. The situation should, however, be sufficiently clear at this time. The adjournment of politics, to which the President referred, ought to be possessed of sufficient substance to enable our Democratic friends to realize that an opportunity is presented to shift a part of the burden our people are called upon to bear to the shoulders of the foreigners seeking our market without being disturbed for fear some one will accuse them of being converted to the theory of protection.

There is another view of the situation as it has developed, and as it will further develop, during the continuation of the war, and especially with the coming of peace, which our Democratic friends may well consider at this time. Whatever may be the fortunes of political contests in the future, the logic of events will compel a readjustment of our tariff schedules and a considerable increase in the rates of duty on many articles to meet the economic and industrial changes which peace will bring. Even a Democratic Congress and administration would not be able to withstand the force of the inevitable logic of a changed political and economic situation. The people will demand that their industries shall not be crippled or submerged. They will particularly insist that we shall not again become wholly dependent on sources beyond our borders for essential products which, with proper direction and encouragement, we can supply at home.

It would be well if our Democratic friends would early accustom themselves to the consideration of customs duties from this viewpoint, and this is a good time to begin, when imports are booming, importers are reaping rich rewards in our great market, and the opportunity is offered to secure a very considerable portion of needed revenues from sources that will not further burden our people.

What the Government Does for Its Soldiers—Digest of New Pension Legislation.

Thirty dollars and up for Civil War veterans—\$25 a month for Civil War widows—\$12 a month for Spanish War widows—\$20 for Indian War veterans—Insurance, allotments, allowances, and compensation for soldiers of the present war, their civil rights protected, and injured men trained for work after the war.

SPEECH OF HON. ALBERT JOHNSON, OF WASHINGTON, IN THE HOUSE OF REPRESENTATIVES, Tuesday, July 9, 1918,

On the bill (S. 4444) to pension widows and minor children of officers and enlisted men who served in the War with Spain, Philippine Insurrection, or in China.

Mr. JOHNSON of Washington. Mr. Speaker, in connection with the bill providing pensions for the widows of veterans of the Spanish War a statement concerning recent pension legislation can not fail to be of interest.

As is well known, neither soldiers nor widows of soldiers of the Civil War were pensioned generally until the passage of the act of June 27, 1890. Prior to that act pensions were al-

lowed for disabilities originating in line of military duty, and widows were pensioned when the death of the soldier was due to causes originating in the service.

CIVIL WAR VETERANS' PENSIONS.

For several years past nearly all surviving soldiers of the Civil War have been pensioned under the so-called "age-and-service act" of May 11, 1912, which made allowances ranging from \$13 per month in the case of a soldier 62 years old who served 90 days, up to \$30 per month for the 75-year-old soldier who served two years or more. The table of rates under that act was as follows:

The Sherwood law.

RATES UNDER ACT JUNE 10, 1918.

Age.	90 days.	6 months.	1 year.	1½ years.	2 years.	2½ years.	3 years.
62.....	\$13.00	\$13.50	\$14.00	\$14.50	\$15.00	\$15.50	\$16.00
66.....	15.00	15.50	16.00	16.50	17.00	18.00	19.00
70.....	18.00	19.00	20.00	21.50	23.00	24.00	25.00
75.....	21.00	22.50	24.00	27.00	30.00	30.00	30.00

Soldiers of the Civil War are now pensioned under the provisions of the act of June 10, 1918, which passed only a few weeks ago, and which provides a minimum rate of \$30 per month for all soldiers who served 90 days or more. The table of rates under the new law is as follows:

The Snotow law.

RATES UNDER ACT JUNE 10, 1918.

Service.	90 days.	At age—	6 months.	1 year.	1½ years.	2 years.
Rate.....	\$30.00	72	\$32.00	\$35.00	\$38.00	\$40.00

The following circular letter was issued by the Commissioner of Pensions, which is in explanation of the provisions and construction of the new law:

DEPARTMENT OF THE INTERIOR, BUREAU OF PENSIONS, Washington, June 10, 1918.

The act of June 10, 1918, amending the pension law of May 11, 1912, provides the rate of \$30 per month for soldiers and sailors of any age who served 90 days or more during the Civil War and were honorably discharged, and who are now receiving a lower rate. Those who are 72 years of age or over and who served six months are entitled to receive \$32 per month; those who served one year, \$35 per month; one and one-half years, \$38 per month; and two years or over, \$40 per month. These increases will be granted automatically and without application of any kind to the Pension Bureau to all soldiers and sailors now pensioned under the act of May 11, 1912, and who have attained the required age and served the necessary length of time.

Soldiers and sailors who served during the Civil War and are pensioned at lower rates under some other law, but who are entitled to pension under the act of May 11, 1912, will be required to file an application under that act in order to receive the benefits of the new law.

The Pension Bureau will make these allowances with all the dispatch possible under existing conditions. A special force for the adjustment of cases within the provisions of the new law has been organized which will handle these cases exclusively. It should be borne in mind by those concerned that there are now nearly 268,000 pensioners under the act of May 11, 1912, and all are urged to exercise patience and consideration. While every effort will be made to hasten this work, there will be no avoidable interference with the progress of claims now on file or hereafter filed under other laws. A special effort will be made not to interfere with the adjudication of widows' claims.

It will be wholly impracticable to make any payments at the increased rate on July 4, 1918, but it is hoped that payments due August 4, 1918, may be made at the rate provided by the new law. It will not be necessary to write the bureau about these increases. Letters of inquiry will simply delay the work of making allowances.

No attorneys' fees will be allowed or paid for services in securing increase of pension under the act of June 10, 1918.

G. M. SALTZGABER, Commissioner.

CIVIL WAR WIDOWS' PENSIONS.

During recent years, widows of Civil War veterans have been pensioned under the act of April 19, 1908, which allowed \$12 per month for all widows married prior to June 27, 1890. This act was amended by the act of September 8, 1916, giving widows married as late as June 27, 1905, pension at the rate of \$12 per month, and those 70 years of age or over, \$20 per month.

An amendment to the war-risk insurance act of October 6, 1917, gave \$25 per month to all Civil War widows, regardless of age, provided they had a pensionable status under previous enactments. The act of September 8, 1916, also made pensionable the widow of a Civil War soldier who had been placed on the roll and whose name had been dropped from the roll by reason of her marriage to another person, who had since died, or from whom she had been divorced upon her own application.

INDIAN WAR VETERANS' PENSIONS.

A number of acts have been passed to provide pensions for veterans of the Indian wars which occurred in the Middle Western and far Western States. The latest and most liberal of

these laws is the act of March 4, 1917, which gives Indian war survivors \$20 per month, and their widows \$12 per month.

PENSIONS FOR WIDOWS OF SPANISH WAR SOLDIERS.

Neither soldiers nor widows of soldiers of the Spanish War and Philippine insurrection have been pensioned generally up to the present time, although the former have been allowed pensions for disabilities originating in line of military duty, and widows have been pensioned when the death of the soldier could be shown to be due to causes originating in the service.

The Key bill, just passed by Congress, gives to widows of officers and enlisted men who served during the War with Spain, the Philippine insurrection, or the Boxer uprising, for a period of not less than 90 days, and received an honorable discharge, pensions of \$12 per month. The widow need not prove the soldiers' death to have been caused by his military service, but she must have been married to him prior to July 16, 1918, and she must be without an annual net income of \$250. The law also provides \$2 per month additional on account of each minor child until it reaches the age of 16 years. Where there is no widow but one or more minor children, the widows' rate of \$12 per month is divided equally between the children plus \$2 each until they reach 16 years of age.

REGULAR ARMY SOLDIERS NOT PENSIONED.

It should be borne in mind that Congress never has made general provision for the pensioning of soldiers or dependents of soldiers of the Regular Military Establishment, except on account of disabilities or death incurred in line of duty. Frequently Members of Congress receive inquiries regarding pensions for soldiers who saw service in the Regular Army after the close of the Civil War. None of these can be pensioned unless their disabilities originated in the service and have continued ever since, or unless their commands are named in the act of March 4, 1917, as having taken part in the suppression of Indian uprisings.

WAR-RISK INSURANCE.

All soldiers in the present Army of the United States (including sailors and Army and Navy nurses) are entitled to the benefits of the war-risk insurance act of October 6, 1917, as amended by the act of June 25, 1918. Under the provisions of these laws officers and enlisted men are privileged to take out life insurance to the amount of \$10,000. They are obliged to make allotments out of their pay for the benefit of their wives and children, and they are permitted to make allotments to other persons. To such allotments the Government adds allowances to dependent relatives where the soldier or sailor, before enlistment, has been in the habit of contributing to the support of his relatives. Compensation is allowed to wounded soldiers at no cost to them in addition to medical, surgical, and hospital services, including artificial limbs, trusses, and other appliances. In case of the death of a soldier from wounds or injuries compensation is allowed his dependent relatives; this in addition to any Government life insurance for which the soldier may have contracted.

The provisions of the war-risk insurance act are necessarily somewhat involved and can not be given in full in this brief statement, but I shall be glad to explain the law in detail to all who write. Also, it is a privilege to assist all relatives of soldiers who find payments delayed or who have any trouble in collecting amounts due them. The war-risk insurance act, with its amendments, is one of the most progressive and generous laws ever enacted by any legislative body, and is designed to be more effective and more fair than any form of pension legislation heretofore tried. Naturally there have been delays and confusion in putting it into operation for millions of soldiers and their relatives, and therefore those interested should not hesitate to write to me in case of any misunderstanding.

VOCATIONAL EDUCATION OF SOLDIERS.

In addition to all of these improved pension acts, which have been passed since I have had the honor to be a Member of Congress, there has been enacted a law providing for the vocational training of those who return from the war injured, which act is bound to prove its value as time goes on. It is designed to train, equip, and place every injured soldier where he can best be of service to society and himself.

SOLDIERS' AND SAILORS' CIVIL RELIEF.

Soldiers and sailors in the present war are also protected in their civil rights by the act of Congress of March 8, 1918. Under the provisions of this law judgment by default can not be entered against a person in the military service except upon a proper showing. A soldier's dependents can not be evicted from rented premises except upon a showing that the tenant's ability to pay the agreed rent has not been materially affected by reason of military service. Installment contract and mortgage foreclosures are circumscribed for the protection of soldiers and

their dependents. Provision is made for the payment, by the Government, of lodge dues and other insurance premiums during the period of the soldier's service, the Government to be reimbursed by the soldier within one year from his discharge from the Army. This act provides that a soldier's land can not be sold for tax payments or other assessments if he files affidavit showing that his ability to pay has been materially affected by reason of his military service. And if he be a homesteader or an entryman on desert or mining land his rights as such can not be prejudiced or affected by reason of his absence from the land on military duty.

Pneumatic Tubes.

No time to Unload Junk on the Country—Patriotism or Profitism—Loyalty and Lip Service—The Day of Reckoning When the Boys Come Marching Home.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 27, 1918.

Mr. CARY. Mr. Speaker, I will have to vote against the proposition that the Government purchase the pneumatic tubes that have been in experimental operation for some years. It has not been clearly demonstrated that they give good service and it has been fairly well proven that the compensation asked for them is entirely out of proportion to the value of such service as they may render to the communities of the cities where they are now being used. It is the old, old story of trying to make Uncle Sam pay high for something the people do not need, and is on a par with all the rest of the moves that are now being made to loot the Treasury and pick the pockets of the people at the same time, and I regret to say that in these critical times, when the attention of the country is attracted to the exciting events and issues of the tremendous conflict in which we are involved, the well-trained masters in the gentle art of looting are making pretty lively progress in their nefarious operations.

Only a short time ago the President of the United States in a message to Congress uttered these significant words:

The profiteering that can not be got at by the restraints of conscience and love of country can be got at by taxation. There is such profiteering now, and the information with regard to it is available and indisputable.

The President's charge that avaricious persons are growing rich out of the war and taking advantage of the Nation's peril to exact extortionate profits from our Government and its people was received in surprise by many of our citizens who had not investigated the subject. The profiteers have been diligent in their efforts to conceal their rapacity. They have usually wrapped themselves in the American flag and boasted loudly of their patriotism. They have been loud in lip service and have been prominent in the dailies in connection with war work. They have pretended to be the most active supporters of our Government and, though wholly selfish themselves, have been most diligent in criticizing others for lack of patriotism.

REPORT OF FEDERAL TRADE COMMISSION.

In support of the President's charge against the profiteers we now have the report of the Federal Trade Commission, dated June 29, 1918, which is a shocking revelation of the avarice of the profiteers. The report covers in chief the great basic products of mining and industry, the commodities upon which practically all other prices are based. I will not attempt more than a hasty analysis of the report.

STEEL.

The Steel Trust made 24.9 per cent in 1917 upon the total amount invested in its business as against 4.7 per cent in 1912, 5.7 per cent in 1913, and 2.8 per cent in 1914. Even these enormous figures are small in comparison with the profits of Follansbee Bros. Co., 112.48 per cent; West Leeburg Steel Co., 109.05 per cent; West Penn Steel Co., 159.01 per cent; and dwindle into modesty as compared with the profits of Nagle Steel Co., which reach the murderous figure of 319.67 per cent.

COPPER, NICKEL, AND ZINC.

The average profits of 21 leading copper companies were found by the commission to average 24.4 per cent. Some of the concerns earned as high as 107 per cent on their investments. These figures show profits left after paying all Federal taxes and show the net amounts applied to dividends.

The New Jersey Zinc Co., which has a practical monopoly of zinc production, shows 95.9 per cent profits.

The International Nickel Co., which also has a monopoly, made 30 per cent on its investment.

SULPHUR.

Two corporations together enjoy a practical monopoly in sulphur production. They made for 11 months, ending October 31 last, 236 per cent on their investments. It costs about \$6 per ton to produce sulphur. These concerns charged from \$18 to \$35 per ton for their product.

LUMBER.

The lumber industry has been comparatively lenient. On an average the mills made net profits of 20 per cent during 1917, though some mills ran up to 121 per cent. The average for 1916 was 5.2 per cent.

COAL.

Coal producers seem to have been guilty of the most shameless profiteering of all, not that their profits were greater than other profiteers but because they dealt in a necessary of life—coal—which must be used by rich and poor alike, so that much of their extortion was practiced upon the poor and oppressed. The soft-coal producers of central Pennsylvania in 1916 made an average profit of only 20 cents per ton. In 1917 their profit was 90 cents per ton. Coal producers in the Middle States made 54 cents per ton profit as against 10 to 15 cents for the prewar period. So that the commission's report shows that coal operators had increased their profits from 300 to 500 per cent. I do know that coal which was sold f. o. b. mines at from 90 cents to \$1.35 per ton in 1912, 1913, and 1914 was sold during 1917 at from \$2.25 to \$2.90 per ton after Government prices had been fixed and that prior to price fixing the price in some cases reached \$4 per ton.

OIL AND GASOLINE.

The war emergency has given a golden opportunity to Standard Oil and its subsidiaries. They have earned from 24 to 63 per cent upon their investments.

MEAT AND LEATHER.

The big packers have proven themselves the robbers that they were believed to be. The big four—Armour, Swift, Morris, and others—had averaged prewar profits—1912, 1913, and 1914—of \$19,000,000; in 1917 they earned \$86,000,000. They did well in 1915 and 1916, for their profits for the last three years have reached \$142,000,000. Morris & Co. for 1917 earned 263.7 per cent on capital stock. Armour in 1916 increased its capital stock from \$20,000,000 to \$100,000,000, not a dollar of new money being paid for the new stock.

The packers are also interested directly and indirectly in the hide and leather business. A tremendous advance in prices of leather was made in 1917 and enormous profits realized. The Eastern Leather Co. paid 53 per cent dividends on its common stock after transferring 10 per cent to its surplus. The people paid this when they bought their shoes.

FLOUR AND MILK.

Flour millers increased their profits during 1917, 400 per cent, but the increase was distributed so that only a little was paid by each individual. Millers had been content with an average of 13 cents per barrel profit, but with the war they increased their average to 52 cents a barrel and paid profits of 38 per cent on their investments.

The canned-milk business is monopolized by a few concerns. One of these made 65 per cent on its investments and the others something less. Even little babies depending for nourishment upon a can of condensed milk are required to yield something to the war profiteers.

THEY BETRAY OUR SOLDIERS.

I can not take space to further notice the details of the commission's report. It is a sickening situation. The Nation is confronted with a powerful and unscrupulous adversary. Engaged in a stupendous war, it is sending its soldiers across the seas to fight the battles of mankind. Our brave soldiers are pouring out their lifeblood upon the battle fields of France and performing deeds of deathless heroism. Our armies are winning imperishable glory for American arms. Over the seas they are showing all that is splendid, magnanimous, and fine in our civilization, and here at home millions of patriotic citizens are watching and praying for the winning of the war. In millions of American homes the anxious mother prays for the absent son and feels a holy and solemn pride in his sacrifice, and humble citizens toil through the long hours that our country may be saved. Patriots are denying themselves of food and clothes so as to give their strength and substance to our armies. Yet into this awful and sacred situation sinks the ghoulish profiteer, who would turn his country's extremity to his own advantage.

The winning of the war is the chief and almost only concern of every good citizen; yet, and I say it with all deliberation, the greatest obstacles to American success are the men who are seeking to make fortunes in war profits.

Now, Mr. Speaker, ever since I have been a Member of Congress I have been opposed to the grafter and the profiteer, and long before the war I called attention to some of the practices and methods of these gentry. I have always believed that in times of peace we should be prepared for war and that such preparation should be made economically, wisely, and scientifically. In times of peace I have not hesitated to call attention to the lack of foresight and the almost criminal negligence of our Government in past years in failing to recognize brains and intelligence in creating and maintaining an efficient and modern equipment. As far back as 1913 I called attention to the experiments with the Gathmann high-explosive shell, which conclusively proved that no armor plate could withstand the impact of this form of explosive, and every contention made at that time has been amply demonstrated since the war began. On September 25, 1914, I made the following statement in the House of Representatives and I think events have justified my contentions at that time:

I think I would also be able to show why our Navy is not in harmony with modern science; why we have no large-caliber guns which can throw high-explosive shells, such as are now being used in the European war; why we have no armored automobiles with automatic machine guns; why our inventors have been turned down by our Navy Department when they offered their inventions exclusively to our Government; why American inventors are obliged to sell their inventions to foreign countries, where they are received with honor and profits. England knighted our American citizen, Hiram Maxim, and made him rich for his invention of the automatic machine gun, while he received only snubs and ridicule from our bureaucracy. Germany is relying on the "Gathmann system" of high explosives and large-caliber guns to conquer the whole of Europe. Yet this Chicago inventor, after offering his various inventions exclusively to the United States Government, was rebuffed and ignored by the "ring" which controls and was forced to lay his life work to Germany and Japan, which have adopted them, and his only hope now is that they will never be used against the Government which spurned him.

I will give only a partial list of American inventors who were first in every line of modern improvements, none of which improvements were adopted by our Government officials:

D. W. Meacham, 908793, January 5, 1909; war car, filed May 11, 1908; class 89—40.
A. McE. McSweeney, 1002169, August 29, 1911; skirmish machine, filed July 8, 1910; class 89—40.
Bowman & Hughes, 662761, November 27, 1910; machine gun, filed April 5, 1900; class 89—40.
W. S. Isham, 622479, April 4, 1899; shell for high explosives, filed November 28, 1898; class 102—30.
H. P. Hurst, 582063, May 4, 1897; high-explosive shell and fuse, filed June 10, 1896; class 102—39.
H. P. Hurst, 608125, July 26, 1898; high-explosive shell and fuse, filed April 28, 1897; class 102—39.
L. Gathmann, 569192, October 13, 1896; high-explosive shell, filed April 16, 1896; class 102—30.
L. Gathmann, 639227, December 19, 1899; torpedo shell for high explosives, filed November 4, 1898; class 102—30.
L. Gathmann, 672827, April 23, 1901; shell for high explosives, filed November 25, 1898; class 102—30.
L. Gathmann, 569191, October 13, 1896; projectile and gun for throwing same, filed March 17, 1896; class 102—30.
J. W. Graydon, 899881, March 19, 1889; shell, filed November 8, 1888; class 102—30.
W. S. Isham, 801877, October 17, 1895; gun carriage, filed December 17, 1902; class 89—43.
S. N. McLean, 1005263, October 10, 1911; gas-operated machine gun, filed February 11, 1904; class 89—33.
J. W. Graydon, 382224, May 1, 1888; high-explosive shell, filed February 15, 1888; class 102—30.
J. W. Graydon, 382228, May 1, 1888; method of preparing explosives for use, filed February 20, 1888; class 102—30.
J. W. Graydon, 382225, May 1, 1888; high-explosive shell, filed February 15, 1888; class 102—30.
J. W. Graydon, 382223, May 1, 1888; shell for explosives, filed June 25, 1887; class 102—30.

GUNS FOR HIGH EXPLOSIVES.

Gathmann, 678557, July 16, 1901; filed March 16, 1899.
Gathmann, 569190, October 13, 1896; filed July 10, 1893.
Gathmann, 424969, April 8, 1890; filed March 26, 1889.

AUTOMATIC GUNS.

Maxim, 321513, July 7, 1885; filed May 2, 1884.
Maxim, 459828, September 22, 1891; filed December 28, 1889.
Maxim, 577485, February 23, 1897; filed March 30, 1896.
Maxim, 439248, October 28, 1890; filed April 4, 1890.
Maxim, 317161, May 5, 1885; filed May 27, 1884.
Maxim, 321513, July 7, 1885; filed May 2, 1884.
Lewis, 1004666, October 3, 1911; filed June 27, 1910.

Now, Mr. Speaker, we are in the war, and we are in to win, and we will win, for the mighty crisis that has come upon us has brought home to the people the necessity for urgent and prompt action, and it has been magnificently met. We have created an Army that has already given proof to an astounded world as to what American valor and American efficiency can do when they start moving. We will do still more and more wonderful things as the war progresses, and when victory finally perches on the banners of liberty and democracy has come into its own. It will be American genius, American resource, and American patriotism that have turned the trick.

The present administration and Congress have been alive to the pressing needs of the hour, and measures have been passed and executed that justify the statement of our President that "Politics is adjourned." Since war was declared Congress has done an enormous amount of work and has justly earned the praise of the President, who has said:

It seems to me that the work of this remarkable session has not only been done thoroughly, but that it has also been done with the utmost dispatch possible in the circumstances or consistent with a full consideration of the exceedingly critical matters dealt with. I have admired the work of this session. The way in which the two Houses of Congress have cooperated with the Executive has been generous and admirable.

Just consider for a moment the war measures passed by the present Congress:

War bonds, seven billions, authority to issue.
Assignment of Fleet Naval Reserve to active duty.
For extension of minority enlistments, naval service.
Increase of midshipmen at Annapolis.
Increase age limit for officers, Naval Reserve.
Relating to foreign enlistments in United States.
Army appropriations.
War Army bill, draft and selective service.
Relating to enlistments in Naval Reserve Corps.
Increase enlisted strength of Navy and Marine Corps.
Military Academy appropriations.
Car-service regulations.
War-risk insurance for seamen.
Sundry civil appropriations.
Issuance of rifles to State troops.
Army and Navy deficiency appropriations.
Suppression of espionage.
Condemnation of land for Army.
Aeronautics personnel and appropriations.
Relief of homesteaders in military or naval service.
Protection of desert-land entrymen in Army or Navy.
Increasing membership, Interstate Commerce Commission.
For priority of railroad shipments and control of train service.
Food-survey authorization.
Food-control authorization.
War bonds, authority for second liberty-loan issue.
Creating Aircraft Board.
Authority to explore for nitrates and potassium.
War-revenue measure.
Providing repatriation of citizens in armies of allies.
Urgent deficiency measure appropriating \$5,356,686,016.
Allowing dependents to receive pay while absent abroad.
Regulating use of explosives during war.
Providing for property loss by seamen.
Permission to take public-land affidavits before military authority.
Permitting coastwise trade by foreign vessels.
Providing six months' gratuity to dependents of deceased sailors in the Navy.
Providing commissions in Army Staff Corps and removing age limits of Reserve Corps officers requiring discharge.
Prescribing court-martial procedure in Navy.
Appointing chaplains at large in Army.
Preventing publication of military inventions.
Relating to Medical and Dental Corps.
Establishing new rating for enginemen, blacksmiths, etc., in Navy.
Distribution of Cavalry units in Army, providing for.
Providing military and naval insurance.
Regulating trading with enemy.
Appropriation to continue \$100,000,000 fund to be used by the President, and for other purposes.
Increasing Naval Academy enrollment.
Authority for absence of homesteaders during war for farm-labor requirements.
Authority to call Philippine forces into war service.
Authority for marines to serve under Dominican Republic.
Providing for housing and lands for shipyard and munition workers, \$50,000,000.
Civil-rights law for soldiers and sailors.
Authority to grant furloughs in Army for agricultural and other necessary pursuits.
Railroad-control law.
Urgent deficiency appropriations (second session) on account of war expenditures.
Providing disposal of effects of deceased sailors.
To pay gun pointers and captains in Navy while absent.
Authority to appoint as officers Philippine Scouts.
Restoring discharged enlisted men to former grades if discharged to accept commissions.
Authority to discharge recalcitrant Navy officers.

Reducing instruction period at Naval Academy to three years.
Third liberty-loan authorization.

War Finance Corporation law.
To appoint additional Assistant Secretaries of War.
Regulating pay of retired chief warrant officers, Navy.
To promote export trade.
Providing for quarters for officers in field or abroad.
Delegating powers for suppression of espionage among women enemy aliens.

Relating to military training in colleges and to reserve officers' training camps.

Allowing indemnities to France for damages caused by American forces.

Preventing interference with use of homing pigeons.
Sabotage law, preventing destruction of war materials, etc.
To pay traveling expenses in Army when "on duty under competent orders."

To promote officers temporarily when filling vacancies of officers to higher grades in Regular Army.

For transportation of shipyard employees.
Appropriating \$1,000,000 for ordnance testing in Navy.
Authorizing President to sell supplies, equipment, etc., acquired or manufactured by the United States incidental to the war.

Regulating the officering and manning of vessels subject to the inspection laws of the United States.

Authority to seize enemy vessels.
Authority to Red Cross to erect temporary building.
Permission to War Department to erect building on Smithsonian Grounds

Relating to eligibility of retired Army engineer officers.
Extending time for Niagara water diversions.
Excusing soldiers and sailors from assessment work on mining claims.

Suspending labor requirements of owners of mining claims during war.

Authorizing land purchase by Ordnance Bureau, War Department.

Extending effective date of section 10, Clayton antitrust law.
Extending time for filing applications under soldiers' insurance act.

Permitting outside applicants to take civil-service examinations in the District of Columbia.

Allowing applications for war-risk insurance by soldiers' relatives.

Appropriations for the Army.
Rehabilitation of soldiers and sailors.
Government control of telegraph and telephone.

But, Mr. Speaker, the profiteers and their faithful henchmen are getting ready for more of their nefarious work. They know that the Ways and Means Committee is preparing a bill that, in accordance with the President's suggestion, will make them disgorge a heavy percentage of their ill-gotten gains, and in every section of the country where they find a Member who is dangerous to their plans they are making desperate efforts to have him defeated, and, as they know that I have been the consistent and persistent enemy of this crowd of financial high-binders, it has gained for me the bitter hatred of the guilty and their parasites. They set their newspapers on me and have hounded me with criticism, faultfinding, and misrepresentation to the point of persecution. The exposure of one of these plunderers is taken as a personal affront by all of his kind. They seem to belong to a sort of "plunderbund," each with one hand in the public pocket and ready to smite with the other anyone who may dare to criticize any member of the gang. Being incapable of patriotism themselves, their first play is, of course, to charge a lack of it in others. It is of such as they that Dr. Johnson said, "Patriotism is the last refuge of the scoundrel."

I have been vilified and abused and an issue has been raised in my district as to my loyalty, but let us see by whom. I will quote now from the speech of my colleague Mr. FREAR:

Since the declaration of war in April, 1917, interests, political and otherwise, have assailed the loyalty of my State and, led by the Milwaukee Journal, they have continually denounced the State officials, State legislature, and congressional delegation, and those of political parties or factions other than their own, together with charges against the loyalty of different nationalities and various people within the Commonwealth, until the old Badger State, ever loyal since its entry into the Union, is being looked upon with doubt and suspicion by those who do not understand the full meaning of Wisconsin politics. I desire to show how baseless were these charges and other like reports, but digress for a few moments to take up another branch of Wisconsin's publicity bureau on claimed disloyalty.

I now quote from the Washington Post of April 18, 1918, a paper of widespread circulation, the following libel of a great State: "Traitors in Wisconsin. Defense Council chairman asks Senate for firing squad. W. P. Bloodgood, testifying before the Military Committee, says that war cases are beyond courts. Could not get jury to convict. Indorses Chamberlain measure (for a drum-head military court to try civilians)."

"The American element in Wisconsin appealed to Congress yesterday to provide firing squads to purge the State, and the Nation as well, of treason and disloyalty. * * * The people are likely to go back to primitive methods."

"Mr. Bloodgood declared 'something most unfortunate is likely to happen.' Feeling grows with the departure of every transport to the battle fields."

And so forth.

I have only given a brief extract from the article, which, like Mr. Nieman's charge, with startling headlines, was published throughout the country. Mr. Bloodgood stated to the Senate Military Committee, "I am acting chairman of the County Council of Defense of Milwaukee County and am a member of the executive council of the Wisconsin Loyalty League of the State, and also a member of the law firm of Bloodgood, Kemper & Bloodgood, Milwaukee." The defense league, he said, "arranges for patriotic meetings throughout Wisconsin and has among its 'most active' men Mr. L. W. Nieman, of the Milwaukee Journal, previously quoted." In offering Mr. Bloodgood's credentials for superheated expressions before the committee, it appears he is not only chairman of the Milwaukee County Council of Defense and member of the executive committee of the Wisconsin Loyalty League, but in addition thereto he is on the advisory board of the League for National Unity and also an executive officer of the National Civic Federation, organized for the same general purposes, and he is also a foremost leader in the "next of kin" organization that is founded upon sons who go into service. Altogether Mr. Bloodgood is a man of importance, according to his own admission.

From a column article in the Washington Times devoted to Bloodgood's exhibition before the Senate committee is the following comment: "Mr. Bloodgood gave a most instructive review of recent political history in Wisconsin leading up to and explaining the crisis at which leading citizens of Milwaukee, including himself, had been referred to as the 'exquisite gentry of the city'; other newspapers had indulged in similar treasonable ribaldry. The occasion, it seems, was given by an election in which Mr. Bloodgood and his associates were highly outvoted by the rabble. To show how bold this unshackled treason had grown, Mr. Bloodgood testified that one paper had even called them 'lunatics.'"

The reporter's keen humor, based on actual observations of Bloodgood before the committee, discounts the wickedness of his assault upon the people of a city and State unrepresented at the hearing. The trade was occasioned, apparently, by the reelection of Hoan for mayor, and a large Socialist vote cast in Milwaukee and Wisconsin, and, possibly, by the results of the senatorial election.

In his hearing before the Military Committee, where he is quoted in favor of a firing squad, Bloodgood, in the record, gave a statement he had previously sent to the Attorney General, wherein he says, "What took place at the meeting" with Mayor Hoan in April, 1917, immediately after the declaration of war, "is contained in a written statement that I prepared for Mr. Nieman, of the Milwaukee Journal." At that early day the close association of the State Democratic leader and Mr. Bloodgood is apparent.

THE PRESIDENT DISPOSED OF MR. BLOODGOOD'S BILL.

When President Wilson's attention was called to Bloodgood's wildly reckless statements made before the Military Committee, and his demand for firing squads and drumhead courts-martial for Milwaukee, for Wisconsin, and for the country at large, the President at once wrote Senator OVERMAN that the proposed courts-martial bill was "unconstitutional" and that it would "bring us to the same autocratic Prussian form of government in Europe which we profess to despise."

The Washington Times of April 22 says, in explanation for its introduction:

"The bill was in response to the arrogant tactics of Germans in public office in Wisconsin * * * that brought about the proposal to suspend jury trials and try these offenders by courts-martial. Inability to get 12 true Americans in Wisconsin juries * * * swung the Senate Committee on Military Affairs into line behind the courts-martial bill." The enormity of the offense against his State and his country appears from this report that an attempt to foist an unconstitutional courts-martial law upon the country had its inspiration with Mr. Bloodgood and his advisers in Milwaukee. It was the President who proceeded forthwith to kick from public office the Assistant Attorney General who had advised Bloodgood without General Gregory's knowledge, and it was the President himself who protested against sensational drumhead courts-martial being fastened upon the country.

On March 22 last the press of the country carried a sensational story credited to Bloodgood. I quote from the Washington Star:

WANTS MILWAUKEE PUT UNDER MARTIAL LAW—DEFENSE CHAIRMAN SEEKS INDICTMENT OF HOAN, MAYOR.

"MILWAUKEE, Wis., March 22.

"Wheeler P. Bloodgood, chairman of the Milwaukee County Council of Defense, told newspaper reporters yesterday that he had papers drawn up to seek the indictment of Mayor Daniel Hoan. That Hoan's reelection as mayor being practically assured, he, Bloodgood, would seek to have Milwaukee placed under military law. * * * I say solemnly, he is quoted, 'that the soldiers' 'next of kin' will not stand for a socialist government in Milwaukee or the State of Wisconsin. We are prepared to act. We will, for instance, act if we do not get martial law or an indictment which will prevent Hoan from being sworn in again as mayor. I hope that it will not be put up to our organization, but if it is necessary we will not falter.'"

Bloodgood, chairman of the Council of Defense—appointed to protect law and order and the good name of the State—also member of the executive board of the Loyalty League and the advisory board of the National Civic Federation and executive officer of the League for National Unity and founder of the Next of Kin League and of the law firm of Bloodgood, Kemper & Bloodgood—Bloodgood declared to the people of the country, according to the press, that mob law would prevail in Milwaukee and in Wisconsin. He is reported to counsel anarchy and mob violence, and he placed his people before the country as a riotous, lawless, disloyal people, and gave the widest publicity to his slanders on Wisconsin, that were heralded from one end of the world to the other.

I am not questioning the high purposes of the various organizations named, or the belief that much good has been occasioned by normal, intelligent men acting through such voluntary bodies in encouraging patriotic sentiments and love of country. I do say, however, that any body of men that permits Bloodgood to act as their chief advisor, spokesman, and director gives him the vehicle on which he rides at headlong pace until finally, but only temporarily, squelched by the President of the United States. In this connection it may be proper to add that

associated with Mr. Bloodgood in his Civic Federation labors appear from the letterheads a former partner of and also the attorney for J. Pierpont Morgan & Co., Mr. Du Pont, and many other leading financiers, transportation, and general big-business men.

Incidentally such men are not urging the election or reelection of Members of Congress in Wisconsin who favor a larger proportion of war profits with which to meet present and future national obligations. Neither do they desire control of transportation companies nor the election of men not in sympathy with their ideas.

AN ATMOSPHERE OF DOLLARS.

Before discussing Mr. Bloodgood's political activities, which encompass the entire congressional field in Wisconsin, it may be of value to know how far his own business interests and methods naturally influence his motives. In the Milwaukee Journal of May 23, 1918, his favorite vehicle for self-exploitation, I quote the following shrewd business operation:

DETAILS OF SALE OF INDEPENDENT HARVESTER CO. AT PLANO, ILL.

"Proposed purchase of \$10,000,000 planter for \$5,000,000 was submitted. Proposed purchasers are Francis Bloodgood, Jr.; Jackson B. Kemper; Wheeler P. Bloodgood; and others. The charge that the suit is a collusive one carries an implication that appears unjustifiable. * * * The commission held that there was no proof that the purchase was with a view of getting control of the International Harvester Co."

"No proof," possibly, but it appears from the Journal's report that Wheeler P. Bloodgood was the man who negotiated the big deal to buy up the great agricultural implement plant a few days ago at 50 cents on the dollar with his associates. "No proof" that the purchase was with a view of getting control of the International Harvester Trust, but no farmer in Wisconsin or in the country believes any actual competition, reduction in prices, or better conditions will come to him through Mr. Bloodgood's deal. The \$5,000,000 discount from face value was not for the farmers or general public. Apparently that was profits for those who made the deal, including Mr. Bloodgood, who, in turn, is associated with the Morgans, Du Ponts, and various political and great financial interests, who want a firing squad for Milwaukee, and are now about to select Wisconsin's Congressmen and save the farmers, laborers, and people of the State generally from that duty, as I desire to show. Bloodgood's leading Milwaukee political associates at once suggest his eastern financial connections and the motive behind his present political activities. It is on such meat the new Wisconsin political Caesar feeds.

The President blocked Bloodgood's drumhead courts-martial and the people may block his political big-business scheme now carried on under a "loyalty" cloak. [Applause.] With his peculiar ideas of public and private rights and un-American belief in what the President says is an "autocracy from which we desire to escape," Bloodgood makes more socialists in one week than Carl Marx could make in a year, more discontented and indignant protestants through intolerance than all other agencies in Milwaukee and Wisconsin combined.

Mr. Bloodgood stated to the Senate Military Committee that Mr. Nieman, editor of the Milwaukee Journal, was one of the "most active" men in the county council of which Mr. Bloodgood was chairman. Before the Military Committee, when discussing his leading associates in the Wisconsin Loyalty League, he named particularly Mr. W. S. Goodland, editor of the Rache Times-Call, and also another man, whose company is reported to have cleared \$1,500,000 last year in Government contracts. My purpose in mentioning Messrs. Bloodgood, Nieman, and Goodland by name is not to reflect in any way upon the different organizations to which they belong, but to show a joint effort which can not be overlooked when fixing responsibility for frequent bitter attacks upon Wisconsin's loyalty.

BLOODGOOD TO CONTROL CONGRESSIONAL CAMPAIGNS.

In the Milwaukee Journal, issue of April 30, appears the following: "To favor loyal candidates, Loyalty Legion to take part in congressional campaigns, 'next of kin' organization or men connected with soldiers in France to be organized."

It was further stated that the general council of the Wisconsin Loyalty Legion, of which Bloodgood and Goodland are conspicuous members, declared in favor of bringing out "men of recognized loyalty and supporters of the war as congressional and legislative candidates." The Journal's frequent editorial expression will be found in the announced purpose to elect "nonpartisan" loyalists to succeed the present Wisconsin congressional delegation, which has committed the offense of being solidly Republican, having been elected in 1916 with a joint plurality of 100,000 over their Democratic opponents.

It can readily be seen that an effort will be made under the guise of nonpartisan Americanism to control both Republican and Democratic parties in Wisconsin and for what purpose? Let me quote once more from Mr. FREAR's speech:

Mr. Speaker, in my speech of June 12, made in the House, on Wisconsin partisan politics, I described a so-called "loyalist" gathering composed of candidates for Congress now seeking to defeat my colleague Mr. COOPER, who is rounding out over a quarter of a century of continuous, honorable service in this House. In that speech I disclosed the methods of Milwaukee interests, as announced through the Milwaukee Journal, working under cover of patriotic societies to defeat Republican Members of the Wisconsin delegation for reelection. These Milwaukee interests were further shown to have assumed the selection of candidates for Congress who would be in harmony with their own purposes and interests. The active advice and efforts of Mr. L. W. Nieman, editor Milwaukee Journal and Democratic State leader, were briefly shown.

In that speech I further presented evidence showing that Mr. Nieman and the Journal instigated the bitter partisan fight made on Senator LEXROO; that shortly after war was declared Mr. Nieman told President Wilson and the press of the country of "an organized plot existing in Wisconsin to overthrow the entire military program of the Nation." This libel of the State was further shown to be false and unfounded as disclosed by his own Milwaukee Journal files and by the official records of the United States Attorney General's office. Full-page advertisements in his Milwaukee Journal before the war were also set forth, wherein demands were made that everybody write and wire his Congressman to oppose war, although he now abuses them for so voting. Repeated libels against the State and Republican officials coming from the same source were shown to be untrue. Mr. Nieman's political connection with Bloodgood was also disclosed, and Bloodgood's demand for a "firing squad for Wisconsin" was connected by himself with Mr. Nieman's "activities."

The joint attempt now to control both Democratic and Republican Parties in Wisconsin on the false issue of "Americanism" was also exposed. Mr. Nieman, through his Milwaukee Journal, continues to libel officials at Madison and Washington and has his agents traveling the State, until the Democrats of Wisconsin and all others in our State are now asking why Nieman, who opposes President Wilson on Ford, and Bloodgood, who opposes the President on "firing squads," should not be compelled to furnish acceptable certificates of their own "Americanism."

According to Government reports, in 1913 the Milwaukee Journal made profits of \$35,945. In 1916 the Journal made profits of \$89,855—nearly 200 per cent increase. What is Mr. Nieman's contribution to the war? In May, 1918, the Journal says Mr. Bloodgood put over a \$10,000,000 Harvester Co. deal for \$5,000,000, or profits of \$5,000,000 for Bloodgood and his Milwaukee associates. What is Bloodgood's contribution to the war? What are the ancestry and record, before and since the war, of men who notoriously oppose the President, seek to run the politics of the State, and who recklessly place black spots on Wisconsin? What have they done for our country?

These are the people who are attacking the record of Congressmen on questions connected with the war. These are the types of men who pose as "loyal Americans." God save the country from such loyalty! My record is easily read and just as easily understood by anyone who grasps the fundamentals of American government and has the slightest conception of what it means to be truly and honestly a Representative in Congress. I can not state my position better than to insert a letter I wrote recently in answer to a request for information as to my attitude:

JULY 28, 1918.

Mr. JAMES D. REILLY,
Milwaukee, Wis.

DEAR JIM: I am in receipt of your letter advising me of the great number of people who ask you questions as to my record in Congress on all war measures, and as there seems to be a great deal of misunderstanding and still more misrepresentation as to my stand on the questions involved I deem it best to send you a concise statement as to just what my attitude has been and is now on all matters that have come up in Congress since war was declared on April 5, 1917. I need hardly say that everything herein stated is a matter of official record and can very easily be verified by an examination of the CONGRESSIONAL RECORD.

I voted against the resolution declaring war. As you very well remember I had received hundreds of letters, telegrams, and petitions from my constituents protesting against war. They came from all classes, all races, and all creeds, and indicated, so far as I could judge, that the people of my district were overwhelmingly opposed to war. These people had elected me to be their Representative in Congress. I have always been of the opinion and have always acted under the guidance of that opinion that the word *representative* means a man who represents the people who select him, and that his plain and simple duty is to do what they wish and not what he or any other man or men or party or group wishes to be done. I have followed this method ever since I have been in Congress, and will continue to do so as long as I hold my seat here, and neither the threats nor the desires of any interest outside of the fourth congressional district will ever make me change this attitude. Very few people who were not in Washington on that eventful night can even think or realize the tremendous strain that Congress was under. You will recall that the session started on Holy Thursday and continued into Good Friday. You will also recall that numbers of pious and devoted women came to my office, and came to the corridors of the Capitol, pleading with us not to declare war on the most sacred day in the history of Christendom. You will also recall that the leader of the Democratic Party on the floor of the House, the Hon. CLAUDE KITCHIN, a man of the highest principles and most unquestioned patriotism, passionately voiced his protest against the war; and that Gen. SHERWOOD, the chairman of the Committee on Pensions, and a brave old veteran of the Civil War; the Hon. WILLIAM MASON, of Illinois, whose son is fighting in France to-day; Congressman FREAR, who served in the Spanish-American War; Congressman BURNETT, the chairman of the Committee on Immigration; and a host of others from every section of the country, and men of the most undoubted patriotism and whose loyalty has never been questioned—all voted the same way.

The second measure that came up was what is now known as the "selective conscription bill." When this measure was brought into the House the Democratic chairman of the Military Affairs Committee, Congressman DENT, of Alabama, refused to support it, and the amendment carrying the provisions for selective conscription was handled on the floor of the House by Representative KAHN, of California, the ranking Republican on the committee. The bill as originally reported called for increasing the Army by volunteers and when the amendment was offered to make the increase by selective conscription I voted against this amendment. I did so because I thought the method would be slow and cumbersome, that we would get an army quicker by volunteers, that selective conscription had an evil and undemocratic sound, and that a certain amount of injustice was sure to develop in the administration of a selective draft law. I stated at the time that I would gladly vote, if necessary, for universal military service, which seemed to me in every way better than a selective draft. You will also recall that at that time I introduced a resolution providing that if a selective draft law was passed all men of the draft age who were engaged in nonproductive occupations should be drafted first. It is some comfort for me to know that this provision has been adopted by Executive order in the administration of the law, so that I could not have been very far out of the way at that. However, in voting against this amendment I was also in the company of the able and patriotic Speaker of the House, that grand old war horse of democracy, CHAMP CLARK, who, with tears in his eyes pleaded that the stigma of compulsion should not be placed on his boy who wanted to volunteer and who is now bravely fighting for the flag. Brave old Gen. SHERWOOD, himself a volunteer in 1861, voted against the measure, and I received thousands of messages from all over Wisconsin stating emphatically that there were enough men ready to volunteer in Wisconsin to fill any quota that would be required for the Badger State. However, the amendment was carried, and when the bill was brought up for final passage I voted for it, believing, as I do, in majority rule.

There still remains the so-called "espionage bill." On this measure I voted against the censorship clause that would have absolutely chained and fettered the press of the country and made it utterly impossible for

any newspaper to utter the slightest word of criticism of any move or measure made by the Government. This clause was condemned by the entire press of the country, it was flayed in the House and the Senate by the ablest and most patriotic Members, and if passed would have made this country as far away from a democracy as Russia under the Czar. It was in contradiction to the enunciated principles of Hamilton and Jefferson. It was opposed to the declarations of Abraham Lincoln, and to my mind it was subversive of every vital principle of Democracy, and I have never believed, nor do I now believe, that it ever had the approval of the President. In any event the vicious clause was modified, and when the bill was brought up in perfected form for final passage I again yielded to the principle of majority rule and voted for the bill in its final passage.

Since then I have voted consistently and steadily for every measure for the prompt and vigorous prosecution of the war. Over a hundred bills have been passed relating to the war and I have loyally supported every one of them. I am sending you herewith a list of the most important measures so that some idea may be had of the enormous amount of work that has been done by this Congress. I have no apologies to make for my record. I have always acted in the open and always will, and the above will serve to clear up any points about which there may be any doubt in the minds of the people of the fourth district of Wisconsin, whose servant I am.

Sincerely yours,

WM. J. CARY.

Loyalty.

EXTENSION OF REMARKS

OF

HON. JOHN M. NELSON,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. NELSON. Mr. Speaker, pursuant to leave granted, I herewith extend my remarks in the form of an address to the voters of the third district of Wisconsin:

Fellow citizens, loyalty is now the keynote of every campaign. I wish to direct your attention not only to loyalty but also to all-around loyalty.

Some six months ago I sent you an address entitled "A Political Indictment." These remarks are in the nature of a sequel to that address. The charge of disloyalty is purely political, just as much so as was the charge of violation of law. Both charges had for their purpose my political defeat. Federal Judge Carpenter found the one so utterly foolish that he quickly threw it out of court; the other is even more foolish and false. No man who will take the time to read these remarks will believe it. Anyone who will not read my reply before he accepts this falsehood put forth by my personal, political foes and the profiteering interests can not be an honest man nor an upright citizen. There is no safety in public life for faithful servants of the people if the people themselves are not sufficiently interested in their own affairs to know the truth.

THE REAL ISSUE.

In the most emphatic words at my command I beg of you not to be misled by this campaign cry. There is absolutely nothing in it. It is merely political trickery to get your minds away from the real issue in this district and before Congress. Broadly stated, the main issue is, Shall the profiteers and special interests or the people control the next Congress? In more specific terms the issue is, Shall a lifelong Stalwart be sent to Congress from this district, there to represent the special interests that the Stalwart faction has always stood for in this State, or shall a Progressive remain in Congress, there to represent the rights and the liberties of the common people?

The old reactionary leaders are trying to "put something over" in this district. They could not fool the people two years ago; they can not fool the people now. Remember that because of the war, taking advantage of an old trick in war times they raise the cry of disloyalty in order to steal a seat in Congress for the big business interests that are behind them and backing up this campaign. Surely you see that the big business interests of the country wish to control Congress because they know that men who have made a record on public questions such as I have will insist upon real democracy for our country after the war.

All-round loyalty is the important qualification of a candidate for Congress. Loyalty alone is not enough. All the profiteers are loyal, but they seek to escape just taxation and to saddle upon the people the enormous cost of the war. All the big interests are loyal, but they want the power to make the people pay monopoly prices; all the Stalwarts are loyal, but they seek to persuade the people to trust them and them only in public office. Not loyalty alone, therefore, should be required of a candidate, but all-round loyalty.

SHAM AND HYPOCRISY EXPOSED.

Before applying this real "acid" test to myself and my opponent, I shall puncture this sham and hypocritical cry of disloyalty. I shall do it from two points of view.

Speaking for myself, knowing my mind and heart, I affirm that I have been patriotic in every act and word and vote in Congress or out of Congress. I challenge my Stalwart opponent or any of his profiteering friends to point out a single disloyal act or word or vote. They point to my vote against war. It is true that standing for peace, under the leadership of President Wilson, I exercised my constitutional right of standing for peace longer than the President himself. Who will say that I was loyal up to the moment that he changed his mind and disloyal because I did not instantly change with him?

I did not vote for war. For that vote I offer no excuses and no apologies. In this campaign I will not even explain it. We are in the war. It is a settled fact. It can not be changed now. There is only one way out and that is straight ahead.

I will say this, however, that aside from every other consideration that entered into my official action, I believed then that I represented, and I did represent, the overwhelming majority of the people of my district. I base this belief upon four significant actions, both local and general. (1) The referendum in Green County, which resulted in a vote against war of about 900 to 90; (2) I received telegrams, letters, and petitions from my district in the proportion of 500 against to 3 in favor of war; (3) I received a peace memorial voted by the State legislature and forwarded to me by the duly constituted officers of this State; and (4) I understood thoroughly that the people of this congressional district and of the entire West believed that President Wilson was reelected for the reason that "he kept us out of war."

MY RECORD STATED.

Once war was declared, I accepted the majority decision for war. I can recall only 3 votes out of about 120 since war was declared upon which I was not in full accord with the administration. I voted against the so-called Webb export bill because it permitted trusts to combine in an export trade which I thought bad in principle and dangerous in practice. I voted against the first espionage bill because, in my opinion, it was an unconstitutional infringement upon the right of freedom of speech and freedom of the press. However, I supported a subsequent amendment. Neither of these was strictly a war measure. It has been stated that I voted against conscription. This is a base falsehood. The CONGRESSIONAL RECORD gives all the votes, and that RECORD shows I did not vote against this bill. At the time it was under consideration the CONGRESSIONAL RECORD shows that I was excused from attendance by the House, because I had to undergo an operation in a hospital. Against my doctor's express order I went to the House to vote on an amendment. I favored the committee bill supported by Speaker CLARK, Mr. KITCHIN, and, it was said, by the administration; but as I did not think it safe to endure the strain of remaining in the House for the long debate on the bill itself I did not vote at all on the final passage of the draft act. Outside of these three measures, two of which were not war measures, and the third, on which I did not vote on final passage, you will find my name on every roll call as voting "aye." My political foes either ignore or purposely falsify the record. I challenge them to compare it, vote for vote, with either that of Representative GILLET, the Republican, or with that of Representative KITCHIN, the Democratic leader of the House. The Stalwart critics who shout about disloyalty have no word of criticism of the Republican Senators PENROSE, LODGE, and SMOOT, who constantly oppose and criticize the President and his Cabinet in the conduct of the war.

TESTIMONY OF LEADING DEMOCRATS.

What do Members say of me, and others in Washington who know exactly my record? The most severe critic in the House, the censor of loyalty in Congress—as anyone knows who reads the newspapers—is Hon. THOMAS HEFLIN, of Alabama. Not long ago I asked him who the men were whom he had accused of disloyalty. He replied, "NELSON, it is enough for you to know that you are not one of them."

Anyone who read the newspapers during the persecution to which I was subject last year will remember that the foremost Democrats in the House and Senate and Cabinet were willing to go to Madison to testify under oath to my "character, loyalty, and patriotism." Where will you find better qualified judges of my loyalty than Mr. HEFLIN, the critic, or Chairman WEBB, of my committee, with whom I have worked daily on war bills; or Speaker CLARK, who, looking down from the Speaker's chair, knows all that is doing on the floor, or Senator UNDERWOOD, of the Finance Committee in the Senate, former Democratic leader on this floor, or Postmaster General Burleson, the President's right-hand man in dealing with Congress? In-

deed, Chairman WEBB reported to Postmaster General Burleson how I had aided in reporting out of the Judiciary Committee the so-called Overman bill, one of the most important war measures granting great and unprecedented powers to the President. Mr. Burleson told me that he had called Secretary Baker's attention to my action in committee, and that Secretary Baker replied, "I will remember NELSON as a patriot." I mention these personal matters merely to prove how utterly false and unfounded are these malicious slanders upon my loyalty.

A SOLDIER AND A SAILOR IN THE SERVICE.

In common with every American family, my wife and daughters have done "their bit." My oldest daughter has been very active in Y. W. C. A. and Food Administration war work, and many a time last winter have I seen my good wife at her work for the Red Cross, of three garments per week, until 11 and sometimes 12 o'clock at night. I have purchased liberty bonds to the limit of my financial ability. Are these manifestations of disloyalty? Finally, one of my sons, not yet 20 years old, enlisted in the Navy for four years and now wears the navy blue, while my older son is in the Army, now overseas, serving beneath the flag of his country under the guns of the enemy. What do you think of political foes who will charge a Member with disloyalty who serves his country faithfully in Congress and has two sons in the service? Was there ever a more wicked, false, and cruel libel? I arraign these men responsible for it before the bar of public opinion. You will pass upon them, I am sure, the severest condemnation.

STATESMEN AND WAR.

Speaking from a general point of view, I wish to point out that until after a war has been declared every citizen or Congressman has the right to be for or against war. It is what he does afterwards that affects his standing as a loyal citizen. The great statesmen of England, Pitt and Burke, did not want war with America. Were they disloyal to England? Lloyd-George opposed the Boer War. Was he disloyal? Washington, the Father of his Country, at first opposed war with England. Lincoln, Webster, Clay, and Sumner opposed the Mexican War. Grant was not at first in favor of the Civil War. Were these great statesmen of America subject to the charge of disloyalty because they were slow to rush into war? Indeed, every great-souled statesman who really loves his fellow men is slow to lead his country into war.

LEADING DEMOCRATS AND WAR.

If a vote against war is proof of disloyalty, then what shall be said of the Hon. CLAUDE KITCHIN, of North Carolina, the Democratic leader of the House? He voted against war. What will you do with Gen. ISAAC SHERWOOD, who went into the Civil War a private and, through bravery, came out a brigadier general? He voted against war. His people are giving him a renomination without opposition. I could cite many other Democrats who voted against war and are not branded thereby as disloyal.

MINNESOTA VOTERS JUST.

I will mention only our neighboring State, Minnesota. VAN DYKE, of St. Paul, was renominated without opposition. DAVIS and KNUTSON were renominated by increased majority. Now let us look at some of the Republicans who voted against war. My associate on the Judiciary Committee, Mr. REAVIS, of Nebraska, has no opposition. He is now in France looking over the battle fields. My colleague Mr. ESCH, whose district touches mine, has no opposition. Are the people in their districts disloyal? I might cite a score of Republicans and Democrats who voted against war that have been renominated either without opposition or with increased majority. The people of their districts would not permit them to be branded as disloyal because they voted against war.

THE WISCONSIN DELEGATION.

I am chairman of the Wisconsin delegation. Speaking for my colleagues, I assert that despite all this abuse of the Wisconsin Members at home by the Stalwart profiteering press, the RECORD shows that there has been no divided allegiance to America at Washington. The President, as Commander in Chief, has had our unanimous support on all war issues. When he asked for appropriations, we gave him all he asked; when he asked for authority to issue bonds, we gave it to him; when he asked for authority to control our food, fuel, railroads, telephones, telegraphs, mines, and factories, we gave him the authority; indeed, we did not hold back as a delegation when he asked for power over our liberties and our very lives. I brand as absolutely false the charge that the Wisconsin delegation is responsible for this talk of disloyalty on the part of our State. This vilification has been carried on by the Stalwart profiteering press for political purposes. The Stalwarts have seized the opportunity afforded by the war of raising the cry of disloyalty in order to get into Congress. But the people

understand that the Wisconsin delegation, composed of such men as COOPER, BROWNE, and FREAR, form the nucleus of every opposition vote in the House to the profiteers and the selfish special interests. Their defeat, under the cloak of this false issue, would not only be a great loss to the State but a calamity to the Nation. The cause of the common people everywhere would receive a severe setback, a most grievous blow.

REAL ENEMIES IN THE REAR.

Fellow citizens, I have now demonstrated to you beyond possible dispute the political character and the utter falsity of this fake issue of disloyalty. We have all one common country. We love and cherish our country's flag. Be it wise or otherwise, what we have done as a people, we are now in this world war. It is the sacred duty of every American to be obedient to the laws of the land and loyal to the Stars and Stripes. I assert that not only the grumbler, the critic, or the slacker is the enemy within but much more the "pay-triot," who for the sake of a political job, or for factional or other selfish reasons, denounces public servants doing their duty, accusing them falsely of lack of loyalty, while the backers of these political assassins are harvesting dividends by the millions out of war contracts.

MY WAR CREED.

I believe in loyalty to my Government in peace or in war. My country first. I owe no divided allegiance. I believe in willing obedience to law without persecutions of fellow men. I have only contempt for political patriots, and I would tax to the limit war profiteers. I am against Prussian autocracy resting on militarism, and I find no place for the universal military service that big business seeks to force upon the American Republic. I rejoice at the thought of democracy for the world, but I am also fighting for democracy in my own country—social, political, and industrial.

Let there be no partisan criticism of the President. I shall support him hereafter, as heretofore, wherever it is possible for me to do so, reserving always to myself, as a member of a coordinate branch of our Government, the exercise of my own conviction and loyalty to my constituency in the solemn discharge of my legislative duty.

A RIGHTEOUS PEACE.

I recognize that this war will and must go on until we shall secure a righteous peace for the world. So far as our country is concerned the righteousness of our peace must be determined by the President and Congress together responding to the conscience of America as voiced by the people generally and by the constituents we individually represent.

OUR BOYS.

Having myself two boys in the service, who can take a greater interest in the welfare of all our boys than I do? I have voted for every measure passed in Congress for their aid and comfort. I have personally entertained many of the boys in khaki from my district and elsewhere at my home in Washington. I shall support them by voice and vote when abroad, and I shall give my aid to every measure that purposes to reward them and take care of them when they come back. Fathers and mothers of the boys in the service, I am a friend of your boy. Having two sons of my own in the service, I sympathize with you in all your fears and sorrows, as I expect to rejoice with you when our boys come back and we can clasp them once more in our arms.

THE REACTIONARY INSTINCT.

May I be permitted to inquire by what authority my Stalwart opponent presents himself as the 100 per cent patriot? Should he succeed by means of this fake loyalty issue to win a nomination he will find that the administration will want none of him or his kind. Knowing his past affiliations with the leaders of special interests in this State for more than a quarter of a century, Democrats will do their utmost to defeat him for election. If in all his life he has ever had a Democratic idea, he has never revealed it in public. He never supported a Democratic measure. He will take to the reactionary Republican faction in the House and Senate that is opposing and criticizing the President, Secretary Baker, and other Cabinet officers conducting this war as instinctively as a duck takes to water.

SELF-RATED PATRIOTS.

The Stalwart convention recently held in Madison, composed of self-selected and self-rated patriots, stamped him as the very quintessence of patriotism. Were you represented at that convention? Were you invited to be a delegate? If not, was it because your loyalty was questioned?

Who, then, approves of my Stalwart opponent's loyalty? My personal enemies—old-line Stalwarts; the profiteering interests, who wish to punish me because of my vote to tax their profits

to the limit; and, finally, the special interests throughout the land, who can not use or control me in Congress.

A CLEAR CASE OF HINDSIGHT.

Before my opponent or his Stalwart profiteering friends have the right to criticize or condemn me or other Members of Congress, let them show what they have done for their country. Personally, I believe that my Stalwart opponent followed the leadership of the governor of the State, against whom I make no personal criticism. He has acted throughout in a large and broad-minded way. He is the leader of the faction, however, to which my Stalwart opponent belongs. It is well known that the governor of the State was not satisfactory to the war patriots. In common with other Members of Congress, I received a telegram from the governor asking me to oppose conscription. My Stalwart opponent is a newspaper editor. I challenge him to produce a line from his newspaper advocating either war or conscription. I challenge him to reproduce one public word uttered against the stand of his chief when war was first declared. He can not do it. Believing the many profiteering newspapers represent public sentiment, he has become vociferously patriotic and loyal, hoping thereby to gain the ambition of a lifetime. If he has a war record, why is he so silent about it? The people of Wisconsin know that heretofore this honorable gentleman has never hid his light.

THE LOYALTY CANDIDATE DISCOVERED.

The files of his newspaper disclose that as Mr. Sholts, Mr. Donald, Mr. Ely, Mr. Graves, Mr. Whitman, and Mr. Shuttleworth presented themselves for his editorial approval, none of them measured up to his high standard of loyalty. Week after week there is no word of approval of any of them from his editorial pen. Then, in an interview in the Milwaukee Journal, my opponent is quoted to the effect that some really loyal candidate must be found to make the race against me for Congress. He talked of the selection of a candidate from the third district in Milwaukee—miles away from the district. He did not consult our people of the district. He talked with Bloodgood, the loyalist, who would put Milwaukee under martial law; Bloodgood, mixed up in the \$5,000,000 harvester deal, to which my colleague Mr. FREAR alluded in his speech in Congress; Bloodgood, associated on the national war committee with Morgan's former partner, Bacon, and Morgan's lawyer, Stetson. Then, a week or two after his published interview I read an account in my opponent's newspaper of a meeting of the Lafayette County Republican committee, where his candidacy for Congress was given birth in a very bombastic resolution written in his own familiar style. Thus, at this untimely meeting of a county committee, having no authority to act for the people of that county, the only Simon-pure, blown-in-the-bottle patriot is discovered. Having thus had his candidacy sponsored by a few Stalwart committeemen, his next step is to have his candidacy properly approved by the press. Therefore, in the next issue of his newspaper is printed a long communication from an anonymous writer, in which my opponent praises himself to the sky, and of course insultingly denounces me by name, because I had been falsely accused of violation of law. My opponent was too shrewd, cunning, and prudent to make a direct charge of disloyalty, for that would be libel under the law. He knows that he would be promptly compelled to prove the charge in court.

THE SAME OLD OPPONENT.

His candidacy having been brought out and having also received editorial approval, he comes before the Stalwart convention at Madison with the plea that as he had been beaten two years ago, he ought to be permitted this opportunity of getting revenge.

WITHOUT LEGISLATIVE EXPERIENCE.

The only two candidates who have had any legislative experience, Mr. Donald and Mr. Whitman, had withdrawn their names. As the other candidates were either unknown or impossible, my Stalwart opponent was finally named the choice on the seventeenth ballot of this self-selected bunch of loyalists called together by that arch patriot Jones, of the State Journal. Was there ever before such a farce devised to confound an intelligent people? Verily, old Dr. Johnson was right when he exclaimed in disgust, "Patriotism is the last refuge of a scoundrel."

Ordinarily I fight in politics without resort to personalities or bitterness. War seems to revive the spirit of faction. Stalwartism is again rampant. Denouncing his progressive fellow men whose sympathies are deep and broad for the oppressed people of all nations, the old Stalwart now arrays himself in the Stars and Stripes as the only 100 per cent patriot. How strange it is that they can not see the hypocrisy of their attitude. Think of it! While President Wilson proclaims that we are at war "to make the world safe for democracy," these persistent foes of every democratic cause are banded together to drive out

of Congress the staunchest friends and champions of the principle of democracy in America.

THE RECORD OF A REACTIONARY.

The leopard does not change his spots nor the Stalwart his real interests. Either there are no special interests or profiteers in Wisconsin or they are with my Stalwart opponent. Up to the present I have dealt only with this fake issue of disloyalty. It has been so effectually punctured that even "Jim Vim Vigor" will not be able to fill it again with hot air. I propose to reveal clearly and unmistakably the real issue in this campaign. I congratulate the profiteers and special interests upon their choice of a candidate. I shall make it plain that he has been loyal to their interests for more than 25 years. I shall show from his newspaper and from his public utterances that he has opposed consistently every man in this State who has in any manner stood for the progressive democratic measures of which Wisconsin has been a leader in the Nation. I shall prove that true to his past and to his present my Stalwart opponent would in Congress unquestionably turn this district over to the big profiteers and the big business interests who fear what is coming after this war, when, with renewed zeal, patriotic Americans shall take up the battle cry, "Our own country safe for democracy."

NOT SELF, BUT SERVICE.

Fellow citizens, you know where I stand. I have not changed. I stand for the people against the profiteers and special interests. Had I to consult my personal desires only, I would have refused to have again entered the contest. My private business requires my personal attention. The cost of defending my good name and the good name and freedom of my son in the recent persecution to which we have been subjected has been very great. The strain of this war Congress has been so heavy that many of the older men in Congress have broken under it. I am weary in body and mind, and I long for rest, but letters and personal appeals have brought me to realize once more that this fight is not mine alone. I have resolved, therefore, to set aside every consideration of self.

Born on a farm, reared in your midst, I am one of the people. I can truthfully say that my every thought and purpose in Congress concerned your welfare. For you I have planned and fought and sacrificed for nearly 25 years. Never have I been unfaithful to your interests. If I have unconsciously failed in the least to properly represent you, let some one point it out, and I will make good. As I love my own life, I have a profound sympathy and affection for my fellow men. I am one of you. You can not be against me without being against yourself. You will not let me fight your fight alone. You will not let them brand me, your Representative in Congress, falsely with dishonor. You will not let them carry this political persecution to final success. I am of you. I am fighting for you. I have a right to look to you for support in this contest. Where is the old guard? Where are the comrades of the good old days when these reactionary forces of evil were overthrown in Wisconsin? I solicit the active support of all true men. I am in this fight not only to vindicate my good name but also the good name and honor of our State. I fight for the common good of all men, not only in our country but also for the oppressed peoples of the world.

Fellow citizens, permit me now to direct your attention to the subject, "All-round loyalty." On the surface loyalty is made the issue, but I now propose to show that underneath and beyond this pretended issue, this political camouflage, is the great public issue between the common people and the corporate monopolies of the country. These are the moving powers that are seeking the defeat of the Progressive Wisconsin Members in Congress. COOPER, BROWNE, FREAR, CARY, and VOIGT stand for the Wisconsin idea. Their defeat would be the severest blow the people's cause would suffer for years to come. Concerted action is being inspired from Milwaukee under the direction of the special interests of our country.

THE TRUST TABULATION OF LOYALTY.

The interest that the trusts take in election of Members of Congress was recently revealed in the private papers of the Washington lobbyist of the Meat Trust seized by the agents of the Government. Among these were confidential reports made to him by the packers' attorneys who appeared before the Judiciary Committee, of which I am a member, to oppose the Borland resolution, which demanded an investigation of the packing-house monopoly. You will note that in these reports the Members are listed as friendly and unfavorable to the packers. Merely to illustrate the legislative methods of the trusts I quote this confidential letter written by McManus, the attorney of Swift & Co., to Henry Veeder, the packers' confidential agent:

BORLAND RESOLUTION.

AUGUST 21, 1916.

Mr. HENRY VEEDER,
Counselor at Law, 76 West Monroe Street, Chicago, Ill.

DEAR SIR: On the full Judiciary Committee, Hunter Moss, of West Virginia, is dead, and STEELE, of Pennsylvania, is now on the committee. We can rely upon WEBB, of North Carolina; CARLIN, of Virginia; THOMAS, of Kentucky; TAGGART, of Kansas; IGON, of Missouri; WILLIAMS, of Illinois; WHALEY, of South Carolina; DALE, of New York; CARAWAY, of Arkansas; DYER, of Missouri.

I am also assured that GARD can be controlled.

Yours, respectfully,

R. C. McMANUS.

A copy of that letter was sent to all those parties, which means all five of the packers.

NOT A TOOL OF THE TRUST.

While I reprint his letter, I do not believe the Meat Trust attorney is correct in his claim. He can not "control" the Members listed. Many of them subsequently voted for the Borland resolution. You will notice that my name is not on the list. Your Representative is not down as one "we can rely upon" or can be "controlled." You may depend upon it that this is the way I am listed by all trust lobbyists.

That these trusts punish Congressmen by seeking their defeat is also evident from the hearings. I quote from their page 1992 these words:

Commissioner MURDOCK. Do not forget to show, if you can, that the packers also took revenge on Congressmen.

Mr. HENRY. No; I will not forget to show that, because it was done by concert of action.

I have not the least doubt now that they are encouraging this opposition to me, and that this year they are very much concerned about my loyalty.

But the Meat Trust is not the only trust represented in Washington marking Members for defeat or support. Every monopoly has its men in Washington reporting to the home office on the friends of the people and the friends of the trusts. Every Member who dares to defy the big interests or the profiteers is sure to face a fight in his district. The issue put forth is one that can be best used to deceive the people. The Oil Trust, the Tobacco Trust, the Harvester Trust, the Water-Power Trust, the Steel Trust—all the trusts—know by my votes that I am their relentless foe, and I know that they would foster, support, welcome, and rejoice over my defeat. My colleague Mr. FREAR has traced this opposition to the Congressmen of Wisconsin from the Wall Street interests through Bloodgood, of Milwaukee, and certain newspaper men who constitute themselves the leaders of loyalty. It has been published in the newspapers that men now active against me have been in touch with Bloodgood and these political and newspaper patriots. There is a reason, my fellow citizens, for this spontaneous uprising of the Stalwart representatives of the special interests in my district. If they win, the people lose their Representative in Congress. In fact, there are as many reasons as there are trusts for this demonstration of loyalty in my district.

BIG BUSINESS AT HOME.

But, my fellow citizens, there is not only the national aspect of this contest. We are not only dealing with the big trusts and monopolies of the country who are interested especially in the defeat of Members who hold high place in Congress, but I must tell you why I have big-business enemies at home in standing for your interests.

The largest business interest in my district is the Gisholt Machine Co. It has works in Pennsylvania and does an international business. This company was a member of the Manufacturers' Association, which became odious in the nostrils of the American people. I drove McDermott, of the stockyards district of Chicago, out of Congress because he had become a tool of the lobbyists of this association. My minority report from the Judiciary Committee of the House demanding his expulsion led him to resign, because he could not face the charges made against him and proved from the record.

A PROFITEER'S PEACE PLAN.

This Gisholt Machine Co. employs thousands of men. It has been making millions out of munition war contracts. I present an interesting letter from this company:

GISHOLT MACHINE CO.,
Madison, Wis., U. S. A.

Congressman JOHN M. NELSON,
Washington, D. C.

DEAR JOHN: I notice that several bills have been introduced into Congress making it unlawful for any person or corporation in this country to deliver to any of the countries at war any arms, ammunition, or munitions of war of any kind.

In my opinion, if it is unlawful to furnish the countries at war with munitions of any kind, it should be unlawful to furnish munitions of all kinds. In other words, food and clothing are just as essential to carry on the war as guns and ammunition.

Furthermore, I am inclined to think that the war would be shortened if the parties at war are given all those things which they need to carry on the war. The quicker peace be brought about the less will be the suffering.

Hoping you will see your way to approve such measures as above referred to, I remain, with best regards,

Very truly, yours,

CARL A. JOHNSON.

To this plan for hastening "peace" I merely replied that I would give his letter "careful attention."

PROFITEERING AND PATRIOTISM.

Recently the Capital Times, of Madison, published the income-tax returns of various corporations in Wisconsin, showing to what enormous extent this profiteering exists even in our own State. The Gisholt Machine Co. in 1913 and 1912 made nothing. But the year in which Mr. Johnson wrote me the company had made out of the war contracts an income of \$1,130,040. The next year its income was \$2,378,884, and only the Gisholt Co. itself knows what it has amounted to for the year 1917 and will amount to in the year 1918. It will aggregate surely four or five million dollars a year, for the company has nearly doubled its capacity by erecting additional buildings. The colossal income of this concern and many others is going into the Madison banks and trust companies. One can readily understand how men acquiring millions possess tremendous power; they are using their great influence to bring about the defeat of myself and other members of the Wisconsin delegation.

Officers of the Gisholt Machine Co. were in Washington last winter lobbying to prevent a tax placed upon war profiteering. England taxes her war profits 80 per cent, allowing 20 per cent regular earnings peace times; but so powerful were the representatives of the profiteers, including the Gisholt people, that every proposition to tax profiteers fully was voted down. In the House I repeatedly voted for every increased tax on profiteering. The Gisholt people went home determined upon my defeat for disloyalty.

JOHNSON'S REVENGE.

What did the company do? It used its influence to foster this agitation against me and others for disloyalty. Its president, Carl Johnson, is a member of the Dane County Council of Defense, which instigated by its telegrams the persecution of myself and my son. Carl Johnson, sitting upon the local board, sought in every way to prevent my son from going back to Canada to attend to his duties there when he had come to plead not guilty in court. It was only Judge Sanborn's personal plea, together with a telegram from the Attorney General, that enabled my son to return to the management of the farm. I have felt Carl Johnson's heavy hand against me ever since I failed to respond satisfactorily to his letter, and especially since I voted to increase the taxes on the profiteers. He is a member of the Madison Club, the home of the original Never Again Nelson Club; he is president of the Loyalty League, and was active in bringing out an opposition candidate. The people forget, but the profiteers do not forgive.

NEWSPAPERS AND PROFITEERS—THE STATE JOURNAL.

Where the profiteers do their most dangerous political work is with the newspapers. Have you observed the strange turnings, silences, and utterances of the State Journal on the subject of profiteering? Silence for a long time; then editorials telling the people to win the war and pay no attention to profiteers and trusts. A number of editorials belittled all talk of the evil of profiteering. The State Journal even defended the Hog Islanders. But recently President Wilson denounced the profiteers. Congress will soon levy a stiff tax on war profits. The Journal saw the necessity of a quick change. It must keep its Progressive subscribers while fighting for a Stalwart to go to Congress; so it tries to confuse the issue as adroitly as possible. Men in public life understand the reasons for such newspaper changes. We look to the advertisements and the loans as well as to the stock sales.

The State Journal illustrates my point admirably. Its owner needed money to pay outstanding debts. He had deserted his old friends; he was now associating with his former political foes. Recently the statement had been published as required by law in order that it may be known publicly what financial interests influenced the editorial policy of a newspaper. The Journal's new financial creditor, according to its sworn statement, is the Central Wisconsin Trust Co. Looking over the board of directors, we find on it some very prominent Stalwarts and a member of the Gisholt Machine Co. As a friend of the public interests and a foe of the war profiteer, I must endure the opposition of the State Journal in this campaign.

This illustrates how the financiers and profiteers and special interests control the newspapers, and how Members are opposed who refuse to support their financial purposes and insist upon the proper taxing of their profits. What is done to me is done to other Members. Therefore, Members prefer often to

yield to the demands of these big business interests for fear of their opposition. These interests are always active, while the people we stand for must be aroused by campaigning. The newspapers, representing the financial interests, are the mouthpieces of the profiteers and the special interests generally. At present many of these newspapers are themselves profiteers, making money out of the war, while your boys and mine are risking life for home and country.

THE REAL ISSUE.

Now, the fundamental issue is: Shall a Stalwart go to Congress from this district, there to represent that faction in the State of Wisconsin which supported in Congress the big business interests of the country and the profiteers, or shall a Progressive remain where he is, on the committee of committees and on the Judiciary Committee of the House, places of great advantage and power, where he now represents the rights and the interests of the common people?

THE BIRTH OF THE WISCONSIN IDEA.

When I first met my Stalwart opponent he had been long identified with the old ring in control of Wisconsin politics. The three men that then were in power in party affairs were Philetus Sawyer, representing the lumber barons; John C. Spooner, long the attorney and legislative lobbyist of the railroads; and Henry C. Payne, the representative of the public-service corporation of this State financed by eastern capital. As a young man out of college, my attention was called to the evils of "boss rule," the corrupt use of the "free pass," the unequal distribution of tax burdens, the unrepresentative character of the caucus and convention system, the alarming growth of the trust evil, and other evils resulting from the power of the corporation machine in politics. As a young man I became active as a member of that little band of fighters who under the leadership of LA FOLLETTE undertook to overthrow this power of Wall Street in Wisconsin. We suffered defeat after defeat at first; but finally the old machine went to pieces, the grip of the special interests on our State politics was removed, and Wisconsin stood forth as the prominent Progressive State in the Nation. In fact, from that day she has been looked upon by all other free States as their leader.

PROGRESSIVE LAWS ENACTED.

During that memorable contest the Progressive forces, under the leadership of Gov. LA FOLLETTE, placed upon the statute books of our State a marvelous collection of Progressive laws. Briefly summarized they are:

Model insurance legislation.

A model plan for conservation of water powers.

A splendid plan for State forest reserves.

Scientific graduated income and inheritance tax law.

A model pure-food law with most effective administration.

A comparative negligence law for railway employees.

A model system for taxation of public-service corporations.

A model primary law, including United States Senators and the President.

A model industrial commission to protect the life, health, safety, and welfare of employees.

A model banking law.

A model railroad law.

A model civil-service law.

A model public-utilities law.

A model corrupt-practices act.

A model workmen's compensation act.

Summarized generally may be also noted the free pass prohibited, the lobby controlled, stock jobbing and stock gambling stopped, child labor reduced, a 2-cent fare for passengers, lowered freight rates for shippers, excessive hours for railroad employees and women workers prohibited.

ON OPPOSITE SIDES.

As editor, speaker, and organizer, I was active in supporting the men and the measures prominent in this movement. My Stalwart opponent as editor, public speaker, and local leader was as persistently active against these measures and the men prominent in that historic movement. I challenge him to point out one Progressive measure to which he gave his support.

I have served in Congress 12 years. During the first 6 years Lafayette County, the home of my opponent, was not in my district. During the 6 years that Lafayette County has been in my district I have found my opponent not merely a stalwart but reactionary to a degree and very unfair. I will mention but two experiences that I have had with him. Taft had been renominated by means of southern postmasters; Roosevelt had bolted the party; it looked as if the election of a President might be finally settled in the House of Representatives. My Stalwart opponent sought to compel me to declare publicly that I would support Taft. Thus he stood with that

bunch of reactionary Republicans that gave Taft only two States in the Union—Utah and Rhode Island.

FALSELY UNFAIR.

In the last campaign he was my bitter opponent. I did nothing more than to write a few letters to leading men in various parts of the district. I let him go about unopposed. I did write to him, however, to call his attention to three palpable falsehoods he published. First, he said I had bolted Philipp for governor in the previous campaign. This was not true. I had not even gone home to vote that fall, as Congress had adjourned only a few days previous to the election. Second, he stated that I had voted for an embargo upon the sale of munitions to the belligerent nations. I called his attention to the fact that no such bill had ever been before either branch of Congress for passage. These bills were never reported out of the committees. Third, he also stated that I was a tool of LA FOLLETTE, voting as he told me to vote. I called his attention to the fact that never but once in 12 years had LA FOLLETTE spoken to me about my vote on pending legislation, the only exception being that at the request of the then governor of California, HIRAM JOHNSON, he asked me how I stood on the location of the World's Fair. I told him I had decided to vote for San Francisco. Senator LA FOLLETTE has never sought to influence my legislative action. Notwithstanding my letter to my opponent, he never replied to it, and continued, no doubt, to utter these falsehoods.

THE FIGHT ON CANNONISM.

Permit me now to direct your attention modestly to my record in Congress. I am reluctant even to speak of myself. I do not employ a press agent. I do my duty quietly and faithfully without rushing into print, but I am not ashamed of the things that I have done or of the positions that I have held and now hold in the Congress of the United States. My fight upon Cannonism and arbitrary rules attracted national attention. Recently Speaker CLARK and Postmaster General Burleson gave me the credit in private letters to public men of having been more effective in that memorable contest than any other Republican in Congress.

My investigations of the Meat-Inspection Service in the Agricultural Department attracted national attention, and resulted in driving out of the bureau Solicitor McCabe, who was a tool of the Meat Trust. He is now in the employ of Swift & Co.

OLEO VERSUS BUTTER.

In 1911 and 1912 the Meat Trust and the Cottonseed Trust united to destroy our dairy legislation. At the request of the secretary of the National Dairy Union I counseled with and helped our dairy people before the Agricultural Committee. I was asked to make the closing argument. Former Gov. W. D. Hoard wrote to me, saying that it was the best argument on the subject of oleomargarine versus pure butter that he had ever read. At his suggestion the Dairy Union sent out 10,000 copies to all the Federal judges and district attorneys of the country, and the State of Pennsylvania published my argument as a public document.

TWO IMPEACHMENT CASES.

I am proud that I am the ranking Republican but one on the Judiciary Committee. On that committee I have had distinguished and honorable service. Daniel Thew Wright, of the Supreme Court of the District of Columbia, was impeached on the floor of the House for various misdemeanors. The investigations we conducted lasted six months. As a result Judge Wright resigned, as did Washington's chief of police, many attorneys were sent to prison for embezzlement, and the grip of the street railways on the District courts was broken. Later I was on the committee to investigate the charges against the district attorney of New York City for failure to prosecute the trusts and for using official powers for purposes of persecution. As a result this district attorney was retired to private life, and with him two of his assistants, whom we had censured severely for misconduct.

I have referred to the minority report that I made against Congressman McDermott, a tool of Mulhall, the lobbyist of the Manufacturers' Association, of which the Gisholt Co. was a member. Fearing expulsion under my resolution, McDermott resigned.

When Mr. SIMS of Tennessee had been assaulted by Mr. Glover, the president of the Riggs Bank—a Standard Oil concern—the Speaker appointed me on a special committee with four others to protect the privileges of the House, which had been infringed. On that committee I served with Judge Prouty of Iowa, Judge Crisp of Georgia, Mr. Covington of Maryland, now Chief Justice of the Supreme Court of the District of Columbia, and with Mr. Davis, of West Virginia, now Solicitor General of the United States.

ON COMMITTEE OF COMMITTEES.

I am also proud of the fact that the Republicans of the House in a party conference named me to represent in part the Progressive sentiments of the West on the committee of committees, which has power to assign all Members to committee places.

Neither time nor space will permit me to enumerate in detail further activities or to expand those to which I have referred. I simply wish the people of my district to know from this plain statement that I have achieved the confidence and respect of my associates in Congress because of my unyielding, all-round loyalty to my own conscience and to the best interests of my constituents.

THE STALWART CONVENTION.

The recent Stalwart convention adopted a platform to confuse the people as to the real issue between us. It is an old trick in politics to muddy the waters, so the people may not see clearly through the schemes of the plotters. The call of the convention was inspired by the profilers of Madison and the Never Again Nelson Club, which has its headquarters in the Madison Club, the active members of which are profiteers and representatives of the street railway, the Gas Trust, the Telephone Trust, and other public-service corporations. These interests inspired the persecution of my son and myself in the courts. The active agent in sending out the call for this convention was Jones, of the State Journal. His specialty is loyalty, and he puts himself forth as the censor of other people's patriotism. This Jones, of the State Journal, had more to do with the persecution of myself and my son than any other person, because he artfully worked upon the district attorney, and his editorials and news items were all colored to arouse in the public baseless resentment against us.

THE PLATFORM.

The platform serves as an excuse for Jones, of the State Journal, to completely turn about within two years and to oppose the Progressive candidate he then supported and to support the Stalwart candidate he then opposed. Permit me to call your attention to some of the planks. Outside of the pretended loyalty issue, which is made much of, certain planks are mentioned proposing legislation that I have already supported in Congress. I have uniformly supported labor legislation, and I have now the strongest possible indorsement of my legislative action by the labor leaders at Washington. I voted for the child-labor law, the rural-credits law, the prohibition and woman-suffrage resolutions. I voted to tax profiteers to the limit. Now, my Stalwart opponent pretends to accept this platform. He promises to do the things that I have already done. Neither the prohibition nor the suffrage resolution is now in the House. Both have been passed by that body. The one is before the Senate and the other is before the State legislatures. What a hypocritical performance is the plank on profiteering. To nominate my Stalwart opponent on an anti-profitteering platform, supported by profiteers and the special interests, is like selecting a brewer to lead a prohibition campaign supported by the saloons. It is a sham, a farce, a fake, and fools no one except those who want to be fooled.

SIGNIFICANT SILENCES.

The silence of the platform on some measures is also significant. Where does my opponent stand with reference to the monopolies that exploit the people? Where does he stand with reference to labor organizations and farm organizations, such as the Equity Society and the Nonpartisan League? I favor organizations of labor and farmers. I have repeatedly responded to the call of the Equity Society and have had its strong support. Where does my opponent stand on the question of establishing militarism in this country? In short, his silence indicates that he stands exactly where the profiteers and the special interests stand that support him. He represents them, and they could find no stancher representative of their views and their interests.

After the war there will be the work of reconstruction of our industrial life as a Nation. Already we have taken over the railroads, the telegraphs, and telephone, and tremendous changes in our industrial system are sure to follow the end of the war. I have already suggested that when we have made the world safe for democracy we propose also to make our country safe for democracy. Now, I respectfully submit that my Stalwart opponent, in view of his past and his present attitude, is not the man to represent this district in Congress after the war, unless the people wish to support the interests keenly alive to the importance of a Wall Street control of Congress after the war.

MY ONLY AMBITION.

I am confident that because of my 25 years' study of monopoly evils and proposed remedies, my long training in legislative matters, my place on the committee of committees and on the Ju-

diciary Committee, where trust legislation is considered originally—all these advantages will enable me to represent you, the people of our country, and your interests effectively in the reconstruction of our industrial life as a people. Congress is exactly what the people make it. If the people are careless, they may expect their Representatives to be careless of their interests. The profiteers, the special interests, the monopolies, and trusts are keenly alive to the importance of control of legislation, and we who fight your battles at Washington have a right to your support at home. Personally had I but to consult my own desires and interest, I would not again be a candidate for reelection, but thinking of your interests and of the sacred cause of the common people throughout our beloved country I set aside every personal consideration, and with confidence I submit my candidacy to your judgment. I have no higher ambition in life than to serve my fellow men faithfully and to the best of my ability.

In conclusion I will restate the issue in the simplest possible terms; either the profiteers or the people win—which?

California "Over the Top," But Is Penalized for Patriotism.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 9, 1918.

On the report of the committee of conference on the disagreeing votes of the two Houses on the joint resolution (S. J. Res. 123) providing for the calling into the military service of certain classes of persons registered and liable for military service under the terms of the act of Congress approved May 18, 1917, entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States."

Mr. RANDALL. Mr. Speaker, I have but little to add to what I said on April 13, when this bill was before the House. On that day we gave up the principle of equality in numbers in the Army based on population of the States, and authorized future drafts to be made on the basis of registrants in the various States. We did, however, hold onto the plain and just provision that each State should be given credit for all the men it has so far furnished for the Army and Navy, either by volunteers or draft, and that future calls for men shall be made in a way that will equalize the number supplied by each State proportionately. We were told in a loud voice, when the conscription law was presented here, that its main purpose was to enforce equality of service. No man and no State, under its provisions, was to be allowed to become a slacker. In the recent liberty-loan campaign this principle was emphasized in a remarkable manner. Each State and each district was given an allotment, and dire would have been the consequences if any State or district had failed in its duty.

Yet, Mr. Speaker, we are here confronted with a change of mind of the General Staff of the Army, which asks us to break down equality of service and to give no credit to those States which have oversubscribed of the blood of their men in this great conflict and to enforce no penalty upon those States which have failed to supply their share of the man power.

CALIFORNIA "OVER THE TOP."

Mr. Speaker, California has gone "over the top" in everything connected with this war. But above all other records her contributions in men has exceeded by far every State in the Union, based on population, and Private Devillos, of California, fired the first American gun that tore its way through the German lines.

Why, Mr. Speaker, only six States—Illinois, Massachusetts, New York, Pennsylvania, Ohio, and Texas—have supplied a greater number of men than California, regardless of population. Our credited number of men in the Army and Navy is 68,205.

Let me give you an illustration of how this proposal to penalize the patriotism of California will work out. I will use the State of Alabama as an example for comparison, though almost any other State in the Union might be used instead of Alabama, in a greater or less degree. California has in class 1 for the draft about to be made 58,666 men, while Alabama has 52,815. California has already supplied 68,205 men, while Alabama has supplied only 23,958 men. The monstrous proposition presented here now is to wipe out our credits and draw more men from

California than from Alabama in the next draft, though we have already supplied 41,247 more than Alabama has. The same comparison may be made with many other States in almost as high degree of inequality.

It is not that California wants to keep out of this war, Mr. Speaker. You can not keep our men out. The noble sons of California volunteered in amazing numbers. That is why our credits show so much higher than any other State. But we do not want a law made to penalize our State for the patriotism of its men.

Civil War and Spanish-American War Veterans and American Soldiers in the World War.

EXTENSION OF REMARKS

OF

HON. CHARLES H. SLOAN,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 9, 1918.

AMERICAN SOLDIERS AND PENSIONERS.

Mr. SLOAN. Mr. Speaker, I have read much of the Revolutionary heroes who for eight years followed Washington all the way from Bunker Hill to Yorktown in the making of a nation.

We find some interesting chapters of the soldiers and sailors of 1812. That was apparently an indecisive war. But in it our rights on the seas were established, and for those rights nations are now battling. Then there were the conflicts with the savages at every interval between the oceans. Afterwards came the War with Mexico, which extended our domains. All these are historical. Living links between us and them are few and remote. From the living the participants are "gone through the glimmering gleams of things that were."

However, many of the grand characters who fought and triumphed in the world's greatest civil strife are with us yet. They are falling now more rapidly before the pale-horse cavalry than succumbed between sixty-one and sixty-five to the assaulting charge of the militant grays. They are the patriarchs of the country. They saved a nation whose wealth, power, and standing among the nations are now worth the supreme sacrifice of our blood and treasure to maintain.

There went forth a gallant Army in 1898, whose Commander in Chief was the grand and gentle-souled McKinley. They carried the message of militant humanitarianism to the oppressed peoples on the islands of the seas. With pride we saw them go. With joy we met them on their return bearing the palms and plumes of decisive victory. They are now in the prime of life, doing strong men's parts either in patriotic service in civil life or at the head of our troops in the world's great war.

The American soldier of the world war, carrying in his numbers personality and strength, the determining factor for victory in the colossal conflict, is making major history. As he makes it will civilization prosper, mankind be blessed, and his blessing be established in human estimate for all the ages.

I have at other times taken occasion to address Congress on subjects affecting or relating to those whom Americans have heretofore and will hereafter honor.

July 31, 1911.

PENSION LEGISLATION.

These soldiers gave their youth, their strength, their opportunities; they risked their lives to reweld the Union and keep Old Glory in the heavens. They went against as brave and strong as they. The best and bravest in blue met the best and bravest in gray; valor met valor; strength met strength. Roman could not teach one nobility. Greek could give no lessons of grandeur to the other. The martial might of right met the inspiration of a fearful conviction, and that conviction a mistake.

These veterans for whom I plead were right. Let us be just, and that speedily, rather than generous with too much delay. [Applause.]

December 12, 1911.

PLEA FOR YOUNG SHORT-TERMED SOLDIERS.

Mr. Chairman, the House will notice that the draftsman of this bill fixed a line at one year above which every Union soldier would be entitled to \$30 a month. Below that it divides time into definite periods and has two distinct differentials, one as

to time and the other as to amount. For a reduction from the \$30 period of 90 days \$5 is reduced; for a second reduction of 90 days another \$5 is reduced; for a third reduction of 90 days a third \$5 is reduced, leaving it \$15 for the period from 90 days to 6 months. If we follow the purpose of the draftsman and make the bill symmetrical and logical we will take the further step for the fourth period, and make the allowance for a period of 90 days or under \$10.

It ought to appeal to the sponsors of this bill that these men broke into the war when they were young, through zeal or craft or patriotic perjury in a great many cases, and they went into the war at a time when the North was needing them, and the impact of that force of young men was felt in the South, because it impressed upon the South the inexhaustible resources of the North, against which their efforts were desperate and vain. And because these men added their impact and force to the Union forces already there, it shortened the war and diminished the vast expenditure of life on both sides and a vast expenditure of treasure, which would inevitably have had to be expended if the war had continued far in excess of the amount. I now ask for them, and it should not be to their discredit, but rather to their credit, that the war was closed as early as it was.

The logic of leaving this bill as it is and neglecting the short-term men would indicate that in any future wars it would be a mighty good thing for the soldiers to have a walking delegate to see that they did not do too much fighting on any day and therefore close the war too soon, and thereby get their just deserts. These young men entered the service, and they risked their future. [Applause.]

May 6, 1918.

SHERWOOD-SMOOT-BLAND PENSION BILL.

Mr. Speaker, I regret that this is the one bill at this session of general interest affecting the interests of so many thousands that has been put in a parliamentary strait-jacket, to be run through so that deliberation can not be had on it and no amendment can be made except by unanimous consent. I desire to amend this bill. I shall present an amendment, and hope that there will be no objection to its consideration; if given consideration, I am confident that it will prevail.

There are many thousand young men who served from 30 to 90 days in the Union Army toward the close of the Civil War. In fact there was an army coming from every State in the North, whose addition to the Union forces became so impressive to the leaders of the South—Davis, Lee, and Johnston—that they helped to bring the war to an early conclusion. I shall move to amend, giving \$25 per month to all who served not less than 30 nor more than 90 days in the Union Army and were honorably discharged.

I am opposed to two features of this bill, but I expect to vote for this bill, as it is the best we can get at this time. I expect, further, to vote for a better bill after this has passed here, has gone to the Senate, and come back through conference. If we do our duty by the members of the Grand Army now we in effect will say to the boys abroad, "We propose to treat you right; we show you definite evidence of it when we treat generously the members of the Grand Army of the Republic." Years hence Congress will be treating right the members of the Supreme Army of the Republic when victory has been achieved and they shall have come home. [Applause.]

The Smoot-Bland bill should be considered here and substituted for this one. Every soldier who served 90 days should receive a dollar a day pension. We can stand it; it will not be long. Forty-minute debate on a side! During that time the lives of five Union defenders will have passed away. Five "white robes will have been exchanged for faded coats of blue."

The Smoot-Bland bill provides a graduated scale of from \$30 to \$40 per month. This would amount to an increase per annum over present law of \$40,000,000. We saved that much the other day by our cutting down the wild-cat mineral bill that amount.

There are two highly objectionable features in this bill which, if it was being considered in the regular way, would be cut out by a majority vote of this House. But, of course, we know that to save these provisions is the reason for this bill coming in an unamendable form. The first of these features is the clause which denies the veteran the benefit of this act while he is an inmate of a State or National soldiers' home. That is another way of branding as charity what should be considered the just and generous recognition for age attained and service rendered. I resent it. What business of ours is it if the State of Nebraska or any other State sees fit to provide a comfortable home for its resident Civil War veterans? Moreover, if this increase be given to those who stay part of the time in a soldiers' home, it would enable them to take longer furloughs to visit with their friends and so enjoy more fully their sunset walk of

life. Are these State soldiers' homes of such a character that the inmates should under this bill in effect be penalized from \$10 to \$15 a month for being found in one of them? The reason given seems to be, "For your lack of thrift evidenced by your being sent to a soldiers' home you are penalized."

The second feature which should be taken from this bill is that which denies the soldier its benefits if his net annual income, including his pension, exceeds \$1,000. The blind soldier, who has walked in darkness since the close of the war, and whose pension is \$72 per month, would take nothing under this bill on account of one of its limitations.

Of course I do not believe or charge that this bill was put into this inflexible parliamentary groove to beat the blind, but it could have that effect. We can not remove the limitation. It forcibly illustrates why the bill should have been thrown open to amendment. So would its favoring provisions be denied any soldier who by thrift could accumulate enough money to buy a liberty bond, contribute to the Red Cross, or become subject to the Government income tax.

I trust that when this bill returns it will have shed these two malignant features—that the minimum for soldiers of 90 days' service or more shall be \$30, with generous maximum, and that those young soldiers who came into the service near the close of the war and who heretofore have had no recognition shall be given a pensionable status, because it was not their fault, but to some extent their credit, that the war closed so soon and their terms were so short. If this be all done, a generous people will approve and the grateful veterans will rise up and "call you blessed." [Applause.]

February 18, 1915.

SPANISH-AMERICAN WAR WIDOWS' BILL.

I want to say further that we should not long hereafter refrain from recognizing the widows and the orphans of our recent Spanish-American War. I want to compliment the House—and in doing that I give due credit to the majority—for its liberal action in doing what it could at this term to recognize the just claims of the widows of the Spanish-American War. I hope that before this session closes the shackles or obstructions, or whatever you may see fit to call them, will be removed from the other Chamber, so that legitimate legislation may be enacted; and that as a part of that legitimate, much-desired, and just legislation there will be passed by that legislative body the Spanish-American widows' pension bill already passed by this House. This should have the favorable action of that other body and the ratification of the Executive of this Government.

Beneficiaries of the Spanish-American widows' bill will be in part the wives of the young men who left their homes for Cuba or the Philippines in a great humanitarian war. These men risked their lives to disease in foreign swamp and fen as well as before foreign guns. The toll of death was not over light and many a young wife was left to mourn. Nay, more, it will be a proper recognition of the service of that superb army of laborers, clerks, students, farmers—classes all—which added such a rich contribution to our country's glory.

Mr. Chairman, the amendment to which I have mainly addressed myself has come up for consideration at various sessions of Congress. It will come up for a vote now, and I trust that the same firm, patriotic stand will be taken by the membership of this House that has been taken heretofore, and that we shall not, because of the residence of the recipients of pensions, lose sight of the patriotism which they have displayed. [Applause.]

July 21, 1916.

WAR WITH SPAIN.

Mr. Chairman, I move to strike out the last word. On two former occasions when this bill passed the House there was considerable delay and it was somewhat late in the session. Its early passage here augurs well for the prospect of its becoming a law in a short time.

Having on previous occasions spoken in favor of the bill, and favoring it to-day, I rise simply to give publicity in this way to the part taken by the State of Nebraska in furnishing, as it did, three regiments and a cavalry troop for that war. Large contributions to each of these organizations came from each of the 11 counties of the district I represent.

The large majority of the enlisted men and many of the officers were unmarried. Still, in many cases coming under my observation, wives and little ones were left at home while husbands and fathers went out in obedience to the humanitarian call President McKinley had made.

Their ages averaged probably 20 to 21 years. They are now nearly two-score years. They were then in the first flush of their young enthusiastic manhood. They are now in the 50-

ness of mature citizenship. They were both strong in body and clear in mind. The bullet of fray, fever of swamp, and fatigue of tropic heat collected a very heavy life toll and left the impress of disease upon many whom death spared.

They all contributed to the last great and brilliant chapter of American martial history. Their valor and achievements made the sunset of the nineteenth century for America memorable and glorious.

They returned to civil life and took up their home, industrial, and civic duties. Many returned to fulfill the tender vows sacredly made before following the mad music of war to southern waters of the far-off antipodes. Brides became matrons, and beautiful children, cementing love and radiating sunshine, gladdened new homes.

But valor, triumphant on field where death and danger stalk, insures no immunity against accident or disease along the ways of peace.

So the message that Spanish bullet or Philippine knife could not carry has many times since been delivered in the avenues of peace. Husbands have been taken and fathers called. They had a right to believe that while republics were said to be ungrateful the United States was an exception. They were warranted in believing that the fathers and the fatherless of those who had answered the call of country first and death thereafter would be given that aid which, added to a fair measure of industry, would keep them on that plane of life which the sacrifice of the departed had fairly earned for them.

The widow and minor pension measure before us to-day is designed to meet that end. I hope that there will be few voices lifted against it, not many votes to oppose it, and no obstacles or delays submitted to prevent its early enactment into law.

Men talk much of Americanism. I thoroughly believe in it, both in the abstract view and its concrete manifestation. It may in some parts of the country seem necessary and proper to discuss Americanism with relation to ancestral strains. It is not and has not been necessary in Nebraska. Of the young men who went forth in 1898 there was a mingling of all the strains which, continuing through generations, has been evolving the American race. Of the young men leaving my home city and neighboring cities there were those who could trace their ancestry to the early Puritan and Cavalier stocks. There were many who, reverting but a generation, would be in one of the great nations now in Europe's great convulsion, the best of whose courage and qualities they inherit. They had these with all the added charm and strength that an enlightened Christian civilization can confer. They made the name of America transcendent among the nations. Let us not forget them nor neglect the objects of their solicitude and love. [Applause.]

July 9, 1918.

I am specially pleased to support this Spanish-American widows' pension bill recently passed by the Senate. Heretofore I have several times supported similar measures in the House which failed to pass the Senate. But this having originated in that body we are having the final say. I have no doubt the bill will become a law.

SOLDIERS—VOLUNTEER AND SELECTIVE.

The American soldier came into the service either as the volunteer act of the young patriot, who asked permission to battle for the Nation and its flag, or entered through the systematic selection of his Government, which saw in him the preparation and fighting qualities which could endure the march and gallantly battle for victory. They are both of that American mold for which civilization seemed to wait and call upon for defense in this the hour of her greatest peril.

VISIT TO CAMP AND FIELD.

I have visited and met their officers, types of chivalry, and their comrades, manly men from every part of the Republic. I passed through their cities, built, as it were, in the night, where multiplied thousands work and drill, sleep and eat, read and pray, as men in civil life are wont to do. I saw them move in mighty marches on the campus—drill, steady, vibrant, virile movement—characterizing American manly motion. I saw in many cantonments their daily round of duty and recreation. I visited their hospitals where disease and suffering were, and found the skilled men of medicine and surgery there who had left their homes and practice to battle against disease, that the soldiers might better battle with men. Then, too, I saw the ministering angels of mercy there, who, upon occasion, would with deft hand apply the bandage, administer the soothing lotion, or cool the fevered brow. No longer will it be written as was of old of the "soldier of the legion lay dying in Algiers, there was lack of woman's nursing, there was lack of woman's tears." I broke bread with the officers at their mess and beheld the transformation of the student athlete into a fighting military leader. I dined with the privates and enjoyed their whole-

some fare. I visited the Knights of Columbus establishment and attended divine service at the Young Men's Christian Association hut. It seemed to me that we were making not mere fighting demons of our sons but clean, strong, manly fighting men. As I left I said, "This is America militant and young American manhood at its best."

Our men, more than a million strong, will be thrown into the balance not only to turn a grim deadlock into a decisive victory but to determine the successful close of a world war and give character to the course of civilization. This being true, there should be no failure by delay, neglect, incompetency, or worse, to give them all the preparation and support which the loyal and generous Americans have lavishly provided and our soldiers and sailors so richly deserve.

AMERICAN SOLDIERS.

Into this struggle will come the American soldier as the intelligent and vigorous composite of all that is best of the races with or against which he battles, because for 300 years the best have been coming from Europe to America to develop free institutions and representative government. Their manner of life has been of that free and independent character which has developed along brook and in forest with rod and gun; on grounds of manly sport, where individual effort and teamwork combine to develop initiative and teach discipline; and in field and shop their work has been of that varied character which combines activity of hand with freedom of brain. These, combined with that high general mental discipline possessed by the soldiers of no other country, make our soldier, in the final analysis, the warrior of emergency, whether in the final grapple of men or the ultimate clash of armies. [Applause.]

They will be farther from home than were the battling legions who followed Alexander, Caesar, or Napoleon. They will mingle with and against more different peoples than did the followers of the Macedonian, the Roman, or the Corsican. They may not have the steadiness born of long discipline, which, fixed in the famous phalanx of Macedonia withstood the shock or broke the lines of the oriental myriads. They will not have the lust of conquest nor the appetite for adventure which carried the great Julius through the barbarous north and west. They may not have that mingling of fatalism with human idolatry which recovered at Marengo, charged Lodi, crossed the Alps, ventured Moscow, and rallied at Waterloo. But in fine physique, clean limb, and bright eye they will be the cynosure of the world soldiery; in mental grasp they will surpass those of any other battling host. In those fine qualities of chivalry, courtesy, and manliness they will have no equals. Among and against those armies where rank and title stand forever at premium they will be, in the eyes of all, the war's true nobility. And when the call for sacrifice and struggle shall come, none will go more buoyantly to the task, none acquit themselves more bravely, none will account for more of mankind's enemies; and when the victory is won, in the book of merit and achievement they will be accredited first honors of the war. [Applause.]

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1918.

Mr. LINTHICUM. Mr. Speaker, I am strongly in favor of this resolution which authorizes the President to take over the control and management of the telegraph and telephone lines of the country. At this time, when all the world is at war, when our Government is so deeply engaged in the fight for freedom and democracy, when our boys have left their comfortable and happy homes and have crossed the waters to fight on the battle fields of Flanders for the liberty of the people and the continuation of this great Republic of ours, there is no time for us to hesitate in matters of this nature.

The President is the Commander in Chief of our Army and Navy. It is his duty to prosecute this war to a successful termination, and it is our duty to back him up with such legislation as he may deem necessary and essential in the performance of that great undertaking.

The telegraph and telephone lines of the country are the sole means of quick communication between the various departments of the Government and the cantonments and camps throughout the land, as well as the great Army of more than a million souls now in France fighting our battles. Anything which may break down the system of the telegraph and telephone or disrupt this

essential communication would be a great loss and disaster to the Nation at large and to our fighting forces and Government activities in particular. This is a time when we must lay aside all questions as to what we would have done under normal conditions and must adapt ourselves to the war situation. So long as I am continued in Congress I propose to loyally support the administration, to the end that this war may be brought to a quick and successful conclusion and that success may perch upon the banners of the allies. This is no time to delay when we realize that the spy system used by the German Government throughout the world has caused such great disaster in many parts and has disclosed the work of various nations to the enemy.

Prussianism has made known its base purposes in many ways and in many places and events, from the assault on hapless Belgium to this last effort of Foreign Minister von Kuehlmann to lay the cause of the war to the greed of shattered Russia.

In war there are always spies. They are a military necessity. In former wars the spy, even in the minds of his enemy, had the respect paid those who risk all, even life, for the cause for which they fight. In the past the spy was the product of war, and his mission was to obtain as best he could the military secrets of the enemy. Germany, however, well knowing that in time this war would come, long since laid her plans and built her spy system in times of peace, when all nations permitted free ingress and egress and when without danger these hirelings could penetrate into the life of other nations to ply their nefarious trade.

From Berlin, the headquarters of the German general staff, there has issued for years a steady stream of men and women of all nationalities who have come under the control of the head of the spy system. The stream includes men who have failed at home, men who have been cast off for their crimes or their folly, women who have sunk below the level of decent society, all greedy and all needy, all willing to take gold in exchange for loyalty to home and country. They spread, unknowing each other, to every civilized nation, at the beck of their master, answering to their code number, reporting on their mission from time to time in exchange for the price of their perfidy. The full secrets of the spy system have not been and probably never will be told. It is a record black with the shame of those who sold themselves and blacker with the foul motives of those who bought their services. All were graduates of the careful school for spies; each knew just what he was to do to learn, to steal, or to corrupt. Here one learns the details of certain fortifications that he may by casual, stolen glances be able to report the most minute changes from memory and not by telltale maps; another learns the silhouettes of one nation's battleships that even in the night he may recognize and report their movements in code; another takes up his residence abroad and spends his days lauding and advertising Germany and German ideals; still another leaves his home to teach the German language; and still another to consort with anarchists in foreign lands and to organize potential insurrections waiting the striking of "der Tag." They have slipped into our Government offices and into our factories and our workshops to steal little items of information, trade secrets, and processes for use in Germany. Nothing has been too small, nothing too base, for them to attempt.

Before the war began they had stolen every secret process, every invention and trade secret, they could lay hands on; they had perverted the public mind by pro-German propaganda, and were fully posted as to our military and naval strength. Even now they still exist, and while they may not now freely transport their stolen goods, yet they do still ply their trade, hoping to gain a rich reward when the war comes to an end.

Every nation at war with Germany has felt the effects of this far-reaching system of espionage and propaganda. We all know the record here has been one of arson, murder, and treason; France has had her trials in high places; England has found German capital back of Irish discontent; Italy has seen the rout and disaster to her army before Trieste in 1917; and poor Russia has been shattered into a score of discordant elements and furnishes the most potent example of the full combination of propaganda followed by brute force.

How can we best meet this menace, how guard against the swarm of spies ready to spring forth anew on the conclusion of peace? For the present let us hunt them down here at home, and once apprehended in person let us be guided by the forceful example of France in disposing of these criminals. In war the sentence to the spy is death. That should be our sentence passed on them by our tribunals and put into speedy execution. One dead spy is a greater deterrent to others than 50 spies in comfortable jails. One public execution is worth a hundred stories of what happened to Ruth Law. Now is the time for us at home, together with our boys "over there," to show that there is a God in Israel. A strong, a fearless, and a just sentence and execution of all who transgress

will wipe out the spy and will in the future keep him and his ilk in less dangerous climes and occupations. Let us guard our shops, our offices, our trade secrets and processes as closely as we guard our military information. The spy is like typhoid fever—a preventable disease. It is our part to kill the carrier and clean up his breeding place.

Let us see that the means of communication by telegraph and telephone are placed within Government control by the prompt passage of this resolution, to the end that we may not be in jeopardy as to the transmission of our governmental orders, and that the spy may be eliminated more quickly and effectively.

I take this stand in support of the administration, as I have continually done in the past, as evidenced by the following excerpts from former speeches:

THE DRAFT.

[Speech April 26, 1917.]

Mr. LINTHICUM. We have a leader, a Commander in Chief of our armed forces, our President. He is not a party leader, but is the leader of the people of these United States. He is in supreme command. At his behest we declared war on Germany; at his suggestion we mortgaged the resources of future generations to finance the war. His third request is for men to fight the battle of this country, men to carry the flag we love into the thick of the conflict, men to make our solemn declaration of war something more than high-sounding words, and how have we acceded to that request? This House to-day, when it should be a unit, stands divided against itself; and it is as surely true to-day as when it was written that "a city or house divided against itself shall not stand." To-day we stand at the forks of the road debating whether we shall take the primrose path of volunteer dalliance or the upward and straight path of obligatory service. Call it draft, conscription, compulsion, or universal obligation; call it what you will, we know what it is; we know what we want; we want and must have the services of the entire manhood of the Nation. We want enacted into law the President's plan. We must have selective draft.

Just so sure as the Nation embarks on a system of volunteer service just so sure history will write the record, as it wrote it after that "rash and fatal charge" at Balaklava, that "somebody blundered."

I can not believe, Mr. Chairman, that we are about to commit such a blunder. The only reasons, if sentiment is ever a reason, in favor of the volunteer system are sentimental reasons. The reasons against it are the sound reasons of experience. First and foremost is that a volunteer system is not voluntary. First you call for volunteers, then what do you do? You organize a campaign, you employ speakers, you bring out all the brass bands, and then you proceed to badger, bully, browbeat, coax, cajole, and coerce the young men to volunteer. You teach the young women of the land to pin the white feather of the coward brigade to the lapel of the slacker, the man who is exempt, and the man who has been rejected. You make a hero out of the raw recruit and puff him up with unwon self-esteem. You get two classes of men by this system—first, men who come in on the first call who are brave enough to go; and, second, you get those who are too cowardly to longer stay out and endure the goad of public opinion.

The second objection I present to the volunteer system is that it is not democratic, in that it does not bear equally on all the manhood of the Nation. We have no volunteer system for obeying the laws of the Nation, no volunteer system for paying the Nation's taxes. These things are compulsory, that all may bear the burden. Now, we fight for the Nation's life, the highest obligation of them all. Shall we thrust this burden on the shoulders of the willing few and those we can drive into the service? No; a thousand times no. Let the greatest burden rest where the lesser burdens of the Government rest, on the shoulders of all. It is the only fair, the only just, the only democratic, levy we can make.

My third objection is that a volunteer system is not efficient. It is inefficient in that it does not produce enough men; it enrolls men who should be at work elsewhere and it protects the skulker, the shirker, and the coward. That it fails to produce enough men is the bitter, bitter experience of Great Britain. Volunteerists say, "Every Englishman to-day fighting in France volunteered for the war." Yes; that may be true, but to-day England is short about 2,000,000 men, which she ought now to have on the western front to strike the decisive blow. Why has she not those men? Because they failed to volunteer, and it took a cabinet upheaval to enact the conscription, and then, when it was a law, it took time to get the troops together and to train them.

Maryland, the birthplace of that immortal anthem, the Star-Spangled Banner, has ever done her duty when the independ-

ence, integrity, and defense of the country required. She stands for patriotism, justice, and the rights of humanity. Her people believe that if you would fight this war successfully and achieve victory, it is necessary to enter by definite and well-laid plans—plans upon which the War Department can definitely depend and act. Our Maryland delegation has weighed well the question and will follow the President, the Commander in Chief of the Army and Navy. [Applause.]

DECLARATION OF WAR.

[Speech April 5, 1917.]

Mr. LINTHICUM. Mr. Chairman, the great crisis, the crucial hour, of the United States is at hand. All sane and patriotic men have sincerely wished and prayed that we might remain at peace with the nations now engaged in this the most dreadful conflict of all times. We have done more than wish and more than pray; we have suffered long and patiently. We have endured all too much.

Nearly three years ago blind blood lust struck the blow which set the world aflame. On the day of the first blow by Germany there was not a trace of feeling against her in the United States. The most prevalent sentiment was one of deep admiration for the marvelous perfection of her military establishment. The first war news lauded the efficiency of German mobilization and recounted the wonderful precision of her marching thousands.

At the beginning of this conflict the United States of America was absolutely neutral. We acknowledged to Germany the world's debt in science and the arts. We recognized her achievements and her splendid history. Her customs, many of them, had become our customs and her people had become our people. By every bond of peace, friendship, and common blood we were bound to her as much, if not more, than any other European nation.

Hardly had the shock of the various declarations of war died away before the United States stood aghast at German violation of Belgium. That the German Government could think of its solemn treaty as a "scrap of paper" came as a sharp awakening to the American public. Apologists for Germany may say what they may, military necessity may be cited as excuse, but the fact yet remains that in the violation of Belgium, the burning of her cities, the devastation of her fields, the slaughter of her women—in these things Germany laid the foundation for the present hostility of this Republic.

Mr. Chairman, we have been slow to anger; but this Republic, sir, has never been prone to rush into war. In our history we have engaged in four foreign wars, including our war for independence. Preceding each war the people of this Republic have suffered and endured foreign aggression, just as we have suffered and endured since August, 1914.

Ten years of wrong, oppression, and the blood of the Boston massacre preceded armed resistance to England and led to the Revolution.

The enslavement of our seamen and the almost total destruction of our commerce were long endured before the War of 1812.

Years of border raids, destruction of property, and the blood-stained Alamo finally drove our people to the Mexican War of 1848.

We watched for years Spanish tyranny in Cuba starve and kill a brave people before the destruction of the *Maine* brought on the Spanish War of 1898.

In every instance we have been goaded to desperation before we have drawn the sword. We have ever been patient; now let Germany learn the import of the words, "Beware of the anger of a patient man." The day is here! The hour has struck! It is our destiny here and now to once more draw the sword—now as ever heretofore in defense of liberty, humanity, and peace.

We, Members of this Congress, in response to the wish of our great and patient President, stand now ready to launch into battle the mightiest Nation in the world, not the mightiest in standing armies nor in navies, nor in thirst for conquest, but in those elements which are the great foundation for victory we are the mightiest of them all. We bring to the cause of humanity more material wealth than any nation ever before in history. We bring unbounded natural resources in the very sinews of war. We bring a united Nation, strong, determined, patriotic, prepared to endure to the end. We bring 100,000,000 freemen and a flag that has never bowed in defeat.

By the iron in our mountains,
By the power in our rivers,
By the harvest of our prairies,
By the skill of our inventions,
By the courage of our fathers,
By the aid of God above us,
We shall win and we shall conquer.

ANARCHISTS.

[Speech June 21, 1918.]

Mr. LINTHICUM. It is high time we were realizing that the doctrine that "he that is not with me is against me" is just as true to-day as it was nearly 2,000 years ago, and is just as applicable to nations as it is to individuals.

The patriotic people of this country are straining every nerve and energy, every resource of property, in the prosecution of this great war in Europe for the defense of democracy and the freedom of the people. The American people are slow to anger and slow to enter wars, but when once they enter they are a determined and forceful people. They have entered this war with the determination that autocracy shall be banished from the face of the globe and that it shall not stalk its hideous form through future history. To this end they are ready to make every sacrifice and to endure every hardship, not only for the benefit of the present generation, but for those who are to come after us.

We are the trustees, as it were, of this great democracy which was handed down to us by our forefathers, and it is the duty of the present generation to hand it down to those to follow untarnished by any act and with a power equal to or greater than when we received it. Its doctrines and principles are a precious heritage, and they are now in the keeping of the present generation.

The man or organization that teaches anarchy in opposition to the American Government, that endeavors to undermine its operations and to overthrow its form of government, is perhaps the greatest enemy we can have, and should be dealt with as an arch enemy of the country. Our people have complained for some time that the Government was not drastic enough in these cases. I know that the Government is doing everything within its power to put down false doctrines and to eliminate the enemies of our country, but what the Government needs is more stringent laws, such as the one we are passing to-day, so that it may carry into effect the wishes and aims of the American people.

Our forefathers early in the history of this country found that it was necessary to pass and enforce stringent laws that the Government should not be overthrown, and that they might prosecute the war in the interest of our people. To-day after more than 100 years we find ourselves in the same position, and that the melting pot, which we thought was in full operation, had not so amalgamated our people that we were one and inseparable, but had failed to assimilate certain elements, and among these are the anarchists of this country, who are endeavoring by their doctrines and teachings to overthrow democracy.

I realize the enemies of our country are not large in proportion to our population, but the great difficulty is that our enemies devote their time and attention in their teachings and practices among those who are least able to refute them. They attempt to spread their doctrines among the population least educated in democracy and the aim of the American Government. They teach among those who are mostly foreign born and have not had the advantages of being born and reared under the Stars and Stripes and understanding the principles and doctrines laid down by our forefathers in the Constitution of our country. It is this same teaching, limited and small in the beginning, gradually growing and extending, which brought down the great Government of Russia at a time when we most needed it, and it would be criminal negligence on the part of Congress not to pass this measure and eliminate the anarchists and anarchy from America.

The prairie fire often starts from the embers left by a traveler in his march through the country or a live match carelessly thrown aside, but fanned by the gentle breezes and later by the swift winds it gathers force and spreads devastation along miles of country, doing damage to thousands of homes and spreading want throughout an entire section. The teachings of the anarchists may begin in some small, obscure, and unnoticed home, gradually increasing among the people of that class until it spreads and devours their reason, and great governments are overthrown like the mighty monarchy of Russia.

The American Government, the greatest democracy which the world has ever known, has granted great liberty and opportunity to all the people of the globe. They have been invited to come and enjoy the great resources and free Government of a liberty-loving people. The great bulk of those who have come have been melted in the melting pot and become true and sympathetic American citizens, but there is left another class which has not been assimilated, which has not appreciated the great opportunities given them nor endeavored to learn the principles and doctrines laid down by our forefathers, for which they shed their blood and gave up their lives. They have not de-

sired to become American citizens; rather they would remain alien enemies in order that they may call upon their own Governments in times of peace for consideration should they violate the laws of America. These are the men who, inspired by false doctrines, do not believe in the rule of the people under a constitution properly promulgated, but prefer to teach a false doctrine among the people, alluring those in sympathy with their teachings and interesting those who are too ignorant to understand the Government under which they are living.

HOUSE EMPLOYEES IN BALTIMORE.

[Speech April 1, 1918.]

Mr. LINTHICUM. Mr. Chairman, I wish to bring to the attention of this House again a solution of vital importance to the matter of housing. I realize that gentlemen may think I am merely speaking for Baltimore, but I want to say that if we could arrange in some way to have regular trains leaving here on time and taking employees back and forward between here and Baltimore we could relieve to a large extent this expenditure. We have a city of 700,000 people. You have a city here of 200,000 white people. England is mobilizing 50,000,000 of people, and she has the city of London, with 5,000,000 people, to center all of these activities in. France is mobilizing a people of 40,000,000, and has the city of Paris, with about 3,000,000, to center all that in. America, mobilizing a country of 110,000,000 people, has only the city of Washington, you might say, to which to bring all of these activities, a city of something over 200,000 white people. I submit that there is only a slight distance between Baltimore and Washington, only 40 miles, and if trains are put on and run properly you can add to the city of Washington within 45 minutes a city of 700,000 people, and carry these employees back and forth, and relieve a large part of this expenditure and congestion.

I think the Government could very easily carry commuters backward and forward to Baltimore for somewhere about \$8 or \$10 a month. The railroads are now charging \$16.69, including the war tax; the electric line several dollars less. This matter is not something that is going to take time, like building homes. You can do this thing inside of a day, almost, by putting on trains that will leave at a proper time and leave the other end at the proper time. Immediate relief is what is needed. You can not do it well under the general railroad schedules, because you have trains late for various reasons, and in the wintertime it would be impossible to do it on the regular train schedule. The trains run so irregularly. I tried to commute, and I did it up until the 15th of January, and some of the days I spent six hours on the trains going backward and forward. That was under the general schedule. What we want is special trains. I would leave there about daylight and get back after dark; so that you can see that for the year round on the present railroad schedule it would be quite a hardship, though many do so in spite of the task. You must establish trains to carry the employees, to bring them from Baltimore here, and have these trains leave at a specified time. If we would do that we would save millions of dollars of these expenditures for buildings. Why, you can build a railroad from Baltimore to Washington for less than what some of these buildings are going to cost you. I tell you this is a matter of very serious consideration, not alone for Baltimore but for the Government.

TUBERCULOSIS IN CATTLE—SAVE THE BABIES.

[Speech January 25, 1918.]

Mr. LINTHICUM. Mr. Chairman, I am particularly interested in the subject which is under discussion to-day, that of the eradication of tuberculosis from the cattle of this country. As the Members present know, some two years ago I introduced a resolution to investigate this subject, and, through the assistance of the Federation of Labor of my State, cooperating with the Federation of Labor throughout the country, we were able to bring this subject before the various labor organizations, the women's clubs, and other organizations of the country, as to the importance of the eradication of tuberculosis. I told them at that time that there were some 2,000,000 cattle in this country suffering from this dread disease; that there were some 93,000 deaths each year from tuberculosis, and that 6,000 of these deaths were traced to children who had contracted the disease from tuberculous cattle through the drinking of the milk.

I treated the subject upon the line of sanitation and health more than upon economic lines, because while I believed and while I realized the great importance of the economic question as to the eradication of tuberculosis, and while I admire the magnificent argument made by the gentleman from Nebraska [Mr. SLOAN] along that line, I believe the great and paramount question involved in the eradication of tuberculosis among cattle

is to stop the spread of bovine tuberculosis among the people, and especially among the children of this Nation.

We hear a great deal about the conservation of the food supply, conservation of the fuel supply, conservation of this, that, and the other, but I tell you, gentlemen, the great question for our country and for every other white country on the face of the globe in these days is the conservation of humanity and the continuation of the white race with its power and might on this earth, and yet we sit idly by and appropriate the meager sum of \$250,000 for the eradication of tuberculosis among cattle, when we know we can trace the death of 6,000 children to that very cause.

[Speech April 17, 1918.]

Mr. LINTHICUM. I am pleased to note the agreement in conference upon the Senate amendment to increase the appropriation for the eradication of tuberculosis among the cattle of the country from \$250,000 to \$500,000; also the legislation therewith, which will make it effective and beneficial. This amendment came within three votes of adoption in the House, and should have been passed here, but the fact that it has been agreed to in conference and will now be approved by the House and become law is satisfactory indeed.

There is no legislation we could adopt which will do more for the people than the eradication of tuberculosis in cattle and thereby prevent the infection of the children with that dreaded plague. "The vitality of the people is the strength of the Nation." If we are to have a strong and healthy Nation we must do all we can toward having them supplied with pure and nutritious food. Impure milk affects the children more largely than it does grown people because it is more largely used by them than by adults, and in the very young their only food.

We provide legislation for the inspection of meat but none for the inspection of milk. We know that the latter is far more dangerous because it enters the stomach in its raw state, whereas the meat is cooked and many of the germs destroyed.

Dr. Welch, when speaking to a party of ladies on this question, said water and milk might be likened unto two streams flowing through a town, the difference being that if one put a number of, say, typhoid germs in the stream of water they would be tremendously diluted, whereas the same number in milk would be indefinitely multiplied. As with the typhoid germ, so it is with the tubercular germ.

BALTIMORE EQUIPPED FOR WAR—35-FOOT CHANNEL FROM CITY TO SEA.

[Speech July 15, 1917.]

Mr. LINTHICUM. Baltimore is the strategic point of the Atlantic coast. It enables commercial and industrial enterprises to defy competition from other seaboard cities. Figure it out from a map. It is the shortest route to southern Europe and Africa. It is closer than any other big Atlantic seaport to Cuba, Jamaica, and South American cities on the east coast. It is 470 miles closer than San Francisco to the city of Valparaiso, Chile, the chief seaport on the west coast of South America. As a distributing center, it is closer to the South and the great Middle West than any other Atlantic seaport. It has 19 steamship lines engaged in trans-Atlantic and other foreign trade; 8 local steamship companies operating 68 vessels in Chesapeake Bay and coastwise trade. It has 6 miles of municipal wharfage front; 32 miles of private wharfage, of which 10 miles are occupied by railroad piers and docks, 1.3 miles by steamship companies, 2 miles by wharf and dock companies, and 19 miles by industrial concerns.

By reason of its geographical location the city from the very first days of the "iron horse" became a railroad center. It has always been one of the important seaports of the country. That Baltimore lived and flourished may be attributed to its natural maritime advantages. It early became a distributing point for merchandise that came over all seas and from all lands. It sent and still sends back ships burdened with products of every section of this country. Long before steam became the propelling force of commerce Baltimore's supremacy was assured. The Baltimore clipper was famous; it was sailing every sea and was seen in every port.

BALTIMORE AS A PIONEER.

Peter Cooper made the first railroad coach run from Baltimore to Ellicott City, August 28, 1830.

The first railroad was organized in 1827.

The first patent for a locomotive was granted in 1828.

The first ribbon of American silk was made.

The first steam engine for traction purposes was operated.

The first steam vessel to cross the Atlantic set sail.

The first steam vessel entirely of iron was constructed.

The first telegraph line was operated.

The first iron building was erected.

The first revolving cylinder press was made.
 The first armor plate was made.
 The first electric car was operated.
 The first electric locomotive was used by a railroad.
 The first dental college was established.
 The first linotype machine was made.
 The first carbureted hydrogen gas for illuminating was made.
 The first merchants' exchange was erected.
 The first monument to Washington was erected.
 The *Decoy*, the largest floating dry dock in the world, was built.

Baltimore is the Monumental City, with 21 notable memorials.
 Baltimore is the birthplace of "The Star-Spangled Banner"—the national anthem.

Baltimore is the first in the canning and preserving industry.
 Baltimore is the first in the manufacture of cotton duck.
 Baltimore is the first in manufacture of straw hats.
 Baltimore ranks first in medical science and education in America.

The Johns Hopkins is the one real university in America.
 Baltimore is first in the oyster industry.
 Baltimore is the largest banana market in the world.
 Baltimore stands first in the bonding business.
 Baltimore is first in manufacture of fertilizers.
 Baltimore ships more bituminous coal than any other American port.

Mr. Speaker, in conclusion I wish to say that I have always believed that the harbor of Baltimore and channels leading thereto are its great assets; that everything should be done to develop this important adjunct to our progress and prosperity.

I, therefore, early began the introduction of bills and procurement of appropriations for the widening and deepening of our channels and harbor and secured a million two hundred thousand dollars for that purpose. This gives us a channel from the city to the sea of 35 feet, equal to any in the country except New York, placing the city in the forefront for war work.

I believe that Baltimore should have at least a 40-foot channel to prepare for the future, and have so introduced bills and am proceeding along that line.

The immigration station was procured under bills which I introduced early in my congressional career, and the result is that we have a modern station at Fort McHenry, for which \$550,000 was appropriated, and which it seems as though Providence had ordained, because it is to-day harboring, as a hospital, the wounded and suffering from the battle front in France.

The great governmental activities which are pouring to our city are largely due to the splendid channels and harbor of Baltimore. To-day we have immense shipbuilding industries, great camps and cantonments, ordnance plants, automobile-assembling plants, depot quartermaster employing hundreds of men and women, buying millions of dollars of goods, and many other activities I might mention, all assisting in the prosecution of this war and placing Baltimore strictly on the map as a great metropolitan center and the source of much of the war work necessary to the winning of this great conflict.

The Water-Power Bill.

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

Mr. TREADWAY. Mr. Chairman, under permission granted me to extend my remarks during discussion on the water-power bill, I present herewith extracts from various speeches made during the present session of this Congress.

MAIL TO MEN IN THE SERVICE.

December 13, 1917.

Mr. TREADWAY. Mr. Speaker, I think there are two matters in connection with the delivery and handling of mails to soldiers that ought to be given very careful attention. One is, Why is there the discrimination between our men in foreign service having free postage and our men in service in this country not being given the same privilege? That has been called to my attention quite recently. I can personally see no reason why these men are not just exactly as much entitled to that service, of the freedom of the mails, as the men who are overseas.

Another matter that has recently come to my attention is partially covered by the letter from Mr. Praeger, to which reference has been made. I received a letter yesterday from a gentleman having two sons overseas, who writes me that he can go to Canada, mail letters and packages to his sons, have them promptly delivered, and secure a reply from them more quickly than he can from his own home in Massachusetts, and that he has done so in order to hear from his boys. It strikes me that such a condition as that, and the statement that there are thousands and thousands of bundles of mail addressed to our soldiers stored in warehouses in Paris, ought to be given prompt attention by the postal authorities. I have transmitted the letter to the Post Office Department with a request for a prompt investigation.

Personally, I do not think there can be any excuse for such a condition as I have described and which I am sure does exist, that mail can be delivered through Canada and sent to the soldiers in France and reach them with a fair degree of promptness, and that we can not get similar service from this country to our boys over there. I am not criticizing the department. I realize that the conditions under which they are serving are difficult; they are probably doing the best they can, but when such conditions as these are brought to their attention I think they are entitled to careful investigation; and I also wish that the committee or some one familiar with the details would explain why the soldiers over there should have free postage and not those here. Both are doing their whole duty and deserve the best consideration and attention we can give them. When the proper time comes I hope to see free postal facilities given every man in the service.

EULOGY ON EX-CONGRESSMAN LAWRENCE.

January 7, 1918.

Mr. TREADWAY. Mr. Speaker, Members who served in this body previous to the Sixty-third Congress will readily recall the Member from the first Massachusetts district. Should any of the older men be asked who made friends the most readily and the most of them, who always had a cordial greeting, a hearty handclasp, and a pleasant word for everyone, I believe the name that would be most likely to come to mind would be of this very Member.

The disposition which endeared him to his friends at home was the same as that which made him so popular in the Halls of Congress. The smile, the handclasp, the hearty laugh, were all the indications of his natural personality. I well recall during my early membership in the Sixty-third Congress how frequently Members on both sides of the House inquired most feelingly for him. It was very easy for me, a new Member, to realize what a loss the House itself felt in his retirement, both from his merit as a Member and from his personal association with his colleagues. His jovial disposition could not better be illustrated than by the remark he made to me when I asked him, after I had been elected as his successor, why he was retiring from Congress. His reply was:

I want the people to say, "Why did you?" instead of "Why don't you?"

After leaving Congress he was selected by the then governor, although a member of the opposition party, for one of the responsible positions in our State. This position, however, he was able to retain only for a short time. Last summer he was designated as chairman of the local exemption board in the city of North Adams. The work of that board was a severe strain upon him, in that he felt the conscientious duty of designating the young men who were to enter the military service of our country from his own city. It was this service that permanently undermined his health. No man could have gone about this task with more feeling of responsibility and conscientious desire to perform his duty than did Mr. Lawrence. He gave his life in serving his country. Positions on the exemption boards are ones of patriotism, and as Mr. Lawrence lost his health and strength in that service he can be classed as one of those who have given their lives gladly in their country's cause and the patriotic call of duty. I last saw him as the first troops went to the cantonment, and, together with all his friends present, noticed that he was broken in health and was in need of a change of scene. He died in New York City on November 21 last. George Pelton Lawrence has forever left the earthly scenes which he so greatly enjoyed and where he was so much beloved. His life was a useful and illustrious one.

Verses might be quoted which would be truthful of his life and character. I prefer, however, in these brief remarks to designate him with these few words: A true friend, a brilliant statesman, a manly man. [Applause.]

WOMAN SUFFRAGE.
January 10, 1918.

Mr. TREADWAY. Mr. Speaker, as is well known, the State of Massachusetts voted on the suffrage referendum in the election of 1915. A very large vote was cast against suffrage. The first district, which I represent, voted nearly 2 to 1, or by a majority of 8,329, against it. In view of these facts a person in my position who supports the amendment to-day is entitled to an opportunity to express his reasons.

This I will do in a very brief manner. First, I voted in the Sixty-third Congress for the amendment, and I also cast my ballot for it as a voter in the election in Massachusetts. Secondly, I have frequently explained to the suffrage and anti-suffrage supporters at home my attitude upon the question. It is this: It does not seem logical to me that one sex should have the power to deny the right of suffrage to the other.

I have invariably told my friends that if the women by their own conduct and knowledge of public affairs and by an expression of the majority of their own sex showed their desire to exercise the right of franchise, I, for one, was willing and glad to assist them in procuring it. It is for this reason that I shall vote contrary to the expressed opinion of the male voters of my district and the State of Massachusetts on the question. [Applause.]

In response to a question at the hearing before the Massachusetts delegation, an advocate of suffrage remarked that the women of Massachusetts would gladly have a referendum given to them and would abide by the results. In my opinion, suffrage would win on such a vote at the present time.

It further seems to me that the conduct of the women in the prosecution of the war offers still another argument for suffrage at this time. The women of the country have arisen to their full duty and have proven themselves worthy of being the mothers of the fighting force of this Nation. Many of their boys are overseas and many more are going. If these young men were asked in whose hands they would leave their right of franchise, there would be a unanimous response in favor of leaving the question with their mothers, wives, and sisters. [Applause.] It is nearly 15 years since I first saw active efforts on the part of suffragettes, and, while the militants made mistakes then, and while they have made mistakes here in Washington during the past two years, I am convinced that the majority of the women of this country have become capable of properly making use of the franchise, both through education and study of the affairs of government.

Certainly I credit the women of Massachusetts and the women of the first congressional district as possessing as much if not more knowledge and intelligence as their fellow women of the country and as being as capable as others of exercising the right of franchise.

In view of these facts as applied directly to my own case and my own district, I shall vote to-day to refer the amendment to the States. [Applause.]

PAY OF SOLDIERS.
January 19, 1918.

Mr. TREADWAY. Mr. Speaker, I hold in my hand a letter from a soldier who entered the service just four months ago to-morrow. In that length of time he has been unable to receive one cent of pay, and the assignment that he made to his mother has not been paid to her. It seems that such a condition as this is deserving of the attention of the department. I took the matter up with the War Department last Monday, but as yet have received no reply to my communication.

The circumstances are these: The young man entered the service by joining a company in my section. He was transferred to another camp. Later the company which he first joined was sent overseas, and the records of his enlistment are with that company. It seems to me strange that in some way duplicates of such important papers as those should not have been left with the department here. I have a letter from the young man this morning saying that the roll has been signed for another month's pay, and that his name is not on that roll. Consequently, it will be at least five months before he receives any pay or before his mother receives the benefit of the assignment which he has made to her. I wish to call this matter to public attention to see if some action can not be secured looking to prompt pay of our men in the service. There are laws regulating time of payment of private corporations, but the Government itself can tie up a soldier's pay for at least four months, and, as this circumstance proves, it will be at least another month before he can get any pay, unless something can be done to cut this red tape. If these records are across the ocean, they ought to have been returned before this.

Wherever they are, the men in the service ought not to be held up four months or their families be allowed to suffer because of some kind of department red tape.

DEPORTATION OF ALIENS.
February 6, 1918.

Mr. TREADWAY. Mr. Chairman, during the consideration of the immigration bill in the Sixty-third and Sixty-fourth Congresses I favored an amendment requiring either compulsory naturalization or deportation. That was before war measures were under consideration. And it is, in my mind, very much more important that the same sort of law should become effective to-day. The only objection heard in our section of the country at all to the draft law is the fact of the very large percentage of aliens that are not only escaping the draft but are taking the positions made vacant by our boys that are called into the service. [Applause.] It works wrong in both ways.

Let me call to your attention the registration of Massachusetts under the selective-draft act. The total was 359,323, according to the statistics furnished by the Provost Marshal General. Of this number 106,014, or nearly one-third of the total number, were exempt under the alien clause. In the four western counties of Massachusetts, where my district is located, the total registration was 54,006; aliens, 16,772. The same proportion has prevailed throughout the State, nearly one in every three escaping under the alien provision.

I believe most thoroughly in the elimination of section 2 of this bill. There should be no discrimination shown these aliens who remain in this country. Let them take the same chances as our boys do, and there will not be this opposition to the selective draft. [Applause.]

The district I represent is about half urban and country population. In the cities the young men have been taken from trades and occupations of the sons of our own citizens, while the alien population stands on the street corners watching the men march to the service of their country, and then enter the mills or factories in the positions the boys with the colors have held.

In the country sections farms are being abandoned for the lack of men to cultivate them. Fathers and mothers have seen their boys leave the plow, or the rake, or the hoe; leave their firesides and homes, being deprived both of their labor and their needed companionship. You can not expect increased production of the farm when the only ones not affected by the selective-draft act are those who have not sufficient interest in the welfare of our country to become citizens of it.

One in every three men in Massachusetts of draft age is exempted; one in every eight in the entire United States. Such a condition is intolerable. I appreciate the desire of many Members not to act contrary to the wishes of the State Department and infringe on any treaty rights, but there can be no argument raised against prompt action either through legislation or through treaty agreements on a subject so vital to the interest of our people. Within a short time the next draft will be called out, and either this bill should become law before that call is issued or treaties with the various countries should become operative for the same purpose.

WAR-RISK INSURANCE BUSINESS.
February 27, 1918.

Mr. TREADWAY. Mr. Chairman, I wish to use the short space of time allowed to me in calling the attention of the committee to some interesting statistics which came to my attention yesterday in reference to the amount of war-risk insurance that has been taken out by soldiers and sailors. I happened to call at the office of Commissioner Nesbitt yesterday and was given these figures, which seem to me to be extremely interesting:

The total mail received by the bureau on February 25 was 11,291 letters. There was in force on that date \$10,229,685,000 of insurance. There was in force last night—I called up this morning to see what the addition was overnight, or within 24 hours—and there was in force to-day \$10,400,313,500. The number of applications, including day before yesterday, was 1,262,447. Last night it was 1,284,665, showing the receipt yesterday of over 22,000 applications. The average amount of these policies day before yesterday was \$8,103. Yesterday the average was \$8,096. The highest number of applications received in any one day was 54,000. The highest amount written in any one day was \$501,622, or an average of \$9,289, showing how nearly all the men applying for insurance were taking their full allotment of \$10,000. In addition to the insurance there have been filed 1,327,342 applications for allotments and allowances. There have been 518,282 awards sent to the disbursing officer, of which 19,101 were sent day before yesterday. The number of employees in the department yesterday was 2,383, and in

addition to that there are about 400 employed during the evening by the hour.

It seems to me that these statistics of the value of the war-risk insurance to the men in the service are well worth the House having a knowledge of. [Applause.]

WAR FINANCE CORPORATION.

March 18, 1918.

Mr. TREADWAY. Mr. Chairman, this measure, known as the War Finance Corporation bill, is so completely at variance with all previous methods of loans on business transactions and with normal methods of doing business that opposition to it from men experienced in banking matters was perfectly natural. I think I am breaking no committee confidences when I say that my personal idea, gathered from various members of the committee in informal conversation, was that when the original bill was introduced the Committee on Ways and Means was not disposed to favor the legislation. To-day the committee is unanimous for its passage, and two things have brought this result. One, an explanation by the Secretary of the Treasury and by Mr. Warburg of the absolute need of the bill, and, second, various changes that the committee has made from the original form.

That the bill is purely within the scope of a war measure was made very plain in Mr. Warburg's testimony, as was stated by the gentleman from Michigan on Saturday. In answer to a question as to how he regarded this kind of legislation in normal times, Mr. Warburg replied it would be "absolutely rotten." The fact that it is war legislation is recognized in the life of the corporation it establishes, whereby the affairs of the corporation cease within a limited period after the close of the war.

The proposed legislation is extremely drastic, but I for one am convinced that it is thoroughly needed. I agree with criticisms that have recently been made on the floor of the House against accepting every piece of legislation desired or proposed by any one of the executive departments on the plea that forms in which offered carry with them the only possible correct method.

In a recent issue of the Springfield (Mass.) Union appears a striking cartoon showing Mr. McAdoo starting out for work in the morning. He has seven different jobs, and the final one is the general manager of the \$500,000,000 United States corporation. This is further illustrated by the following squib from a Philadelphia newspaper:

Poor Mr. McAdoo!
Think of the jobs he's hitched up to—
The Treasury, the railroad crew,
The income tax, and then a few.
Each week they hand him something new
To tax his time and temper, too.
He has to know when loans are due,
What source to get his billions through,
What fund to pass each dollar to,
Which tax is what, and who is who;
What bonds to sell and what renew,
Which "trust" to coax and which to sue.
He stretches out each day to two
To do the things he has to do.
The job would flounder me or you,
But it's a cinch for McAdoo!

[Laughter.]

In the formation of the War Finance Corporation, Mr. McAdoo desired complete authority in the appointment both of the board and of the Capital Issues Committee. This power has been, in name at least, taken away from him in that the appointments must be made by the President and confirmed by the Senate. We have also very much abbreviated the powers of the Capital Issues Committee. Briefly the situation is this: The original bill would not be recognized by its own father. The idea of its need came from the Secretary of the Treasury. The bill giving the necessary machinery to the administration has been framed by the Ways and Means Committee. We recognize that it carries with it huge possibilities of inflation of credits, but this is not the time when normal objections hold good.

Capital must be provided for carrying on the industries necessary in the conduct of the war, and, as the Government is requiring practically the entire business of the country, it is proper that it should furnish the capital with which to carry on the business. All large business requires extension of credit, and that is exactly the foundation of this legislation. The Government is engaged in a stupendous business proposition requiring unlimited capital, and is asking assistance of the going business concerns of the country in carrying on its business. In order to have such business successfully carried on, it must provide the capital through a system of loans and

credits. That is what this bill does. It establishes a Government board able to extend cash credit to the banks to the amount of \$500,000,000, with an additional loan of two billions through bonds or notes. It not only puts this amount into circulation, but the amount that this will offer as credit when this is itself loaned through the various channels.

The opponents of the bill argue that an extension of the power of the Federal Reserve Board could provide extension of credits to business. The Federal Reserve Board is recognized as a great success in general methods of banking. One of the basic principles of the organization is it handles only liquid paper, whereas in this bill long-time collateral in the issuing of bonds and stock will be accepted. The marked difference between the two is readily recognized and the two kinds of collateral ought not to be handled under the same auspices.

The willingness shown to pass this bill is another illustration of absolute harmony in the management of the war and the desire of all parties to work together to the one aim of its satisfactory conduct and conclusion. [Applause.]

INCREASES FOR POSTAL EMPLOYEES.

March 22, 1918.

Mr. TREADWAY. Mr. Chairman, I am heartily in favor of the Moon-Madden bill. It seems to me that we have waited long enough to do justice to a very large class of employees throughout the Government service whose faithfulness has been well established in every branch wherein this bill is applicable. As has been frequently stated on the floor, it is over 10 years since any adjustment has been made of salaries of postal employees, and no one will deny that during that period of time there has been a very marked increase in the cost of living. It is very essential that something should be done to retain the personnel. I happen to know of numerous instances where men have become absolutely disgusted with Postal Service conditions and have resigned from positions where their service has been valuable to the Government, and accepted others in order to better their living conditions. We do not need to paint, Mr. Chairman, any pictures of conditions under which these men serve.

The rural carrier goes out over his line in winter and summer, in heat and cold, rain and snow. The railway mail postal clerk is continually exposed, both to danger and to the hardships of travel, requiring long absences from home. The city carrier is also obliged to face the inclemencies of the weather in his routine work. All of these men are serving at very moderate rates of compensation. In fact, there is no feature of the Postal Service that is appealing to men to enter it at the present time.

Certainly we can do justice to these men by these moderate increases. As the gentleman from Illinois [Mr. MADDEN] said yesterday, if any one of these men was in your or my employ and asked for an increase there would be no question of its being granted. Why does not that same rule apply to the thousands in the Government service? Why should we not do justice to them as well as to one individual employee? I do not agree with the attitude of the chairman of the committee that this is a war-emergency measure. The committee has acted wisely in striking out that feature of section 1 and incorporating a permanent basis of additional pay in the various postal lines of service. We have had in New England recently a good deal of complaint of the Postal Service. This has come, in large measure, from the fact that we have sapped the ambition of the men in all branches by the attitude of the department toward them and toward these increases in salary. I noticed only a few days ago that the Postmaster General made a statement whereby he showed that he was quite proud of the fact of the large surplus in the postal receipts. It strikes me that it is a bookkeeping surplus, pure and simple, but if there is a surplus let us put it to the right use. These men have helped earn that surplus by giving their best, by giving faithful service, and, therefore, it seems to me that we as representatives of the Government can do no better than to recognize that faithful service by granting such increases as are called for in this bill.

I have been in favor of this legislation since it was first brought forward, and have twice appeared before the Committee on the Post Office and Post Roads, offering statistics and designating the organizations in my district that would be directly affected by these increases. I also have frequently stated my attitude to the men themselves and am very glad of this opportunity to add a further word in their behalf.

The requirements of their duties are very exacting, and they must be men of excellent habits and character to satisfactorily perform the duties demanded of them. They merit this recognition from the Government, and I hope that this bill will be speedily enacted into law.

MOTOR-TRUCK POSTAL ROUTES.

March 26, 1918.

Mr. TREADWAY. Mr. Chairman, I should like to supplement the statement that the gentleman from Pennsylvania [Mr. STERLING] has just made by giving the aggregate of the expenses and postal receipts of the six routes to which he refers. The total weight carried over those six experimental routes was 15,236 pounds. The actual cost of operation, maintenance, overhead charges, depreciation of the trucks, and so forth, was \$386.22. The total postage received was \$2,417.49, a profit of seven times the actual cost. These figures represent six days' operation during the present month. It seems to me that is a very excellent governmental experiment. As a rule, experiments are mighty expensive. Here is an experiment that is making money for the Government, and it is right and fair that that experimental profit should be used for the continuation of the experiment and the extension of the effort to establish these motor-truck routes through farming districts. I disagree absolutely with the gentleman from Indiana [Mr. Cox] who said that the debate on this bill had not been sincere, that we were trying to choke off some other legislation. Has there been anything more sincere than the effort that this House has made during the past three days to better the condition of the Postal Service men in this country? I think it has been time well spent and money well invested. [Applause.]

This proposition comes right home to another class of our people. My district is partially a farming community in western Massachusetts, adjoining a section of Connecticut and near to a section of New York, portions as inaccessible as any sections in those respective States. The farms are being depopulated, farming is dying out, and all for lack of accessibility to the markets. This sort of service will provide for farming communities means of reaching market centers. The establishment of a motor route through the section to which I refer, which will put into communication with the market the sort of country where we are appealing to the people to better the farming conditions, to produce more and to bring it to the market for consumption both here and abroad, is one of the most useful propositions in which the Government can engage. I have seen nothing in the way of service to the people of the country that promises more than this move to establish motor routes. The deserted farm in our country has been a very serious question. Our State legislature has for a long time had that problem before it. Our State board of agriculture has been greatly exercised over it. It is not because the farming community is a poor one. It is the richest possible kind of a farming section, but the very fact of the inaccessibility of the market is what prevents its production being brought up to its highest standard. So give the farmer this chance, experiment in just such a section of the country as that, and it will redound both to the profit of the country and to the amount of production of the farm. I am sincerely interested in the passage both of the amendment suggested and the amendment to it that the chairman of the committee has proposed. It is proper that the profit shown in this experiment of 7 to 1 over the cost should be used for a continuation of the experiment. [Applause.]

HOUSING FOR WAR NEEDS.

April 1, 1918.

Mr. TREADWAY. Mr. Chairman, I shall vote for this bill, as I have for all measures that have come before the House in the last year having to do with our better equipment for carrying on the war. It seems to me the item in the committee's report, which says that it is for the housing of industrial workers who are engaged in industries connected with and essential to the national defense during the existing war, is the real purport of the bill. The report also says that the committee desire to express the opinion that the only justification for the proposed legislation is the condition confronting our country, as shown in the hearings. It is exactly on that basis, it seems to me, that we can consistently support this measure. I do feel, however, that there should be attention called to the fact of the amendment which the committee says it intends to introduce, namely, for \$10,000,000 additional money for a housing proposition in the District. I have made inquiry as to the number of employees in the District actually residing here at the present time, who seems to me to have to do probably with war measures but who could better be located elsewhere than in the District of Columbia and avoid some of this extravagant expenditure of \$10,000,000.

Any Member of this House can see the enormous outlay for building going on here now. We are spoiling our parks, taking up beautiful shrubbery and trees, and going to extravagant expenditures for locations here. I agree fully with the gentleman from Kansas [Mr. CAMPBELL] in his statement on Friday last

as to conditions in the expenditure of this enormous sum for overhead charges. But I want to refer specifically to the boards which have no occasion to be in Washington and the number of employees that they have. I have obtained the following figures by inquiry of each bureau to which I refer.

The Food Administration has in its employment here in Washington 1,834. The center, Mr. Chairman, of food measures and distribution in this country is certainly in Chicago. And why the Food Administration should have its headquarters in this city is beyond me to understand.

The Fuel Administration is employing here in Washington 700 persons. The center of fuel distribution of the country is Pittsburgh. Why is the Fuel Administration located in Washington?

The Emergency Fleet Corporation is employing 1,381. The Shipping Board is employing 145. The center of the maritime interests of the country is in New York. Why are not those employees taken to New York, the center of the shipping interests of the country? There are employed by the Committee on Public Information here in Washington 325 persons. From recent exposures the title is wrong, it should be called the Committee on Public Misinformation. Another body of this Congress looked into the matter of the usefulness of the Committee on Public Information last week, and I refer the Members of the House to the CONGRESSIONAL RECORD as to the need of the continuance of these employees in Washington. The misinformation that the public is receiving through the so-called Committee on Public Information will fill a very large volume, not only of printed matter but of photographs. So that we find of these very few commissions—there are several others—a total here in Washington of 4,385 employees on the pay roll, for whom we are asked, in order that these may remain here, to appropriate \$10,000,000 in order to secure better housing facilities in the District of Columbia. Those that are called here, Mr. Chairman, for the direct purposes of the Government we should provide for, but there are at least 4,000 of the employees to whom I have referred that can very well be spared from the city of Washington, making room for 4,000 other employees who may be needed here. I fully agree with the attitude of the gentleman from Kansas [Mr. CAMPBELL] in the extravagance of the appropriation contained in this bill, particularly in the amendment. [Applause.] Let the boards and commissions not needed here make room for the new employees who may be needed before we appropriate such an enormous sum for additional housing accommodations.

MUSCLE SHOALS.

April 4, 1918.

Mr. TREADWAY. Mr. Chairman, this is another one of those tests of our patriotism by being asked to vote for a so-called war proposition in which it is difficult to see the direct war connection but very easy to see some other things. I am willing to vote with the gentleman from Ohio for this bill, and I expect to vote for it on his representations and the representation of the department that it is desirable from a war standpoint.

At three different times the Muscle Shoals proposition has been before us; the Committee on Rivers and Harbors has had it, the Committee on Agriculture has had it, the Committee on Military Affairs has had it, and every time when the House itself or the committees of the House have had the opportunity to vote on the question on its merits it has been defeated. Now, then, what is it to-day? Here is the situation, as I view it: After we have defeated the proposition on its merits three different times in different ways, then it is foisted on the Government through some unknown method contrary to its merits, contrary to the opinion of the War Department as expressed at one time, and then out of some so-called emergency fund, without one word being said upon the subject as before us, the general proposition itself is accepted.

I want to ask this House what is the power higher up that can load such a proposition as this on the American people and on the Government? Nobody has said who that power was or what it was, but there is some mysterious power at work capable of placing an expense of \$125,000,000 on the American people contrary to the wishes of their Representatives in Congress assembled.

Who exercises this power? What authority has it? Where does it come from? Why is it not out in the open? It never has been in the open; never. I have known Muscle Shoals River for five years, during my term of service in Congress, and, while there is an opportunity to develop a great water power there, there has never to my knowledge been a time when the parties interested to foist this thing on the Government were not looking for the best end of the trade. That is the Yankee situation of it to-day—nothing else, gentlemen. I think it is

proper for some one to rise on the floor and explain to the membership of this House what the power is that can put such an unmeritorious proposition as this across, in view of the action of the committees of this House and in view of the action of the House. What is the ulterior purposes? What is that mysterious power? [Applause.]

RIVERS AND HARBORS BILL,
April 6, 1918.

Mr. TREADWAY. Mr. Chairman, as a former member of the Committee on Rivers and Harbors I wish to congratulate the present committee on the bill which is now under consideration before the House. It seems to me that the committee has carried out the express wishes of some of the Members in the last session, wherein we endeavored to have the bill made a war measure. Certainly it bears every resemblance of being of that nature at the present time, and it is a great gratification to me to look over the bill, as I have casually, and find that there has been removed from it by the committee the character of items that caused the criticism some of us made against former bills. It is the first one, I think, of the kind that the House has had before it, and I especially wish to congratulate the chairman upon the auspicious way in which he has conducted the difficult task of the chairmanship of that committee. The work of river and harbor improvement throughout the country is one of great value to the Nation, and it is possible to have a bill of a kind that avoids the nature of criticism that has been offered against it previously. I am glad, indeed, as I say, to be able to most heartily approve of the action of the committee at this time.

MAIL TO SOLDIERS ABROAD,
April 6, 1918.

Mr. TREADWAY. The short time that I have remaining I wish to use in reference to the order which was adopted by the House this morning in connection with the soldiers' mail. I introduced last week a privileged resolution, which the House has just recently adopted, asking for certain information from the Postmaster General. The resolution is as follows:

Resolution.

Resolved, That the Postmaster General be requested to furnish the House of Representatives, if not incompatible with the public interest, information relative to the amount of mail matter which has been addressed to members of the American Expeditionary Force during the past 30 days of the class which has now been restricted in transportation; also information relative to the amount of mail matter that has been sent to members of the American Expeditionary Force by the Committee on Public Information, how it has been distributed, and whether mail matter of this kind has been restricted in further transportation.

At the time of introducing the resolution I addressed a letter to the Acting Secretary of War asking for information relative to the amount of parcel-post packages that were being sent to soldiers across the seas, and the reason for the restriction. The following is a copy of the letter:

MARCH 28, 1918.

Hon. BENEDICT CROWELL,
The Acting Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: According to an official announcement, I understand an order has recently been issued restricting relatives of members of the American Expeditionary Force sending to them packages by parcel post. I would greatly appreciate information relative to the necessity of the issuance of such an order.

My correspondence indicates that such parcels have been of great comfort both to the senders and recipients. I respectfully ask for full information in the premises.

Yours, very sincerely,

ALLEN T. TREADWAY.

As you doubtless are aware, the order of the Post Office Department was issued March 29 and went into effect April 1. That has since been postponed in actual operation until April 15. I sincerely hope that still further postponements, if not entire withdrawal, of that order will seem advisable to the Post Office Department.

I have received no information relative to the amount of parcels post or mail matter being sent abroad by the Committee on Public Information, but I am reliably informed that there has been a very large amount of that class of mail matter sent over. My criticism is that that class of mail matter is allowed to be sent to boys overseas, and for what reason? No one knows. They are getting all they want of the knowledge of the war situation and conditions first handed without information being forwarded to them by the so-called Creel Bureau here in Washington; but it is a well-known fact that great quantities of that class of matter has been placed in their hands overseas. Mr. Chairman, if the mails are being clogged by any kind of material and any supplies are being delayed in transportation that are necessary, let us, for goodness sake, stop that kind rather than the home packages from the parents, and brothers, and sisters, and relatives, and friends of the boys in the trenches. [Applause.] If there is one thing that will encourage the spirit

of the brave boys over there, it is the feeling that those at home are thinking of them and are remembering them by these little mementoes, whether useful or otherwise. [Applause.]

I fail to see, Mr. Chairman, the reason for the order restricting parcel-post mail to the soldiers, provided this other class of mail to which I refer is allowed to continue to occupy space on transports. Further, the order that has been promulgated by the Post Office Department is so absolutely impossible and impracticable that it would be better to tell the parents and the boys in the trenches outright that they can not receive packages from home rather than use this sort of postal departmental subterfuge, as the order very plainly is. It provides that in order to receive packages from home the soldier must make application to his commanding officer that he desires such an article or articles and that his written request has been approved by his commanding officer and duly forwarded to this country and then is indorsed by a red-tape notice, as follows:

This parcel contains only articles sent at approved request of addressee, which is inclosed.

In making public this announcement, the Official Bulletin of Mr. Creel carries the news on the front page of his daily publication under big headlines, and states "wide publicity is requested" of the new order concerning the shipment of parcels to soldiers.

I am wondering how many boys will receive those welcome little remembrances of the dear ones here under any such regulation as this. Could there be anything more absurd than that sort of permission?

I received a very courteous letter from The Adjutant General, stating the amount of mail that was being transported to the soldiers, which is of a very large amount, and I will insert Gen. McCain's letter in connection with my remarks. The letter is as follows:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, April 5, 1918.

Hon. ALLEN T. TREADWAY,
House of Representatives.

MY DEAR MR. TREADWAY: Referring to your letter of March 28, 1918, requesting information relative to the necessity of the issuance of an order restricting relatives of the members of the American Expeditionary Force sending packages to them by parcel post, I have the honor to inform you that the amount of mail, parcel post, and boxes going to our troops in France was growing out of all proportion to the number of soldiers serving abroad. A committee embracing all departments concerned investigated this subject and found that up to date the amount of such freight amounted to an average of 250 tons per week. This was fast interfering with the handling of urgent war supplies. It can readily be seen that with any considerable increase in the number of men abroad it would have very seriously hampered the prosecution of the war.

Very truly, yours,

H. P. MCCAIN,
The Adjutant General.

But that does not cover the point I am speaking of, namely, the relationship between the people here at home and the boys at the front. I have a large number of letters that have come to me during the past week referring to the gratification of the boys at the front and the relatives of the boys at home at being able to send to them over there these little packages and comforts, and so on, that have been going. Not only is it a comfort to them but it actually keeps the spirit of the boy encouraged, as I have already stated, and there should be the very greatest reason from a military standpoint to retain that right and privilege to the boys.

Let me just read a few words of an extract from two letters to a father from a boy in the trenches:

Just received three boxes, lots of letters, and some papers and magazines. Box with cigars and candy; box with rock candy, bakers, and crackers; and box with fruit cake. Wow! Great! You can just believe, mother I am some happy to-night.

From the same boy a few days later:

I wish you could see the pleasure every box brings to Mac and I, for we share the contents of each other's boxes. I think I have received every package you have sent—thanks to the splendid packing. Quite a few fellows get boxes that are pretty well battered up, but only one of mine has ever had as much as a string broken.

Now, there is satisfaction enough to pay for the transportation of those two boxes to that boy. [Applause.] And so I could continue, Mr. Chairman. Here is a letter from another father:

I have just read with great interest your championing of the rights of the boys who are at the front with reference to their mail matter, and I want to congratulate you on the stand you have taken. The boys at the front will appreciate this, and I am going to make it a point to cut out several of these clippings and mail them to the boys. It is a perfect crime the way the inefficient men in office in Washington are handling this situation. The idea of trying to rob these boys of the only comfort they can get because our Washington officials have not been efficient enough to prepare for this work. I am sure you will feel well repaid for your efforts, having performed such a pleasant task as you have undertaken.

And another from the father of a young lieutenant:

I was very much pleased to know that you had asked for an investigation of the order forbidding the sending of packages to our Army in France.

One of my sons is a lieutenant in the — Infantry, and we have been sending him certain things regularly since he left here last September. While I can not say that these are absolutely necessary, I am confident that it not only gives pleasure to those who send but also a great pleasure to the men who receive such packages. Of course, if it is necessary to stop this as a military necessity, either on account of lack of transportation or any other reason, the decision will be accepted with good grace. I am glad to see, however, that before this is accepted you have asked for an investigation, and I trust that as a result some means will be found which will enable us to keep in touch in this way with our boys in France.

If it is true that the mails are being filled with literature sent out by the Committee on Public Information, there can be no question that it will be better to stop such literature and send other articles to the boys—

And so on, indefinitely through these various letters.

I hope as the result of the resolution the House has adopted to-day that we will be provided with the information which that resolution calls for, and know how much mail matter is being sent by a department of which, it seems to me, we can very readily spare the shipments and allow the space that they are occupying to be devoted to the space that these mothers ask, in order that they may be given the satisfaction of providing these little comforts for the boys "over there." [Applause.] I trust that the action of the House will be supplemented by a reversal of the stringent order that the Postmaster General has had adopted. [Applause.]

PACKAGES TO SOLDIERS ABROAD.

April 8, 1918.

Mr. TREADWAY. Mr. Chairman, on Saturday, on page 4730 of the RECORD, appears a statement made by me in relation to the Post Office order cutting off parcel-post packages to soldiers abroad. I stated that that order was issued on March 29 and went into effect on April 1, but that its actual operation has been postponed until April 15. Having made that statement on Saturday, I desire to correct it, as I find to-day that the order is in actual operation. The reason I made the statement was that I was quoting from the Official Bulletin, issued, as Members know, by the Committee on Public Information, in which, under date of March 29, appears the order of the Postmaster General, with the heading "Order issued restricting shipments of mail parcels to United States soldiers in France," and then another heading asking that wide publicity be given to the order.

Under date of April 2, in the same publication, the Official Bulletin, appears an official order from The Adjutant General directing attention to the order issued under authority of the Secretary of War, signed F. W. Lewis, Adjutant General, postponing the operation of the order of the Post Office Department from April 1 to April 15. He asks that the same be published in the Official Bulletin, which it was under date of April 2. It reads as follows:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, March 29, 1918.

From: The Adjutant General of the Army.
To: Gen. Frank McIntyre, Chief Bureau of Insular Affairs.
Subject: Reported increase in weight and bulk of parcel-post matter for soldiers.

Referred to letter from this office dated March 26, 1918 (311.16 OD, A. G. O.), in which it was requested that the War Department bulletin relative to articles being shipped by parcel post, express, or freight companies to be published in the Official Bulletin, you are informed that the date of action on this matter has been postponed from April 1 to April 15, 1918.

By order of the Secretary of War:

F. W. LEWIS,
Adjutant General.

My attention has been called to-day to the fact that parcel-post matter addressed to soldiers abroad is being refused at post offices. I made inquiry of the Post Office Department about 20 minutes ago in relation to this matter and was informed that the order of March 29 from the Postmaster General restricting the parcel-post shipments, and putting it in operation April 1 had never been changed. But the War Department issued a supplementary order postponing its operation until April 15. In other words, here is the situation: The Post Office Department makes one order, at the request of the War Department, prohibiting the shipment of parcel-post matter to soldiers after April 1, and the War Department countermands that order evidently by stating that such parcels can be shipped until April 15, but the War Department seems to have no way of enforcing its order. I never saw wires crossed worse in my life, and the sufferers are our soldier boys abroad; because the Postmaster General asks that wide publicity be given to his order, in effect April 1, dated March 29, and every post office in the country where there is a father or mother of a soldier abroad knows that these packages can not be shipped, although

the War Department was willing that these shipments should be continued until April 15. Now, it seems to me when such an important order as that is issued somebody ought to know what the authority actually is and whether our boys can receive those desired packages from home or not. The whole thing is a mass of confusion.

In my opinion the order never ought to have been issued. There is nothing that appeals to these boys more than to receive these packages, and certainly the two departments ought not to be in direct conflict as to the date when the order goes into effect. Having made the statement I did on Saturday, that parcels could be sent until April 15, I desire now to correct it, because the Post Office Department seems to have more authority than the War Department has in the premises.

GEORGE CREEL.

April 11, 1918.

Mr. TREADWAY. Mr. Speaker, I regret extremely that I was the originator of a matter which has occupied the time of the House for over two hours, when there is extremely important business pending. I introduced a resolution of inquiry which waited one week for action by the Post Office Committee, and no response was received to it. Under the rules of the House, at the expiration of the week, the resolution was called up and adopted. I made no personal references. That goes without saying. A Member could not make any personal references in such a resolution as that; and my object in asking for information on the subject covered was as sincere a motive as ever influenced a Member of this House in any action he might take. A day or two previously the announcement was made that parcels to soldiers overseas, sent by their friends and relatives, could no longer be received by the Post Office Department for transmission to them unless perchance the individual soldier to whom the package was going, sent from overseas, approved by his commanding officer, a request for the contents of that package, and that that individual approval was included in the package when offered for mailing.

Now, Mr. Speaker, coupled with the request for information as to the quantity being so transported was a further request for information as to the amount of matter being sent by the Committee on Public Information, the so-called Creel Bureau. I think in that connection I might say that it was a matter of very little interest to me as to what quantity might be going, or whether there was any going at all or not. But I did receive reliable information, which I can submit at any time, that such literature was being sent over. Now, I submit to this House, which is of the more interest to the boys in the trenches, to receive these little home packages from mother, sister, wife, or sweetheart or a speech by such a great man as we recognize the Secretary of the Treasury to be? My interest in the resolution that I offered was to find out whether that class of literature was still being sent across, and the package from home to the soldier boy was being refused.

In connection with the adoption of the resolution I made some remarks on this floor, and Mr. Creel has seen fit to reply to those remarks in the letter submitted by the Postmaster General, in such a way that I feel I am justified in asking this House to adopt the motion of the gentleman from Minnesota [Mr. MILLER]. I do not need to offer any more explanation than he has so well offered. I have no personal grievance with Mr. Creel. I never saw the man in my life. I have a little enmity to him now, and any other man would have when he dignifies his position in a letter of absolute insult to a Member of this House for remarks made by the Member on the floor of this House in his right and says that the statement the Member makes is founded on "absolute baselessness."

I have heard men called liars in various phrases, but I would much prefer that a man would come right outside the door here and call me a liar to my face now [applause] than write such an insinuating letter as that and submit it through such an instrumentality as a communication from the Postmaster General.

The gentleman from Ohio [Mr. LONGWORTH] says the remark of Mr. Creel was insulting, and I feel that it was insulting. Further, Mr. Creel questions a statement in my right as a Member of this House when he so characterizes my remarks. I leave the House to its own decision as to whether or not a public official, in answering a resolution of inquiry adopted by this House, can take that means of offering a personal insult to a Member of this House. I myself am now no longer concerned in this matter. It seems to me it is up to the House itself to say whether it cares to have a public official use his prerogative of letter writing to the extent of submitting an official response to a resolution adopted by the House asking for information purely, and nothing else, and including in his

reply a personal insult for such remarks as the Member introducing it had the right to make on the floor. Mr. Creel quotes the statement that I say I had been reliably informed that there had been a large amount of that class of mail matter sent over. It is absolutely true. I have been so informed.

And then he goes still further. I have not the exact phraseology. I do not know exactly the words, but I take it for granted that he is correct in saying it is a well-known fact that great quantities of that class of matter have been placed in their hands overseas, practically confirming the same language. That is the extent of his quotation, which Mr. Creel says is "absolute baselessness." And, further than that, Mr. Speaker, he says I could have found out that it was absolutely baseless by a telephone inquiry. May I ask this House, when have we reached the point when a Member of Congress, in order to secure information, is under obligation to the subordinates of a department to call them on the telephone? Of course, if I had called for Mr. Creel I would have been shifted a dozen times, in the various offices down there, through a line of clerks, and I would have been blamed lucky if I could have reached Mr. Creel at all, because I see that just now he is devoting a good deal of his time and attention to going up in aeroplanes. He had one ride here the other day, and I saw that he got a little hurt over in Baltimore repeating it. So that it would have been a little difficult, probably, about the time this resolution was up, to have found Mr. Creel to get him to answer the inquiry that I wanted to make. I was within my rights in asking for the information referred to in the resolution. I am still within my rights in confirming that statement, and I am still further within my rights when I say that a subordinate of a department of the Government has no right to offer a personal insult and to question the veracity of a Member of this House for such statements as he makes on the floor of this House.

CLAIM AGENTS AND WAR-RISK ACT.
April 17, 1918.

Mr. TREADWAY. Mr. Speaker, the reason for the introduction of this measure is very plain. I desire to call attention to a sentence in section 13 of the war-risk insurance act approved October 6, 1917, which reads as follows:

The director shall adopt reasonable and proper rules to govern the procedure of the divisions, to regulate the matter of compensation, if any, but in no case to exceed 10 per cent, to be paid to claim agents and attorneys for services in connection with any of the matters provided for in articles 2, 3, and 4.

Now, articles 2, 3, and 4 are the allowance, compensation, and war-risk insurance, so that you see whatever was done under the authority of a claim agent entitles that agent to receive 10 per cent of the benefits derived by the beneficiary from the Government. In other words, take, as an illustration, a \$10,000 war-risk insurance policy. Such a policy would not be paid in a lump sum of \$10,000, but would cover a period of 20 years, or 240 months.

Now, then, during the entire life of that policy the claim agent who has presented the claim to the War-Risk Bureau can demand the 10 per cent commission for those services.

Undoubtedly that was a mistake in the framing of the bill. The bill never was so intended. The department did not intend, the gentleman who offered the war-risk insurance bill did not intend, nor did the Committee on Interstate and Foreign Commerce intend that any such opportunity should be given to the claim agent. We have not heard, however, of any claim agent objecting to that phrase in the bill up to the present time. It is a very nice opportunity, and one which is being rapidly made use of.

Now, let me explain to you exactly what has happened. The same explanation appears in the report of the committee on this bill. During the period when the casualty lists were published and the names of the next of kin of those injured or killed in the service were printed with the addresses these so-called claim agents took those addresses and at once communicated with the beneficiaries under the law. I hold in my hand a set of papers which was sent me by the town clerk of one of the towns in my district, who brought the matter to my attention. This is the form in which the claim agents sent out the papers, giving them power of attorney and agreement as to attorney's fees, and a form of printed letter, of which I want to read one sentence; and, by the way, I will state that this letter is addressed to the mother of one of the first soldiers from my district killed in the war. This is the sentence to which I desire to call the particular attention of the House:

Of course, you understand that in a claim of any sort against the Government no officer or agent of the Government can render the claimant the aid and counsel an attorney can—

And so forth. In other words, this claim-agent concern here says that it can do better service for the beneficiaries under the war-risk insurance act than can any officer or agent of the Government. Was there ever a more deceiving communication put into the hands of friends and bereaved relatives than such a letter as that?

Under date of January 23 I introduced a bill, H. R. 9161, which amended that section of the act by cutting out the reference to claim agents. It also amended section 405 by removing a sentence there also permitting the appearance of claim agents. This was about the time the railroad hearings were being held, and which were at once followed by the water-power development hearings, so it was some time before the Committee on Interstate and Foreign Commerce could give the subject attention.

On March 15 Mr. SIMS, chairman of the Committee on Interstate and Foreign Commerce, introduced a bill of somewhat similar nature, which I understand was submitted by the department. This bill very much curtailed the powers of claim agents, but, nevertheless, would permit of their recognition. At a hearing given by the committee I stated my objections to the bill in that it would not seem to me that any recognition whatever should be permitted these people.

Following the hearing and after a consultation with Messrs. RAYBURN and ESCH, of the committee, on April 2 I introduced House bill 11190. Three days later, April 5, Mr. SIMS introduced practically the same bill, H. R. 11245, which is now before the House and which has my hearty approval.

Unless there is still some joker we have not discovered, enactment of this bill will absolutely prevent applications being made by claim agents in behalf of beneficiaries under the act who would prevent them from obtaining all that is justly their due.

Now, Mr. Speaker, Congress and the Government are back of the boys in the trenches and back of their friends and families. [Applause.] To my mind no better piece of legislation, no more humanitarian piece of legislation, has ever been put on our statute books than this war-risk insurance act. It will make the people at home feel better toward the Government that is calling out their young men and asking those men to make this supreme sacrifice. It will make the young men feel better to realize that the Government stands back of and is willing to assist the ones they are leaving behind by such humanitarian legislation as this.

It is not the intent of Congress that these mercenary claim-agent leeches should sap the blood of any financial benefit from the Government by putting up these false claims and establishing their right to this 10 per cent commission for doing nothing, and doing what the Government itself intends to do in every individual case.

CORRECT FLAG IN THE HOUSE.
May 4, 1918.

Mr. TREADWAY. Mr. Speaker, a large number of the Members of the Massachusetts delegation in this House take pride in the fact that they saw service originally in the Massachusetts House of Representatives. There were interesting exercises there day before yesterday, when a service flag for the members who had gone from the house of representatives in Massachusetts was dedicated appropriately. I desire to call the attention of this House to those exercises, and ask that we follow here the very worthy example set by the house in Massachusetts, namely, to dedicate a flag in this body to the Members who have gone from it in the service of their country, one of whom has given the supreme sacrifice of his life. [Applause.]

And in this connection, Mr. Speaker, I also wish to call attention to the fact that the flag back of the Speaker's rostrum is not the official flag of the United States. The stars in that flag are of gilt and should be of plain white. There is no authority for the use of gilt stars in the official flag of this country.

On June 14, 1777, Congress passed an act designating the Stars and Stripes as the national flag of the United States. The Federal law read:

Resolved, That the flag of the United States be 13 stripes, alternate red and white; that the Union be 13 white stars in a blue field, representing a new constellation.

Thus, it is noted, the thirteen original States designated the national colors and commemorated themselves in the 13 stars and 13 stripes. Later an act was passed authorizing the addition of a new star for each State admitted to the Union. The number of stars has grown until to-day there are 48 in the flag. In commemoration of the act of Congress in 1777, June 14 each year is now celebrated as Flag Day throughout the United States.

If there ever was a time when this House ought to sit under the proper Stars and Stripes it is when we are in this great contest across the sea. I therefore most earnestly wish to suggest to those having in charge the ornamentation of this room that a proper and appropriate flag be hung in this body. Gold stars look pretty, but they are not found in the official flag of the United States, and it seems to me that that correction ought to be made.

I ask leave to extend my remarks by inserting the article describing the exercises in the house of representatives in Boston.

The SPEAKER pro tempore. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

There was no objection.

Following is the article referred to:

[From the Springfield (Mass.) Union, May 3, 1918.]

HOUSE DEDICATES SERVICE FLAG FOR FORMER MEMBERS.

A service flag with 11 stars, for members of last year's house who have gone into the military service, presented by Mrs. John H. Sherburne, of Brookline, wife of Col. Sherburne, of the One hundred and first Field Artillery, formerly the First Massachusetts Field Artillery, was dedicated this afternoon in the house.

Representative William Foster, of Springfield, was on a committee that escorted Mrs. Sherburne into the chamber. Standing under the flag, she made a brief speech, telling of the entry of the 11 members into the war "for country, civilization, humanity, and Christianity."

Accepting the flag, Speaker Cox said: "They have gone to service worthily and gloriously in a great cause. We honor them. While they are away this service flag shall remain not merely as a silent reminder of the splendid associations which we have lost for a time, but as a mighty inspiration for us who sit where they served to do nobly the work left undone at home, an inspiration for us to stand ready to do all and make any sacrifice, even as they, for the cause of civilization and liberty."

Chaplain Daniel W. Waldron offered a prayer of dedication, with patriotic reference to the significance of the flag and the circumstances of its presentation.

The men for whom the flag is in honor are: Capt. James Tracy Potter, of North Adams; Col. Sherburne, Daniel W. Casey, Alfred J. Moore, and Daniel J. Young, of Boston; Kenneth P. Hill, of Cambridge; Daniel W. Lincoln, of Worcester; Ward M. Parker, of New Bedford; Charles H. Stowey, of Lowell; and Maj. Roger Wolcott, of Milton.

INVESTIGATING REMARKS OF GEORGE CREEL.

May 16, 1918.

Mr. TREADWAY. Mr. Speaker, a few moments ago I placed in the basket a resolution asking that the Committee on Rules be instructed to make proper inquiry relative to remarks made by George Creel in New York on Sunday last. I do this because Mr. Creel has under his own name written as follows to Mr. Whigham, editor of the Metropolitan Magazine:

We consider it right to spend that money—

Referring to the funds of the Committee on Public Information—

to defend the Government and its war measures from misstatements that weaken the faith of the Nation in the Nation's war work. We are not worried about criticisms. We are worried about falsehoods.

Mr. Speaker, if there is any one thing that will weaken the Nation's faith in the Nation's war work it is distrust of Congress; and when a public official or employee in a public meeting casts slurs upon this body he is going beyond his province, either as an employee or as a patriotic citizen. If he were a private individual, a muck-raking newspaper or magazine writer—which may or may not have been some people's previous record—I should not bring the matter up at this time. But this man is a public official or employee, and we should take him at his own word and not allow him to make scurrilous remarks against this body which, if believed by the people, would certainly weaken the faith of the Nation in it. Therefore, I have introduced the resolution to which I have referred, and I ask permission to extend my remarks by the insertion of three editorials that appeared in to-day's New York papers touching on this situation. [Applause.]

COMMITTEE ON PUBLIC INFORMATION.

June 17, 1917.

Mr. TREADWAY. Mr. Chairman, several months ago we were considering the subject of the delivery of soldiers' mail abroad. I believe that was the original appearance on this floor of any criticism in reference to the chairman of the Committee on Public Information. In that connection, although not having a direct bearing on the matter under consideration to-day, I would like to refer for just a moment to an article in yesterday's Washington Post. Its heading "The Army has Christmas mail" is very illuminating. It is an article written with the troops in France on May 21, describing the receipt of Christmas packages by the soldiers on that date. Some of them were marked "Do not open until Christmas." I suppose that must refer to the Christmas of 1918, because as applicable to the Christmas of 1917 it would, of course, be extremely humorous and out of

place. I would like to insert that extract from this interesting war article bearing on the question of soldier's mail as a part of my remarks.

Mr. Chairman, I intend to vote for the appropriation that the Committee on Appropriation recommends for the support of the Committee on Public Information. It seems to me that the explanation given by my colleague [Mr. GILLET] covers the ground very fully indeed, as his remarks always do. I wish, however, particularly to refer to the statements of the chairman of the committee [Mr. SHERLEY] and also of the gentleman from South Carolina [Mr. BYRNES], wherein they more or less apologize for Mr. Creel's remarks and statements. I agree with the gentleman from Illinois [Mr. MADDEN], that any man who would make the statement that was made by Mr. Creel in New York ought not to be in a responsible position connected with the Government. But it is not for us to decide, perhaps, whether he should or should not be so retained.

In that connection, Mr. Chairman, I wish to call attention to the delay in the apology. One of the principal reasons given why we should accept the gentleman's statement and his apology is his backing down, as it were, from the statement that he made.

That remark was made in New York on Sunday, May 12, and on May 14 a resolution of inquiry was introduced and referred to the Committee on Rules, of which the gentleman from North Carolina [Mr. POT] is chairman. It was not until May 17, the following Friday, that Mr. Creel decided that he wanted to apologize, the morning on which the Committee on Rules set a hearing on the resolution introduced relative to Mr. Creel. That morning the chairman of the committee came to the Committee on Rules and made the statement that he had met Mr. Creel down town and that he was anxious to present a letter to the committee absolutely apologizing for any reference to Congress. It strikes me that it took the gentleman a good while to find out that he wanted to apologize to Congress for the remark he made.

In view of the many expressions of apology made by Mr. Creel and his statements that he frequently says things he does not mean, and in view of the very thorough investigation the Committee on Appropriations has made on this subject, it is hardly to be expected that the Committee on Rules will report the resolution originally introduced. It is, however, apparent that the resolution has served a useful purpose. While Mr. Creel is publicity agent for governmental items, and is the publisher of the Official Bulletin, the resolution has brought forward considerable publicity about Mr. Creel himself, of an unenviable nature. Furthermore, it brought out his letter of apology for the remarks he made in New York. It is very evident that no apology would have been forthcoming had Congress not taken the initiative.

It is more than a coincidence that his letter of apology was only received after the hearing on the resolution was under way. His apologists here to-day have not defended his personality nor have they claimed that he is the right man personally for the position he holds.

EXTENSION OF REMARKS

OF

HON. HENRY I. EMERSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of Representative JULIUS KAHN, of California, ranking member of the Committee on Military Affairs of the House of Representatives, delivered before the League of Republican Clubs at Cleveland, Ohio, July 27, 1918.

The address is as follows:

ADDRESS OF REPRESENTATIVE JULIUS KAHN, OF CALIFORNIA, RANKING MINORITY MEMBER OF THE COMMITTEE ON MILITARY AFFAIRS OF THE HOUSE OF REPRESENTATIVES, DELIVERED BEFORE THE LEAGUE OF REPUBLICAN CLUBS AT CLEVELAND, OHIO, JULY 27, 1918.

The country is to be congratulated on the splendid showing made by American soldiers on the western front. The officers and men are likewise to be congratulated for having maintained with such splendid valor and fortitude the best traditions of American troops. Germany was wont to sneer at our military efforts. She is learning on the field of battle to know the bravery and the intrepidity of Uncle Sam's trained forces. Her autocrats believed that we would never get ready in time to become a factor in the outcome of this war. That is another instance

of their constant blundering. We, too, have made many mistakes since we first entered the war. It would have been a miracle if we had not made them considering how absolutely unprepared for war we were. But we are now trying to mend the faults of yesterday with the wisdom of to-day.

We must not, however, be carried away by the advances of our soldiers on the western front from Chateau-Thierry to Soissons. Their victory has cheered our hearts and strengthened the hopes of our cobelligerents. We will still have to send men, and more men, and still more men, in order to achieve the final victory. There must be no cessation on our part in sending a steady stream of officers and men "over there." Man power will win the war, and upon us rests the duty and the burden of supplying the necessary man power.

I was pleased to read in a Washington newspaper the other day that the Secretary of War is considering the early necessity for extending the age limits under the selective-draft law. I believe that such a course is vital. I believe there should be no delay in the matter. According to such information as I have been able to glean, class 1 will be practically exhausted during the month of September. It is imperative that additional men be called in order that class 1 may be replenished without delay; otherwise we shall have to invade the deferred classes, which, in my humble opinion, would be a serious calamity. Our industrial and agricultural industries would suffer seriously at this time were men from classes 2, 3, and 4 drafted into the Army. It may ultimately become necessary to call out many of these men, but that time has not yet arrived. Therefore, Congress should change the draft law immediately after the recess, so that several million additional men can be added to class 1. The situation, as I interpret it, brooks no delay.

Occasionally we read in the cable news that Von Burian or Czernin, of Austria-Hungary, or Von Kuehlman or Hertling, of Germany, have spoken in their respective legislative bodies along the line of some tentative peace proposals couched in ambiguous phrases and abounding in glittering generalities. We must not be deceived by such utterances. A prominent English officer now in this country told me very recently that his Government was constantly misled in the early stages of the war by this kind of German camouflage. The moment a peace talk was uttered by any of these officials of the central powers there would be a disposition among the pacifists of England to shut down on the manufacture of ordnance and ammunition, because there seemed to be a prospect of early peace. It threw the English people off their guard repeatedly. We must not allow it to influence us similarly.

To my mind the best answer we can make every time such speeches are delivered in the future will be the calling out of 500,000 additional men. German autocracy, arrogant, stubborn, insincere, and aggressive knows no language but the language of force. They will understand the call for 500,000 additional men much better than if we engaged in long-distance peace parleys. German autocracy must be taught that this country is neither a China to be bullied and bulldozed nor a Belgium whose rights must succumb to the power of might. German autocracy must be taught once and for all, in this very war, that American rights on land and on sea must be respected, especially by those predatory and aggressive nations which claim for themselves a "place in the sun" but which seek to deny the weaker and less powerful States even a place on the map of the world.

We have not begun to make sacrifices in these United States. We do not know as yet the pinch of hunger—I hope and pray we may never know it—but we will be the better prepared for possible eventualities if we begin now the practice of self-denial. Every loyal American must help the Food Administration all he can. You must learn to deny yourselves with a smile upon your lips. Begin this very day to wipe the grinch out of your hearts. Meet every demand the country makes upon you cheerfully, joyfully, uncomplainingly; then you will approximate that spirit of devotion to your country and its institutions that alone is worthy of the loyal sons and daughters of this Republic.

The Army appropriation bill which was approved by the President on the 9th day of this month carried a total of \$12,089,000,000. The amount is stupendous and staggering. No other legislative body at any time in the world's history appropriated such an enormous sum in a single measure for carrying on the military operations of its country. Large as is the sum, I venture the prediction that the Army bill for the fiscal year of 1920 will amount to nearer \$18,000,000,000. We will have to provide for the pay of about 5,000,000 officers and men in that year; we will have to furnish them clothing, subsistence, and supplies; we will have to furnish transportation on land and on water for this mighty host. We are only providing for 3,000,000 men under the present bill, so you can readily understand how much greater the expense is going to be in the year 1920. This

means additional liberty bonds; this means additional taxation; it means—if it means anything—that the American people must learn to be prepared to give their all, if need be, to meet these extraordinary expenses. Perhaps the time will come before the war is over when every individual in the United States will have to content himself with the bare necessities of life. He will possibly have to surrender everything he possesses or earns beyond those bare necessities to aid his Government. Should that time come during this war, the American people must meet patriotically and devotedly even such hard conditions without a murmur, without a complaint. That constitutes the very essence of patriotism.

There is one class of citizens that must be eliminated from among us. I refer to the profiteer. The man who takes advantage of his fellow men and charges exorbitant profits simply because the opportunity to do so presents itself ought to be made to suffer severely for the hardships and the suffering he brings upon the shoulders of his helpless fellow men. Unfortunately there has been a considerable element in this country that has always looked upon the Government itself as lawful prey for loot. If the Government were to be the purchaser in the open market for a tract of land or a certain necessary commodity, the price would be enhanced invariably by men of this ilk. And, unthinkable as it may seem, individuals who thus succeeded in mulcting the Government were looked upon by their fellow citizens as shrewd and smart business men who were worthy of commendation rather than condemnation. I could never understand the morals of such people.

Social ostracism by their fellow citizens ought to be visited upon them but would probably not be a sufficient punishment to mete out to these malefactors. If there is no law to reach them, we must write upon the statute books of the Republic the necessary legislation to punish these money-mad degenerates. The man who takes a Government contract and then seeks to defraud the Government in carrying it into effect ought to spend many years behind prison bars. There should be no pardon for such miscreants.

But that is not the only class of profiteers who should be summarily dealt with. The man who in these days of stress can take advantage of the overwhelming mass of his countrymen—the toilers, the workers, the teachers, the struggling professional men, and the small business men—by charging increased prices on the necessities of life must be put down at all hazards. In most instances there is no real reason for such increases; all too frequently they are inspired by a lust for pelf. We have been investigating this matter for a long time. We have borne it patiently for a long time. We are growing impatient at the constant raise in price on articles which we require for our daily existence. The profiteer must be eliminated, otherwise the long-suffering public will demand that the Government itself, in the final analysis, shall confiscate in some form or another, the ill-gotten profits of these soulless profiteers.

The People of the New Seventeenth Congressional District of Texas are Loyal, Patriotic, and Enthusiastically Backing up the President and War Congress, and Trust in Them to Do What Is Just and Right Is Not Misplaced.

EXTENSION OF REMARKS

OF
HON. THOMAS L. BLANTON,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 23, 1918.

Mr. BLANTON. Mr. Speaker, I am availing myself of this privilege—unanimously extended, page 9453—to place in the Record evidence of the fact that the good people of the new seventeenth congressional district of Texas, whom after March 4 next year it will be my honor to represent, are loyal, patriotic, and dependable, and are standing firmly behind the President and this War Congress in our policies to win this war quickly and successfully.

It is a matter of record that on August 25, 1917, Hon. Oscar Callaway, a former Member of this House, made in Comanche, Tex., a speech, then considered as his opening speech in his campaign for reelection to Congress, wherein he severely denounced the President of the United States, Secretary William G. McAdoo, and each and every Senator and Congressman supporting our war policies, stating that on election day the people should club each and every one of them out of office. He also severely de-

nounced all food conservation and all efforts to finance our war program. He spoke to a crowd of between five and ten thousand people gathered from several counties, and by reason of applause given him and certain petitions for the repeal of the draft law signed by citizens of Comanche County, afterwards sent here and filed in this Record, the impression may have obtained that quite a degree of disloyalty existed in this section.

In reapportioning the State, the last Legislature of Texas took me out of my present sixteenth district, took 48 of my old counties away from me, and placed me in an entirely new district created by the legislature as the new seventeenth district, embracing Comanche County, the home of Mr. Callaway, and also embracing McCulloch County, the home of Hon. Joe Adkins, a former member of the legislature, who was well acquainted in the new district, having made the race for Congress in 1916 against Congressman SLAYDEN, and who again was an avowed candidate for the 1918 contest. The fact that the new seventeenth district had never had a Congressman led another to enter the primary—William G. Blackmon, of Jones County, a member of the Texas Legislature, representing the district composed of Jones and Shackelford Counties. During the campaign Mr. Callaway continued to make speeches, at De Leon, Gustine, and other places, attacking the war policies of our country, both National and State.

In his home county of Comanche I received 1,191 votes more than Mr. Callaway did, and in the entire district Mr. Callaway received only 3,355 votes, practically the exact number of Socialists in the district, while I received 32,034 votes. In his home county of Jones I received 1,879 votes more than did Mr. Blackmon, and in the other county composing his legislative district—Shackelford—Mr. Blackmon received only 45 votes while I received 882 there. In my home county of Taylor I received 3,319 votes more than all three of my opponents received together.

The correct official vote by counties is given below:

Vote for Congressman in the seventeenth congressional district of Texas in Democratic primary July 27, 1918.

County.	Thomas L. Blanton.	Oscar Callaway.	Joe Adkins.	William G. Blackmon.
Taylor.....	3,992	177	297	199
Comanche.....	2,585	1,394	285	117
Itombs.....	2,242	149	399	107

Why Authorize the Draft of 20,000,000 Men and Boys When Only 2,000,000 Are to be Put Into Military Service?

EXTENSION OF REMARKS OF HON. WILLIAM GORDON, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918,

On the bill (H. R. 12731) amending the act entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States," approved May 18, 1917.

Mr. GORDON. Mr. Speaker, under legislation already enacted by Congress there have been registered for military service about 11,000,000 men between the ages of 21 and 31. On June 13 last Secretary of War Baker gave out a statement, in which he said:

The present provisions for drafting men between the ages of 21 and 31 satisfies military requirements, and there is no need whatever to look beyond these age limits now or in the near future. Mr. Baker would be opposed to any proposition to extend the age limit at present, for the reason that he regards this as entirely unnecessary.

Then, omitting a few paragraphs, the article continues as follows:

It is explained at the War Department that if raising the draft age at this time would hasten the winning of the war or serve a useful military purpose there would be no hesitancy in recommending it.

The available man power between the ages of 21 and 31 has not been exhausted nor has the call to the colors of men within those age limits reached a point where it appears necessary to look beyond. Each year brings upward of 1,000,000 new men to availability for service by the fact that approximately this number becomes of age annually. (Gen. Crowder's testimony, pp. 20 and 21, hearings Senate Military Affairs Committee, June 10-18, 1918.)

When the original draft law was pending before the Committee on Military Affairs it contained a provision authorizing the drafting of 1,000,000 men between the ages of 19 and 25. Secretary of War Baker stated to the committee that if given authority to do so by the bill he would draft this 1,000,000 wholly from those 19 and 20 years of age. Congress was opposed to this proposition and fixed the minimum age at 21, and authorized a draft of these million men from those between the ages of 21 and 30, inclusive. This bill, if enacted into law, will authorize the drafting of those between 18 and 45, including those who have attained these ages since June 5, 1917. This will authorize the executive authorities to draft into the military service an aggregate of about 24,000,000 men, including those already in the service; by legislation adopted a few months ago those boys arriving at the age of 21 subsequent to June 5, 1917, were required to register and made liable to military service on June 5, 1918. The following is a table showing the number of males in the United States in each of the years from 18 to 45:

Graduated numbers of the male population of the continental United States, ages 18-45, by single years of life and conjugal condition, estimated for the year 1918.

Ages.	Total.	Single.	Married.	Widowed and divorced.
18.....	1,065,265	1,072,646	18,208	399
19.....	1,059,291	1,065,700	61,198	808
20.....	1,050,025	1,031,707	109,245	2,325
21.....	1,046,598	849,661	186,397	3,842
22.....	1,040,202	766,104	237,709	5,658
23.....	1,031,708	685,558	322,678	7,477
24.....	1,021,315	610,558	395,011	9,295
25.....	1,007,924	543,622	433,671	11,216
26.....	990,233	477,179	502,730	12,732
27.....	970,849	416,273	541,675	14,247
28.....	949,763	363,925	571,514	15,662
29.....	927,278	318,623	593,768	16,874
30.....	902,994	289,871	608,435	18,087
31.....	876,712	248,153	616,021	18,895
32.....	851,229	219,966	616,527	19,704
33.....	818,452	196,811	611,469	20,512
34.....	802,662	176,677	603,883	21,421
35.....	779,577	160,570	597,814	22,230
36.....	768,285	148,983	595,204	23,311
37.....	753,063	141,442	595,265	24,655
38.....	743,102	135,905	592,756	25,171
39.....	729,011	129,865	586,181	27,787
40.....	714,121	121,812	571,514	29,718
41.....	679,544	112,248	551,789	32,940
42.....	645,667	101,677	521,949	35,467
43.....	612,789	89,597	487,651	38,195
44.....	580,810	79,027	457,717	41,226
45.....	549,631	70,973	435,969	41,551

NOTE.—The actual age returns, by single years of life, according to the census, include numerous inaccuracies in matters of minor detail. It has therefore seemed advisable to graduate the data in conformity to standardized methods of statistical practice. The combined totals for the three groups, by conjugal condition, vary slightly from the estimated graduated total, but the differences are relatively unimportant. The estimates are, of course, without reference to the effect of the first and second selective drafts and the mortality of the American forces at home and abroad since the outbreak of the war.

This is wholly unnecessary as a military measure, because Gen. March testified before the Committee on Military Affairs of both the House and Senate that the maximum effort of the military authorities at present under consideration was to place on the western front by June 30, 1919, 80 divisions of 40,000 men each, and that their plans included, in addition to this, the retention of about 1,000,000 men in training camps in the United States, which would make a maximum in the service of 4,200,000 men.

Not one man can be put in the Army or Navy by the President without authority of Congress. Congress has already authorized the President, in addition to filling up the units of the Regular Army and National Guard, to put all men in the Army who are subject to the draft legislation already enacted, or a total of about 11,000,000 men. This legislation would increase that authority to about 24,000,000 men, and is wholly unnecessary for any legitimate military purpose comprehended by any plans made known to Congress by the President or his military advisers. If the purpose of this legislation is to carry out the original suggestion of the Secretary of War, and to shift from men to boys under age the entire military obligation of the Nation under the draft law, it is entirely unjustifiable and indefensible and ought not to be enacted into law.

The question of the number of men necessary to accomplish a stated end or purpose in war is purely a military one, and upon this question I freely defer to the judgment of the military authorities, but upon a bill which proposes to authorize the drafting of ten times the number of men which the military authorities say are required or necessary, I can not delegate to anyone the function of determining for me the wisdom, policy, or expediency of deciding that question. As we now have 3,000,000 of men in the military service, and for the purpose of increasing this number to the maximum military requirements as stated by the military authorities, I am unwilling to vote to authorize the drafting of 20,000,000 more men and boys, with authority to draft only boys.

The Draft and the War.

EXTENSION OF REMARKS

OF

HON. HENRY A. BARNHART,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

Mr. BARNHART. Mr. Speaker, the district I represent is populated with a citizenship which expects me to vote for enough money and men to win this war. They want it won at the earliest day possible, and won in such a decisive way that never again will the people of this world be cursed by a cruel slaughter of humanity and wholesale destruction of property and institutions because some bloodthirsty and power-greedy ruler like the Kaiser is permitted by the other nations to arm and train his people for a world conflict while the others are engaged in peaceful and uplifting pursuits. And that is what I have been doing and intend to continue doing until victory is won.

But sometimes when the Congress, which is responsible for legislation, amends, tries to amend, or refuses to amend bills as an improvement over what the War Department or Treasury Department officials have written them, some political designers and overenthusiasts complain that we are not loyal to the principle involved. For instance, nearly all Members of Congress, including myself, voted against enlarging the Army and Navy bills several years ago when we were trying to keep out of the war by neutrality, and for this we are criticized by a New York organization of military extremists, the National Security League, for not voting to amend bills which the War and Navy Departments considered safe and ample and which bills were signed by the President. This New York organization also criticizes those who voted to give those within the first draft the privilege of volunteering, which was afterwards allowed at frequent intervals and in many instances by the War Department, as everybody knows. This autocratic organization went so far in its enthusiasm for Prussianizing the United States with militarism long before the war that it condemns me for not being present to vote to change an administration Navy bill when I was away from Washington at a hospital at the bedside of my dying wife.

I merely mention these instances to illustrate the fact that a public official is unfairly criticized and sometimes abused if he can not please all disagreeing people.

But what of this draft or man-power bill? It provides for taking boys 18, 19, and 20 years old and men from 21 to 45 into military service by conscription. The War Department, or rather the military officials, say these men will be needed to win the war. They ought to know as to this, but as Italy and France do not take boys into the trenches under 20, and practically all other countries do not go so low as 18, I doubt if we should put our 18 and 19 year old boys in the fighting lines until last resort, and so I vote to amend the bill that the 18 and 19 year old boys shall not be called until those older are put in. We did this when we passed the last draft bill calling those into service who became 21 after the passage of the first conscription law. We provided in that that these incoming twenty-oners should be called after the available older men, already in the draft, had been called. Why not do the same thing for these young boys now? It would give the war officials power to call them, if they are needed, as soon as the older available have been called.

While in my home district in the recent past every man to whom I talked is ready to make any sacrifice to win this war, and win it quick, but everyone to whom I talked on the subject said that 18-year-old boys ought not to be called until the last needed; and so I vote to amend this bill in that way. Of course,

if the amendment fails I shall vote for the bill, for we must crush the enemy that is so murderously attacking our country and its principles.

We did not go into this conflict until Germany formally notified us that she would blow up our ships and kill our people without warning if they were found in a zone forbidden by the Kaiser. This was such a violent attack on our rights, our lives, and our property that we had to fight or abandon our principles of freedom for all mankind. The issue is clearly drawn. We are not in this war to acquire territory nor financial gain; we are in it in defense of our right to justly sail the seas unmolested; in defense of the international law of nations, which Germany and Austria helped to establish as rule of equal rights; in support of our principles of liberty; and in defense of the security of our homes and the lives of our people. And for these principles every available man and every available dollar in our country shall be pledged if my vote will do it. As to how the men and money shall be raised are questions on which we may patriotically differ, for they are serious and complex, but on the main issue of putting in the necessary men and money there should be no objection from anyone who loves his country and believes in protecting the free principles, the lives, and the homes of our people.

As for me, there is but one course, and that is to stand with the administration to secure enough men and money to defeat the murderous foe of our country. I shall stand to win this war and establish peace at the earliest moment possible. I am working with the win-the-war legions, regardless of political destiny or personal fortunes. My time, my money, and my boys are in this struggle to win the war, and God help me to follow our flag wherever our great leader carries it in defense of liberty, justice, and peace. Under President Wilson's direction the greatest military achievement in the history of the world has been accomplished. Not only have we marshaled and equipped millions of soldiers but we have armed, clothed, transported, and fed them as has never before been done, and we must follow this up by such support of the administration that the success we have already attained in turning the tide of this world war shall rapidly swell into overwhelming victory. And it can be done quickly and decisively if we will all hurry with men and money and home enthusiasm.

Change of the Draft Ages.

EXTENSION OF REMARKS

OF

HON. EDWARD VOIGT,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

On the bill (H. R. 12731) amending the act entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States," approved May 18, 1917.

Mr. VOIGT. Mr. Speaker, the object of the bill under consideration is to make subject to the draft men between the ages of 18 and 45. We have in the Army at this time approximately 3,000,000 men. About 1,500,000 of these are in Europe and the rest in training in this country. The War Department claims that at this time it is necessary to provide for an increase, so as to bring the total up to about 5,000,000 men. It is proposed to have 4,000,000 men in France next summer and have 1,000,000 in training in this country.

The question of the number of men required to prosecute the war is a question for the military experts to decide, and I am not disposed to question their judgment in the matter. The question of how this Army shall be raised is a legislative question, and one on which every Member of Congress must exercise his own judgment. I can not agree with the views of those who are willing to substitute the judgment of others for their own in the matter of fixing the proper ages.

The Secretary of War is credited with having made the following statement a short time ago:

The present provision for drafting men between the ages of 21 and 31 satisfies military requirements, and there is no need whatever to look beyond these age limits now or in the near future. Mr. Baker would be opposed to any proposition to extend the age limit at present for the reason that he regards this as entirely unnecessary.

While the Secretary of War is at liberty to change his views with changing conditions, nothing has transpired which, in my judgment, makes it now imperative that we must draft boys from 18 to 21 years of age. We are suddenly asked to vote for a bill to draft boys under age, and before I can consent to

vote for such a proposition the necessity must be as apparent to me as the proposal is extraordinary.

There are in the United States 23,086,500 men between the ages of 18 and 45. There are about 21,000,000 between the ages of 21 and 45, and 3,000,000 of these are in the Army, which leaves 18,000,000 to draw from. It seems to me that out of these 18,000,000 men, 2,000,000 can be selected without having to call on the minors. It has been said that a great many men under the age of 21 are now in the Army and in the Navy. There is no doubt that many young men below the age of 21 are both physically and mentally superior to men over 21, but I do not consider that to be the rule. If young men under age who are exceptionally well qualified wish to volunteer there can be no objection, but that is a different proposition from applying compulsion to minors, many of whom may be immature and who have no voice in the affairs of the Government. The law says that they can not make contracts, they can not vote, and they are considered to be under the guardianship of parents until they arrive at 21.

We have in this country about 760,000 men between the ages of 21 and 31 who are citizens of friendly nations, such as Italians, French, Belgians, and so forth. There are probably 2,000,000 subjects of these friendly nations within our borders between the ages of 21 and 45. I believe that vigorous steps should be taken to press them into service before we consider drafting boys from 18 to 21. There are still remaining in class 1 of the present draft about 600,000 men. There are about 1,000,000 who arrive at the age of 21 years in this country every year. In some localities the number of men in class 1 as compared to the total number registered has fallen very low, and no doubt many men between 21 and 31 can be procured by reclassifications in such localities. It should be possible to get at least 1,000,000 men out of those between 32 and 45. All these facts considered together convince me that it is not necessary to go below the age of 21 in providing 2,000,000 more men.

England, only half our size in population, raised an army of 6,000,000, and was in the fourth year of the war before she called boys under 20 years of age. Canada does not draft boys under 20. France has raised a tremendous army and has not used boys of the age of 18. The experience of our allies does not seem to warrant our taking this step at the present time. If the necessity should ever arise when it will become necessary to draft men below 21, Congress can very quickly pass a law to meet it.

I am not convinced that it is necessary at this time to draft men from 18 to 21 and shall vote against that proposition. The necessity for increasing the age from 21 to 45 is conceded, as it is manifestly unfair to throw the entire burden of the war on men between the ages of 21 to 31. The membership of the House seems to be unanimous on this proposition.

I was one of those who, in May, 1917, when the question was first presented, whether an army to prosecute the war should be a draft army or a volunteer army, voted against the draft amendment because I favored the volunteer system. That question is not now presented. The question now is not whether we shall have a volunteer or draft army, because it has been definitely determined by Congress that the policy of the Government in raising the army for this war shall be to employ the draft system. The big question which is now presented is, To what extent shall the draft ages be changed in order to raise the number of men the War Department demands?

EXTENSION OF REMARKS

OF

HON. WILLIAM B. MCKINLEY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

Mr. MCKINLEY. Mr. Speaker, I shall vote for this manpower bill, because I feel it my duty to vote for all measures that will bring this war to a speedy and successful conclusion. I have several regrets—one that the administration deems it necessary to include 18-year-old boys, another and very sincere one that Congress was not asked to pass the 21-year-old to 31-year-old draft bill immediately after the *Lusitania* was sunk in 1915 instead of passing it in 1917.

I think if the United States with its unbounded resources and 100,000,000 people had made this show of strength and purpose in 1915 when the people were aroused over the *Lusitania* atrocity and when Russia was in the war with its full strength, that peace would have come before it was even necessary for the

United States to declare war. There is a feeling over the country that a boy of 18 is too young to put in the trenches. France, after four years of war has not called 18-year old boys. Italy has not drafted 18-year-old boys. England put 6,000,000 men in the army before calling 18-year-old boys to the trenches. If we sent men in the same proportion, we would first send 13,000,000 older men.

I hope the administration will devise some plan to keep them out. There is a movement, supposed to be backed by the administration, to keep the boy of 18 in the colleges and some of the colleges have been requested to prepare for such work, but the trouble is not more than 25 per cent of the 18-year-old boys can go to college. What about the other 75 per cent? The district I represent is an agricultural one, where the 18-year-old boy can be very fully utilized on the farms.

I hope the administration will arrange some plan whereby he will stay there until needed.

EXTENSION OF REMARKS

OF

HON. HENRY D. FLOOD,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 29, 1918.

Mr. FLOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include an address delivered by the minister of foreign affairs of Uruguay, Dr. Brum, at a banquet given in honor of the Secretary of State, Hon. Robert Lansing, night before last, and Mr. Lansing's reply. They are strong Pan American addresses and I believe will render good effect in drawing the Americas closer together.

The matter referred to is as follows:

ADDRESS OF THE MINISTER FOR FOREIGN AFFAIRS OF URUGUAY, DR. BALTASAR BRUM, AT THE BANQUET IN HONOR OF THE SECRETARY OF STATE OF THE UNITED STATES OF AMERICA, THE HON. ROBERT LANSING, GIVEN IN THE PAN AMERICAN UNION, WASHINGTON, D. C., AUGUST 27, 1918.

Mr. SECRETARY: In the home of the Americas and in the propitious midst of this fraternal occasion one feels a stronger yearning to see the organization of the world for justice and peace become a real fact in the nearest future. Such a thing which once appeared as a mirage destined to fade away in the cheerless reality of life, which seemed to be the dream of a generous soul, is now beginning to be considered a feasible ideal since the earnest voice of the great President Wilson has been heard in this historic hour, when the faint glow is seen of the new era that will follow this horrible night through which humanity is passing.

In truth, gentlemen, we Americans can think with noble satisfaction that it is not in the New World that unsurmountable difficulties are offered to the development of the plan to make effective the "society of nations," which will insure forever universal peace, because here in America, where no longer exists a suitable field for imperialism and conquest, there have been shown for a great many years abundant and eloquent examples of its inclination to reach equitable and peaceful solutions.

Thus I may cite, among the many cases that have arisen in our continent, Argentina, which has already settled by means of arbitration its boundary questions with Chile, Brazil, and Paraguay; Brazil, which has solved all its frontier problems, going so far as spontaneously rectifying in favor of my country the boundary pending between the two; Peru and Bolivia have also settled their differences.

Uruguay set aside 30 years ago a war debt she held against Paraguay, returning to this sister country the trophies she held, and declaring that the flags of a country of America had no place in her military museums. And I feel sure that in Argentina, as well as in Brazil, there is a widely spread sentiment frankly in favor of an altruistic settlement of the debts which, for the same cause, Paraguay has contracted with them.

While in Rio de Janeiro I concluded with Minister Pecanha a treaty liquidating the debt that Uruguay contracted with Brazil for assistance given by the latter in the struggles they both engaged in on behalf of justice and liberty. And in that agreement, which constitutes the highest exponent of equity and fraternal disinterestedness, Brazil has renounced to charge any interest to my country, and the amount of the debt which once was invested in fighting tyranny has been destined to erect on our frontiers works for the mutual benefit of both countries.

Identical sentiments of peace and solidarity inspire all the other countries of America, and if there still exist even now among some of them certain pending questions, we may feel confident, for the glory of all, that they will be discussed and settled in a broad, equitable, and friendly spirit.

When we notice the sentiment of solidarity animating the peoples of the Columbian Continent, when we remember the numerous historical precedents affirming the triumph of upright, pacific doctrines in the development of their international relations; when we behold the most powerful, the richest, the best organized among them going into a frightful war with the sole plan—idealistic, of deliverance—of destroying forever the hegemony of force and setting up definitively the empire of right, which equalizes all countries and enjoins respect to all sovereignties; when one sees and feels all this, we can not but trust in the fraternal future of America; we are bound to believe that the auspicious time has come to cling together in such a way that injustice and aggression be forever banned from international relations.

I feel sure such is the ideal of all, and we must hope, therefore, that in a very near future it will become a tangible reality. These are my most earnest wishes, and I trust that the public men of all the countries of America will contribute with their efforts to its final realization.

Gentlemen, on a certain occasion President Wilson, in one of his masterly public addresses, discussing with the clearness and precision of a seer the transformation undergone by the old system, said, in a sad mood, full of infinite bitterness, referring to men capable of oppression and injustice, "I do not know how they can sleep in peace."

O gentlemen, the present hour is perhaps the historic hour which must be improved by giving to the world the final impulse that will organize it for justice and love; and let us hope that the coming generations, when considering the work done by the men of to-day, may not repeat the words of condemnation said by President Wilson.

I raise my glass to the Chief Executives of the countries here represented; to Secretary Lansing, to the diplomats here present, to continental fraternity, and the bonds of solidarity of the peoples.

REMARKS OF SECRETARY OF STATE LANSING AT DINNER GIVEN BY DR. BRUM, OF URUGUAY, AT THE PAN-AMERICAN BUILDING, WASHINGTON, D. C.

Your excellency and gentlemen, it is with a sense of hesitation that I address you after you have listened to the eloquent words of our distinguished host, whose powerful appeal for international justice and for fraternity between nations can not be improved by anything that I might say.

Yet I would deny my own feelings were I to remain silent on a theme so dear to the heart of every American who looks into the future with hope and confidence. However great the confusion of the present day in the affairs of men, however concentrated are the thoughts and energies of Americans upon the terrible task which is ours as a people, however intense the passion for sacrifice and service in our holy cause, we look forward through the tempest of battle to the calm which lies beyond, where reason will again become supreme over the nations.

To-day this country thinks war, breathes war, lives war, not because we love to slay men or lust for conquest but because the path to enduring peace for this world lies only across red battlefields. We are fighting to rid the world of the greatest enemy of international peace and fraternity that has ever sought to trample upon liberty and right. We shall go forward until we reach the heights which are beyond the grim scenes through which humanity is living in these days of war.

In this struggle for the salvation of liberty the American Nation has found strength and comfort in the sympathy of other great Republics in this hemisphere, but none has understood our motives better than the Republic of Uruguay and Uruguay's statesmen. Our hearts glow with the consciousness that the prayers of Uruguay are ours.

It is the fraternal spirit, the appreciation of liberty and all that liberty means, and the devotion to eternal justice so eloquently proclaimed by our host to-night upon which the nations must build a new world dedicated to righteousness and peace.

These lofty ideals are the vital principles of Pan Americanism. In the Americas they have taken root and are already bearing fruit. It is for us to scatter the seeds throughout the earth until all nations learn the truth and unite with us in submitting to the bonds which make all peoples free.

Your excellency, I can not refrain from expressing my sincere admiration for the nobility of your thoughts to-night. They will find an echo in the heart of every man who loves his fellow men and who longs for the day when peace and prosperity again come to this bleeding and exhausted world. In the name of the President and of the American people, I thank you. As an apostle of Pan Americanism and of world unity, as a prophet of a glorious future for mankind, you will be remembered when you have left our shores. But, above all, we who have met you face to face will ever think of you as the generous and sincere friend of the United States, a friend upon whom we can always depend, because he knows us and understands us.

I give you the toast—Uruguay, her President and the distinguished statesmen who are the guests of the United States.

The Selective-Draft Bill.

EXTENSION OF REMARKS

OF

HON. W. FRANK JAMES,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

Mr. JAMES. Mr. Speaker, we have heard a good deal about "robbing the cradle," "babies," "infants," etc.

Was Nathan Hale an infant when he enlisted at 19 and a captain at 20? Was he a "babe-in-arms" when at 20, dying a martyr for his country, he said: "I regret that I have but one life to give for my country!"

Was the Father of Our Country "robbing the cradle" when he appointed William Henry Harrison (afterwards President) an ensign at 19?

Alexander the Great, during the absence of his father, at 16 quelled a rebellion of the hill tribes on the northern border. At 20 he was a celebrated soldier.

The Duke of Wellington was an ensign at 18, and a little later a lieutenant.

Light Horse Harry Lee was a captain at 19.

At 18 Alexander Hamilton wrote the first open statement that the Colonies ought to be free and independent.

Kitchener at 20 was fighting on the side of the French in the Franco-Prussian War.

Washington enlisted at 19 and was a major before he was 20.

Julius Caesar was a distinguished man at 20.

Guynemer, the greatest aviator that ever lived, died at 21; enlisted at 18, rejected four times, a consumptive from birth. Up

to the time of his death had shot down more planes than anyone else.

The great Turenne, who never lost a battle, entered the army at 14 and was commissioned at 19.

U. S. Grant was a lieutenant at 21.

David Farragut was a midshipman at 9 and an ensign at 12.

Duke of Marlborough was a lieutenant at 16.

Napoleon was a second lieutenant at 16 and a first lieutenant at 17.

Andrew Jackson enlisted in the Revolutionary War at 13.

John Paul Jones was a second mate at 17 and a first mate at 18.

Prince Eugene was a distinguished soldier at 20.

Fonck, who had over 60 planes to his credit—three planes in 20 seconds, six planes in a day—is only 23 now, and enlisted, I have heard, before he was 20.

NAPOLEON AND HIS MARSHALS.

Napoleon and most of his marshals were less than 20 when they entered the service of their country.

None of the generals of Napoleon were appointed because of wealth; most of them were the sons of poor parents.

NAPOLEON.

Napoleon, one of the greatest men—soldier or statesman—of all times, was himself a second lieutenant at 16 and a first lieutenant at 17.

BERTHIER.

Berthier, one of the greatest of all of Napoleon's marshals, entered the military service at 13. By the way, he fought under Rochambeau in our Revolutionary War.

MURAT.

Murat, who rose from stable boy to King of Naples, deserted the priesthood for the chasseurs of the Ardennes at 20.

MASSENA.

Andre Massena, the "wildest of Italians," the son of a tanner, entered the Royal Italian Regiment in the French service at 17. Napoleon considered Massena as the greatest of his generals.

BERNADOTTE.

At the age of 17 Bernadotte, afterwards King of Sweden, enlisted in the Royal Marine Regiment.

SOULT.

Although handicapped by a clubfoot, Soult, at the age of 16, enlisted in the Royal Infantry Regiment.

JEAN LANNES.

Jean Lannes was born in 1769, the year which saw the birth of many famous soldiers—Napoleon, Wellington, Ney, and Soult among others. He joined the army before he was 20.

NEY.

Marshal Ney, famed throughout all Europe as the "bravest of the brave," was the son of a poor cooper. His parents wished him to become a miner, but at 18 he joined the Colonel General's Hussars.

DAVOUST.

At 15 Davoust entered the Royal Military School at Paris. At 19 he received a commission in the cavalry.

MACDONALD.

Macdonald, a descendant of the Macdonalds of Clanranald, entered the service of France at 19.

DE MARMONT.

De Marmont, the youngest of Napoleon's marshals, started his military career at 18. At 19, in the army of the Alps, under Gen. Kellermann, he performed all the duties of a senior colonel.

ST CYR.

Laurent St. Cyr, the son of a small landowner of Teul, entered the military service before he was 18.

DE MONCEY.

When but 15 years of age Bon Adrien Jeannot ran away from home and joined the Conti regiment of infantry.

JOURDAN.

At 16 Jean Baptist Jourdan joined one of the French regiments that came to America to fight against England.

ANGEREAU.

Angereau, the son of a mason, enlisted in the Carbineers at 17.

FERRIN.

At 17 Victor Perrin enlisted as a private in the artillery regiment of Grenoble.

DE GROUCHY.

De Grouchy entered the army at 14; after a year's service was transferred to the cavalry regiment of the line and at 20 had been selected for the Gardes du Corps.

KELLERMANN.

Kellermann, descended from an old Saxon family long domiciled in France, entered the French army as a private at 15.

LEFEBVRE.

Lefebvre, the son of a soldier, joined the celebrated Garde Francaise at Paris at 18.

OUDINOT.

Oudinot enlisted as a private at the age of 17.

SERURIER.

Serurier joined the army at 13.

LAFAYETTE.

Gen. Lafayette was 19 years old when he joined the American Army.

WASHINGTON AND HIS GENERALS.

WASHINGTON.

Washington enlisted at 19 and was a major before he was 20.

MONTGOMERY.

Maj. Gen. Richard Montgomery entered the English Army at the age of 18.

GATES.

Gen. Horatio Gates entered the English Army before he was 20.

HAMILTON.

Alexander Hamilton, at 18, wrote the first open statement that the Colonies ought to be free and independent. At 19 he was captain of Artillery.

HARRY LEE.

Light-Horse Harry Lee was captain at 19.

KNOX.

Gen. Henry Knox enlisted at the age of 18.

CHARLES LEE.

Gen. Charles Lee entered the military service before he was 15.

CLINTON.

Maj. Gen. James Clinton, when but 20 years of age, was captain under Col. Bradstreet and fought bravely at Fort Frontenac.

SENATORS IN CIVIL WAR.

The senior Senator from Minnesota, Senator Nelson, was in the Union Army at 18.

The late Senator Daniel of Virginia was a private at 18 and an officer at 19.

Senator Martin, of Virginia, was in the Confederate Army at 18.

Former Senator Kenna of West Virginia was in the Army at 16.

Senator Bankhead, of Alabama, joined the Confederate Army at 18.

Senator Warren, of Wyoming, entered the Union Army at 17. Senator Goff, of West Virginia, entered the Union Army at 18.

MEMBERS OF THE HOUSE IN CIVIL WAR.

Congressman Stedman, of North Carolina, loved by all Members of the House, joined the Confederate Army as a private at the age of 20.

Congressman Hollingsworth, of Ohio, joined the Union Army when he was 17.

Congressman Osborne, of California, joined the Union Army when he was 16.

Congressman Estopinal, of Louisiana, joined the Confederate Army at age of 17.

MEMBERS OF CONGRESS IN 1898.

Congressman Sydney Anderson, of Minnesota, served as a private at age of 16.

Congressman Ellsworth of same State enlisted as a private at age of 19.

Congressman Helvering, of Kansas, enlisted as a private when he was 20.

Congressman Haskell, of New York, at age of 20 served as a private.

Gen. March said:

The fact of the matter is that in order to carry through the 80-division program in France by June 30, 1919, we will need substantially every man we can obtain in class 1, from 18 to 45 years, inclusive—every single man—and we must not delude ourselves with the idea that the 18 and 19 year men are going to be deferred, if you want to put it in that way, for a considerable length of time. If you will go over the figures you will see that we will have to have those men in the early spring, anyway, in order to give them the training and get them over in France.

Gen. March, I presume, is in communication with Gen. Pershing and certainly this piece of legislation must have been submitted to and received the approval of the one in charge of our Army in France.

I am not one of those who think myself better qualified than those directing the fighting, how many men are necessary, which men are the best men to send, and when they should be sent in order to win the war quickly.

To show that things in this respect, the same as many others, have not changed, let me quote you the following from Livy

by the Roman consul, Lucius Aemilius Paulus, who had been selected to lead the Romans against the Macedonians. Though uttered 168 B. C., it sounds true to life to-day:

In every circle and, truly, at every table there are people who lead armies into Macedonia, who know where the camp ought to be placed, what posts ought to be occupied by troops, when and through what pass Macedonia should be entered, where magazines should be formed, how provisions should be conveyed by land and sea, and when it is proper to engage the enemy, when to lie quiet.

And they not only determine what is best to be done, but if anything is done in any other manner than what they have pointed out, they arraign the consul as if he were on his trial.

These are great impediments to those who have the management of affairs, for everyone can not encounter injurious reports with the same constancy and firmness of mind as Fabius did, who chose to let his own authority be diminished through the folly of the people rather than to mismanage the public business with a high reputation.

I am not one of those who think that commanders ought never to receive advice; on the contrary, I should deem that man more proud than wise who did everything of his own single judgment.

What, then, is my opinion?

That commanders should be counseled chiefly by persons of known talent; by those especially who are skilled in the art of war and who have been taught by experience; and, next, by those who are present at the scene of action, who see the country, who see the enemy, who see the advantages that occasions offer, and who, embarked, as it were, in the same ship, are sharers of the danger.

If, therefore, anyone thinks himself qualified to give advice respecting the war which I am to conduct, which may prove advantageous to the public, let him not refuse his assistance to the State, but let him come with me into Macedonia. He shall be furnished by me with a ship, a horse, a tent, and even with his traveling charges.

But if he prefers the repose of a city life to the toils of war, let him not, on land, assume the office of a pilot.

The city itself affords matter enough for talking; therefore, let them set bounds to their prating and be assured we shall content with such advice that shall be given in the camp itself.

Camouflage it as you will, this McKenzie amendment does not say, nor does it attempt to say, that the boys of 18 and 19 shall be the "last to fight"—the last to go to France and fight. It only means that they would be the last to be "called for training." There is nothing to prevent these men from being sent to France ahead of the men of 45.

If the advocates of the McKenzie amendment are sincere that they want the boys of 18 sent to France last, they will amend the bill to provide that men of less than 20 shall be the last to go. If they do not want "babes in arms," "infants," and so forth, to fight, then they will amend this bill providing that men of less than 20 shall not be called at all.

In fact, to be consistent they ought to amend the bill so that those less than 20 can not enlist at all, because there are to-day 244,326 "babes in arms," "infants," and so forth, in the Army, Navy, and Marine Corps.

As is well known, a boy of 18 can enlist in the Navy (and could since 1837) without the consent of the parents. Why do not the defenders of the cradle repeal the law?

The supporters of this amendment evidently prefer to take fathers of babies now in the cradle than they do to take the advice of the men who are going to direct our fighting.

I would make the ages 18 to 99—deny exemption to any special class—and use each man where he can best serve the Government and not where he would rather serve. In other words, let Uncle Sam and not the individual do the selecting.

I want to see this war end quickly and believe that the plan of the War Department is the right one for us to follow. Let us do it even if it does cost us some votes this fall.

The Man-Power Bill.

EXTENSION OF REMARKS

OF

HON. RICHARD OLNEY,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 28, 1918.

Mr. OLNEY. Mr. Speaker, under the leave granted to me to extend my remarks in the Record upon the Army bill, I desire to submit the following letter which eloquently speaks for itself:

Boston, August 26, 1918.

HON. RICHARD OLNEY,
Member of Congress.

MY DEAR RICHARD: We had a reunion of the Thirty-fourth Massachusetts Volunteers on the 15th instant, at Worcester, and I beg to inform you of the following resolution, which I trust meets your approval.

"Resolved, That when the time arrives for a settlement of the present war the only terms of peace we will allow our enemies and which will be acceptable to Civil War veterans must be their unconditional surrender."

We feel that no other terms will give us future safety.

Sincerely, yours,

HENRY E. WILLIAMS.

EXTENSION OF REMARKS
OF
HON. THETUS W. SIMS,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 19, 1918.

Mr. SIMS. Mr. Speaker, under leave to extend my remarks on the water-power bill, I am now, as a part of my remarks, quoting from the hearings a statement of Sir Adam Beck, in explanation of the operations of the Hydroelectric Commission of the Province of Ontario, Canada, as follows:

APRIL 12, 1918.

HYDROELECTRIC POWER COMMISSION OF ONTARIO.

About 1906 the municipalities in western Ontario, being unable to secure sufficient power for their requirements, and then only at exorbitant prices, approached the Government for relief in this direction, and after exhaustive investigation, the Hydroelectric Power Commission of Ontario was formed, to secure a sufficient quantity of power for these municipalities and transmit the same.

The Hydroelectric Power Commission of Ontario was appointed by the Provincial Legislature of Ontario in May, 1906, to provide for the development, generation, transmission, and distribution of electrical energy at cost to the various municipalities desiring it throughout the Province.

The Hydroelectric Power Commission of Ontario transmits power to the various municipalities on the principle of cost, and the municipalities, in turn, sell power to their consumers at cost. The retail rates in the municipalities are regulated by the commission. Every consumer is treated alike, and power is sold to both large and small consumers at the same rate for the same class of power in any one municipality. The commission makes no discrimination whatever between customers. The price of power, however, varies as between towns according to the cost of serving the same. The commission is essentially a nonpolitical body and is, therefore, in a position to undertake the above duties in an impartial manner.

ADDITIONAL DUTIES OF THE COMMISSION.

The commission performs a number of other functions, in addition to the generation, transmission, transforming, and supplying of power to the various municipalities which constitute the hydroelectric system. Besides handling the electrical inspection of interior wiring for the Province, the commission acts as consulting engineer to large numbers of the municipalities.

UNDERGROUND AND STREET-LIGHTING CONSTRUCTION.

Municipalities are given assistance with regard to ornamental street-lighting systems and underground construction. Plans have been drawn up and submitted giving the estimated cost of cable, conduit, lighting standards, etc. This material, in a great many cases, has been purchased by the commission for these municipalities and the installation of same has been supervised by the commission's engineers.

ENGINEERING WORK.

The commission, through its engineering staff, supervises a great deal of the construction work for the municipalities, acting in the capacity of consulting engineer. Many problems of an engineering nature, such as waterworks pumping, street lighting, construction of distributing systems, valuations and appraisals of plants, etc., have been handled by the commission. This is an important feature of the commission's work, as the municipalities have been able to secure expert engineering advice at a minimum cost, resulting in the most efficient installations being made for the use of hydroelectric power.

MUNICIPAL PURCHASING.

Approximately 200 municipalities are availing themselves of the advantages of cooperation afforded by the purchasing department of the commission and, during the year 1917, the municipalities purchased approximately \$1,300,000 of equipment and supplies through the commission.

DEVELOPMENT OF HYDRO SINCE ITS INCEPTION.

An idea of the development which has taken place, in connection with the hydroelectric system, may be obtained by considering the amount of power sold during its existence. On October 31, 1910, the load of the system was 750 horsepower. On October 31, 1915, the load on the system was 130,000 horsepower, while at the present time the total load on the system is 202,400 horsepower of which 155,500 horsepower is distributed in the Niagara district. An idea of what this means may be had by glancing at the chart which is made out for the Niagara system only, but which is representative of the whole system. It will be seen that on the Niagara system alone the load has increased in six years from 750 horsepower to 155,500 horsepower.

The growth of the hydroelectric system may be indicated by the increase in the number of towns served. In 1912 there were 28 towns on the system; in 1913 there were 45; in 1914, 69; in 1915, 99; in 1916, 128; and in 1917, 192.

The number of consumers on the hydroelectric system in 1912 was 34,967, of which 33,568 were lighting customers and 1,399 power customers; in 1913 the total number of consumers was 65,689, of which 63,157 were lighting customers and 2,532 power customers; in 1914 the number of consumers was 96,744, of which 93,179 were lighting customers and 33,565 were power customers; in 1915 the total number of consumers was 120,828, of which 117,010 were lighting customers and 3,818 power. The total number of consumers in 1916 had increased to 148,732. The estimated number for 1917 will be approximately 165,000. The population served by the hydro at the present time is 1,155,000 people.

DEVELOPMENT OF HYDRO SINCE THE WAR.

The importance of the Hydroelectric Power Commission to the industrial life of the Province is well shown by the developments since the outbreak of the war. In October, 1914, the combined power requirements of all the municipalities on the system amounted to 168,000 horsepower. Shortly after the outbreak of the war numerous firms received contracts for the manufacture of munitions, and at once turned to the commission for the necessary supply of power. Owing chiefly to work of this nature, the requirements of the municipalities on the

Niagara system during October, 1916, amounted to 117,500 horsepower, and at the present time they amount to more than 154,000 horsepower. It is estimated that more than 300 plants making munitions of war use electric power furnished exclusively by the commission. The commission recently contracted with the Imperial Munitions Board to supply 23,000 horsepower to a steel plant in Toronto for the manufacture of shell steel from steel scrap by means of electric furnaces. This plant is the largest of its kind in the world. If it had not been for hydro power the munition manufacturers in Ontario would have been in a very poor position owing to the want of power, because of the fact that the amount of coal available has been very much restricted. The manufacture of shells by power generated by steam would have been next to impossible under existing conditions.

COAL SAVED BY HYDRO.

The subject of coal brings us to another phase of hydro power. It is a well-known fact that Ontario is dependent on the United States for the coal which she uses. Coal can be procured from Nova Scotia in limited quantities. Everyone knows the exorbitant prices that are being paid for coal, and even then people are lucky to get what they need at the prices quoted. It may be argued that this is an abnormal condition, which is possibly correct, but it is extremely doubtful if coal will ever be back to former prices. Furthermore, with coal purchased in the United States our manufacturers are always liable to have to close down their steam-driven plants, due to strikes or other difficulties on the railroads or at the mines.

SUMMARY OF DEVELOPED AND UNDEVELOPED WATER POWERS IN ONTARIO.

The following is an approximate summation of the total amount of power capable of development in the Province of Ontario:

	Horsepower.
Ottawa River and tributaries.....	638,000
Great Lakes tributaries.....	466,000
Hudson Bay Slope.....	250,000
James Bay Slope.....	1,500,000
International boundary rivers.....	2,045,000
Total potentiality.....	4,929,000

Similarly the totals, for the developed power, may be summarized as follows:

	Horsepower.
Ottawa River and tributaries.....	71,000
Great Lakes tributaries.....	137,000
Hudson Bay Slope.....	22,000
James Bay Slope.....	70,000
International boundary rivers.....	462,000
Total developed power.....	762,000

Of this latter total, about 574,000 horsepower is electric energy sold for light and power, about 69,000 horsepower is used for pulp and paper manufacture, and about 59,000 horsepower is used for the most part in the form of hydraulic power directly applied. According to the above figures, the developed capacity of the Ontario water powers is about one-third greater than the capacity developed in Quebec.

EXPORT OF POWER.

Last year the companies at Niagara Falls were exporting approximately 165,000 horsepower. Arrangements were made by the commission to take approximately 50,000 horsepower for use in Ontario, so that at the present time there is still exported to the United States approximately 115,000 horsepower.

The amount of bituminous coal imported into western Ontario, in the district served by the Niagara system, was, in 1914, 5,377,777 tons, valued at \$8,921,708. In 1915 there was 3,979,499 tons, valued at \$6,178,459, or a reduction of 1,398,278 tons. This result can be accounted for in some measure to the extensive use of hydro power in this district. During the same period the imports of anthracite coal remained practically the same, being as follows:

	Tons.
1914.....	1,715,924
1915.....	1,799,197

The commission is supplying in Ontario over 200,000 horsepower; the quantity of coal necessary to develop this amount of power at the consumers' premises throughout Ontario is estimated as considerably more than 4,500,000 tons—having a money value exceeding \$20,000,000 under normal conditions. At the present time this coal would, no doubt, cost in excess of \$30,000,000.

DESCRIPTION OF SYSTEMS.

The commission at the present time is operating the following systems:

Niagara system, Severn system, Wasdells Falls system, St. Lawrence system, Ottawa system, Port Arthur system, Eugenia system, Muskoka system, Northern Ontario system, Central Ontario system, Ontario Power Co. of Niagara Falls.

Amount of power developed and possible future development.

	At present developed, horsepower.	Possible future development, horsepower.
Severn system.....	3,000	5,000
Wasdells Falls system.....	1,100	1,100
St. Lawrence system.....	500	2,000
Ottawa system.....	10,000	20,000
Port Arthur system.....	20,000	140,000
Eugenia system.....	4,000	8,000
Muskoka system.....	1,500	6,000
Northern Ontario system:		
Electrical.....	1,200	3,000
Hydraulic.....	2,200	
Central Ontario system:		
Normal.....	22,000	60,700
Maximum.....	27,000	78,500

TRANSMISSION LINES.

The commission have built up to the present time 454 miles of high-tension transmission line and 2,069 miles of low-tension pole lines, from 44,000 volts to 4,000 volts, or a total of 2,523 miles.

POWER RATES TO MUNICIPALITIES.

As stated previously, the rate which the commission charges the municipality for power is based on actual cost and is adjusted annually by the commission. As the load increases, the cost of delivering power becomes less and the municipality pays for its power at this lesser rate. As an example, we may cite some of the towns in western Ontario, as follows:

	1912	1913	1914	1915	1916	1917
Toronto.....	\$18.50	\$15.00	\$15.00	\$15.00	\$14.50	\$14.50
London.....	28.00	24.00	23.00	23.00	22.00	21.00
St. Thomas.....	32.00	29.00	28.00	28.00	27.00	26.00
Port Credit.....	36.79	31.00	28.00	28.00	27.09	27.00
Ottawa.....	15.00	15.00	15.00	14.00	14.00	14.00
Guelph.....	25.00	22.00	21.00	21.00	20.00	20.00
St. Marys.....	38.00	29.50	29.50	29.50	28.00	28.00
Hamilton.....	17.00	16.00	15.00	15.00	14.00	14.00
Waterdown.....	37.50	26.00	26.00	26.00	26.00	26.00
Waterloo.....	26.00	23.50	22.50	22.50	22.00	21.00
Hespeler.....	26.00	23.00	23.00	23.00	22.50	21.00

The peak loads on the various systems and number of municipalities supplied by the commission in December, 1917, were as follows:

System.	Peak loads.	Municipalities supplied.
Niagara.....	Horse-power, 155,509	118
Central Ontario.....	26,139	22
Windsor.....	1,072	6
Eugenia.....	3,887	19
Severn.....	3,418	12
St. Lawrence.....	530	7
Ottawa.....	6,330	1
Port Arthur.....	3,439	1
Muskoka.....	804	2
Northern Ontario.....	1,200	4
Total.....	202,379	192
Townships.....		33
Total.....		225

Comparing these figures for the cost of power in Ontario with the selling price of power in some of the largest cities in the United States, as listed in the following tabulation, we can readily see why there are relatively such a large number of steam plants in the State of New York, as compared with those in Ontario. It will be seen that the cost of 500 horsepower of 24-hour power in these cities ranges from \$52.20 per horsepower per year up to \$118.70 per horsepower per year.

CAPITAL INVESTED BY THE HYDROELECTRIC POWER COMMISSION IN POWER PROJECTS, EXCLUSIVE OF CAPITAL INVESTED BY MUNICIPALITIES.

Up to February 28, 1918, the capital invested by the Hydroelectric Power Commission in its various systems was \$21,500,000. Additional capital which will be expended, due to the purchase of the Ontario Power Co., approximately \$23,000,000, or a total of \$44,500,000.

In addition to this the Hydroelectric Power Commission are operating the Electric Power Co.'s system, which was purchased last year by the government of Ontario. Capital expenditure on this system is approximately \$9,439,000, making a grand total of approximately \$53,939,000.

In addition to the paying of operating expenses and fixed charges on this system and reducing the cost of power to the municipalities, as above outlined, the commission have put away as an accumulated sinking fund and renewals reserve accounts a sum of \$1,600,000 to amortize the investment and provide for the replacing of apparatus when it has served its useful life. The commission's finances are very conservatively managed and all transactions are placed on a sound business and financial basis.

FINANCIAL OPERATION OF MUNICIPALITIES.

The financial operation of the 192 municipalities, which comprised the hydroelectric system, has been very gratifying. The characteristic feature of the operation during the past two years has been a steady increase in cash balances which, in some cases, now amount to more than 25 per cent of the total plant cost, notwithstanding the fact that the commission have, from year to year, made reductions in the rates of the various towns and cities. Many local commissions have loaned cash to the municipalities and some have invested largely in Canadian war loans. The net credit balance of surplus from the year's operation in 128 municipalities amounted to \$357,394. Of the total accumulated surplus of \$4,660,817 at the end of 1916 approximately \$1,722,000 has been invested in plant extension.

The 192 municipalities on the hydro system have \$17,330,015 invested in their local plant and distributing systems. After paying all fixed and operating charges these municipalities up to the end of 1916 have put away, in the form of debentures paid, sinking fund and depreciation reserves, the sum of \$3,559,369. In addition to this they have accumulated a surplus of \$1,101,448, making a grand total of accumulated surplus and reserve of \$4,660,817. It should be remembered that this has been accomplished by the municipalities, in spite of the fact that the commission has regulated their retail rates downward year by year with a view to reducing surplus profits. The reserve funds above mentioned are put away for the purpose of meeting contingencies and for allowing for apparatus replacement due to depreciation, and also for the purpose of amortizing the investment at the end of the debenture period.

REDUCTION IN RATES DUE TO HYDRO.

The entrance of hydro into the light and power business in the Province was responsible for a very great reduction in the retail rates of

the private companies doing business in Ontario. Before hydro entered the field in Toronto the domestic rates were 8 cents per kilowatt hour plus 25 cents a month meter rental. In 1916 the hydro rates in Toronto averaged 24 cents per kilowatt hour. Previous to hydro entering the field in Toronto the commercial rates were 12 cents per kilowatt hour plus 25 cents per month meter rental. Last year the commercial lighting served by hydro averaged 2 cents per kilowatt hour. In 1912 the Toronto hydroelectric system had 11,959 customers. In 1917 this number had increased to 52,000, an increase of practically 4 to 1 in four years.

It should be remembered, in connection with these figures, that private ownership was very firmly entrenched in Toronto and competition was of the keenest. In 1912 rates for power delivered to the city of Toronto by hydro were \$18.50, while in 1916 they were reduced to \$14.50. The city of Hamilton is another city where the hydro had keen competition. The domestic rates, previous to the entrance of hydro, were 8 cents per kilowatt hour plus 25 cents per month meter rental. Last year, under hydro operation, they averaged 24 cents per kilowatt hour. The commercial rates, under private ownership were 8 cents per kilowatt hour. Last year hydro rates averaged 1.32 cents for the same service. In 1913 Hamilton had 6,250 customers, while in 1916 they had 16,000. In 1912 the rate for power in Hamilton was \$17, while during 1916 the rate charged by the hydro was \$14.

As an illustration of what is happening in this direction it may be stated that in Toronto in 1913 whereas the average monthly domestic consumption was 25 kilowatt hours and the average monthly bill for that consumption was \$1.25, in 1916 the average monthly consumption was 29 kilowatt hours, while the average monthly bill was only 89 cents for the increased quantity of electricity; had the average monthly consumption remained what it was in 1913, the average bill would have been only 77 cents as compared with \$1.25. This condition obtains practically all over the Province wherever the commission is supplying electric energy. Prior to the date when the commission began to furnish a supply of current the rates in force were much higher. Taking Toronto as an example again, the cost of 89 kilowatt hours per month would have been 29 x 8 = \$2.32 plus 25 cents meter rent, totaling \$2.57.

In 1916 the total domestic consumption in 108 of the municipalities served at that time amounted to 160,000,000 kilowatt hours supplied to 12,050 consumers. Had these consumers been taking current at the old prehydro rates their aggregate bill for the year would have been \$3,455,622, whereas at the hydro 1916 rate it approximated \$1,075,680, a difference of \$2,380,000 for one year's sales. It must be remembered, too, that these reductions in rates have been made possible after providing ample sums for depreciation and sinking fund and all other charges. Similar conditions may be found in rates for commercial lighting, street lighting, and power supply.

Taking some of the smaller towns (Kitchener, for instance) previous to hydro, the domestic rates here were 11 cents per kilowatt hour plus 25 cents a month meter rental. Under hydro they averaged 3.5 cents per kilowatt hour for 1916.

The rates at Galt, previous to hydro, were 11 cents per kilowatt hour, while in 1916, under hydro, they averaged 2.8 cents per kilowatt hour.

These figures, we believe, are sufficient to show what hydro has done for the municipalities in Ontario in the way of procuring cheap lighting rates for the citizens of the various municipalities.

Sir ADAM BECK. I have a copy of the act governing the leasing of water powers in the Province of Ontario. The water powers are administered by the minister of lands, forests, and mines. The bill that you are interested in, of course, is a Federal bill, but this will give you information of how we deal with the water powers that are still subject to lease, because our policy is that we do not lease any further water powers in the Province of Ontario, and none have been leased, as I said this morning, other than those that are essential or form part of the rights that are acquired in a wool-pulp limit, where paper mills are established for the manufacture of pulp and paper. The water power is usually advertised in conjunction with the limit. They come partly under the control of the commission, as follows:

"Any engineer appointed by the Hydroelectric Power Commission shall have free access to all parts of the works and all books, plans, or records, etc., for the purpose of ascertaining whether the works are being constructed according to the plans approved by the commission, and also to compute the quantity of power developed.

"During the continuance of the lease the lessee shall maintain the works in good repair and condition, and at the expiry of the lease the water privilege shall revert to the Crown, but where permanent buildings or structures have been made the lieutenant governor in council may, under report of the Hydroelectric Power Commission, compensate the lessee therefor."

That is, when they revert to the Crown, but that gives you a general idea.

THE CHAIRMAN. I suggest that you submit that for the record, Sir Adam.

The paper referred to follows:

ADMINISTRATION OF WATER POWERS IN ONTARIO.

(By Thomas W. Gibson, deputy minister of lands, forests, and mines, Toronto.)

[Extract from Water Powers of Canada, published by authority of Hon. W. J. Roche, minister of the interior, Ottawa, 1916.]

"By virtue of an act respecting water powers, passed by the Legislature of Ontario in 1898, and of the regulations made thereunder, water powers, the property of the Crown, in Ontario may now be leased on certain conditions. The administration of the law is in the hands of the minister of lands, forests, and mines. Following is a synopsis of the regulations:

"The applicant for a water privilege is required to file in the department of lands, forests, and mines plan and field notes by an Ontario land survey or showing the water power and the land required in connection with the same; also report by a competent engineer, satisfactory to the minister, giving the height of the fall, estimated capacity of same in the natural condition or at the average low stage of water, the height of the dam, if any, which it is proposed to construct, and the consequent increase in the level of the waters. The applicant is required to file the plan by which he proposed to develop the water privilege; also to state the estimated cost of development, and the form in which the power is to be used or transmitted; that is, whether by direct energy, electricity, compressed air, etc. He must indicate the lands to be overflowed, or otherwise affected, and the nature and location of the plant, manufactory, or other industrial establishment in connection with which he proposes to use the power; and also furnish satis-

factory proof that the water privilege is required for bona-fide industrial or mechanical purposes, or to supply an anticipated or actual demand for power within transmission distance.

"If required by the minister, the applicant shall likewise furnish all measurements, plant, applications, etc., as may be required, and the same may be submitted to the Hydroelectric Power Commission of Ontario for its approval, in which case the works shall not be proceeded with until such approval is given. The applicant must also submit proof of his financial standing and ability and intention to develop the water privilege.

"Before the lease is granted the applicant must deposit with the treasurer of the Province a sum of money, say \$500 or upward, proportioned to the capacity of the water power, as guaranty that the development conditions will be duly carried out, this sum to be returned to the lessee upon fulfillment of the same, otherwise to be forfeited to the Crown.

"An annual rental is charged, based upon the number of horsepower to be developed. The term of the lease is 20 years, the lessee having the right of renewal for two further and successive terms of 10 years each, upon such terms and conditions as may be agreed upon or fixed by the minister.

"Navigation, which is under the control of the Government of Canada, must not be interfered with, and if the stream is used for log-driving purposes, the lessee must provide facilities for the safe and convenient passage of logs and timber.

"The lease will require the holder to develop and use, within a given period, a specific quantity of horsepower. If such quantity is less than the full capacity of the privilege, upon report of the Hydroelectric Power Commission the lessee may be required to develop the privilege to its full capacity, or to such other extent as may be requisite.

"If there is a surplus of water or power not required by the lessee for his business, plant, or manufactory, he shall supply other parties desirous of power, and failing agreement as to terms, the matter may be submitted to the Hydroelectric Power Commission, and upon their report the lieutenant governor in council may fix and determine the rates and conditions upon which the power shall be supplied.

"Any engineer appointed by the Hydroelectric Power Commission shall have free access to all parts of the works and all books, plans, or records, etc., for the purpose of ascertaining whether the works are being constructed according to the plans approved by the commission, and also to compute the quantity of power developed.

"During the continuance of the lease the lessee shall maintain the works in good repair and condition, and at the expiry of the lease the water privilege shall revert to the Crown, but where permanent buildings or structures have been made, the lieutenant governor in council may, on report of the Hydroelectric Power Commission, compensate the lessee therefor.

"Where a water privilege is required by a municipality for the purpose of supplying water power, light, or heat to the inhabitants, the minister may issue a lease upon such special terms and conditions as are recommended by the Hydroelectric Power Commission, and on such rental as he may deem proper.

"Water-power leases are subject to general regulations made or to be made by the lieutenant governor in council, and may be canceled for non-compliance with any of their terms or conditions, or upon neglect by the lessee for the space of one year effectually to produce power from the water privilege.

"The Hydroelectric Power Commission has the right under the statutes of Ontario to acquire water powers and works by purchase, lease, or otherwise, or without the consent of the owner.

"The foregoing regulations are not applicable to water privileges which, in their natural condition, at the average low stage of water, have not a greater capacity than 150 horsepower.

"All applications for water powers should be made to the minister of lands, forests, and mines, Toronto, Ontario."

The following schedule illustrates the operations of 20 typical municipalities using electric power supplied by the Hydroelectric Power Commission of Ontario:

Their total population is.....	825,972
Their contracts for transmitting power.....number.....	100,575
Total power transmitted is.....horsepower.....	112,128
The average contract is for about.....do.....	1½
The average distance transmitted is.....miles.....	100½
The average cost to municipalities per horsepower year of 8,760 hours is.....	\$21.85
The average cost to power users per horsepower year of 3,130 hours is.....	\$23.20
The average cost to domestic users per kilowatt hour.....cents.....	1½
The average cost of commercial lighting per kilowatt hour, cents.....	1½

The following schedule shows the population of the said 20 cities, the names of the cities, the transmission distance for each, the number of customers and the horsepower transmitted, the rate paid the Hydroelectric Power Commission per horsepower per annum, the rate at which it was sold to consumers per horsepower per annum, and also the rate paid by domestic and commercial users per kilowatt hour and the average per kilowatt hour for said 20 cities:

Hydroelectric Power Commission of Ontario, Niagara system.

For the following twenty municipalities.	1	2	3		4	5	6		
	Popula- tion.	Miles from Niagara Falls.	Customers and horse- power transmitted.		Rate paid Hydro- electric Power Com- mission, 8,760 hours yearly.	Rate sold to con- sumers, 3,130 hours yearly.	Rates sold to consumers.		
			Contracts.	Electric horse- power.			Domestic, kilowatt hour.	Commercial, kilowatt-hour.	
							Cents.	Cents.	Cents.
Brantford.....	25,420	80	2,055	2,536	\$19.00	\$24.81	1.18	1.70	1.00

1 Average.

NOTE.—These calculations are made from the reports of the Hydroelectric Power Commission of Ontario, 1913-17 (1918 estimated).

Calculations of power rates (column 4) are based on individual contracts of 100 horsepower.

Calculations of domestic rates (column 5) are based on individual contracts of houses with floor area of 600 square feet and 118 kilowatt hours per month.

Calculations of commercial rates (column 6) are based on individual contracts of 200 to 300 kilowatt hours per month consumption.

Rates will work out a little higher or lower according to quantities of power used.

The foregoing statement showing what has been accomplished and what is being done by the Hydroelectric Power Commission of Ontario is an object lesson in what can be done and is now being done by public ownership and operation of hydroelectric power public utilities. When compared with what was done in the same line of service before this method of public ownership was resorted to by private agencies, with private capital, including the profits demanded and received by the private capital so invested, the results of public ownership and operation have been simply marvelous.

Mr. Speaker, without being an expert, and without claiming to be absolutely accurate, I have tried to work out how long it will require a charge of 1½ per cent on the gross receipts per annum per horsepower, at a rate of interest of 4 per cent per annum,

in order to completely amortize the capital investment, including all costs of the generating plant, up to and including the low-tension busbars, upon a capital cost of \$75, \$100, \$125, and \$150 per horsepower, and upon an average of gross receipts per annum of \$35.

I find that a capital cost of \$75 per horsepower, with gross receipts of \$35 per horsepower, will be completely amortized in 44 years; that a capital cost of \$100 per horsepower will be completely amortized in 55½ years; \$125 capital cost in 60½ years; \$150 in 65 years. This charge would amount to only 52½ cents per horsepower per annum, and would be so small as would not prevent or even discourage development, and so small that it could not be passed to the small domestic consumers.

But I think the better and wiser way to provide for an amortization sinking fund would be to make no charge of any amount during the first 10-year period following the beginning of operations by the licensee. Then make a charge of 2 per cent on the gross receipts of operation for the second 10-year period, 3 per cent on the third 10-year period, 4 per cent on the fourth 10-year period, and 5 per cent during the remainder of the license period, but amend the bill so as to provide that at any time when this amortization sinking fund thus provided equals the fair value of the project property, as may be defined and provided for in this bill, that upon the payment of said sum to the then licensee that all the right, title, claim, and interest of such licensee shall be divested out of him and shall vest in the United States, providing, of course, that any taxes or other valid lien charges that may then exist against said property may be paid by the United States and the remainder only of such sinking fund be paid to the then licensee.

If this bill can be thus amended, it will result in the complete amortization of the capital investment in every instance during the license period of 50 years, and in a large majority of the projects in a period much less than 50 years. Under the bill thus amended this amortization fund will constitute an absolute guaranty to the bondholders that they would get their money without risk of loss, regardless of what might be done with the property by the United States.

Mr. Speaker, on the 16th of July I received the following letter from Mr. M. O. Leighton, which reads as follows:

WASHINGTON, D. C., July 16, 1918.

HON. THETUS W. SIMS,
House of Representatives.

MY DEAR JUDGE SIMS: Permit me to thank you for your kind references, in your speech of July 12, to my testimony on the water-power bill.

I beg leave to invite your attention to a certain part of your speech in which there is evidence that I failed to make myself clear with respect to the cost of water-power development on navigable rivers. Reference is made to the second column of page 9040 of the CONGRESSIONAL RECORD.

Near the head of that column is a quotation from my statement concerning the total length and approximate cost of waterways canalized at private expense. In your remarks concerning the same you state: "There is not a dollar included in that estimate (\$40,000,000 for 108 miles of canalization) for the erection of the water-power plant that furnishes the water power for the purpose of operating the electric-power plant called the generating plant." Going further, you add to the indicated expense of \$372,000 per mile of canalized river, the cost of power house, machinery, and all appurtenances, including transmission lines and substations, for the purpose of showing that the water-power plants so far erected have been "almost beyond the possibility of private-capital undertaking."

It appears that I did not make clear to you just what was covered under the \$40,000,000 expenditure. My statement was: "We know that it could not have been less than \$40,000,000, and it has resulted in the development of 251,800 horsepower, which is being used by the public in furtherance of economic needs and social well-being."

It was my intention in making the foregoing statement to make it very clear that the approximate estimate of \$40,000,000 included the entire expense for dam, locks, and other appurtenances, power house, machinery, and all appliances necessary to send the power over the wire, and I regret I failed. My figure of \$40,000,000 is, of course, a mere approximation based on my knowledge of the cost of some of the plants referred to and of the cost of water-power development in general. This amount represents an expenditure of about \$160 per horsepower for the 251,800 horsepower developed at the several sites, which, in view of all the conditions and circumstances, is not excessive and does not in any sense offer an obstacle to financing or to fairly low-cost power service.

I am naturally reluctant to have crystallized in the CONGRESSIONAL RECORD an interpretation of my testimony to the effect that the cost of the plants already constructed on navigable streams at private expense, as well as those that may be constructed in the future, is so great as to be beyond the possibility of private undertaking, especially when I know that the truth is quite the contrary.

If you find it possible to do so, it is my earnest hope that the aforesaid interpretation be corrected; or if that be impossible, this statement in response thereto be inserted in your remarks.

Yours, very truly,

M. O. LEIGHTON.

On the 17th of July I replied to Mr. Leighton's letter, which reads as follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C., July 17, 1918.

MR. M. O. LEIGHTON,
McLachlan Building, Washington, D. C.

DEAR MR. LEIGHTON: I have your letter of yesterday in which you call attention to my remarks wherein I say that the indicated expense of \$372,000 per mile of canalized river referred to by me as not including the cost of power house, machinery, and all appurtenances and substations was incorrect and did not properly represent what you said. In other words, I misunderstood your meaning. In your testimony, beginning on page 479, where you commence a new paragraph, in which you say, "Canalization costs are heavy," from there on to the top of page 499, excluding the contents of Appendix A, beginning on page 480, I was unable to find that any items of cost mentioned by you covered anything except navigation river improvements by the canalization method. Your estimate was that it would cost upon an average of \$193,000 per mile of river so improved, or something more than \$800,000,000 for the entire mileage to be thus improved. Of course, I naturally inferred that some portion of this mileage would cost a great deal more than the average and that other portions would cost less than the average, but in the last paragraphs of your testimony, on page 498, you state that the total length of waterways canalized and improved at private expense under the direction of the War Department for

through navigation purposes is 108 miles. You further state that these 108 miles cost the Government \$214,720, or a cost upon the average of about \$2,000 per mile. You then compare it with the cost to the Government of \$193,000 per mile unsupplemented or aided by private capital. Then you say rather emphatically that "We know it could not have been less than \$40,000,000, and it has resulted in the development of 251,800 horsepower." Now, I fail to see one word in that portion of your hearing dealing with this matter that does not almost necessarily limit it to river improvement for navigation purposes by canalized methods. No doubt private capital was invested in the best projects, and in all probability cost more per mile than the average, and that is the reason why I understood, and I do not see how I could have understood it any other way, that the 108 miles has cost over and above the \$2,000 per mile paid by the Government the said sum of \$40,000,000, and I could not reach any other conclusion from the whole context of your statement on this subject, because nowhere in it did you say one word that would indicate that you included the water-power machinery, the hydroelectric generating machinery, transformers, transmission lines, and distribution plants. It was not my intention, of course, to make you state anything except what you intended to state. There may be other portions of your statement that would indicate that you included all these several items of expense, but in my remarks I had only in mind that portion of your statement which I have just referred to. In fact, I had that part marked out in pencil brackets and read from it when delivering my speech.

Of course, I shall be very glad to give you the benefit of the statement in your letter, and in order that you may have the fullest benefit of it I will print your letter in full in the RECORD and this, my reply to the same, as I have permission to extend my remarks in the RECORD for the purpose of covering matters that I did not fully cover when occupying the floor.

I have always regarded you as one of the ablest and fairest of those who have appeared before the committee, and I certainly would not do or say anything that would be an injustice to you or in any way be an unwarranted interpretation of your statement.

Very truly, yours,

T. W. SIMS.

EXTENSION OF REMARKS

OF

HON. JOHN W. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

On the bill (H. R. 12731) amending the act entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States," approved May 18, 1917.

MR. JOHN W. RAINEY. Mr. Speaker, it was my wish and hope that before it became necessary to draft any more of the citizens of the United States in this great conflict that some law would be written on our statute books dealing with aliens. The people of this country are wondering why it is possible that the citizens of this great country should be called to arms and that the alien, who has enjoyed the luxuries of this law, who has come here to avoid the autocracy of their own government, were not forced to carry some of the burdens. The American boys responded willingly, left their positions, their fathers and mothers and wives, and sacrificed their futures for the honor of Old Glory, while the alien remained behind. However, I do not desire to interfere with the plans of those in authority, those who should know, those upon whom the responsibility of the successful prosecution of this war rests.

The wish of the people of this country is to win this war and win it as soon as possible. Congress and the Senate have readily responded to the wish of our Commander in Chief; our Shipping Board is rapidly increasing in number ships to transport our soldiers; the country is willing to be burdened with increased taxation and willingly subscribe to each liberty loan; labor has cheerfully responded, and the industries of our country, large and small, are constantly releasing labor for essential war work. Throughout the length and breadth of this land you find the universal desire to bring to a speedy termination this terrible conflict. On the floor of this House I expressed the hope that it would not be necessary to disturb the boys of 18 to 21 from their studies; to take them from their professions; from the farms, or prevent them from becoming proficient in some trade, but added that if the time came when it was deemed imperative I would willingly subscribe to whatever those in authority considered necessary. When war was declared against Germany we pledged the President of the United States all our resources to successfully prosecute the struggle. It is now claimed by those who should know that our boys from 18 to 21 are necessary; therefore I will keep my promise and will vote for this bill. I am anxious to do that which is for the best interest of the country, and Gen. March, Chief of Staff of the United States Army, believes that with 4,000,000 men on the battle front by next June it will be possible to break down the defense of the Hindenburg line and force a military decision that will permit the victors to dictate the terms of peace, and we and our associates in this great struggle must dictate the terms.

I feel satisfied that the presence of our soldiers in France awakened a new spirit in the allies in this world's war. How much greater, then, will this feeling be when they understand the determination of the American people to have 4,000,000 soldiers at the front by next June. And once more may I suggest that I sincerely hope in the very near future some law will be passed making it imperative for the alien to assume some of the responsibilities of our Government. If they do not help us in time of war, they should be interned, and when peace is restored they should be deported back to the country they came from.

The Man-Power Bill.

EXTENSION OF REMARKS

OF

HON. JOHN R. RAMSEY,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

Mr. RAMSEY. Mr. Speaker, this proposed important legislation imposes upon us the necessity of exercising our best thought and performing our duty in a fearless, true, and conscientious manner. It is needless to say that a man called upon to represent the people in the capacity of a legislator must meet the issues that are brought before him in the manner I have indicated, namely, in a fearless and straightforward way, and must eliminate personal feelings and sympathetic sentiment and have as his guide that which the country demands and is best for its interests. I do not mean by this that upon some unimportant matter which has no public bearing men may not vote as they often do to please some friend or party, but upon great, big, and most important matters of government and governmental policies the man who shirks his responsibility as he sees it and believes it to be is a moral coward and is therefore subject to severe censure and just criticism.

I do not in any way want to be understood as impugning the loyalty or patriotism of any Member of this House because he does not think as I do, nor act as I will, upon the matter now before us. I not only believe, but know, this body to be as loyal, patriotic, and full of true American spirit as any in the world, and that each individual has by his voice and vote helped our Government and the Governments of our allied countries in the great crisis with which we are now and for a long time past have been confronted.

What is the character of the bill and the legislation now before us? It is, in broad language, to increase the man power of our Army, under the control and regulation of the Commander in Chief of the Army and Navy and the War Department of the United States. Mr. Chairman, permit me to call the attention of this House to the feeling that existed in the minds of a great number of the people of our country prior to the year 1917. By many it was believed that war would not be entered into between ourselves and the Imperial German Government. But by the unwarranted and outrageous acts of Germany we were, in honor to ourselves, for the protection of civilization and the security of posterity, obliged to declare that a state of war existed. After this declaration was made by Congress in April, 1917, it was hoped and expected by many of our people that the war would not last long, because Germany would realize the mighty strength of this Nation and soon would seek for peace. But she did not. The failure of a realization of this hope and desire is a matter of common knowledge, and her acts of aggressiveness became more pronounced and effectual. Advances were made by her armies, and the allied forces were gradually, but steadfastly, driven back in orderly retreat. The savior lay in the American forces and the resources which our country contributed. Without the stimulating effect of our troops and the other and great resources which we so liberally supplied, it is questionable whether the allied countries could have successfully withstood the great task before them. Slow though we were at first to send troops, because we were not prepared, but awakening to the dire necessity of being on the battle line, and without further delay, our Government responded to the occasion and with great speed and hardly any mishaps succeeded in having a large force of fighting men in France, which very materially helped to change the condition of things to the benefit of the allied forces. They, together with our troops, have stemmed the tide, and instead of being on the defensive have for some time past magnificently not only forced the German Army back

a long distance, but have taken a great many prisoners and large quantities of war supplies. We hope for victory, but victory is not yet visible. Our foe with its large army in actual combat and a reserve force of great numbers is not conquered, but is far from it. It is no doubt shattered in spirit to a limited degree. The hearts of its men are weakened, for defeat is beginning to be realized as never before.

Now, what is to be done? Shall we hesitate at this critical moment to give to our Government that which it asks for? The President of the United States, Commander in Chief of the Army and Navy, the Chief of Staff, the War Department, all ask that this bill be passed without the limitation of power of the Government as proposed by this, the McKenzie amendment. They know the necessity better than I, and I can not consistently and for a sentimental reason combat nor deny this request. No man deplores more than I the placing of our young men from 18 to 20 years of age in the military forces of our country, but to legislate that all others duly qualified up to 45 years should be taken before those under 20 years can be called I believe to be unwise. I have confidence in our President and the Department of War and believe they will use such judgment in the enforcement of this act as will be most advantageous to this great cause and that due deference will be given to these young men in putting this law into operation. The time now is critical. The enemy is on the retreat. It is vitally necessary, in my opinion, to show the central powers that this Congress will provide now and immediately all the strength in man power that she possesses and all the resources that this great Nation has to prosecute speedily this war to a successful conclusion. Hesitation by curtailing the powers and rights of the President and the War Department by adopting this amendment may be a fatality which can never be overcome. It may mean defeat or it may result in delaying the victory which we all are so eagerly and expectantly looking and hoping for. Let us therefore not hesitate to give to our President that which he wants. He would not ask it did he not believe it was urgently necessary that his request be granted. Since it was declared by Congress that a state of war existed between the Imperial German Government and the United States his conduct and action relative to matters pertaining to this war have been wise and effective and, I believe, have met with the approval and commendation of all the Members of this House and of the people generally of our great Republic. Let us not curtail or limit the powers of the Department of War now.

Mr. Speaker, England wants this legislation. France wants it, Italy wants it, all the belligerent countries want it, and the world for its future safety demands it.

Shall we not respond to these requests and this demand? I for one feel that it is my solemn duty as a Member of this House so to do and shall therefore vote against the McKenzie amendment and for the final passage of the bill as recommended by the administration, believing that to be the best legislation now to be enacted.

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 24, 1918.

Mr. BURNETT. Mr. Speaker, I am in full accord with the desire of the War Department to increase our Army to 5,000,000 men by June, 1919, and am willing to vote for any fair and practicable proposition to bring about that end.

The only question involved here is the best means of accomplishing that purpose.

There are some who pretend to think that we should pass without amendment every proposition favored by the administration and then denounce Members of Congress as disloyal who do not agree with them in that belief. This bill as reported by the committee shows the utter absurdity of such a contention.

The bill as proposed by the War Department would make everyone between the ages of 18 and 45 years subject to the draft without any provision for deferring the call of those between 18 and 20.

The bill as reported by the committee has this proviso:

Provided, however, That registrants who on the date fixed by the President for registration are of the age of 19 years and not over 20 years shall be designated as the 19 class and shall be drafted subsequent to registrants in class 1 of the age of 20 years and over the age of 20 years; and registrants of the age of 18 years and not over 19 years

shall be designated the 18 class and shall be last called for service. All registrants of the age of 20 years and above on the day fixed by the President for registration shall be called prior to those in the classes hereby created.

The chairman of the committee, Mr. DENT, and a majority of the members of the committee favor this proviso and have so reported the bill. Would any man who regards truth and honesty dare to put the ban of disloyalty on these courageous members of the committee who have dared to do what they believe to be their duty under the sanction of their oaths of office?

Every member of the Alabama delegation is agreed on the proposition that boys under 20 years of age ought not to be called until the imperious demands of war require it. There are seven of us here to-day and all loyally supporting the supreme efforts of the administration to win the war. They are STEAGALL, DENT, HEFLIN, BLACKMON, BANKHEAD, ALMON, and myself. Yet every one of us will vote to defer the call of young boys until those from 20 to 45 are exhausted.

This was done in the bill which we passed some months ago providing for registering and drafting boys who became 21 since June 5, 1917. We wrote into the law that they should be deferred till the others subject to draft were exhausted. If that was right as to those, is it not much more right and fair that those under 20 should be deferred?

Let the boys stay with their parents at home as long as possible. Let them prosecute their studies. Let them till the farms. Already the question of labor for the farms is becoming a most serious one. Our armies and those of our allies must be fed and clothed. The millions who remain at home must be fed and clothed. If we strip the farms, who will do it?

The Secretary of War has stated to the newspapers that it is his purpose to place those from 18 to 19 in a deferred class. I have perfect confidence in the Secretary of War and in the President. I regard Mr. Wilson as the greatest President since the days of Washington. His conduct of this world war has been the wonder of the nations.

Yet neither he nor the Secretary of War can possibly look after the thousands of details arising in this titanic struggle, and have of necessity to leave much to their subordinates. These subordinates are only men and often err.

Only yesterday the whole country was shocked by the report of the Senate committee in regard to the maladministration of the hundreds of millions of dollars which Congress appropriated for the construction and equipment of aircraft. This and many other cases show the utter impossibility of the President or the members of his Cabinet giving personal attention to the multitude of matters that arise and will arise in the conduct of the war. Then why not write this important matter into the law and not leave it to Executive discretion?

Why not force the hundreds of thousands of aliens who are here and who are subjects of belligerent countries to go before we take young boys?

Their countries are in the midst of a war for their very existence, and yet these cowardly slackers stay here and take the jobs of our boys, while the American mother gives up her son without a murmur.

An amendment will be offered by Mr. McCULLOCH, of Ohio, to force these cowards to fight, and I hope that no vote will be cast against it.

Treaties have been made with Great Britain and Canada by which their subjects residing in the United States may be drafted, but there are hundreds of thousands of Italians, Greeks, Russians, and others who can not be reached. They enjoy the privileges and opportunities offered them by free America, and yet they will not raise a hand in her defense.

In fact, thousands of them are anarchists and are ready to drive the assassin's dagger into the very vitals of our Government; are ready to tear down our flag; are ready to murder our President, while America is giving the flower of her young manhood to achieve freedom for the world.

Gentlemen of the House, this is not right. Let us be just to those of our own household before we are generous to the alien.

According to the report of Provost Marshal Crowder, under the registration of June 5, 1917, there were 772,744 alien registrants. Under this age extension law the number will be more than 2,000,000. Suppose we only get 500,000 of these, how many poor lads of 18 and 19 will we leave at home to gladden the aching hearts of mothers who have already given sons to answer their country's call? Adverting again to the original proposition to place those under 20 years of age in deferred classes, Italy and France, although in the fifth year of the war, do not put their boys under 20 in the trenches, and none of our belligerents go as low as 18. Then why should we, before our first year has hardly passed, take boys of that age?

Mr. Speaker, I shall vote to try to save our boys, but if we fail in that I shall vote for the bill anyhow. I shall throw no ob-

struction in the way of a victory which will crush the power of Kaiserism and bring Germany to her knees. No patriot can now consent to a half-hearted peace. Nothing will now satisfy me short of the total destruction of a government founded on an autocratic rule which seeks to drive human liberty from the face of the earth.

I believe this can be done without forcing young boys into the conflict, but if a majority of Congress decides otherwise I shall yield to the will of that majority.

EXTENSION OF REMARKS

OF

HON. EDWIN Y. WEBB,
OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 2, 1918.

Mr. WEBB. Mr. Speaker, the House having given me permission to extend my remarks in the Record by inserting therein a letter from Col. L. W. V. Kennon, commanding officer at Camp Greene, N. C., in regard to the method for the recovery of grease from liquid garbage, I beg to say that Col. Kennon and his able aides are to be very highly commended for adopting this method of securing grease and thus bringing about a great saving to the Government and thereby to the people. The time is going to come, Mr. Speaker, very shortly when a demand for rigid economy is going to be made upon all the commanding officers at all the camps throughout the country, and every encouragement should be given these splendid officers along this line, for every dollar saved to our Government is that much made, and it is indeed refreshing to see that Col. Kennon has installed a system whereby thousands and tens of thousands of dollars will be made and saved to our Government and the taxpayers through the simple method of extracting grease from liquid garbage. I therefore take great pleasure in presenting for the information of the country the method by which this interesting process is carried on. The letter and description of process follow:

HEADQUARTERS, CAMP GREENE,
Charlotte, N. C., August 22, 1918.

HON. E. Y. WEBB,
Washington, D. C.

MY DEAR SIR: In response to your request on a recent visit to Camp Greene, I am forwarding to you some of the details of the method in use here for the recovery of grease from liquid garbage.

The former method of disposing of kitchen slops was to pour them into evaporating pans, by which the solid residue was caked in the bottom of the pans. This was then thrown into the fire and burned. This method entailed the construction of brick furnaces and pans and a very large consumption of fuel. It was also expensive and was a waste. Another disadvantage was the evil odors in the neighborhood while this process was carried out.

On or about the 1st of June of this year, Lieut. Clay Littleton, of the Signal Corps, was detailed to the conservation and reclamation department of this camp. The idea of a plant for the treatment of this kitchen waste, whereby the useful elements could be conserved, was proposed by him, and I immediately authorized him to proceed with it. This agent for the treatment of these kitchen slops was a niter cake, a large percentage of which is sulphuric acid. For such materials as were available for use in this process we looked to the barrels and odd lumber about the camp. A little money was spent in purchasing copper screening used in the filter boxes. I inclose herewith a blue print showing the entire plant necessary in this production, with instructions for using it. After a trial of 26 days a report was made of the results.

Cost of niter cake.....	\$97
Freight on niter cake.....	39
Hauling niter cake.....	20
	156
Saving on wood, 26 days at 16 cords per day at \$5.50 per cord.....	1,738
Hauling on wood, 75 truck days at \$5.....	375
Freight on wood at 75 cents per cord.....	234
Recovery of grease, 200 pounds daily, at 15 cents per pound.....	750
Fertilizer produced.....	130
	3,260

The above statement proved to be a little sanguine, inasmuch as some minor costs were not included in the report and also the estimate of the price to be obtained for the grease which was saved was higher than we have been able to obtain, which is 12 1/2 cents instead of 15 cents. This will reduce the savings by \$120, so that the net saving would be in the neighborhood of \$2,980, instead of \$3,110.

Since the niter cake was purchased as above, it has been found that this is a by-product of a local chemical concern in Charlotte, and it is considered a waste on their hands. An agreement has been entered into between this office and that concern whereby we obtain the niter cake without charge, the only condition being that the chemical is hauled away at frequent intervals, so that the waste pile at the plant will not be objectionable. Our conservation division has one of its trucks detailed on this work hauling the niter cake to the rendering plant, where the organizations receive it when they deliver their grease. The estimated wood consumption is one-third of a cord per day.

The rendering plant is an improvised affair which has been able up to the present time to care for the limited amount of grease derived from kitchens with the small force now in the camp. It would not be

able to take care of that derived from the camp at maximum strength. In my opinion the results of this experiment are entirely satisfactory and show a very considerable saving to the Government, not only in the product obtained but in the saving of wood and the construction of furnaces for evaporating the water under the old system. In this system there is absolutely no waste. The water in which the slops are treated comes out nearly pure, excepting for an acid taste, and this water is found to be a protection against both flies and mosquitoes. What runs off goes into the streams of the neighborhood and is not objectionable.

I am inclosing the blue prints and the rules for this work. The method seems to be as nearly as possible "fool-proof." The results for disposal of garbage are also good here. The grease derived is sold to a contractor in the vicinity, and the saving comes purely from liquid waste of the kitchens.

I trust this will give you the information which you desire.

Very truly, yours,

L. W. V. KENNON,
Colonel, Infantry, Commanding.

INSTRUCTIONS FOR BUILDING AND OPERATING THE PORTABLE NITER-CAKE WATER-TREATMENT OUTFIT.

Action: The action of this filter depends upon the effect of sulphuric acid on the soaps and emulsified solutions in waste water. The acid is added to the outfit in the form of niter cake, which is an acid salt and is about one-third acid. The effect of the acid is to coagulate and make insoluble all of the soaps and greases and all of the albuminous and starchy matter, which, according to the amount of grease in contact with it, either settles or rises to the top of the water in the barrel.

Construction: Two ordinary barrels of the 50-gallon size are required and about 15 feet b. m. of 1-inch lumber for the box, one piece of screen, two pieces of 1-inch pipe, and one elbow. The accompanying sketch shows the details of the parts of the box, and the assembled box in a cut-away barrel, giving sizes and details. The mortise and tenon is necessary on the bottom boards, as they support the niter cake and the acid of the cake would soon destroy any nails. All joints should be made open about one-fourth inch to allow the water to run through, and the tenon joints should be made loose to allow for swelling of the lumber. Side boards may be nailed to the support pieces. The screen set on top of the niter-cake box is to remove any solid matter. The frame is simply four boards nailed and braced with a bottom of 20-mesh copper screen. The iron overflow pipe, standard 1-inch size, should be tapped in about 10 inches from the bottom and should extend to within 10 inches of the top of barrel when bent. The purpose of this pipe is to keep the water level in the barrel about 3 inches above the bottom of the niter-cake box, insuring a contact between the niter cake and any water in the barrel and aiding the treatment of the entering water. The half barrel is used for additional settling and is allowed to overflow from the top to any place.

Operation: The niter-cake box is filled with the cake and set in the barrel, screen set on top, and it is ready for use. Pour all water, pan drippings, soups, and beverages through the screen, using some judgment about overloading the outfit. When the barrel has been filled, it will start overflowing and will not be very well treated, but on standing this will be corrected by increased acidulation. The water collecting in the second barrel should be almost transparent, have an acid or vinegar-like odor, and when tasted with the tip of the tongue should be strongly acid. The proper separation of grease should be visible, and any water coming over showing the original characteristics should be run through again. The presence of any particles in the overflow water shows that the accumulation has reached the overflow pipe in the bottom of the barrel, and the water should be drawn off and the sludge cleaned out. Grease should be skimmed from the top as often as seen to accumulate and kept for rendering. This grease is not edible, but is valuable. It may be handled by any rendering method.

SUCCESS OF OPERATION OF NITER CAKE WATER-TREATMENT OUTFIT.

Since the proper operation of the barrel depends primarily on the introduction of sulphuric acid, and since the sulphuric acid is obtained by the dissolving of niter cake, it is absolutely essential that strict attention be given the following important points:

1. **Niter-cake box:** The niter-cake box must at all times contain a quantity of niter cake. To insure this the box should be inspected and filled to within 2 inches of the screen, daily, at 7.30 and 11.30 a. m. and 4.30 p. m.

2. **Water level:** During the day, the water level in the barrel must be about 3 inches in the niter cake (the water level is regulated by moving the overflow pipe). Thus the waste water being in constant contact insures the dissolving of sufficient niter cake.

NOTE.—At night the overflow pipe may be lowered to a position necessary to bring the water level just below the niter-cake box, the purpose being to stop dissolving through the night, which would only cause an overacid solution, thereby wasting niter cake.

3. **Overloading:** The liquids must be poured into the barrel slowly, so that the separated solids will not be stirred up and forced out through the overflow pipe, and so that the waste water will have sufficient time to be mixed with the acid. This is very important from both the standpoints of sanitation and conservation.

4. **Placing:** The strainer, niter-cake box, and exterior of barrel must be kept clean. Camp sanitary requirements demand that the barrel be clean at all times. To meet these requirements the strainer should be kept covered and always polished immediately after the waste water is poured through; the retained solids in the strainer being emptied into the No. 2 garbage can (this can to contain all solid garbage, except coffee and tea grounds and eggshells).

5. **Removal of grease and sludge:** At least twice daily the grease should be skimmed from the barrel and put into the No. 1 garbage can, the sludge to be cleaned from the bottom of the barrel whenever the accumulation reaches the overflow in the bottom of the barrel; this sludge to be put in the No. 1 garbage can.

6. **Caution:** Niter cake should always be handled with a shovel, as it should not come in contact with the clothing or skin. Niter cake being an acid salt is destructive; however, it is not toxic and has good disinfectant qualities. The supernatant liquid from the overflow half barrel may be used for keeping down the flies and mosquitoes by simply sprinkling it about.

GARBAGE SEPARATION AND DISPOSAL.

1. Each organization will provide itself with two 40-gallon galvanized-iron garbage cans.

These cans will be numbered 1 and 2, respectively, using 10-inch black figures.

The cans so numbered will be used as follows:

Garbage can No. 1: To receive all meat scraps (not fish), fats, bones, grease, and sludge from filter barrel, and all condemned or spoiled food articles containing fats.

Garbage can No. 2: To receive all other solid garbage except coffee and tea grounds and eggshells.

Coffee and tea grounds and eggshells to be burned in the field ranges. 2. All garbage from the No. 2 can will be collected daily and delivered to the No. 2 garbage platform located approximately 2 miles west of Liberty Park on the Tuckasee Road, at Rhyne farm.

All grease, meat scraps, bones, etc., from the No. 1 can will be collected daily and delivered to the rendering plant located about one-fourth mile in rear of camp library.

3. All solid garbage will be separated and disposed of as above specified.

All liquid waste, such as pan drippings, dishwater, soups, beverages, etc., will be run through the niter-cake filter barrel.

EXTENSION OF REMARKS

OF

HON. C. FRANK REAVIS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 11, 1918.

Mr. REAVIS. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include an address delivered by Senator LENROOT at a loyalty convention held recently in Lincoln, Nebr.

The address is as follows:

AN ADDRESS BY SENATOR LENROOT.

A year ago America accepted the decision of war, but without great enthusiasm. While the Nation responded loyally to every appeal and made plain that it would stand back of the Government in the prosecution of the war, the minds of many of our people were vague and confused as to our aims and purposes. For nearly three years Europe had been fighting, and during that entire time it was the hope and expectation that America would not become involved. The presidential campaign of 1916 was won by President Wilson upon the issue that "He kept us out of war." While the invasion of Belgium in the early days of the war, thus violating its neutrality, shocked us, while the admission by the German officials that the Belgium treaty was to be considered as nothing but a "scrap of paper" troubled us, we still looked upon it as a European quarrel that did not directly concern us. However, as the days and months and years went by it became more clear that this was not a European quarrel over the balance of power or for commercial rivalry, but that there was a deep-set purpose in the minds of the autocracy of Germany to conquer and rule the world.

The sinking of the *Lusitania* was one of the greatest crimes in history, but Germany's promise that the offense would not be repeated made us feel that if she did not have any concern for the laws of humanity she did fear us and would respect our rights; but on January 31, 1917, when Germany announced that she would resume her ruthless and unrestricted submarine warfare, it became plain to us all who were familiar with the facts in the situation that peace could not much longer continue between the United States and the German Government. Germany carried out her threats; she did sink American vessels, did destroy American lives, did attempt to influence the American Congress by the use of money, did by her authorized spies and agents destroy American property, and the result was the declaration of war on April 6, 1917. It was unfortunate that in the early days of this war the aims and purposes of America were so vaguely stated by those in authority. We realize more fully now than we did then that this is not a war primarily to make the world "safe for democracy," although it will do that when it is won; it is not primarily to restore Belgium or safeguard the rights and liberties of small nations, although it will do that when it is won; it is not, except incidentally, to protect our rights upon the seas, although those rights are included in what we fight for; this is really a war to save America, to preserve American ideals and the principles upon which this great Republic was established.

We are in it, and it must go on until we win it. We can not safely allow ourselves to stop short of complete defeat of the German autocracy. We can not negotiate with a man who regards treaties as "mere scraps of paper," who makes promises only to break them, who has no respect for any law, human or divine. We must fight on until we can negotiate with a Government responsible to the German people themselves; then, and not until then, can we begin to think of peace.

In the conduct of this war there should be no politics, no partisanship. Patriotism never should be a political issue; it can not properly be a political issue between loyal Americans.

Whatever differences may exist between political parties, there should be no differences in the support of our Government in time of war. In all matters in relation to the conduct of the war party lines should be forgotten, and everyone should forget that he is a Republican or a Democrat, and remember only that we are all Americans.

Nevertheless, political parties should be instrumentalities for the creation of a correct public sentiment in the support of the war, and the subject of my talk to-day is "The patriotism of the Republican Party." It was a deep and burning patriotism that created the Republican Party, and that patriotism is as active to-day in this crisis as it was in its earlier days.

While never claiming any monopoly of patriotism, the majority of the great leaders of our country during more than half a century, in war and in peace, have been Republicans. Without underestimating the value of others, there are three names that the whole world has delighted to honor—Lincoln, Grant, and McKinley. We take pride in the fact that they were Republicans, and it is peculiarly fitting to-day that we recall the patriotism of these men. When we contemplate this war in which we are engaged, the struggles and sacrifices that may be before us, we need to remember these men and emulate them: Lincoln, the patient, brave, far-seeing man, gentle as a woman, but firm as a rock; Grant, with his dogged determination to win—Grant, without whose marvelous genius as a military commander the war would have been prolonged and possibly lost; and McKinley, the brave soldier and great statesman.

Peace we all desire; peace we all long for. The day will come when America will repeat the words of Grant, "Let us have peace"; but as he did not speak these words until the victory was won and the Union saved, so America will not speak them until this war is won and our liberties are preserved. Until victory comes we will rather remember Grant's words, "I propose to fight it out on this line if it takes all summer." But it is not my purpose to-day to speak of the past. I wish to speak of the patriotism and unselfish devotion to country of the Republican Party in this great struggle for the very existence of our Republic.

In all history no party out of power has more disinterestedly and whole-heartedly supported the Government than has the Republican Party in this war. Its only desire has been to help President Wilson in the prosecution of the war to victory. It has in Congress repeatedly surrendered political advantage in order to sustain the President, it has refrained from criticism under great provocation, it has seen incompetency in some departments, it has seen partisanship in some cases taking the place of patriotism, but realizing the magnitude of the undertaking, realizing that mistakes will occur, that more or less extravagance is to be expected in the beginning, realizing this, it has kept silent when it might have spoken. Republicans have constantly kept in mind the need of a united country, and that it is better to endure to a certain point some evils than to bring on greater ones through their exposure. We had hoped, too, as the months went by and war activities became better organized, that incompetency and extravagance would be remedied. We have always, however, asserted our right to criticize when criticism would be helpful, and we shall exercise that right in the future.

We regret this administration is conducting the war as a partisan matter. No other nation has done this. In every other nation every political party has been consulted and been given a participation in the administration of the government. In every other nation associated with us in this war there are coalition cabinets representing the whole people. In the United States alone the administrative side of the Government has been conducted in a partisan way, and yet Republicans have ungrudgingly given the administration their support and will continue to do so.

President Wilson called upon the Republicans for help only when his own party leaders deserted him, and it is a matter of pride that Republicans have never failed to come to his rescue upon any measure necessary to properly prosecute the war. Republican party lines have never been drawn upon any war measure. We claim no special credit for this, for our duty is to our country, irrespective of who may be its President.

In both Senate and House the Republicans have voted for and actively supported all measures necessary to carry on the war. As I have said, we do not claim any special credit for this, for we performed only our duty. We have not asked for the thanks of the Democratic Party in what we have done, but we had a right to expect that, in the face of this record, Democrats would not, at the very least, deny the patriotism of the Republican Party. But what are the facts? Last year there was an election to fill a vacancy in New Hampshire caused by the death of Mr. Sulloway, a Republican. In the campaign following Democratic ora-

tors sent into that district by the Democratic national committee, in their speeches stated that a vote for the Republican candidate was a vote for the Kaiser. Nevertheless, the Republican candidate was elected, and he has been a loyal supporter of all war measures since he has been a Member of the House. He was known to be loyal throughout the campaign, but for the sake of political advantage alone, Democrats tried to place the stamp of disloyalty upon the Republican candidate and the Republican Party in New Hampshire. Last June there was a special election in Indiana to fill a vacancy caused by the death of Mr. Comstock, a Republican. The Republicans nominated a loyal supporter of the war; the Democrats nominated a man who had been a Member of Congress until March 4, 1917, a man who was a professed pacifist, a man who had opposed preparedness measures in Congress, preparedness measures advocated by President Wilson. Nevertheless, President Wilson in a letter indorsed the pacifist candidate; but, as in New Hampshire, the Republican candidate was elected, and he has been a loyal supporter of all war measures in the House.

The first partisan speech made on the floor of either House of Congress since the war began was made on January 21 of this year in the Senate by a Democrat. His text was: "Republican leaders in and out of Congress are undoubtedly seeking to make politics out of this war." This speech was followed on February 4 by the insertion in the RECORD by Mr. FERRIS, a Democratic Member of the House, of an editorial by ex-Governor Glynn, bitterly attacking the Republican Party. A few weeks afterwards Mr. FERRIS was elected chairman of the Democratic congressional committee.

A little later the Wisconsin senatorial campaign came on, and I shall touch upon that only because it reveals the methods and unfairness of the Democratic Party, and we must be prepared to meet like methods in the campaign next fall.

The finger of suspicion had unjustly been pointed at the loyalty of Wisconsin. Loyalty was the issue. I was nominated as the Republican candidate upon that issue. Although as a Member of the House I had voted for the declaration of war and every war measure since, although President Wilson had frequently called me to the White House to confer upon war measures, and I had by speeches and votes and in every possible way supported him, an attack was begun upon the loyalty of the Republican nominee. I regret to say that such attack was participated in by President Wilson in an indirect way. It was followed by the Democratic national committee, by the Democratic candidate, by the Democratic newspapers, and a score of Democratic Senators and Representatives sent to Wisconsin. The voters of Wisconsin were told they could not be loyal unless they supported the Democratic candidate. Billboards from one end of the State to the other were covered with the statement that "Wilson wants Davies. His defeat will bring joy to Potsdam and gloom to Washington." Finally, Vice President Marshall came into the State. In a speech at Madison, the capital, he said:

I came to Wisconsin to find if 100,000 Republicans will not count the loss of partisanship cheap if thereby Wisconsin may be saved to the Union.

He said some other things which I shall refer to in a few moments.

The Wisconsin soldiers still in the United States, under the statutes of the State, had the right to vote at their camps. A large number of them were stationed at Camp Grant, at Rockford, Ill. A few days before the election the following advertisement was published, two columns in width, in a Rockford paper:

To the Wisconsin soldiers at Camp Grant: Tuesday, April 2, you are entitled to vote for United States Senator from Wisconsin to succeed Senator Paul O. Huston. President Wilson, your Commander in Chief, desires all loyal Americans to vote for Joseph E. Davies for United States Senator. Davies's election means joy at Washington and gloom at Berlin. Davies's defeat means gloom at Washington and joy at Berlin."

To say to soldiers in the service that their Commander in Chief desires them to vote a certain way is indefensible from any standpoint. I, of course, freely acquit President Wilson of any knowledge of this outrage. It may be interesting to note what the vote of this camp was, following this appeal to obey their Commander in Chief—the Republican nominee received 576 votes at this camp and the Democratic candidate 403 votes.

I shall not speak of misrepresentations made by the Democratic organizations; I am giving you simply some illustrations of the methods employed. Notwithstanding these methods, the Republican candidate was elected, but following his election the Democratic national committee issued a statement on April 4, quoting from the speech of Vice President Marshall, which I have referred to, in part, as follows:

It makes no difference how pure and patriotic the purposes of the Republican candidate may be, to be elected he is now bidding for the vote of the German sympathizer, for the vote of the traitor, for the vote

of the secessionist, for the vote of the pacifist, for the vote of the man so hidebound in politics that he rejoices at every mistake made by the President or his advisors, or the vote of the man who is willing to make an inglorious peace, for the vote of the disappointed profiteer, and the vote of the man who wanted our citizens and our ships to stay off the high seas, and who wanted an embargo placed upon the sale of munitions of war in the markets of the world. By these votes and these alone can the Republican candidate hope to be elected, for Mr. Davies does not seek them and would, I believe, scorn to receive them.

The national committee adds:

This statement of the Vice President accurately described the campaign, which results in Mr. LENROOT'S election by a small majority.

As I was the candidate referred to, I can say that the English language is not sufficiently strong to adequately characterize the falseness of this charge.

That the people of Wisconsin knew that it was false is demonstrated by the fact that such a storm of protest went up after the Vice President's speech that it was certain the Republican candidate would win. The people of Wisconsin knew that neither the Republican candidate nor any Republican speaker nor the Republican Party organization was bidding for disloyal voters. They knew that every speech made by Republicans was a loyalty speech, denouncing disloyalty and pleading for support of the war to victory.

But we have other evidence disproving the charge of the Democratic committee. The pro-German vote of Wisconsin, as elsewhere, is naturally confined very largely to those of German blood. It is cruel to assume that all citizens of German blood are disloyal, for such is not the case. We have citizens of German blood or ancestry who are just as patriotic as any other citizens of our country; but it is true that of those who are for Germany first and America second a large majority of them are of German blood. The majority of the Germans in Wisconsin are confined to 14 counties out of the 71 in the State. This group of German counties was carried by the Democratic candidate by a plurality of more than 16,000 votes over the Republican candidate. The counties in which it was admitted that practically all of the voters were loyal were carried by the Republican candidate by a plurality of more than 30,000 votes over the Democratic candidate. So the fact is, as shown from the returns, if the election had been dependent upon the German counties of Wisconsin the Democratic candidate would have been elected.

I have taken the time to recite these facts only because they indicate the policy that the Democratic Party will pursue in the fall elections. Republicans will resent these methods wherever employed, but they will not retaliate by using similar methods. Republicans will not attack the loyalty of President Wilson or of the Democratic Party. On the contrary, they will continue to support the Democratic administration in all necessary war measures in the future as they have in the past. The Republican Party in this war is not following the example of the Democratic Party in the Civil War. Comparisons are odious, but in view of what has transpired we have a right to compare the patriotism of the Republican Party in this war with that of the Democratic Party in the Civil War. I quote from the platform of the Democratic Party adopted on August 29, 1864, at Chicago:

Resolved, That this convention does explicitly declare, as the sense of the American people, that after four years of failure to restore the Union by the experiment of war, during which, under the pretense of a military necessity or war power higher than the Constitution, the Constitution itself has been discarded in every part and public liberty and private right alike trodden down and the material prosperity of the country essentially impaired; justice, humanity, liberty, and the public welfare demand that immediate efforts be made for a cessation of hostilities, with a view to the ultimate convention of the States or other peaceable means to the end that, at the earliest practicable moment, peace may be restored on the basis of the Federal Union of the States.

Resolved, That the aim and object of the Democratic Party is to preserve the Federal Union and the rights of the States unimpaired, and they hereby declare that they consider that the administrative usurpation of extraordinary and dangerous powers not granted by the Constitution—the subversion of the civil by military law in States not in insurrection; the arbitrary military arrest, imprisonment, trial, and sentence of American citizens in States where civil law exists in full force; the suppression of freedom of speech and of the press; the denial of the right of asylum; the open and avowed disregard of State rights; the employment of unusual test oaths; and the interference with and denial of the right of the people to bear arms in their defense—is calculated to prevent a restoration of the Union and the perpetuation of a government deriving its just powers from the consent of the governed.

We have a right to be proud of the splendid record the Republican Party is making in this war. We are glad for the sake of our country that there are no such party differences now as there were in the Civil War. The fact is that the rank and file of both parties are equally patriotic. Only a few men, seeking political advantage, would make it appear otherwise. The effort by some to make this a war of, for, and by the Democratic Party will fail. This is not a Democratic war; it is not a Republican war; it is an American war, and in carrying it through to victory there will be "glory enough for all."
